(2) In the Constitution "Pastor Æternus", cap. iii, the pope is declared to possess ordinary, immediate, and episcopal jurisdiction over all the faithful: "We teach, moreover, and declare that, by the disposition of God, the Roman Church possesses supreme ordinary authority over all Churches, and that the jurisdiction of the Roman Pontiff, which is true episcopal jurisdiction, is immediate in its character" (*Enchir.*, n. 1827). It is further added that this authority extends to all alike, both pastors and faithful, whether singly or collectively. An ordinary jurisdiction is one which is exercised by the holder, not by reason of any delegation, but in virtue of the office which he himself holds. All who acknowledge in the pope any primacy of jurisdiction acknowledge that jurisdiction to be ordinary. This point, therefore, does not call for discussion. That the papal authority is likewise immediate has, however, been called in question. Jurisdiction is immediate when its possessor stands in direct relation to those with whose oversight he is charged. If, on the other hand, the supreme authority can only deal directly with the proximate superiors, and not with the subjects save through their intervention, his power is not immediate but mediate. That the pope's jurisdiction is not thus restricted appears from the analysis already given of Christ's words to St. Peter. It has been shown that He conferred on him a primacy over the Church, which is universal in its scope, extending to all the Church's members, and which needs the support of no other power. A primacy such as this manifestly gives to him and to his successors a direct

authority over all the faithful. This is also implied in the words of the pastoral commission, "Feed my sheep". The shepherd exercises immediate authority over all the sheep of his flock. Every member of the Church has been thus committed to Peter and those who follow him. This immediate authority has been always claimed by the Holy See. It was, however, denied by Febronius (op. cit., vii, § 7). That writer contended that the duty of the pope was to exercise a general oversight over the Church and to direct the bishops by his counsel; in case of necessity, where the legitimate pastor was guilty of grave wrong, he could pronounce sentence of excommunication against him and proceed against him according to the canons, but he could not on his own authority depose him (op. cit., ii, §§ 4, 9). The Febronian doctrines, though devoid of any historical foundation, yet, through their appeal to the spirit of nationalism, exerted a powerful influence for harm on Catholic life in Germany during the eighteenth and part of the nineteenth century. Thus it was imperative that the error should be definitively condemned. That the pope's power is truly episcopal needs no proof. It follows from the fact that he enjoys an ordinary pastoral authority, both legislative and judicial, and immediate in relation to its subjects. Moreover, since this power regards the pastors as well as the faithful, the pope is rightly termed *Pastor pastorum*, and *Episcopus episcoporum*.

It is frequently objected by writers of the Anglican school that, by declaring the pope to possess an immediate episcopal jurisdiction over all the faithful, the Vatican Council destroyed the authority of the diocesan episcopate. It is further pointed out that St. Gregory the Great expressly repudiated this title (Ep. vii, 27; viii, 30). To this it is replied that no difficulty is involved in the exercise of immediate jurisdiction over the same subjects by two rulers, provided only that these rulers stand in subordination, the one to the other. We constantly see the system at work. In an army the regimental officer and the general both possess immediate authority over the soldiers; yet no one maintains that the inferior authority is thereby annulled. The objection lacks all weight. The Vatican Council says most justly (cap. iii): "This power of the supreme pontiff in no way derogates from the ordinary immediate power of episcopal jurisdiction, in virtue of which the bishops, who, appointed by the Holy Spirit [Acts, xx, 28], have succeeded to the place of the Apostles as true pastors, feed and rule their several flocks, each the one which has been assigned to him: that power is rather maintained, confirmed and defended by the supreme pastor" (Enchir., n. 1828). It is without doubt true that St. Gregory repudiated in strong terms the title of universal bishop, and relates that St. Leo rejected it when it was offered him by the fathers of Chalcedon. But, as he used it, it has a different signification from that with which it was employed in the Vatican Council. St. Gregory understood it as involving the denial of the authority of the local diocesan (Ep. v, 21). No one, he maintains, has a right so to term himself universal bishop as to usurp that apostolically constituted power. But he was himself a strenuous asserter of that immediate jurisdiction over all the faithful which is signified by this title as used in the Vatican Decree. Thus he reverses (Ep. vi, 15) a sentence passed on a priest by Patriarch John of Constantinople, an act which itself involves a claim to universal authority, and explicitly states that the Church of Constantinople is subject to the Apostolic See (Ep. ix, 12). The title of universal bishop occurs as early as the eighth century; and in 1413 the faculty of Paris rejected the proposition of John Hus that the pope was not universal bishop (Natalis Alexander, "Hist. eccl.", sæc. XV and XVI, c. ii, art. 3, n. 6).

(3) The Council goes on to affirm that the pope is

the supreme judge of the faithful, and that to him appeal may be made in all ecclesiastical causes. The right of appeal follows as a necessary corollary from the doctrine of the primacy. If the pope really possesses a supreme jurisdiction over the Church, every other authority, whether episcopal or synodal, being subject to him, there must of necessity be an appeal to him from all inferior tribunals. This question, however, has been the subject of much controversy. The Gallican divines de Marca and Quesnel, and in Germany Febronius, sought to show that the right of appeal to the pope was a mere concession derived from ecclesiastical canons, and that the influence of the pseudo-Isidorean decretals had led to many unjustifiable exaggerations in the papal claims. The arguments of these writers are at the present day employed by frankly anti-Catholic controversialists with a view to showing that the whole primacy is a merely human institution. It is contended that the right of appeal was first granted at Sardica (343), and that each step of its subsequent development can be traced. History, however, renders it abundantly clear that the right of appeal had been known from primitive times, and that the purpose of the Sardican canons was merely to give conciliar ratification to an already existing usage. It will be convenient to speak first of the Sardican question, and then to examine the evidence as regards previous practice.

In the years immediately preceding Sardica, St. Athanasius had appealed to Rome against the decision of the Council of Tyre (335). Pope Julius had annulled the action of that council, and had restored Athanasius and Marcellus of Ancyra to their sees. The Eusebians, however, had contested his right to call a conciliar decision in question. The fathers who met at Sardica, and who included the most eminent of the orthodox party from East and West alike, desired by their decrees to affirm this right, and to establish a canonical mode of procedure for such appeals. The principal provisions of the canons which deal with this matter are: (1) that a bishop condemned by the bishops of his province may appeal to the pope either on his own initiative or through his judges; (2) that if the pope entertains the appeal he shall appoint a court of second instance drawn from the bishops of the neighbouring provinces; he may, if he thinks fit, send judges to sit with the bishops. There is nothing whatever to suggest that new privileges are being conferred. St. Julius had recently, not merely exercised the right of hearing appeals in the most formal manner, but had severely censured the Eusebians for neglecting to respect the supreme judicial rights of the Roman See: "for", he writes, "if they [Athanasius and Marcellus] really did some wrong, as you say, the judgment ought to have been given according to the ecclesiastical canon and not thus. . . . Do you not know that this has been the custom first to write to us, and then for that which is just to be defined from hence?" (Athanasius, "Apol.", 35). Nor is there the smallest ground for the assertion that the pope's action is hedged in within narrow limits, on the ground that no more is permitted than that he should order a rehearing to take place on the spot. The fathers in no way disputed the pope's right to hear the case at Rome. But their object was to deprive the Eusebians of the facile excuse that it was idle for appeals to be carried to Rome, since there the requisite evidence could not be forthcoming. They therefore provided a canonical procedure which should not be open to that objection.

Having thus shown that there is no ground for the assertion that the right of appeal was first granted at Sardica, we may now consider the evidence for its existence in earlier times. The records of the second century are so scanty as to throw but little light on the subject. Yet it would seem that Montanus, Prisca, and Maximilla appealed to Rome against the decision

of the Phrygian bishops. Tertullian (Con. Prax., i) tells us that the pope at first acknowledged the genuineness of their prophecies, and that thus "he was giving peace to the Churches of Asia and Phrygia", when further information led him to recall the letters of peace which he had issued. The fact that the pope's decision had weight to decide the whole question of their orthodoxy is sufficiently significant. But in St. Cyprian's correspondence we find clear and unmistakable evidence of a system of appeals. Basilides and Martial, the bishops of Leon and Merida in Spain, had in the persecution accepted certificates of idolatry. They confessed their guilt, and were in consequence deposed, other bishops being appointed to the sees. In the hope of having themselves reinstated they appealed to Rome, and succeeded, by misrepresenting the facts, in imposing on St. Stephen, who ordered their restoration. It has been objected to the evidence drawn from this incident, that St. Cyprian did not acknowledge the validity of the papal decision, but exhorted the people of Leon and Merida to hold fast to the sentence of deposition (Ep. lxvii, 6). But the objection misses the point of St. Cyprian's letter. In the case in question there was no room for a legitimate appeal, since the two bishops had confessed. An acquittal obtained after spontaneous confession could not be valid. It has further been urged that, in the case of Fortunatus (Ep. lix, 10), Cyprian denies his right of appeal to Rome, and asserts the sufficiency of the African tribunal. But here too the objection rests upon a misunderstanding. Fortunatus had procured consecration as Bishop of Carthage from a heretical bishop, and St. Cyprian asserts the competency of the local synod in his case on the ground that he is no true bishop—a mere *pseudo-episcopus*. Juridically considered he is merely an insubordinate presbyter, and he must submit himself to his own bishop. At that period the established custom denied the right of appeal to the inferior clergy. On the other hand, the action of Fortunatus indicates that he based his claim to bring the question of his status before the pope on the ground that he was a legitimate bishop. Privatus of Lambese, the heretical consecrator of Fortunatus who had previously been himself condemned by a synod of ninety bishops (Ep. lix, 10), had appealed to Rome without success (Ep. xxxvi, 4).

The difficulties at Carthage which led to the Donatist schism provide us with another instance. When the seventy Numidian bishops, who had condemned Cæcilian, invoked the aid of the emperor, the latter referred them to Rome, that the case might be decided by Pope Miltiades (313). St. Augustine makes frequent mention of the circumstances, and indicates plainly that he holds it to have been Cæcilian's undoubted right to claim a trial before the pope. He says that Secundus should never have dared to condemn Cæcilian when he declined to submit his case to the African bishops, since he had the right "to reserve his whole case to the judgment of other colleagues, especially to that of Apostolical Churches" (Ep. xliii, 7). A little later (367) a council, held at Tyana in Asia Minor, restored to his see Eustathius, bishop of that city, on no other ground than that of a successful appeal to Rome. St. Basil (Ep. cclxiii, 3) tells us that they did not know what test of orthodoxy Liberius had required. He brought a letter from the pope demanding his restoration, and this was accepted as decisive by the council. It should be observed that there can be no question here of the pope employing prerogatives conferred on him at Sardica, for he did not follow the procedure there indicated. Indeed there is no good reason to believe that the Sardican procedure ever came into use in either East or West. In 378 the appellate jurisdiction of the pope received civil sanction from Emperor Gratian. Any charge against a metropolitan was to come before the pope himself or a court of bishops nominated by him, while

all (Western) bishops had the right of appeal from their provincial synod to the pope (Mansi, III, 624). Similarly Valentinian III in 445 assigned to the pope the right of evoking to Rome any cause he should think fit (Cod. Theod. Novell., tit. xxiv, De episcoporum ordin.). These ordinances were not, however, in any sense the source of the pope's jurisdiction, which rested on Divine institution; they were civil sanctions enabling the pope to avail himself of the civil machinery of the empire in discharging the duties of his office. What Pope Nicholas I said of the synodal declarations regarding the privileges of the Holy See holds good here also: "Ista privilegia huic sanctæ Ecclesiæ a Christo donata, a synodis non donata, sed jam solummodo venerata et celebrata" (These privileges bestowed by Christ on this Holy Church have not been granted her by synods, but merely proclaimed and honoured by them) ("Ep. ad Michaellem Imp." in P. L., CXIX, 948).

Much has been made by anti-Catholic writers of the famous letter "Optaremus", addressed in 426 by the African bishops to Pope St. Celestine at the close of the incident relating to the priest Apiarius. As the point is discussed in a special article (APIARIUS OF SICCA), a brief reference will suffice here. Protestant controversialists maintain that in this letter the African bishops positively repudiate the claim of Rome to an appellate jurisdiction, the repudiation being consequent on the fact that they had in 419 satisfied themselves that Pope Zosimus was mistaken in claiming the authority of Nicæa for the Sardican canons. This is an error. The letter, it is true, urges with some display of irritation that it would be both more reasonable and more in harmony with the fifth Nicene canon regarding the inferior clergy and the laity, if even episcopal cases were left to the decision of the African synod. The pope's authority is nowhere denied, but the sufficiency of the local tribunals is asserted. Indeed the right of the pope to deal with episcopal cases was freely acknowledged by the African Church even after it had been shown that the Sardican canons did not emanate from Nicæa. Antony, Bishop of Fussala, prosecuted an appeal to Rome against St. Augustine in 423, the appeal being supported by the Primate of Numidia (Ep. ccix). Moreover, St. Augustine in his letter to Pope Celestine on this subject urges that previous popes have dealt with similar cases in the same manner, sometimes by independent decisions and sometimes by confirmation of the decisions locally given (*ipsa sede apostolica judicante vel aliorum judicata firmante*), and that he could cite examples either from ancient or from more recent times (Ep. ccix, 8). These facts appear to be absolutely conclusive as to the traditional African practice. That the letter "Optaremus" did not result in any change is evinced by a letter of St. Leo's in 446, directing what is to be done in the case of a certain Lupicinus who had appealed to him (Ep. xii, 13). It is occasionally argued that if the pope really possessed *jure divino* a supreme jurisdiction, the African bishops would neither have raised any question in 419 as to whether the alleged canons were authentic, nor again have in 426 requested the pope to take the Nicene canon as the norm of his action. Those who reason in this way fail to see that, where canons have been established prescribing the mode of procedure to be followed in the Church, right reason demands that the supreme authority should not alter them except for some grave cause, and, as long as they remain the recognized law of the Church, should observe them. The pope as God's vicar must govern according to reason, not arbitrarily nor capriciously. This, however, is a very different thing from saying, as did the Gallican divines, that the pope is subject to the canons. He is not subject to them, because he is competent to modify or to annul them when he holds this to be best for the Church.

IV. JURISDICTIONAL RIGHTS AND PREROGATIVES OF

THE POPE.—In virtue of his office as supreme teacher and ruler of the faithful, the chief control of every department of the Church's life belongs to the pope. In this section the rights and duties which thus fall to his lot will be briefly enumerated. It will appear that, in regard to a considerable number of points, not merely the supreme control, but the whole exercise of power is reserved to the Holy See, and is only granted to others by express delegation. This system of reservation is possible, since the pope is the universal source of all ecclesiastical jurisdiction. Hence it rests with him to determine in what measure he will confer jurisdiction on bishops and other prelates.

(1) As the supreme teacher of the Church, whose it is to prescribe what is to be believed by all the faithful, and to take measures for the preservation and the propagation of the faith, the following are the rights which pertain to the pope: (a) it is his to set forth creeds, and to determine when and by whom an explicit profession of faith shall be made (cf. Council of Trent, Sess. XXIV, cc. i, xii); (b) it is his to prescribe and to command books for the religious instruction of the faithful; thus, for example, Clement XIII has recommended the Roman Catechism to all the bishops. (c) The pope alone can establish a university, possessing the status and privileges of a canonically erected Catholic university; (d) to him also belongs the direction of Catholic missions throughout the world; this charge is fulfilled through the Congregation of the Propaganda. (e) It is his to prohibit the reading of such books as are injurious to faith or morals, and to determine the conditions on which certain classes of books may be issued by Catholics; (f) his is the condemnation of given propositions as being either heretical or deserving of some minor degree of censure, and lastly (g) he has the right to interpret authentically the natural law. Thus, it is his to say what is lawful or unlawful in regard to social and family life, in regard to the practice of usury, etc.

(2) With the pope's office of supreme teacher are closely connected his rights in regard to the worship of God: for it is the law of prayer that fixes the law of belief. In this sphere very much has been reserved to the sole regulation of the Holy See. Thus (a) the pope alone can prescribe the liturgical services employed in the Church. If a doubt should occur in regard to the ceremonial of the liturgy, a bishop may not settle the point on his own authority, but must have recourse to Rome. The Holy See likewise prescribes rules in regard to the devotions used by the faithful, and in this way checks the growth of what is novel and unauthorized. (b) At the present day the institution and abrogation of festivals, which was till a comparatively recent time free to all bishops as regards their own dioceses, is reserved to Rome. (c) The solemn canonization of a saint is proper to the pope. Indeed it is commonly held that this is an exercise of the papal infallibility. Beatification and every permission for the public veneration of any of the servants of God is likewise reserved to his decision. (d) He alone gives to anyone the privilege of a private chapel where Mass may be said. (e) He dispenses the treasury of the Church, and the grant of plenary indulgences is reserved to him. While he has no authority in regard to the substantial rites of the sacraments, and is bound to preserve them as they were given to the Church by Christ and His Apostles, certain powers in their regard belong to him; (f) he can give to simple priests the power to confirm, and to bless the oil of the sick and the oil of catechumens, and (g) he can establish diriment and impedient impediments to matrimony.

(3) The legislative power of the pope carries with it the following rights: (a) he can legislate for the whole Church, with or without the assistance of a general council; (b) if he legislates with the aid of a council, it is his to convoke it, to preside, to direct its delibera-

tions, to confirm its acts. (c) He has full authority to interpret, alter, and abrogate both his own laws and those established by his predecessors. He has the same plenitude of power as they enjoyed, and stands in the same relation to their laws as to those which he himself has decreed; (d) he can dispense individuals from the obligation of all purely ecclesiastical laws, and can grant privileges and exemptions in their regard. In this connexion may be mentioned (e) his power to dispense from vows where the greater glory of God renders it desirable. Considerable powers of dispensation are granted to bishops, and, in a restricted measure, also to priests; but there are some vows reserved altogether to the Holy See.

(4) In virtue of his supreme judicial authority (a) *causæ majores* are reserved to him. By this term are signified cases dealing with matters of great moment, or those in which personages of eminent dignity are concerned. (b) His appellate jurisdiction has been discussed in the previous section. It should, however, be noted (c) that the pope has full right, should he see fit, to deal even with *causæ minores* in the first instance, and not merely by reason of an appeal (Trent, Sess. XXIV, cap. xx). In what concerns punishment, (d) he can inflict censures either by judicial sentence or by general laws which operate without need of such sentence. (e) He further reserves certain cases to his own tribunal. All cases of heresy come before the Congregation of the Inquisition. A similar reservation covers the cases in which a bishop or a reigning prince is the accused party.

(5) As the supreme governor of the Church the pope has authority over all appointments to its public offices. Thus (a) it is his to nominate to bishoprics, or, where the nomination has been conceded to others, to give confirmation. Further, he alone can translate bishops from one see to another, can accept their resignation, and can, where grave cause exists, sentence to deprivation. (b) He can establish dioceses, and can annul a previously existing arrangement in favour of a new one. Similarly, he alone can erect cathedral and collegiate chapters. (c) He can approve new religious orders, and (d) can, if he sees fit, exempt them from the authority of local ordinaries. (e) Since his office of supreme ruler imposes on him the duty of enforcing the canons, it is requisite that he should be kept informed as to the state of the various dioceses. He may obtain this information by legates or by summoning the bishops to Rome. At the present day this *jus relationum* is exercised through the triennial visit *ad limina* required of all bishops. This system was introduced by Sixtus V in 1585 (Constitution, "Rom. Pontifex"), and confirmed by Benedict XIV in 1740 (Constitution, "Quod Sancta"). (f) It is to be further observed that the pope's office of chief ruler of the Church carries with it *jure divino* the right to free intercourse with the pastors and the faithful. The *placitum regium*, by which this intercourse was limited and impeded, was therefore an infringement of a sacred right, and such was solemnly condemned by the Vatican Council (Constitution, "Pastor Æternus", cap. iii). To the pope likewise belongs the supreme administration of the goods of the Church. He alone (g) can, where there is just cause, alienate any considerable quantity of such property. Thus, e. g., Julius III, at the time of the restoration of religion in England under Queen Mary, validated the title of those laymen who had acquired Church lands during the spoliations of the previous reigns. (h) The pope has further the right to impose taxes on the clergy and the faithful for ecclesiastical purposes (cf. Trent, Sess. XXI, cap. iv de Ref.). Though the power of the pope, as we have described it, is very great, it does not follow that it is arbitrary and unrestricted. "The pope", as Cardinal Hergenröther well says, "is circumscribed by the consciousness of the necessity of making a righteous and benefi-

cent use of the duties attached to his privileges. . . . He is also circumscribed by the spirit and practice of the Church, by the respect due to General Councils and to ancient statutes and customs, by the rights of bishops, by his relation with civil powers, by the traditional mild tone of government indicated by the aim of the institution of the papacy—to 'feed'—and finally by the respect indispensable in a spiritual power towards the spirit and mind of nations" ("Cath. Church and Christian State", tr., I, 197).

V. PRIMACY OF HONOUR: TITLES AND INSIGNIA.—Certain titles and distinctive marks of honour are assigned to the pope alone; these constitute what is termed his primacy of honour. These prerogatives are not, as are his jurisdictional rights, attached *jure divino* to his office. They have grown up in the course of history, and are consecrated by the usage of centuries; yet they are not incapable of modification.

(1) *Titles*.—The most noteworthy of the titles are *Papa*, *Summus Pontifex*, *Pontifex Maximus*, *Servus servorum Dei*. The title *pope* (*papa*) was, as has been stated, at one time employed with far more latitude. In the East it has always been used to designate simple priests. In the Western Church, however, it seems from the beginning to have been restricted to bishops (Tertullian, "De Pud.", xiii). It was apparently in the fourth century that it began to become a distinctive title of the Roman Pontiff. Pope Siricius (d. 398) seems so to use it (Ep. vi in P. L., XIII, 1164), and Ennodius of Pavia (d. 473) employs it still more clearly in this sense in a letter to Pope Symmachus (P. L., LXIII, 69). Yet as late as the seventh century St. Gall (d. 640) addresses Desiderius of Cahors as *papa* (P. L., LXXXVII, 265). Gregory VII finally prescribed that it should be confined to the successors of Peter. The terms *Pontifex Maximus*, *Summus Pontifex*, were doubtless originally employed with reference to the Jewish high-priest, whose place the Christian bishops were regarded as holding, each in his own diocese (I Clem., xl). As regards the title *Pontifex Maximus*, especially in its application to the pope, there was further a reminiscence of the dignity attached to that title in pagan Rome. Tertullian, as has already been said, uses the phrase of Pope Callistus. Though his words are ironical, they probably indicate that Catholics already applied it to the pope. But here too the terms were once less narrowly restricted in their use. *Pontifex summus* was used of the bishop of some notable see in relation to those of less importance. Hilary of Arles (d. 449) is so styled by Eucherius of Lyons (P. L., L, 773), and Lanfranc is termed "primas et pontifex summus" by his biographer, Milo Crispin (P. L., CL, 10). Pope Nicholas I is termed "summus pontifex et universalis papa" by his legate Arsenius (Hardouin, "Conc.", V, 280), and subsequent examples are common. After the eleventh century it appears to be only used of the popes. The phrase *Servus servorum Dei* is now so entirely a papal title that a Bull in which it should be wanting would be reckoned unauthentic. Yet this designation also was once applied to others. Augustine ("Ep. cexvii a. d. Vitalem" in P. L., XXXIII, 978) entitles himself "servus Christi et per Ipsum servus servorum Ipsius". Desiderius of Cahors made use of it (Thomassin, "Ecclesiæ nov. et vet. disc.", pt. I, l. I, c. iv, n. 4): so also did St. Boniface (740), the apostle of Germany (P. L., LXXIX, 700). The first of the popes to adopt it was seemingly Gregory I; he appears to have done so in contrast to the claim put forward by the Patriarch of Constantinople to the title of universal bishop (P. L., LXXV, 87). The restriction of the term to the pope alone began in the ninth century.

(2) *Insignia and Marks of Honour*.—The pope is distinguished by the use of the tiara or triple crown (see TIARA). At what date the custom of crowning the pope was introduced is unknown. It was certainly previous to the forged donation of Constantine,

which dates from the commencement of the ninth century, for mention is there made of the pope's coronation. The triple crown is of much later origin. The pope moreover does not, like ordinary bishops, use the bent pastoral staff, but only the erect cross. This custom was introduced before the reign of Innocent III (1198–1216) (cap. un. X de sacra unctione, I, 15). He further uses the pallium (q. v.) at all ecclesiastical functions, and not under the same restrictions as do the archbishops on whom he has conferred it. The kissing of the pope's foot—the characteristic act of reverence by which all the faithful do honour to him as the vicar of Christ—is found as early as the eighth century. We read that Emperor Justinian II paid this respect to Pope Constantine (708–16) (Anastasius Bibl. in P. L., CXXXVIII, 949). Even at an earlier date Emperor Justin had prostrated himself before Pope John I (523–6; op. cit., 515), and Justinian I before Agapetus (535–6; op. cit., 551). The pope, it may be added, ranks as the first of Christian princes, and in Catholic countries his ambassadors have precedence over other members of the diplomatic body.

VI. ELECTION OF THE POPES.—The supreme headship of the Church is, we have seen, annexed to the office of Roman bishop. The pope becomes chief pastor because he is Bishop of Rome: he does not become Bishop of Rome because he has been chosen to be head of the universal Church. Thus, an election to the papacy is, properly speaking, primarily an election to the local bishopric. The right to elect their bishop has ever belonged to the members of the Roman Church. They possess the prerogative of giving to the universal Church her chief pastor; they do not receive their bishop in virtue of his election by the universal Church. This is not to say that the election should be by popular vote of the Romans. In ecclesiastical affairs it is always for the hierarchy to guide the decisions of the flock. The choice of a bishop belongs to the clergy: it may be confined to the leading members of the clergy. It is so in the Roman Church at present. The electoral college of cardinals exercise their office because they are the chief of the Roman clergy. Should the college of cardinals ever become extinct, the duty of choosing a supreme pastor would fall, not on the bishops assembled in council, but upon the remaining Roman clergy. At the time of the Council of Trent Pius IV, thinking it possible that in the event of his death the council might lay some claim to the right, insisted on this point in a consistorial allocution (Phillips, "Kirchenrecht", V, p. 737 n.). It is thus plain that a pope cannot nominate his successor. History tells us of one pope—Benedict II (530)—who meditated adopting this course. But he recognized that it would be a false step, and burnt the document which he had drawn up for the purpose. On the other hand the Church's canon law (10 D. 79) supposes that the pope may make provision for the needs of the Church by suggesting to the cardinals some one whom he regards as fitted for the office: and we know that Gregory VII secured in this way the election of Victor III. Such a step, however, does not in any way fetter the action of the cardinals. The pope can, further, legislate regarding the mode in which the subsequent election shall be carried out, determining the composition of the electoral college, and the conditions requisite for a definitive choice. The method at present followed is the result of a series of enactments on this subject.

A brief historical review will show how the principle of election by the Roman Church has been maintained through all the vicissitudes of papal elections. St. Cyprian tells us in regard to the election of Pope St. Cornelius (251) that the comprovincial bishops, the clergy, and the people all took part in it: "He was made bishop by the decree of God and of His Church, by the testimony of nearly all the clergy, by the col-

lege of aged bishops [*sacerdotum*], and of good men" (Ep. iv ad Anton., n. 8). And a precisely similar ground is alleged by the Roman priests in their letter to Emperor Honorius regarding the validity of the election of Boniface I (A. D. 418; P. L., XX, 750). Previous to the fall of the Western Empire interference by the civil power seems to have been inconsiderable. Constantius, it is true, endeavoured to set up an antipope, Felix II (355), but the act was universally regarded as heretical. Honorius on the occasion of the contested election of 418 decreed that, when the election was dubious, neither party should hold the papacy, but that a new election should take place. This method was applied at the elections of Conon (686) and Sergius I (687). The law is found in the Church's code (c. 8, d. LXXIX), though Gratian declares it void of force as having emanated from civil and not ecclesiastical authority (d. XCVI, proem.; d. XCVII, proem.). After the barbarian conquest of Italy, the Church's rights were less carefully observed. Basilius, the prefect of Odoacer, claimed the right of supervising the election of 483 in the name of his master, alleging that Pope Simplicius had himself requested him to do so (Hard., II, 977). The disturbances which occurred at the disputed election of Symmachus (498) led that pope to hold a council and to decree the severest penalties on all who should be guilty of canvassing or bribery in order to attain the pontificate. It was moreover decided that the majority of votes should decide the election. Theodoric the Ostrogoth, who at this period ruled Italy, became in his later years a persecutor of the Church. He even went so far as to appoint Felix III (IV) in 526 as the successor of Pope John I, whose death was due to the incarceration to which the king had condemned him. Felix, however, was personally worthy of the office, and the appointment was confirmed by a subsequent election. The precedent of interference set by Theodoric was fruitful of evil to the Church. After the destruction of the Gothic monarchy (537), the Byzantine emperors went even farther than the heretical Ostrogoth in encroaching on ecclesiastical rights. Vigilius (540) and Pelagius I (553) were forced on the Church at imperial dictation. In the case of the latter there seems to have been no election: his title was validated solely through his recognition as bishop by clergy and people. The formalities of election at this time were as follows (Lib. Diurnus Rom. Pont., ii, in P. L., CV, 27). After the pope's death, the archpriest, the archdeacon, and the primicerius of the notaries sent an official notification to the exarch at Ravenna. On the third day after the decease the new pope was elected, being invariably chosen from among the presbyters or deacons of the Roman Church (cf. op. cit., ii, titt. 2, 3, 5), and an embassy was despatched to Constantinople to request the official confirmation of the election. Not until this had been received did the consecration take place. The Church acquired greater freedom after the Lombard invasion of 568 had destroyed the prestige of Byzantine power in Italy. Pelagius II (578) and Gregory I (590) were the spontaneous choice of the electors. And in 684, owing to the long delays involved in the journey to Constantinople, Constantine IV (Pogonatus) acceded to Benedict II's request that in future it should not be necessary to wait for confirmation, but that a mere notification of the election would suffice. The loss of the exarchate and the iconoclastic heresy of the Byzantine court completed the severance between Rome and the Eastern Empire, and Pope Zacharias (741) dispensed altogether with the customary notice to Constantinople.

In 769 a council was held under Stephen III to rectify the confusion caused by the intrusion of the antipope Constantine. This usurper was a layman hurriedly raised to priest's orders to render his nomination to the pontificate possible. To make a repeti-

tion of the scandal impossible it was decreed that only members of the sacred college were eligible for election. The part of the laity was, moreover, reduced to a mere right of acclamation. Under Charlemagne and Louis the Pious the Church retained her freedom. Lothair, however, claimed more ample rights for the civil power. In 824 he exacted an oath from the Romans that none should be consecrated pope without the permission and the presence of his ambassadors. This was, in fact, done at most of the elections during the ninth century, and in 898 the riots which ensued upon the death of Pope Stephen V led John IX to give ecclesiastical sanction to this system of imperial control. In a council held at Rome in that year he decreed that the election should be made by bishops (cardinal) and clergy, regard being had to the wishes of the people, but that no consecration should take place except in the presence of the imperial legate (Mansi, XVIII, 225).

The due formalities at least of election appear to have been observed through the wild disorders which followed the collapse of the Carolingian Empire: and the same is true as regards the times of Otto the Great and his son. Under the restored empire, however, the electors enjoyed no freedom of choice. Otto I even compelled the Romans to swear that they would never elect or ordain a pope without his or his son's consent (963; cf. Liutprand, "Hist. Ott.", viii). In 1046 the scandals of the preceding elections, in which the supreme pontificate had become a prize for rival factions entirely regardless of what means they employed, led clergy and people to leave the nomination to Henry III. Three popes were chosen in this manner. But Leo IX insisted that the Church was free in the choice of her pastors, and, until he was duly elected at Rome, declined to assume any of the state of his office. The party of reform, of which Hildebrand was the moving spirit, were eager for some measure which should restore an independent choice to the Church. This was carried out by Nicholas II. In 1059 he held a council in the Lateran and issued the Decree "In Nomine". This document is found in two recensions, a papal and an imperial, both of early date. There is however little doubt that the papal recension embodied in the "Decretum Gratiani" (c. 1. d. XXIII) is genuine, and that the other was altered in the interest of the antipope Guibert (1080; Hefele, "Conciliengesch.", IV, 800, 899). The right of election is confined to the cardinals, the effective choice being placed in the hands of the cardinal bishops: clergy and people have a right of acclamation only. The right of confirmation is granted to the Emperor Henry IV and to such of his successors as should personally request and receive the privilege. The pope need not necessarily be taken from the number of cardinals, though this should be the case if possible.

This decree formed the basis of the present legislation on the papal election, though the system underwent considerable development. The first important modification was the Constitution "Licet de Vitanda" [c. vi, X, "De elect." (I, 6)] of Alexander III, the first of the decrees passed by the Third Ecumenical Council of the Lateran (1179). To prevent the evils of a disputed election it was established by this law that no one should be held duly elected until two-thirds of the cardinals should have given their votes for him. In this decree no distinction is made between the rights of the cardinal bishops and those of the rest of the Sacred College. The imperial privilege of confirming the election had already become obsolete owing to the breach between the Church and the Empire under Henry IV and Frederick I. Between the death of Clement IV (1268) and the coronation of Gregory X (1272) an interregnum of nearly three years intervened. To prevent a repetition of so great a misfortune the pope in the Council of Lyons (1179)

issued the Decree "Ubi periculum" [c. iii, "De elect.", in 6° (I, 6)], by which it was ordained that during the election of a pontiff the cardinals should be secluded from the world under exceedingly stringent regulations, and that the seclusion should continue till they had fulfilled their duty of providing the Church with a supreme pastor. To this electoral session was given the name of the Conclave (q. v.). This system prevails at the present day.

VII. CHRONOLOGICAL LIST OF THE POPES.—The historical lists of the popes, from those drawn up in the second century to those of the present day, form in themselves a considerable body of literature. It would be beyond the scope of the article to enter upon a discussion of these catalogues. For an account of the most famous of them all, the article *LIBER PONTIFICALIS* may be consulted. It appears, however, desirable to indicate very briefly what are our authorities for the names and the durations in office of the popes for the first two centuries of the Church's existence.

Irenæus, writing between 175 and 190, not many years after his Roman sojourn, enumerates the series from Peter to Eleutherius (Adv. Hær., III, iii, 3; Eusebius, "Hist. eccl.", V, vi). His object, as we have already seen, was to establish the orthodoxy of the traditional doctrine, as opposed to heretical novelties, by showing that the bishop was the natural inheritor of the Apostolic teaching. He gives us the names alone, not the length of the various episcopates. This need is supplied by other witnesses. Most important evidence is furnished by the document entitled the "Liberian Catalogue"—so called from the pope whose name ends the list. The collection of tracts of which this forms a part was edited (apparently by one *Furius Dionysius Philocalus*) in 354. The catalogue consists of a list of the Roman bishops from Peter to Liberius, with the length of their respective episcopates, the consular dates, the name of the reigning emperor, and in many cases other details. There is the strongest ground for believing that the earlier part of the catalogue, as far as Pontian (230–35), is the work of Hippolytus of Portus. It is manifest that up to this point the fourth-century compiler was making use of a different authority from that which he employs for the subsequent popes: and there is evidence rendering it almost certain that Hippolytus's work "Chronica" contained such a list. The reign of Pontian, moreover, would be the point at which that list would have stopped: for Hippolytus and he were condemned to servitude in the Sardinian mines—a fact which the chronographer makes mention when speaking of Pontian's episcopate. Lightfoot has argued that this list originally contained nothing but the names of the bishops and the duration of their episcopates, the remaining notes being additions by a later hand. The list of popes is identical with that of Irenæus, save that Anacletus is doubled into Cletus and Anacletus, while Clement appears before, instead of after, these two names. The order of Popes Pius and Anicetus has also been interchanged. There is every reason to regard these differences as due to the errors of copyists. Another witness is Eusebius. The names and episcopal years of the bishops can be gathered alike from his "History" and his "Chronicle". The notices in the two works can be shown to be in agreement, notwithstanding certain corruptions in many texts of the "Chronicle". This Eastern list in the hands of Eusebius is seen to have been identical with the Western list of Hippolytus, except that in the East the name of Linus's successor seems to have been given as Anenectetus, in the original Western list as Cletus. The two authorities presuppose the following list: (1) Peter, xxv; (2) Linus, xii; (3) Anenectetus [Cletus], xii; (4) Clement, ix; (5) Evarestus, viii; (6) Alexander, x; (7) Sixtus, x; (8) Telesphorus, xi; (9) Hyginus, iv; (10) Pius, xv; (11) Anicetus, xi; (12) Soter, viii; (13) Eleutherius, xv; (14) Victor, x; (15)

Zephyrinus, xviii; (16) Callistus, v; (17) Urban, viii; (18) Pontian, v (Harnack, "Chronologie", I, 152).

We learn from Eusebius (Hist. eccl., IV, xxii) that in the middle of the second century Hegesippus, the Hebrew Christian, visited Rome, and that he drew up a list of bishops as far as Anicetus, the then pope. Eusebius does not quote his catalogue, but Lightfoot sees ground for holding that we possess it in a passage of Epiphanius (Hær., xxvii, 6), in which the bishops as far as Anicetus are enumerated. This list of Hegesippus, drawn up less than a century after the martyrdom of St. Peter, was, he believes, the foundation alike of the Eusebian and Hippolytan catalogues (Clement of Rome, I, 325 sq.). His view has been accepted by many scholars. Even those who, like Harnack (Chronologie, I, 184 sq.), do not admit that this list is really that of Hegesippus, recognize it as a catalogue of Roman origin and of very early date, furnishing testimony independent alike of the Eusebian and Liberian lists.

The "Liber Pontificalis", long accepted as an authority of the highest value, is now acknowledged to have been originally composed at the beginning of the fifth century, and, as regards the early popes, to be dependent on the "Liberian Catalogue".

In the numbering of the successors of St. Peter, certain differences appear in various lists. The two forms Anacletus and Cletus, as we have seen, very early occasioned the third pope to be reckoned twice. There are some few cases, also, in which it is still doubted whether particular individuals should be accounted genuine popes or intruders, and, according to the view taken by the compiler of the list, they will be included or excluded. In the accompanying list the Stephen immediately following Zacharias (752) is not numbered, since, though duly elected, he died before his consecration. At that period the papal dignity was held to be conferred at consecration, and hence he is excluded from all the early lists. Leo VIII (963) is included, as the resignation of Benedict V, though enforced, may have been genuine. Boniface VII is also ranked as a pope, since, in 984 at least, he would seem to have been accepted as such by the Roman Church. The claim of Benedict X (1058) is likewise recognized. It cannot be affirmed that his title was certainly invalid, and his name, though now sometimes excluded, appears in the older catalogues. It should be observed that there is no John XX in the catalogue. This is due to the fact that, in the "Liber Pontificalis", two dates are given in connexion with the life of John XIV (983). This introduced confusion into some of the papal catalogues, and a separate pope was assigned to each of these dates. Thus three popes named John were made to appear between Benedict VII and Gregory V. The error led the pope of the thirteenth century who should have been called John XX to style himself John XXI (Duchesne, "Lib. Pont.", II, xvii). Some only of the antipopes find mention in the list. No useful purpose would be served by giving the name of every such claimant. Many of them possess no historical importance whatever. From Gregory VII onward not merely the years but the precise days are assigned on which the respective reigns commenced and closed. Ancient authorities furnish these details in the case of most of the foregoing popes also: but, previously to the middle of the eleventh century, the information is of uncertain value. With Gregory VII a new method of reckoning came in. The papal dignity was held to be conferred by the election, and not previously by the coronation, and the commencement of the reign was computed from the day of election. This point seems therefore a convenient one at which to introduce the more detailed indications.

LIST OF THE POPES.—

- (1) St. Peter, d. 67(?)
- (2) St. Linus, 67–79(?)

- (3) St. Anacletus I, 79-90(?)
- (4) St. Clement I, 90-99(?)
- (5) St. Evaristus, 99-107(?)
- (6) St. Alexander I, 107-16(?)
- (7) St. Sixtus (Xystus) I, 116-25(?)
- (8) St. Telesphorus, 125-36(?)
- (9) St. Hyginus, 136-40(?)
- (10) St. Pius, 140-54(?)
- (11) St. Anicetus, 154-65(?)
- (12) St. Soter, 165-74
- (13) St. Eleutherius, 174-89
- (14) St. Victor, 189-98
- (15) St. Zephyrinus, 198-217
- (16) St. Callistus I, 217-22
- (17) St. Urban I, 222-30
- (18) St. Pontian, 230-35
- (19) St. Anterus, 235-36
- (20) St. Fabian, 236-50
- (21) St. Cornelius, 251-53
Novatianus, 251-58(?)
- (22) St. Lucius I, 253-54
- (23) St. Stephen I, 254-57
- (24) St. Sixtus (Xystus) II, 257-58
- (25) St. Dionysius, 259-68
- (26) St. Felix I, 269-74
- (27) St. Eutychian, 275-83
- (28) St. Caius, 283-96
- (29) St. Marcellinus, 296-304
- (30) St. Marcellus I, 308-09
- (31) St. Eusebius, 309(310)
- (32) St. Melchades (Miltiades), 311-14
- (33) St. Sylvester I, 314-35
- (34) St. Marcus, 336
- (35) St. Julius I, 337-52
- (36) St. Liberius, 352-66
Felix II, 355-65
- (37) Damasus I, 366-84
- (38) St. Siricius, 384-98
- (39) St. Anastasius I, 398-401
- (40) St. Innocent I, 402-17
- (41) St. Zosimus, 417-18
- (42) St. Boniface I, 418-22
- (43) St. Celestine I, 422-32
- (44) St. Sixtus (Xystus) III, 432-40
- (45) St. Leo I, 440-61
- (46) St. Hilarius, 461-68
- (47) St. Simplicius, 468-83
- (48) St. Felix II (III), 483-92
- (49) St. Gelasius I, 492-96
- (50) St. Anastasius II, 496-98
- (51) St. Symmachus, 498-514
- (52) St. Hormisdas, 514-23
- (53) St. John I, 523-26
- (54) St. Felix III (IV), 526-30
- (55) Boniface II, 530-32
- (56) John II, 533-35
- (57) St. Agapetus I, 535-36
- (58) St. Silverius, 536-38(?)
- (59) Vigilius, 538(?) -55
- (60) Pelagius I, 556-61
- (61) John III, 561-74
- (62) Benedict I, 575-79
- (63) Pelagius II, 579-90
- (64) St. Gregory I, 590-604
- (65) Sabinianus, 604-06
- (66) Boniface III, 607
- (67) St. Boniface IV, 608-15
- (68) St. Deusdedit, 615-18
- (69) Boniface V, 619-25
- (70) Honorius I, 625-38
- (71) Severinus, 638-40
- (72) John IV, 640-2
- (73) Theodore I, 642-49
- (74) St. Martin I, 649-55
- (75) St. Eugene I, 654-57
- (76) St. Vitalian, 657-72
- (77) Adeodatus, 672-76

- (78) Donus, 676-78
- (79) St. Agatho, 678-81
- (80) St. Leo II, 682-83
- (81) St. Benedict II, 684-85
- (82) John V, 685-86
- (83) Conon, 686-87
- (84) St. Sergius I, 687-701
- (85) John VI, 701-05
- (86) John VII, 705-07
- (87) Sisinnius, 708
- (88) Constantine, 708-15
- (89) St. Gregory II, 715-31
- (90) St. Gregory III, 731-41
- (91) St. Zacharias, 741-52
Stephen (II), 752
- (92) Stephen II (III), 752-57
- (93) St. Paul I, 757-67
Constantine, 767-68
- (94) Stephen III (IV), 768-72
- (95) Adrian I, 772-95
- (96) St. Leo III, 795-816
- (97) Stephen IV (V), 816-17
- (98) St. Paschal I, 817-24
- (99) Eugene II, 824-27
- (100) Valentine, 827
- (101) Gregory IV, 827-44
- (102) Sergius II, 844-47
- (103) St. Leo IV, 847-55
- (104) Benedict III, 855-58
Anastasius, 855
- (105) St. Nicholas I, 858-67
- (106) Adrian II, 867-72
- (107) John VIII, 872-82
- (108) Marinus I (Martin II), 882-84
- (109) Adrian III, 884-85
- (110) Stephen V (VI), 885-91
- (111) Formosus, 891-96
- (112) Boniface VI, 896
- (113) Stephen VI (VII), 896-97
- (114) Romanus, 897
- (115) Theodore II, 897
- (116) John IX, 898-900
- (117) Benedict IV, 900-03
- (118) Leo V, 903
- (119) Christopher, 903-04
- (120) Sergius III, 904-11
- (121) Anastasius III, 911-13
- (122) Lando, 913-14
- (123) John X, 914-28
- (124) Leo VI, 928
- (125) Stephen VII (VIII), 928-31
- (126) John XI, 931-36
- (127) Leo VII, 936-39
- (128) Stephen VIII (IX), 939-42
- (129) Marinus II (Martin III), 942-46
- (130) Agapetus II, 946-55
- (131) John XII, 955-64
- (132) Leo VIII, 963-65
- (133) Benedict V, 964
- (134) John XIII, 965-72
- (135) Benedict VI, 973-74
Boniface VII, 974
- (136) Benedict VII, 974-83
- (137) John XIV, 983-84
- (138) Boniface VII, 984-85
- (139) John XV, 985-96
- (140) Gregory V, 996-99
John XVI, 997-98
- (141) Silvester II, 999-1003
- (142) John XVII, 1003
- (143) John XVIII, 1003-09
- (144) Sergius IV, 1009-12
- (145) Benedict VIII, 1012-24
- (146) John XIX, 1024-32
- (147) Benedict IX (a), 1032-45
Silvester III, 1045
- (148) Gregory VI, 1045-46

- (149) Clement II, 1046-47
Benedict IX (b), 1047-48
- (150) Damasus II, 1048
- (151) St. Leo IX, 1049-54
- (152) Victor II, 1055-57

ROBERTI, *Bibl. Maxima Pontificia* (21 vols., Rome, 1695-99); ROSKOVÁNY, *Romanus Pontifex antiquum Primum Ecclesie et principis civilis et Monumentum omnium arcuorum demonstratus* (16 vols., Neutra, 1867-79). The collection of ROBERTI embraces the works of more than a hundred authors (from the ninth to the seventeenth century) on the primacy. ROSKOVÁNY's work is a collection of documents dealing with the primacy, the civil principality, infallibility, the Vatican Council, etc. A valuable feature of the work is a vast bibliography of books and pamphlets treating of the subject from the earliest times up to the date of publication, with useful appreciations of many of the works mentioned. BELLARMINE, *De Summo Pontifice in Cardinalibus*, I (Ingolstadt, 1601); BALLERINI, *De primatu romani pontificis* in MIGNE, *Patrologia*, III, 906; PALMIERI, *De romano pontifice* (Rome, 1877); PASSAGLIA, *De prerogative s. Petri apostolorum principis* (Ratisbon, 1880); HERGENROTHER, *Catholic Church and Christian State* (London, 1876). On the primacy in the primitive Church: RIVINGTON, *The Primitive Church and the See of Peter* (London, 1894); IDEM, *The Roman Primacy*, 189-251 (London, 1899); CHAPMAN, *Bishop Gore and the Catholic Church* (London, 1905), vi-vii.

On the right of the pope to receive appeals: LUTUS, *Dirigimus et immutabile S. Petri circa omnium sub eodem fidei et Romanum quod Cathedram Appellationis in Opera*, VIII (Venice, 1728); ALEXANDER NATALIS, *Hist. eccl.*, sec. IV, dissertatio XXVIII: *De Jure Appellationum*; BALLERINI, *Annotationes in Dissert.*, V, *Quaestio* in MIGNE, P. L., LV, 534; HAFELER-LECLERCQ, *Hist. des conciles*, I (2), p. 739 sq. (Paris, 1907). On the primacy of honour: PHILLIPS, *Kirchenrecht* (Ratisbon, 1854); HINSCHTUS, *System des kathol. Kirchenrechts* (Berlin, 1869).

On papal elections: PHILLIPS, *op. cit.*; HINSCHIUS, *op. cit.*; THOMASSIN, *Vetus et nova ecclesiæ disciplina* (Lyons, 1706); SCHEFFER-BOICHOEST, *Die Neuordnung der Papstwahl durch Nicolaus II* (Strasburg, 1879). On the chronology of the popes: DUCHESNE, *Liber pontif.* (Paris, 1892); GAMS, *Series episcoporum* (Ratisbon, 1873).

G. H. JOYCE.

Popish Plot. See OATES'S PLOT.

Poppo, SAINT, abbot, b. 977; d. at Marchiennes, 25 January, 1048. He belonged to a noble family of Flanders; his parents were Tizekinus and Adalwif. About the year 1000 he made a pilgrimage to the Holy Land with two others of his countrymen. Soon after this he also went on a pilgrimage to Rome. He was about to marry a lady of noble family, when an impressive experience led him to seek another mode of life. As he was journeying late at night a flame burst forth over his head and his lance radiated a brilliant light. He believed this to be an illumination of the Holy Spirit, and soon after, 1005, he entered the monastery of St. Thierry at Reims. About 1008 Abbot Richard of St. Vannes at Verdun, who was a zealous reformer of monasteries in the spirit of the reform of Cluny, took Poppo with him to his monastery. Richard made Poppo prior of St. Vaast d'Arras, in the Diocese of Cambrai, about 1013. Here Poppo proved himself to be the right man for the position, reclaimed the lands of the monastery from the rapacious vassals, and secured the possession of the monastery by deeds. Before 1016 he was appointed to the same position at Vasloges (*Beloacum*, Beaulieu) in the Diocese of Verdun. In 1020 the Emperor Henry II, who had become acquainted with Poppo in 1016, made him abbot of the royal Abbeys of Stablo (in Lower Lorraine, now Belgium) and Malmédy. Richard was very unwilling to lose him. Poppo also received in 1023 the Abbey of St. Maximin at Trier, and his importance became still greater during the reign of Conrad II. From St. Maximin the Cluniac reform now found its way into the German monasteries. The emperor placed one royal monastery after another under Poppo's control or supervision, as Limburg an der Hardt, Echternach, St. Gislen, Weissenburg, St. Gall, Hersfeld, Waulsort, and Hostières. In the third decade of the century Poppo gave these positions as abbot to his pupils. The bishops and laymen who had founded monasteries placed a series of other monasteries under his care, as St. Laurence at Liège, St. Vincent at Metz, St. Eucharis at Trier, Hohorst, Brauweiler, St. Vaast, Marchiennes, etc. However, the Cluniac reform had at the time no permanent success in Germany, because the monks were accustomed to a more independent and individual way of action and raised opposition. After 1038 the German court no longer supported the reform.

Personally Poppo practised the most severe asceticism. He had no interest in literary affairs, and also lacked the powers of organization and centralization. Neither was he particularly prominent in politics, and in the reign of Henry III he was no longer a person of importance. Death overtook him while he was on a journey on behalf of his efforts at monastic reform. His funeral took place in the presence of a great concourse of people at Stablo.

KLEMENS LÖFFLER.

Popular Devotions.—Devotion, in the language of ascetical writers, denotes a certain ardour of affection in the things of God, and even without any qualifying prefix it generally implies that this ardour is of a sensible character. On the other hand, by the term "devotions" in the plural, or "popular devotions", we commonly understand those external practices of piety

by which the devotion of the faithful finds life and expression. The efficacy of these practices in eliciting feelings of devotion is derived from four principal sources, either (1) by the strong appeal which they make to man's emotional instincts, or (2) by the simplicity of form which puts them within the reach of all, or (3) by the stimulus of association with many others in the same good work, or (4) by their derivation from the example of pious persons who are venerated for their holiness. No doubt other reasons besides these might be found why this or that exercise brings with it a certain spiritual unction which stimulates and comforts the soul in the practice of virtue, but the points just mentioned are the most noteworthy, and in the more familiar of our popular devotions all these four influences will be found united.

Historically speaking, our best known devotions have nearly all originated from the imitation of some practice peculiar to the religious orders or to a specially privileged class, and consequently owe most of their vogue to the fourth of the influences just mentioned. The Rosary, for instance, is admitted by all to have been known in its earliest form as "Our Lady's Psalter". At a time when the recitation of the whole hundred and fifty Psalms was a practice inculcated upon the religious orders and upon persons of education, simpler folk, unable to read, or wanting the necessary leisure, recited instead of the Psalms a hundred and fifty Pater noster or supplied their place more expeditiously still by a hundred and fifty Hail Marys said as salutations of Our Lady. The Rosary is thus a miniature Psalter. Again, at a time when the most ardent desires of Christendom centred in the Holy Land, and when lovers of the Crucified gladly faced all hardships in the attempt to visit the scenes of the Saviour's Passion, those unable to accomplish such a journey strove to find an equivalent by following Christ's footsteps to Calvary at least in spirit. The exercise of the Stations of the Cross thus formed a miniature pilgrimage. Similarly, the wearing of a scapular or a girdle was a form of investiture for people living in the world, by which they might put on the livery of a particular religious institute; in other words, it was a miniature habit. Or again, those who coveted the merits attaching to the recitation of the day and night hours of the clergy and the monks supplied their place by various miniature Offices of devotion, of which the Little Office of the Blessed Virgin and the Hours of the Passion were the most familiar.

Even devotions which at first sight suggest nothing of imitation prove on closer scrutiny to be illustrations of the same principle. The triple Hail Mary of the Angelus probably owes its actual form to the *Tres preces* said by the monastic orders at Prime and Complin as far back as the eleventh century, while our familiar Benediction of the Blessed Sacrament has almost certainly developed out of an imitation of the musical rendering of the antiphons of Our Lady, notably the *Salve Regina*, which to the popular taste were the most attractive feature of the monastic office. To classify these practices of piety, and especially those others which concern the observance of special times and seasons, for example, the consecration of the month of May to Our Lady, or of the month of June to the Sacred Heart, is not easy; for the pious ingenuity of the faithful is fertile in new devices, and it is difficult to decide what degree of acceptance warrants us in regarding a new devotion as legitimately established. The dedication of May and June just referred to, and that of November to the Holy Souls, is recognized everywhere, but there is far less unanimity about the consecration of October, for example, to the honour of the Guardian Angels. This devotion is no doubt indicated in many prayer books, but it has been in a measure obscured of late years by the special papal commendation of the Rosary in October, while

Indulgences are also granted for the novena and other exercises in honour of St. Francis of Assisi during the same month. We may note that the consecration of March to St. Joseph, of September to the Seven Dolours, and, less directly, that of July to the Precious Blood, are also recognized by the grant of indulgences.

Again, there are other devotions whose popularity has been limited to certain periods or certain localities. For example, the various sets of "Little Offices" (e.g. of the Passion or of the Blessed Trinity), which occupy so much space in the printed *Horæ* and *Primers* of the early sixteenth century, are hardly heard of at present. The "Seven Blood-Sheddings" or the "Seven Falls" of Our Blessed Lord, once so much honoured, have now passed out of recollection. Similarly the exercise of the Jesus Psalter, which was incredibly dear to our ancestors in the old penal days, seems never to have spread beyond English-speaking countries and has never been indulged. On the other hand, the prevalence of more frequent Communion since the sixteenth century has introduced many new practices of devotion unknown in the Middle Ages. The Six Sundays of St. Aloysius, the Five Sundays of St. Francis's Stigmata, the Seven Sundays of the Immaculate Conception, the Seven Sundays of St. Joseph, the Ten Sundays of St. Francis Xavier, the Ten Sundays of St. Ignatius Loyola, and especially the Nine Fridays in honour of the Sacred Heart are all in various degrees authorized and familiar. And, as these last examples suggest, there is everywhere a tendency to multiply imitations. We have now not one Rosary, but many rosaries or chaplets (of which imitations perhaps the best known is the Rosary of the Seven Dolours), not one scapular but many scapulars, not one "miraculous medal" but several. Neither must we always expect to find consistency. In the thirteenth and fourteenth centuries, the Seven Dolours and Seven Joys of Our Lady were commonly Five Dolours and Five Joys (see "*Analecta Bollandiana*", 1893, p. 333), while this last reckoning probably owed much to the great popularity of the devotion to the Five Wounds. On the other hand, indulgences, which may be found in the *Raccolta*, have been granted to certain prayers in honour of the Seven Sorrows and Seven Joys of St. Joseph.

It must not, however, be supposed that devotional extravagances are suffered to multiply unchecked. Although the Holy See as a rule refrains from intervention, except when abuses are directly denounced to it (the practice being in such matters to leave the repression of what is unseemly or fantastic to the local ordinary), still, every now and again, where some theological principle is involved, action is taken by one of the Roman Congregations, and some objectionable practice is prohibited. Not very long since, for example, the propagation of a particular form of prayer was forbidden in connexion with the so-called "Brief of St. Anthony". The history of the slow recognition by the Church of the devotion to the Sacred Heart might very well serve as an illustration of the caution with which the Holy See proceeds in matters where there is question of any theological principle. The precise number of Christ's blood-sheddings, or of Mary's joys, the fashion or colour of scapulars, medals, or badges, the veneration of Our Lady under one particular invocation rather than another, are obviously matters of subordinate importance in which no great harm can result if some measure of freedom is allowed to the pious imagination of the faithful.

No good purpose would be served by attempting a catalogue of approved Catholic devotions. It may be sufficient to note that the list of indulged prayers and practices provided in the *Raccolta* or in the larger works of Beringer and Mocchegiani afford a sufficient practical indication of the measure in which such practices are recognized and recommended by the Church. Most of the principal devotions are dealt with sep-

arately in *THE CATHOLIC ENCYCLOPEDIA*, whether we regard different objects and motives of devotion—such as the Blessed Sacrament (see *EUCCHARIST*), the Passion, the Five Wounds, the Sacred Heart, the Seven Dolours, and, in a word, the principal mysteries and festivals—or, again, devotional practices—e. g., the Angelus, Benediction of the Blessed Sacrament, the Rosary, the Stations of the Cross—or, again, confraternities and associations identified with particular forms of devotion—e. g., the Confraternity of the Bona Mors or that of the Holy Family.

There seems to be no authoritative general work on popular devotions, but for the Indulgences and some historical details connected with them see *MOCCHEGIANI, Collectio Indulgentiarum* (Quaracchi, 1897); *BERINGER, Die Abldisse* (many editions and a French and Italian translation); *LÉPICIER, Indulgences*, tr. (London, 1906). Several of the more familiar popular devotions have been treated historically by the present writer in *The Month* (1900 and 1901).

HERBERT THURSTON.

Population, THEORIES OF.—Down to the end of the eighteenth century, very little attention was given to the relation between increase of population and increase of subsistence. Plato (*De republica*, V) and Aristotle (*De republica*, II, vi) maintained, indeed, that in a communistic society marriage and the birth of children ought to be regulated and restricted by law, lest the means of support should be insufficient for all the citizens; and in some of the city-states of ancient Greece, abortion, unnatural love, and infanticide were deliberately recommended and practised for the same general end. As a rule, however, the nations of antiquity as well as those of the medieval period regarded the indefinite increase of the population as a public good, since it multiplied the number of the country's fighting men. In the words of Frederick the Great, "the number of the population constitutes the wealth of the State". Before his time over-population had not occurred in any civilized country, or at least it had not been recognized as such. It was prevented or disguised by disease, plagues, wars, and various forms of economic hardship; by fixed and simple standards of living; and by customs which adjusted the marriage rate, and consequently the rate of reproduction, to the contemporary planes of living and supplies of food. The Mercantilists, whose opinions on economic matters were widely accepted in the sixteenth, seventeenth, and eighteenth centuries, agreed with the military statesmen that increase of population was an unqualified blessing; while the Physiocrats of the eighteenth century were less confident, some of them insisting that shortage of food was a possibility that ought to be taken into account by a nation, none of them conceived the problem as of pressing importance, or dealt with it in an extended and systematic way. Several other writers, such as Montesquieu, Hume, Steuart, Wallace, Arthur Young, and Julius Möser, who had recognized the existence and general nature of the problem, likewise failed to discuss it thoroughly. This was true even of Adam Smith. Although he noted the fact that increase of population among the poorer classes is checked by scarcity of subsistence ("*Wealth of Nations*", London, 1776, I, viii), he did not develop the thought or draw any practical conclusions therefrom. Writing when the great industrial inventions were just beginning to indicate an enlargement of the means of living, when the new political and economic freedom seemed to promise the release and expansion of an immense amount of productive energy, and under the influence of a philosophical theory which held that the "unseen hand" of Providence would so direct the new powers and aspirations that all classes would have abundant sustenance, Smith was an unqualified optimist. He believed that the pressure of population upon subsistence had become a thing of the past.

The first author to deal systematically with the problem was Gianmaria Ortes, a Venetian friar, in a work entitled, "Reflessioni sulla popolazione per rapporto all' economia nazionale." It appeared in 1790, eight years before the first edition of Malthus's famous work. According to Nitti: "Some pages of Ortes seem quite similar to those of Malthus; he comprehended the entire question, the geometrical progression of the population, the arithmetical progression of the means of subsistence, the preventive action of man, and the repressive action of nature" (Population and the Social System, p. 8). However, his book lacked the confident tone and the statistical arguments of Malthus; consequently it was soon overshadowed by the latter's production, and the Anglican divine instead of the Venetian friar became the sponsor of the world's best-known and most pessimistic theory of population.

THE THEORY OF MALTHUS.—In the twenty-two years that had intervened between the appearance of Adam Smith's "Wealth of Nations" and the "Essay on the Principle of Population" (London, 1798) of the Rev. Thomas Malthus (1766-1834), the French Revolution had caused the downfall of the old social system, without improving the condition of the French people; a succession of bad harvests had impoverished the agricultural districts of England, while her credit had become so impaired by the recent wars as to render very difficult the importation of supplies from abroad. On the other hand, the rapid development of the textile and other industries through the recent mechanical inventions had called new towns into existence, and greatly stimulated the increase of population; the system of public allowances of money to all pauper children encouraged improvident marriages among the poorer classes. Although there had been a considerable increase in the national wealth as a whole, the working classes had received none of the benefit. Increased production seemed to mean a disproportionate increase in population, and a decrease in the subsistence of the poor. The obvious objection, that this condition was attributable to bad distribution rather than to insufficient production, had indeed come to the attention of Malthus. In some degree his book was an answer to that very objection. William Godwin, a disciple of the French revolutionary philosophers, chiefly in his work "Political Justice", had been defending the theory that all the evils of society arose from defective social institutions, and that there was more than enough wealth for all, if it were only distributed equally. Malthus replied to this position with his "Essay on the Principle of Population". His thesis was that population constantly tends to outrun subsistence, but that it is held in check by vice—abortion, infanticide, prostitution, and by misery in the form of war, plague, famine, and unnecessary disease. If all persons were provided with sufficient sustenance, and these checks removed, the relief would be only temporary; for the increase of marriages and births would soon produce a population far in excess of the food supply.

The first edition of Malthus's work had, therefore, a definite polemical purpose, the refutation of a communistic scheme of society. Its arguments were general and popular rather than systematic or scientific. They were based upon facts easily observed, and upon what the average man would expect to happen if vice and misery ceased to operate as checks to population. As a popular refutation of the theories of Godwin, the book was a success, but its author soon began a deeper inquiry into the facts from which he had drawn his conclusions. The result of his labours was the appearance in 1803 of a second edition of the "Essay", which differed so much in size and content from the first as to constitute, in the words of Malthus himself, "a new work". In the first chapter of the

new edition he declared that "the constant tendency of all animated life to increase beyond the nourishment prepared for it" (p. 2) had not hitherto received sufficient attention. Before attempting to prove the existence of this tendency, he inquired what would be "the natural increase of population if left to exert itself with perfect freedom . . . under the most favourable circumstances of human industry" (p. 4). On the basis of the history of North America during the century and a half preceding 1800, and from the opinions of some economists, he concluded that "population when unchecked goes on doubling itself every 25 years, or increases in a geometrical ratio" (p. 6). A brief examination of the possibilities of food increase convinced him that this could never be "faster than in an arithmetical ratio" (p. 10). Applying these conclusions to England with its 11,000,000 inhabitants in 1800, he found that the natural result at the end of the nineteenth century would be a population of 176,000,000, and subsistence for only 55,000,000 (*ibid.*). The remainder of the first volume is occupied with an account of the positive checks, that is, vice and misery, which had hitherto concealed this disastrous discrepancy between population and subsistence in the various countries of the world. In the second volume he discusses the means which have been proposed to prevent an undue increase of population, and, therefore, to render unnecessary the action of the positive checks. Some of the means that he recommended were abstention from public provision for the encouragement of population increase and for the relief of the poor, and abolition of existing laws of this kind, especially the Poor Law of England. But his chief recommendation was the practice of what he called "moral restraint". That is, persons who were unable to maintain a family properly should live in chaste celibacy until such time as they had overcome this economic disability (*bk. IV, passim*). In the new edition of his work, consequently, Malthus not merely pointed out a new check to population, but advocated it, in order to prevent and forestall the operation of the cruel and immoral checks automatically set in motion by vice and misery.

Criticism of the Malthusian Theory.—The theory may be briefly characterized thus: In its most extreme and abstract form it is false; in its more moderate form it never has been and never can be demonstrated; even if true, it is so hypothetical, and subject to so many disturbing factors, that it is of no practical value or importance. It is, of course, abstractly or theoretically possible that population may exceed subsistence, either temporarily and locally, or permanently and universally. This possibility has been frequently realized among savage peoples, and occasionally among civilized peoples, as in the case of famine. But the theory of Malthus implies something more than an abstract possibility or a temporary and local actuality. It asserts that population shows a constant tendency to outrun the food supply, a tendency, therefore, that is always about to pass into a reality if it is not counteracted. In all the six editions of his work that appeared during Malthus's lifetime, this tendency is described in the formula that population tends to increase in geometrical progression, as, 2, 4, 8, etc., while the utmost increase in subsistence that can be expected is according to an arithmetical ratio, as, 2, 3, 4, etc. So far as we know, population has never increased in geometrical ratio through any considerable period; but we cannot show that such an increase, by natural means, is physiologically impossible. All that it implies is that every married couple should have on the average four children, who would themselves marry and have the same number of children to each couple, and that this ratio should be kept up indefinitely. It is not, however, true that the means of

living can be increased only in an arithmetical ratio. During the nineteenth century this ratio was considerably exceeded in many countries (cf. Wells, "Recent Economic Changes"). Malthus's view on this point was based upon a rather limited knowledge of what had been happening before his time. He did not foresee the great improvements in production and transportation which, a few years later, so greatly augmented the means of subsistence in every civilized country. In other words he compared the potential fecundity of man, the limits of which were fairly well known, with the potential fertility of the earth and the potential achievements of human invention, neither of which was known even approximately. This was a bad method, and its outcome in the hands of Malthus was a false theory.

Even if we discard the mathematical formulation of the theory, and examine it in its more moderate form, as merely asserting that population tends to outrun subsistence, we find that the theory cannot be proved. The facts adduced by Malthus in support of his contention related to the insufficiency of the food supply in many countries at many different times. Now it is true that barbarous peoples and peoples dependent upon fishing and hunting for a living have frequently lacked subsistence, especially when they were unable or unwilling to emigrate; but such has not often been the case for any considerable time among civilized nations. Want of food among the latter has usually been due to a bad industrial organization and a bad distribution, rather than to the poverty of nature, or the unproductiveness of man. Even to-day a large proportion of the inhabitants of every country is insufficiently nourished, but no intelligent person attributes this condition to an absolute excess of population over subsistence or productiveness. Since Malthus did not give sufficient attention to the evils of distribution, he failed to prove that his theory was generally true, even of the time before he wrote; since he did not suspect the great-improvements in production that were soon to take place, he was still less able to show that it would be universally valid. While admitting the weakness of his argument, some of his later followers insist that the theory is true in a general way. Population, if unchecked by a prudential regulation of marriages and births, can and in all probability often will outrun subsistence, owing to the law of diminishing returns (cf. Hadley, "Economics").

Although Malthus seems to have had some knowledge of this law, he did not use it as the basis of his conclusions. Now the "law of diminishing returns" is simply the phrase by which economists describe the well-known fact that a man cannot go on indefinitely increasing the amount of capital and labour that he expends upon a piece of land, and continue to get profitable returns. Sooner or later a point is reached where the product of the latest increment of expenditure is less than the expenditure itself. This point has already been reached in many regions, whence a part of the population is compelled to move to other land. When it has been reached everywhere, population will universally exceed subsistence. Stated in this form, Malthusianism seems to be irrefutable. Nevertheless the law of diminishing returns, like all economic laws, is true only in certain conditions. Change the conditions, in this case, the methods of production, and the law is no longer operative. With new productive processes, further expenditures of labour and capital become profitable, and the point of diminishing returns is moved farther away. This fact has received frequent illustration in the history of agriculture and mining. While it is true that new methods are not always discovered as soon as they are needed, and that men often find it more profitable to expend their

additional resources upon new lands than upon the old, it is also true that we can set no definite limits to the inventive power of man, nor to the potential fertility of nature. Absolutely speaking, no one is warranted in asserting that these two forces will not be able to modify indefinitely the conditions in which the law of diminishing returns operates, so that subsistence will keep pace with population as long as men have standing room upon the earth. On the other hand, we cannot prove that if population were to increase up to the full limit of its physiological possibilities, it would always be sufficiently provided for by the fertility of nature and the inventiveness of man. We are dealing here with three unknown quantities. Upon such a basis it is impossible either to establish a social law, or conclusively to refute any particular generalization that may be set up. In the third place, the Malthusian theory, even if true, is of no practical use. The assurance that population, if unchecked, will inevitably press upon subsistence does not terrify us, when we realize that it always has been checked, by celibacy, late marriages, war, natural calamities, and other forces which are not due to scarcity of subsistence. The practical question for any people is whether these non-scarcity checks are likely to keep population within the limits of that people's productive resources. So far as the nations of the Western world are concerned, this question may be answered in the affirmative.

The use of preventive checks, such as postponement of marriage, abortion, and artificial sterility have become so common that the birth-rate has almost everywhere decreased within the last half-century, and there is no indication of a reaction in the near future. During the same period the rate of food production has considerably increased. Moreover, the decline in the birth-rate has been most pronounced among those classes whose subsistence is most ample, thus suggesting the probability that it will become equally prevalent among the poorer classes as soon as their plane of living is raised. The contingency that men may some day become so careless of the higher standards of comfort as to give up the present methods of restriction is too remote to justify anxiety on the part of this generation. Let us assume, however, that, under the influence of religion and moral teaching, all the immoral preventives of population were discarded. Even so, we have no reason to doubt that the lawful checks, such as virtuous celibacy both temporary and permanent, and the decrease of fecundity that seems to be a necessary incident of modern life, particularly in cities, would be sufficient to keep the world's inhabitants well within the bounds of its productive powers. So far as we can see at present, the Malthusian theory, even if true in the abstract and hypothetically, is so hypothetical, assumes the absence of so many factors which are always likely to be present, that it is not deserving of serious attention, except as a means of intellectual exercise. As a law of population, it is about as valuable as many of the other laws handed down by the classical economists. It is about as remote from reality as the "economic man".

And yet, this theory met with immediate and almost universal acceptance. The book in which it was expounded went through six editions while Malthus was living, and exerted a remarkable influence upon economics, sociology, and legislation during the first half of the nineteenth century. Aside from a section of the Socialists, the most important group of writers rejecting the Malthusian theory have been Catholic economists, such as Liberatore, Devas, Pesch, Antoine (cf. Pesch, "Lehrbuch der Nationalökonomie", II, 598). Being pessimistic and individualistic, the teaching of Malthus agreed thoroughly with the temper and ideas of his time. Distress was deep and general, and the political and

economic theories of the day favoured the policy of *laissez faire*. To him perhaps more than to any other writer is due the evil repute of the orthodox economists, as opponents of legislation in the interests of the poorer classes. In the words of Devas, "Malthusianism in practice has been a grave discouragement to all works of social reform and humane legislation, which appeared as foolish sentiment defeating its kind aims by encouraging population" (Political Economy, 2nd ed., p. 198). Malthus declared that the poor created their own poverty by marrying improvidently, and that any general system of poor relief only increased and prolonged the root evil, overpopulation, from which they suffered (Essay bk. IV, *passim*). Although he had a genuine sympathy for the poor, and believed that the practice of "moral restraint" in postponing or foregoing marriage was the one means of bettering their condition permanently, his teaching received the cordial approbation of the wealthier classes, because it tended to relieve them of "responsibility for the condition of the working classes, by showing that the latter had chiefly themselves to blame, and not either the negligence of their superiors or the institutions of the country" (Ingram, "History of Political Economy", p. 121). His more recent followers among the economists realize that an improvement in the condition of the masses is apt to encourage a lower birth-rate, consequently they are not opposed to all measures for improvement by legislation. Many of them, however, have exaggerated the social and moral benefits of a low birth-rate, and have implicitly approved the immoral and destructive practices upon which it depends. The irony of the situation is that preventive checks, moral and immoral, have been adopted for the most part by the rich and comfortable classes, who, in the opinion of Malthus, were not called upon to make any personal contribution to the limitation of population.

The most notable results of the work and teaching of Malthus may be summed up as follows: he contributed absolutely nothing of value to human knowledge or human welfare. The facts which he described and the remedies which he proposed had long been sufficiently obvious and sufficiently known. While he emphasized and in a striking way drew attention to the possibility of general overpopulation he greatly exaggerated it, and thus misled and misdirected public opinion. Had he been better informed, and seen the facts of population in their true relations, he would have realized that the proper remedies were to be sought in better social and industrial arrangements, a better distribution of wealth, and improved moral and religious education. As things have happened, his teaching has directly or indirectly led to a vast amount of social error, negligence, suffering, and immorality.

Neo-Malthusianism.—In a sense this system is the extreme logical outcome of Malthusianism proper. While Malthus would have turned in horror from the practices of the newer theory, his own recommendations were much less effective as a means to the common end of both systems. The Neo-Malthusians realize better than he did, that if population is to be deliberately restricted to the desired extent, other methods than chaste abstinence from or postponement of marriage are necessary. Hence they urge married couples to use artificial and immoral devices for preventing conception. Some of the most prominent leaders of this movement were Robert Dale Owen, John Stuart Mill, Charles Bradlaugh, and Annie Besant. With them deserve to be associated many economists and sociologists who implicitly advocate the same practices, inasmuch as they glorify an indefinitely expanding standard of comfort, and urge limitation of offspring as the one certain means whereby the labour of the poorest

paid workers may be made scarce and dear. Some of the Neo-Malthusian leaders in England maintained that they were merely recommending to the poor what the rich denounced but secretly practised.

In common with the older theory from which it derives its name, Neo-Malthusianism assumes that population if unchecked will exceed subsistence, but by subsistence it means a liberal, or even a progressively rising, standard of comfort. In all probability this contention is correct, at least, in the latter form; for all the indications are against the supposition that the earth can furnish an indefinitely rising standard of comfort for a population that continues to increase up to the full measure of its physiological capacity. On the other hand, the practices and the consequences of the system are far more futile, deceptive, and disastrous than those of Malthusianism. The practices are intrinsically immoral, implying as they do either foeticide, or the perversion of natural faculties and functions, to say nothing of their injurious effect upon physical health. The condition aimed at, namely, the small family or no children at all, fosters a degree of egotism and enervating self-indulgence which lessens very considerably the capacity for social service, altruism, and every form of industrial and intellectual achievement. Hence the economists, sociologists, and physicians of France condemn the low birth-rate and the small family as a grave national and social evil. On the industrial side, Neo-Malthusianism soon defeats its own end; for increased selfishness and decreased stimulus to labour are naturally followed by a smaller output of product. If the restriction of offspring were confined to the poorer classes, their labour would indeed become scarce relatively to the higher kinds of labour, and their wages would rise, provided that their productivity were not diminished through deterioration of character. As a fact, however, the comfortable classes adopt the method much more generally than do the poor, with the result that the excessive supply of unskilled labour is increased rather than diminished. Where all classes are addicted to the practice, the oversupply of unskilled labour remains relatively unchanged. The wages of all classes in France are lower than in Germany, England, or the United States (cf. Fifteenth Annual Report of the Commissioner of Labour). Finally, a constantly rising standard of comfort secured by the practices and in the moral atmosphere of Neo-Malthusianism means not a higher but a lower plane of life; not more genuine culture or loftier morals, but more abundant physical enjoyments and a more refined materialism.

Other Theories of Population.—Rodbertus, Marx, Engels, Bebel, and possibly a majority of the Socialists who have considered the problem, either deny a general tendency to excessive population, or maintain that it is realized only in capitalistic society. Under Socialism there would be ample sustenance for the greatest possible increase in population, or, at any rate, for whatever increase that form of society would decide to have. Now it is quite unlikely that a Socialistic organization of production, with its lessened incentives to inventive and productive energy, would be able to provide means of living adequate to the full capacity of human fecundity; and a universally and continuously rising standard of comfort would be subject to all the physical, moral, and intellectual hindrances and consequences which beset the suicidal system of Neo-Malthusianism.

A respectable minority of economists (in this connection frequently known as "optimists") have rejected the Malthusian theory from the beginning. Among the most prominent are, Bastiat in France, List (1789-1846) in Germany, and Henry C. Carey in America. In a general way they all maintained that in proper social and industrial arrangements

population will never exceed subsistence. This was likewise the position of Henry George, whose attack upon the theory of Malthus is probably more familiar to Americans than that of any other writer (cf. *Progress and Poverty*). Carey, whose father, Matthew Carey, the Philadelphia publisher, was a Catholic, based his view partly upon his belief in Providence, and partly upon the assumption that in every country the richest lands and land powers remain undeveloped longest; List pointed out that thickly-populated lands are frequently more prosperous than those with relatively few inhabitants, and that we have no good reason to set limits to the capacity of the earth, which could undoubtedly support many times its present population; and Bastiat, who had already observed the artificial restriction of the birth-rate in his own country, seems to have concluded that the same thing would happen in other countries whenever subsistence tended to fall below the existing standards of living. Although there is some exaggeration and uncertainty in all these positions, they are undoubtedly nearer the truth than the assumptions of Malthus.

What may be called the evolutionist theory of population was originated and incompletely stated by Charles Darwin, and developed by Herbert Spencer. In the latter form it has been adopted substantially by many biologists and sociologists. Although it was a chance reading of Malthus's work that suggested to Darwin the idea of the struggle for existence, the Spencerian theory of population is on the whole opposed to the Malthusian. According to Spencer, the process of natural selection, which involves the destruction of a large proportion of the lower organisms, increases individuality and decreases fecundity in the more developed species, especially in man. At length, population becomes automatically adjusted to subsistence at that level which is consonant with the highest progress. With regard to the future, this theory is extremely optimistic, but it is not more probable or any more capable of proof than his prophecy concerning the future identification of egoism and altruism.

On the basis of painstaking research and abundant statistics, M. Arsène Dumont concluded that Malthusianism is theoretically false and practically worthless, and that the only valuable generalizations about the relation of population to subsistence are those which concern a particular country, epoch, civilization, or form of society (cf. Nitti, *op. cit.*). In a democratic society, he says, the real danger is excessive limitation of the birth-rate by all classes, even the lowest. When privileged classes and social stratifications have disappeared, the members of every class strive to raise themselves above their present condition by restricting the number of their offspring. So far as it goes, this theory is a correct explanation of certain existing tendencies, but, as Father Pesch observes in reply to P. Leroy-Beaulieu, the true remedy for the French conditions is not monarchy but the Christian religion and moral teaching (*op. cit.*, II, 639).

The theory of Nitti has a considerable similarity to that of Spencer, but the Italian sociologist expects the deliberate action of man, rather than any decrease in human fecundity, to conform population to subsistence in any society in which wealth is justly distributed, individuality strongly developed, and individual activity maintained at a high level of efficiency (*op. cit.*). He repudiates, however, the egoistic and socially demoralizing "prudence" which is so generally practised to-day for the limitation of the size of families. Nevertheless, it is utterly unlikely that the sane regulation which he desires will be obtained without the active and universal influence of religion. With this condition added, his theory ~~seems~~ to be the most reasonable of all

those considered in this article, and does not greatly differ from that of the Catholic economists.

The latter, as we have already noted, reject the Malthusian theory and the interpretation of social facts upon which it is founded. Taking as typical the views of Devas in England, Antoine in France, Perin in Belgium, Liberatore in Italy, and Pesch in Germany (see works cited below) we may describe their views in the following terms. Where production is effectively organized, and wealth justly distributed; where the morals of the people render them industrious, frugal, averse to debilitating comforts, and willing to refrain from all immoral practices in the conjugal relation; where a considerable proportion of the people embrace the condition of religious celibacy, others live chastely and yet defer marriage for a longer or shorter period, and many emigrate whenever the population of any region becomes congested—undue pressure of population upon subsistence will never occur except locally and temporarily. Probably this is as comprehensive, and at the same time as correct a generalization as can be formulated. It may be reduced to the summary statement of Father Pesch: "Where the quality of a people is safeguarded, there need be no fear for its quantity" (*op. cit.*, II, 624). Take care of the quality, says the learned Jesuit, and the quantity will take care of itself. Be anxious about the quantity, say the Malthusians and all the advocates of the small family, lest the quality deteriorate. It is less than eighty years since Malthus died, and a considerably shorter time has elapsed since the restriction of births became in any sense general; yet the number is rapidly increasing everywhere of thoughtful men who see that the Western world is confronted by "a problem not of excessive fecundity, but of race suicide" (Seligman, "Principles of Economics", 65).

JOHN A. RYAN.

Pordenone, GIOVANNI ANTONIO, Italian painter, b. at Pordenone, 1483; d. at Ferrara, January, 1539. He is occasionally referred to by his family name Licinio, at times as Regillo, but usually as Pordenone, from his birthplace, and by that name some of his works are signed. He is believed to have been a pupil of Pellegrino da San Daniello. Most of the information respecting him is derived from Carlo Ridolfi, who states that Pordenone's first commission was given him by a grocer in his native town, to try his boast that he could paint a picture as the priest commenced High Mass, and complete it by the time Mass was over. He is said to have executed the given commission in the required time. Most of his early work is to be found in the form of fresco decoration in the churches around Pordenone, where he spent most of his time. There he married twice. His work was in great demand in Mantua, Cremona, Treviso, and Spilimbergo, where his rich and elaborate fresco work, as well as decorations for the fronts of organs, and altar-pieces, are found. About 1529 he went to Venice, but little of his work remains in that city, save the two panels representing St. Christopher and St. Martin in the church of Saint Rocco. He then journeyed to Piacenza, Genoa, Ferrara, and other places, doing fresco decoration, and receiving warm welcome at each place. Returning to his native city, he received the honour of knighthood from King John of Hungary, and from that time was frequently styled

"Regillo". In 1536 he was again in Venice, carrying out some commissions for the Council of Ten, and decorating the ceilings of three of their halls. These works were so thoroughly approved that further commissions were given him by the Senate, but unfortunately everything carried out by Pordenone at that time has perished. From Venice he went to Ferrara, to execute certain commissions for Ercole II, Duke of Ferrara, but he was there a short time when he died.

PORDENONE (Painting by himself)

state that he caught a severe chill after eating, and a third statement says that he died from an epidemic at that time raging in the city. A contemporary artist, however, gives his family name as Cuticello and not Licinio. He states definitely that the artist was poisoned by Ferrarese artists at the Angel Inn, Ferrara. His tomb is in the church of San Paolo in Ferrara. Better than most of his contemporaries, he was acquainted with the laws of perspective, and his fresco work is always well drawn, learned, agreeable, and pleasant. He possessed great facility and considerable power of originality, and being a man of strong and very determined religious opinions, devoted himself heartily to church decoration, and carried it out with exceedingly fine results. There was a strong competition between him and Titian in Venice, and there are statements in Venetian MSS. of the time which imply that certain works of Pordenone's were intentionally destroyed by persons who were jealous of the honour and position of Titian. At the present day, to understand his painting, it is necessary to visit the various churches round Pordenone, as the quality of his workmanship cannot be appreciated from the few frescoes which remain in Venice, nor from the small number of easel pictures which can be attributed to him with any definite authority. He had many pupils who copied his work cleverly, and who probably did most of the smaller pictures attributed to him. Perhaps his finest are those in the cathedrals of San Daniele, Spilimbergo, Treviso, and Cremona; in Munich there is a portrait of himself with his pupils, and there is another of himself in a private gallery in Rome. He appears to have founded his ideas in Venice very much on those of Giorgione and Titian, but in the cathedrals already mentioned his work is more natural and original.

RIDOLFI, *Le Maraviglie dell' Arte* (Venice, 1648), and the *Motense MS.*, in the Venice Library.

GEORGE CHARLES WILLIAMSON.

Pordenone, ODORIC OF, Franciscan missionary of Czech family named Mattiussi, b. at Villanova near Pordenone, Friuli, Italy, about 1286; d. at Udine, 14 Jan., 1331. About 1300 he entered the Franciscan Order at Udine. Towards the middle of the thirteenth century the Franciscans were commissioned by the Holy See to undertake missionary work in the interior

of Asia. Among the missionaries sent there were John Plano Carpini, William Rubruquis, and John of Montecorvino. Odoric was called to follow them, and in April, 1318, started from Padua, crossed the Black Sea to Trebizond, went through Persia by way of the Tauris, Sultaniah, where in 1318 John XXII had erected an archbishopric, Kasham, Yezd, and Persepolis; he also visited Farsistan, Khuzistan, and Chaldeia, and then went back to the Persian Gulf. From Hormuz he went to Tana on the Island of Salsette, north of Bombay. Here he gathered the remains of Thomas of Tolentino, Jacopo of Padua, Pietro of Siena, and Demetrius of Tiflis, Franciscans who, a short time before, had suffered martyrdom, and took them with him so as to bury them in China. From Salsette he went to Malabar, Fondaraina (Flandrina) that lies north of Calicut, then to Cranganore that is south of Calicut, along the Coromandel Coast, then to Meliapur (Madras) and Ceylon. He then passed the Nicobar Islands on his way to Lamori, a kingdom of Sumoltra (Sumatra); he also visited Java, Banjarmasin on the southern coast of Borneo, and Tsiompa (Champa) in the southern part of Cochin China, and finally reached Canton in China. From Canton he travelled to Zaitoum, the largest Chinese seaport in the Middle Ages, and Che-kiang, and went overland by way of Fu-cheu, the capital of the province of Fokien, to Quinsay (Hangcheufu), celebrated by Marco Polo. He remained in China and went to Nanking, Yangchufu, and finally travelled by the great canal and the Hwangho River to Khan-balig or Peking, the capital of the Great Khan. At that time the aged Montecorvino was still archbishop in Peking, where Odoric remained three years. On his return journey he went overland by way of Chan-si through Tibet, from there apparently by way of Badachschan to the Tauris and Armenia, reaching home in 1330.

In May, 1330, at the request of his superior, Guidotto, Odoric dictated an account of his travels to Brother William of Solagna while at the monastery of St. Anthony at Padua. According to another version Henry of Glatz, who was at that time staying at the papal court at Avignon, made notes of the accounts given by Odoric's travelling companions and wrote them out at Prague in 1340. Unfortunately Odoric accepted many fabulous stories and for a long period it was doubted whether he had really seen all the places and regions he described. His narrative, though, is veracious, and he is the first European traveller from whom are learned many peculiarities of the Chinese people and country which Marco Polo did not mention, because he had grown accustomed to them. It is to be regretted that he does not give a more detailed account of Tibet and Lhasa, the capital of the Dalai-Lama, which he was the first European to enter. The account of his travels was widely spread by Mandeville's plagiarisms from them, Mandeville's work being exceedingly popular in the later Middle Ages and much used as a manual by geographers of that period. Numerous manuscripts of Odoric's travels were current in Italy, France, Germany, and England. They were first printed at Pesaro. A Latin version appeared in Marcellino da Civezza's "*Storia universale delle missioni Francescane*", III (Rome, 1859), 739-81; an English translation was made by Yule in his work "*Cathay and the Way Thither*", I (London, 1866), 1-162; a French version with very good notes was made by Henri Cordier "*Les voyages en Asie au XIV^e siècle du bienheureux frère Odoric de Pordenone*" (Paris, 1891).

Besides the editions already given may be mentioned: ASQUINI, *Vita e viaggi del B. Odorico da Udine* (Udine, 1737); KUNSTMANN, *Die Missionen in Indien u. China im XIV. Jahrh.* in *Histor.-polit. Blätter*, XXXVIII (Munich, 1856), 507-37; RICHTHOFEN, *China*, I (Berlin, 1877), 617-8; DOMENICHELLI, *Sopra la vita e i viaggi del beato Odorico da Pordenone dell' ordine de' Minori* (Prato, 1881); GNAUCK, *Odorich von Pordenone, ein Orientreisender d. XIV. Jahrh.* (Leipzig, 1895).

OTTO HARTIG.

Pormort, THOMAS, VENERABLE, English martyr, b. at Hull about 1559; d. at St. Paul's Churchyard, 20 Feb., 1592. He was probably related to the family of Pormort of Great Grimsby and Saltfleetby, Lincolnshire. George Pormort, Mayor of Grimsby in 1565, had a second son Thomas baptized, 7 February, 1566, but this can hardly be the martyr. After receiving some education at Cambridge, he went to Rheims, 15 January, 1581, and thence, 20 March following, to Rome, where he was ordained priest in 1587. He entered the household of Owen Lewis, Bishop of Cassano, 6 March, 1587. On 25 April, 1590, Pormort became prefect of studies in the Swiss college at Milan. He was relieved of this office, and started for England, 15 September, without waiting for his faculties. Crossing the St. Gotthard Pass, he reached Brussels before 29 November. There he became man-servant to Mrs. Geoffrey Pole, under the name of Whitgift, the Protestant archbishop being his godfather. With her he went to Antwerp, intending to proceed to Flushing, and thence to England. He was arrested in London on St. James's Day (25 July), 1591, but he managed to escape. In August or September, 1591, he was again taken, and committed to Bridewell, whence he was removed to Topcliffe's house. He was repeatedly racked and sustained a rupture in consequence. On 8 February following he was convicted of high treason for being a seminary priest, and for reconciling John Barwys, or Burrows, haberdasher. He pleaded that he had no faculties; but he was found guilty. At the bar he accused Topcliffe of having boasted to him of indecent familiarities with the queen. Hence Topcliffe obtained a mandamus to the sheriff to proceed with the execution, though Archbishop Whitgift endeavoured to delay it and make his godson conform, and though (it is said) Pormort would have admitted conference with Protestant ministers. The gibbet was erected over against the haberdasher's shop, and the martyr was kept standing two hours in his shirt upon the ladder on a very cold day, while Topcliffe vainly urged him to withdraw his accusation.

POLLEN, *English Martyrs 1584-1603* (London, 1908), 187-190, 200-2, 208-10, 292; *Acts of the English Martyrs* (London, 1891), 118-20; CHALLONER, *Missionary Priests*, I, no. 95; GILLOW, *Bibl. Dict. Eng. Cath.*, s. v.; *Harleian Society Publications*, LII (London, 1904), 790; KNOX, *Douay Diaries* (London, 1878), 174-7.

JOHN B. WAINEWRIGHT.

Porphyreon, titular see, suffragan of Tyre in Phœnicia Prima. It is described in the "Notitia Episcopatum" of Antioch as belonging to the sixth century (*Echos d'Orient*, X, 1907, 145), but does not appear in that of the tenth century (op. cit., 97). Lequien (*Oriens christ.*, II, 829-32) mentions five of its bishops: Thomas, 451; Alexander, at the end of the fifth century; Theodore, 518; Christophorus, 536; and Paul (contemporary of Justinian II), 565-78. There were two Porphyreons in this province, one, described by Scylax (civ. ed. Müller) north of Sidon and also by Palerin of Bordeaux (*Itinera hierosolymitana*, ed. Geyer, 18) eight miles from Sidon, is now the village of El-Djiyeh, in the midst of the beautiful gardens between Saida and Beirut, near the Khan en-Nebi Yunès; a second Porphyreon, according to the Pseudo-Antoninus (*Itinera hierosolymitana*, 161), may be located six or seven miles north of Carmel. Historians of the Crusades (William of Tyre and James of Vitry) confound this town with the modern Caipha. The latter corresponds to our see. In fact Saint Simeon Stylite the Young, contemporary of Paul Bishop of Porphyreon, affirms (Mansi, "Conciliorum collectio", XIII, p. 160) that the episcopal town may be found near Castra, a place inhabited by the Samaritans. Now, in the same epoch the Pseudo-Antoninus (op. cit., 160) locates the "Castra Samaritanorum ■ Sucamina (Caipha) milliario subtus monte Carmelo" south of Porphyreon. The identification is therefore incontestible. The church of Porphyreon,

dedicated to the Blessed Virgin, was not built by Justinian II but by Justinian I (Procopius, "De Aedificiis", V, ix; "Historia arcana", xxx). The ruins of Porphyreon should be found near Belus, the Nahr Namein, in the sands of which may still be seen the *murex brandaris* and the *murex trunculus* (thorny shell fish), from which is extracted the famous purple dye of Tyre, and which has given its name to Porphyreon.

S. VAILHÉ.

Porphyrius. See NEO-PLATONISM.

Porphyrius, SAINT, Bishop of Gaza in Palestine, b. at Thessalonica about 347; d. at Gaza, 26 February, 420. After five years in the Egyptian desert of Scete he lived five years in a cave near the Jordan. In spite of his impaired health, he frequently visited the scene of the Resurrection. Here he met the Asiatic Mark, at a later date a deacon of his church and his biographer. To effect the sale of the property still owned by Porphyrius in his native city, Mark set out for Thessalonica and, upon his return, the proceeds were distributed among the monasteries of Egypt and among the necessitous in and around Jerusalem. In 392 Porphyrius was ordained to the priesthood, and the relic of the Holy Cross was intrusted to his care. In 395 he became Bishop of Gaza, a stronghold of paganism, with an insignificant Christian community. The attitude of the pagan population was hostile so that the bishop appealed to the emperor for protection and pleaded repeatedly for the destruction of pagan temples. He finally obtained an imperial rescript ordering the destruction of pagan sanctuaries at Gaza. A Christian church was erected on the site of the temple of Marnas. In 415 Porphyrius attended the Council of Diospolis. The "Vita S. Porphyrii" of Mark the Deacon, formerly known only in a Latin translation, was published in 1874 by M. Haupt in its original Greek text; a new edition was issued in 1895 by the Bonn Philological Society.

Acta SS., Feb., III (Paris, 1865), 649-66; NUTH, *De Marci diaconi vita Porphyrii episcopi Gazensis quaestiones historicae et grammaticae* (Bonn, 1897); BUTLER, *Lives of the Saints*, 26 Feb.

N. A. WEBER.

Porrecta, SERAFINO, family name CAPPONI, called a PORRECTA from the place of birth, theologian, b. 1536; d. at Bologna, 2 Jan., 1614. He joined the Dominican Order at Bologna in 1552. His life was devoted entirely to study, teaching, writing, and preaching. He is best known as a commentator on the "Summa" of St. Thomas; he also wrote valuable commentaries on the books of the Old and New Testaments. His duties as a professor prepared him well for work of this kind, for he taught philosophy, theology (dogmatic and moral), and Sacred Scripture. In 1606, Father Capponi was invited to teach theology and Sacred Scripture to the Carthusians in a monastery near Bologna. He accepted the invitation, but two years later he was recalled to Bologna, where he died. Fr. Michele Pio, who wrote his life, states that on the last day of his life Porrecta completed his explanation of the last verse of the Psalms. The people of Bologna venerated him as a saint; miracles, attested by the ordinary, are said to have been wrought through his intercession and his body was taken (1615) from the community burying-ground to be deposited in the Dominican church. It is almost universally admitted that, until the Leonine edition of St. Thomas's works appeared, there were no editions more highly prized or more helpful to students of the "Summa" than those which contained the Porrecta-Cajetan commentaries. The distinguishing features of these commentaries are well set forth in the title of the Venice edition of 1612. His principal works are: "Elucidationes formales in summam theologicam S. Thomæ de Aquino" (Venice, 1588, 1596); "Summa totius

theologiæ D. Thomæ . . . cum elucidationibus formalibus . . ." (Venice, 1612; Padua, 1698; Rome, 1773). To the first volume were added: (a) De altitudine doctrinæ Thomisticæ; (b) Regulæ ad lectorem; (c) Five indices. Echard censures the addition of Fr. Javelli's "Expositio in primam partem" and "Tractatus de præscientia et prædestinatione"; "Veritates aureæ supra totam legem veterem. . ." (Venice, 1590); "Commentaries on St. Matthew" (Venice, 1602); "St. John" (Venice, 1604); those on St. Mark and St. Luke were not published; "Scholia super comp. theologica veritatis Alberti Magni" (Venice, 1588, 1590). Echard says the compendium was not by Albertus Magnus (I, p. 176); "Tota theologia S. Th. Aquin. in compendium redacta" (Venice, 1597); "Commentarii in psalmos" (one volume published, Bologna, 1692).

D. J. KENNEDY.

Porta, CARLO, poet, b. at Milan in 1775; d. there, 5 January, 1821; educated by the Jesuits at Monza and in the seminary at Milan. Finding uncongenial the mercantile pursuits for which his family had destined him, he obtained posts in the treasury department first at Venice and later at Milan. He served under the government of the Cisalpine Republic and, without ceasing to be an Italian patriot, welcomed the return of the Austrian rule, since it seemed to promise peace and prosperity. At Milan he enjoyed the companionship of noted men of letters, among them Foscolo and Monti. His fame is based upon his felicitous use of the Milanese dialect for poetical purposes. He was a Romanticist and argued in favour of the doctrines of his friends Manzoni and Grossi in the cantica "El Romanticism", the "Dodes Sonittal'abaa Giavan" (i.e. Giordani), the "Meneghin Classegh", and others. Some of his views are opposed to the French, who had brought so much misery into Italy. He is most successful in humorous compositions, in which he truly delineates Milanese types, especially in "Le disgrazi de Giovannin Bongee" and "Le olter disgrazi de Giovannin Bongee". In his use of dialect Porta evinces the greatest skill; his language is the language of the people adapted in a most masterly way to the purposes of literary expression.

BARBIERA, *Poesie edite, inedite e rare, scelte e illustrate* (Florence, 1887); *Poesie rivedute sugli originali* (Milan, 1887, with a bibliography by ROBECCHI); LETTEMBRINI, *Il Meli, il Cardone il Porta in Morandi, Antologia*; D'OVIDIO AND SAILER, *Porta e il Manzoni in Discussioni Manzoniiane* (Città di Castello, 1886).

J. D. M. FORD.

Porta, GIACOMO DELLA, architect and sculptor, b. at Porlizza on Lake Lugano 1541; d. 1604. He was a pupil of Michelangelo and succeeded Vignola as architect of St. Peter's. Here he removed the temporary choir built by Bramante and with the aid of Domenico Fontana finished the dome and lantern by 1590 or 1592. He completed the plan of Il Gesù, the ground-plan and other chief architectural features of which are the work of Vignola, departing somewhat from his predecessor. Della Porta's façade was, in connexion with Vignola's work, an authoritative model for large numbers of buildings in the Baroque style. The façade, fairly simple in design, is built in two stories, is topped by a gable, and divided by half-pillars and pilasters, panels and niches. It can hardly be said to possess a clearly defined ecclesiastical character; the windows and entrances recall rather the style of a palace. In Santa Maria ai monti, he followed the ground-plan of the church of Il Gesù. He made the façade of San Luigi de' francesi a piece of decorative work entirely independent of the body of the structure, a method much copied later. Another architect-

tural work is Santa Catarina de' funari at Rome. With Carlo Maderna he built the church of San Giovanni de' Fiorentini from the designs of Sansovino. Sometimes the Sapienza at Rome is ascribed to Michelangelo; however, della Porta had charge of the erection and work on the interior of the building although he did not complete it. In constructing an addition to Maria Maggiore he altered the plans of Michelangelo. He had something of the spirit of this great master, although he had neither the ability nor the desire to follow him in everything; yet he did not fall into the uncouth exaggerations of the later period. In the Palazzo Farnese his work is associated with that of Sangallo and Michelangelo. The Villa Aldobrandini with its superb gardens shows what beautiful work della Porta could construct when free to follow his own ideas. At Genoa he built the Annunziata, not with pilasters, a method much admired in the Baroque style, but as a columned basilica, without, however, infringing on the spacious width customary in this style. This is one of the most beautiful churches of the period. As a sculptor della Porta worked on the Certosa of Pavia. He has left some fine groups for fountains, especially the fountains at the Capitol and on the Piazza Mattei. In sculpture his teacher was il Gobbo.

Portable Altar. See ALTAR, sub-title PORTABLE ALTAR.

Portalegre, DIOCESE OF, suffragan of Lisbon, Portugal, established by Pope Julius III in 1550. Its first bishop was Julian d' Alva, a Spaniard, who was transferred to Miranda in 1557. On 17 July, 1560, Andiz' de Noronha succeeded to the diocese, but he was promoted to Placencia in 1581. Frei Amador Arraes, the next bishop, was the author of a celebrated book of "Dialogues"; he resigned in 1582, and retired to the college of his order in Coimbra, where he remained till his death. Lopo Soares de Albergaria and Frei Manoel de Gouvea died before receiving the Bulls confirming their nomination. Diego Conra, nephew of the Venerable Bartholomew of the Martyrs and Bishop of Ceuta, became bishop in 1598, and died on 9 October, 1614. Among the bishops of Portalegre during the seventeenth century was Ricardo Russell, an Englishman, who took possession of the see on 17 September, 1671, and was subsequently transferred to Vizeu. The present bishop is Antonio Mutinho, transferred from Caboverde in 1909. The diocese contains 197,343 Catholics, 16 Protestants, 148 parishes, 286 priests, 447 churches and chapels.

Port Augusta, DIOCESE OF (PORTAUGUSTANA), suffragan of Adelaide, South Australia, created in 1887. Its boundaries are: north, the twenty-fifth degree of S. latitude; east, the States of Queensland and New South Wales; west, the State of West Australia; south, the counties Musgrave, Jervois, Daly, Stanley, Light, Eyre, and the River Murray. As the limits originally fixed were found insufficient, the counties of Victoria and Burra were added. At its inception the diocese was heavily burdened with debt and the Catholic population, numbering about 11,000, became much diminished owing to the periodical droughts to which a large portion of the diocese is subject. The town of Port Augusta commands a splendid position at the head of Spencer's Gulf, overlooking which is the cathedral, a fine stone edifice. Its Catholic population is still small, but is bound to increase when the great overland railways to West Australia and to Port Darwin in the far Northern Territory become linked together.

Right Rev. John O'Reilly, D.D. (to-day Archbishop of Adelaide), consecrated by Cardinal Moran at Sydney 1 May, 1888, was the first Bishop of Port Augusta. His chief work was liquidating the diocesan debts, especially that of the cathedral. He introduced the Sisters of the Good Samaritan from Sydney to Port Pirie in 1890. On 5 January, 1895, he was transferred to Adelaide as archbishop. The second bishop, Right Rev. James Maher, D.D. (d. at Pekina, 20 December, 1905), first vicar-general, then administrator *sede vacante*, was consecrated at Adelaide, 26 April, 1896. His episcopate was marked by a succession of fully nine years of drought, which extended over the larger portion of the diocese. Owing to this disaster it was impossible to make much material progress, but the finances of the see were kept steadily in view. The third bishop and present occupant of the see, Right Rev. John Henry Norton, D.D. (b. at Ballarat, Victoria, 31 Dec., 1855), was consecrated at Adelaide, 9 December, 1906. He is the first native of Ballarat to be ordained priest, the first Victorian, and the third Australian, native to be raised to the episcopate. He received his early education in that city and afterwards engaged in the study and practice of architecture for four years. In 1872 he entered St. Patrick's College, Melbourne, became an undergraduate of Melbourne University, and, on 10 June, 1876, received minor orders from Archbishop Goad. Early in 1878 he became affiliated to the then Diocese of Adelaide under Right Rev. C. A. Reynolds, D.D., and was sent by him to Europe to finish his studies. After a year at St. Kieran's College, Kilkenny, Ireland, he was admitted to Propaganda College, Rome, and was ordained by Cardinal Monaco la Valetta in St. John Lateran's, 8 April, 1882. Returning to Adelaide, February, 1883, he was engaged at the cathedral until January, 1884, when he was appointed first resident priest of the new district of Petersburg, where he has resided ever since. He was made diocesan consultor in 1894, vicar-general under Dr. Maher, 2 May, 1896, administrator *sede vacante* on the latter's death, and appointed bishop, 18 August, 1906. He was consecrated in St. Francis Xavier's Cathedral, Adelaide, by Most Rev. Michael Kelly, D.D., Coadjutor Archbishop of Sydney on 9 December, 1906. As parish priest he erected a church, presbytery, school, and convent at Petersburg, also churches at Dawson, Nackara, Lancelot, Yongala, Teetulpa, Renmark, Farina, and other places. He published three "Reports on the liabilities of the Diocese". He has recently completed a successful campaign for the final liquidation of the cathedral and Koorunga church debts. During his episcopate churches have been erected at Warnertown, Hammond, and Wilmington, and convents at Caltowie, Jamestown, and Georgetown.

The diocese is divided into nine districts (not including the West Coast from Talia to West Australia, which is visited from Port Lincoln in the archdiocese), namely, Port Augusta, Carrieton, Hawke, Georgetown, Jamestown, Koorunga, Pekina, Petersburg, and Port Pirie. There are 10 diocesan priests, 34 churches, two religious orders of women—the Sisters of St. Joseph, numbering 33, and the Sisters of the Good Samaritan, numbering 9. The former have convents and primary schools in Port Augusta, Gladstone, Jamestown, Caltowie, Koorunga, Pekina, Quorn, Georgetown, and Petersburg; the latter are established at Port Pirie only, where they manage two primary schools, including a boarding and select school. The children in these thirteen schools number 754. The Society of Jesus had resident missionary priests at Port Pirie, Koorunga, Georgetown, and Jamestown, long before the formation of the territory into a new diocese. As circumstances permitted, they relinquished Port Pirie in November, 1890, Koorunga in September, 1899, and Jamestown and Georgetown

in September, 1900. Schools are maintained in 24 different places, the aggregate cost of salaries and general maintenance being estimated at £27,500 in the last twenty years, the original cost of the buildings at £18,250, or a total expenditure of £45,750 by the Catholic population, which, according to the census of 1901, is estimated at 11,953.

Australasian Catholic Directory; O'REILLY, MAHER, NORTON, *Reports on the liabilities of the Diocese of Port Augusta* (published between 1889–1907).

JOHN H. NORTON.

Port-au-Prince, ARCHDIOCESE OF (PORTUS PRINCIPIS), comprises the western part of the Republic of Haiti. Its population numbers about 668,700, mostly Catholics, the greater part of whom have but a slight knowledge of their religion, and are scattered over a surface of about 3080 sq. miles. The archdiocese was created by the Bull of 3 June, 1861, and has ever since had a clergy almost exclusively French. In the eighteenth century the territory of the present archdiocese was served by the Dominicans, and after the French Revolution was left in the hands of unworthy clergy, who were driven out after the Concordat of 1860. The archdiocese has had five archbishops: Mgrs Testard du Cosquer (1863–69); Guilloux (1870–85); Hillion (1886–90); Tonti (1894–1902); Conan (1903). In January, 1906, Most Rev. Julian Conan held the first provincial council of Haiti whose acts were approved by the Congregation of the Council, 3 August, 1907. Fourteen diocesan synods have also been held and their acts and statutes have regularly been published. The seminary for senior students is in France (St. Jacques, Finistère), and there is a seminary-college at Port-au-Prince directed by the Fathers of the Holy Ghost with 500 pupils. About an equal number of boys receive their instruction at the Institution St. Louis de Gonzague, kept by the Brothers of Christian Instruction. There are two secondary establishments for girls: Ste Rose de Lima, directed by the Sisters of St. Joseph de Cluny, and Notre Dame du Sacré-Cœur, directed by the Filles de la Sagesse. The province has a monthly religious bulletin published at Port-au-Prince. Archbishop Guiloux has left a valuable work for the history of the archdiocese and of the province, "Le Concordat d'Haiti, ses résultats", a pamphlet of twenty-eight pages relating to the origin of the different diocesan works. The metropolitan church has honorary canons, not constituting a chapter, and named by the archbishop. The archdiocese (1911) has 24 parishes, 140 rural chapels; priests, 55 secular, 42 regular; 67 Brothers of Instruction; 192 sisters.

A. CABOR.

Port de la Paix. See CAP HAITIEN, DIOCESE OF.

Porter, doorkeeper (*ostiarius*, Lat. *ostium*, a door), denoted among the Romans the slave whose duty it was to guard the entrance of the house. In the Roman period all houses of the better class had an *ostiarius*, or ostiary, whose duties were considered very inferior. When, from the end of the second century, the Christian communities began to own houses for holding church services and for purposes of administration, church ostiaries are soon mentioned, at least for the larger cities. They are first referred to in the letter of Pope Cornelius to Bishop Fabius of Antioch written in 251 (Eusebius, "H. E.", VI, 43), where it is said that there were then at Rome 46 priests, 7 deacons, 7 subdeacons, 42 acolytes, and 52 exorcists, lectors, and ostiaries, or doorkeepers. According to the statement of the "Liber Pontificalis" (ed. Duchesne, I, 155) an ostiary named Romanus suffered martyrdom in 258 at the same time as St. Lawrence. In Western Europe the office of the ostiary was the lowest grade of the minor clergy. In a law of 377 of the Codex Theodosianus (Lib. XVI, tit. II, num.

XXIV; ed. Gothofredi, VI, I, 57) intended for the Vicariate of Italy, the ostiaries are also mentioned among the clergy who have a right to personal immunity. In his letter of 11 March, 494, to the bishops of southern Italy and Sicily Pope Gelasius says that for admission into the clergy it was necessary that the candidate could read (must, therefore, have a certain amount of education), for without this prerequisite an applicant could, at the most, only fill the office of an ostiary (P. L., LVI, 691). In Rome itself this office attained to no particular development, as a large part of these duties, namely the actual work necessary in the church building, what is now probably the duty of the sexton, was at Rome performed by the *mansionarii*. The clergy of the three lower grades (minor orders) were united at Rome into the *Schola cantorum* and as such took part in the church ceremonies. There are no special prayers or ceremonies for the ordination of the lower clergy in the oldest liturgical books of the Roman Church. For the Gallican Rite, short statements concerning the ordination of the lower orders, among them that of the ostiaries, are found in the "Statuta ecclesiae antiqua", a collection of canons which appeared at Arles about the beginning of the sixth century (Maassen, "Quellen des Kirchenrechts", I, 382). The "Sacramentarium Gelasianum" and the "Missale Francorum" contain the same rite with the prayers used on this occasion.

According to these the ostiaries are first instructed in their duties by the archdeacon; after this he brings them before the bishop, who takes the keys of the church from the altar and hands them to the candidate for ordination with the words: "Fulfil thine office to show that thou knowest that thou wilt give account to God concerning the things that are locked away under these keys." Then follows a prayer for the candidate and a prayer for the occasion that the bishop pronounces over him. This ceremony was also at a later date adopted by the Roman Church in its liturgy and has continued with slight changes in the formulae until now. In Latin Western Europe, outside of Rome, in the late Roman era and the one following, the ostiaries were still actually employed as guardians of the church buildings and of their contents. This is shown by the epitaph of one Ursatius, an ostiary of Trier (Corpus inscr. latin., XIII, 3789). An ostiary of the church of Salona is also mentioned in an epitaph (Corpus inscr. latin., III, 13142). Later, however, in the Latin Church the office of ostiary universally remained only one of the degrees of ordination and the actual work of the ostiary was transferred to the laity (sacristans, sextons, etc.). In the ordination of ostiaries at the present day their duties are thus enumerated in the Pontifical: "Percutere cymbalum et campanam, aperire ecclesiam et sacrarium, et librum ei aperire qui praedicat" (to ring the bell, to open the church and sacristy, to open the book for the preacher). The forms of prayer for the ordination are similar to those in the old Gallican Rite. In the East there were also doorkeepers in the service of the Church. They are enumerated as ecclesiastical persons by the Council of Laodicea (343-81). Like the acolytes and exorcists, they were only appointed to serve the church, but received no actual ordination, and were not regarded as belonging to the ecclesiastical hierarchy. According to the "Apostolic Constitutions", belonging to the end of the fourth century, the guarding of the door of the church during the service was the duty of the deacons and subdeacons. Thus the doorkeepers exercised their office only when service was not being held.

J. P. KIRSCH.

Porter, FRANCIS, controversialist and historian, b. at Kingston, near Navan, Ireland, 1622; d. at Rome, 7 April, 1702. He was descended from the Norman family of Le Porter, which had been settled in Ireland from the time of Henry II, and were great benefactors of the Franciscans. While still very young, Porter went to Rome, entered the Franciscan Order, took degrees in philosophy and theology, and for several years taught controversial theology, ecclesiastical history and dogmatic theology in St. Isidore's College. King James II appointed him his theologian and historiographer. In 1679 he published in Rome his "*Securis evangelica ad hæresis radices posita*", an able controversial work in which he confutes the fundamental principles of Protestantism and its several sects. In the same year he published at Rome his "*Palinodia Religionis prætensæ reformatæ*", in which he proves with solid and convincing arguments that the Catholic Church is the Church founded by Jesus Christ. To it is prefixed a "Præfatio apologetica"—a noble appeal to the princes and state councillors of Protestant countries to abolish the infamous laws promulgated in their respective states against the Catholic Church. His compendium of the ecclesiastical annals of the Kingdom of Ireland was published in Rome in 1690, and dedicated to Pope Alexander VIII. After a brief outline of the civil history of Ireland, the author gives a summary account of the foundations of the several dioceses and religious houses pointing out the constancy of the Irish people in preserving the Faith, and the persecutions they suffered for their religion.

Besides the works mentioned above, he published "Systema decretorum dogmaticorum", Avignon, 1693; "Disquisitio theologica de præservando fœdere inito cum Principe Duriaco hæretico invasore regiae coronæ ac dictionum Jacobi II, legitimi et Catholici principis. Præmittitur facti historia", Rome, 1683; "De abolitione consuetudinis præstandi juramentum reis", Rome, 1696; "Refutatio Prophetiarum falso attributarum S. Malachiae", Rome, 1698.

History of Ireland* (Dublin, 1864); WEBB, *Compendium of Irish Biography* (Dublin, 1878); COGAN, *Diocese of Meath, Ancient and Modern* (Dublin, 1870); DA CIVEZZA, *Storia delle Missioni Francescane*, VII (Prato, 1883); MSS. in Franciscan Convent, Dublin.

GREGORY CLEARY.

Porter, GEORGE, Archbishop of Bombay, b. 1825 at Exeter, England; d. at Bombay, 28 September, 1889. Of Scotch descent, he was educated at Stonyhurst and joined the Society of Jesus in 1841. After making his novitiate at Hodder, and devoting three years to philosophy at Stonyhurst, he was employed in teaching at Stonyhurst and at St. Francis Xavier's College, Liverpool, becoming prefect of studies at the former college in 1849. In 1853 he went to St. Beuno's College, North Wales, for theology, and in 1856 was ordained priest. His theological studies were completed in Rome under Passaglia and Schrader. After two years more spent at Stonyhurst and a year at Liesse, near Laon, Father Porter returned to St. Beuno's, where for four years he occupied the chair of dogmatic theology. He was then appointed rector at Liverpool, but was moved to London in 1871, becoming master of novices two years later. In 1881 he was appointed rector of Farm Street, London, but he was soon called to Fiesole as assistant to the general. In December, 1886, he was made Archbishop of Bombay (q. v.). Father Porter's collected "Letters" (London, 1891) reveal the versatility of his mind and his skill in direction. He translated or wrote prefaces for a number of spiritual books and compiled "The Priest's Manual for the Holy Sacrifice of the Mass" (Liverpool, 1858).

Some of his meditations and considerations have been printed for private circulation.

GILLOW, *Bibl. Dic. Eng. Cath.*, s. v.

CHARLES PLATER.

Portio Congrua. See CONGRUA.

Portiuncula (PORZIONCULA or PORZIUNCOLA), ■ town and parish situated about three-quarters of a mile from Assisi. The town, numbering about 2000 inhabitants and officially known as Santa Maria degli Angeli, has grown up around the church (basilica) of Our Lady of the Angels and the adjoining Franciscan monastery. It was here that on 24 Feb., 1208, St. Francis of Assisi recognized his vocation; here was for the most part his permanent abode, after the Benedictines (of the Cluny Congregation from about 1200) had presented him (about 1211) with the little chapel Portiuncula, i. e. a little portion (of land); here also he died on Saturday, 3 Oct., 1226. According to a legend, the existence of which can be traced back with certainty only to 1645, the little chapel of Portiuncula was erected under Pope Liberius (352-66) by hermits from the Valley of Josaphat, who had brought thither relics from the grave of the Blessed Virgin. The same legend relates that the chapel passed into the possession of St. Benedict in 516. It was known as Our Lady of the Valley of Josaphat or of the Angels—the latter title referring, according to some, to Our Lady's ascent into heaven accompanied by angels (Assumption B. M. V.); a better founded opinion attributes the name to the singing of angels which had been frequently heard there. However this may be, here or in this neighbourhood was the cradle of the Franciscan Order, and on his death-bed St. Francis recommended the chapel to the faithful protection and care of his brethren. Concerning the form and plan of the first monastery built near the chapel we have no information, nor is the exact form of the loggia or platforms built round the chapel itself, or of the choir for the brothers built behind it, known. Shortly after 1290, the chapel, which measured only about twenty-two feet by thirteen and a half, became entirely inadequate to accommodate the throngs of pilgrims. The altar piece, an Annunciation, was painted by the priest, Hilarius of Viterbo, in 1393. The monastery was at most the residence, only for a short time, of the ministers-general of the order after St. Francis. In 1415 it first became associated with the Regular Observance, in the care of which it remains to the present day. The buildings, which had been gradually added to, around the shrine were taken down by order of Pius V (1566-72), except the cell in which St. Francis had died, and were replaced by a large basilica in contemporary style. The new edifice was erected over the cell just mentioned and over the Portiuncula chapel, which is situated immediately under the cupola. The basilica, which has three naves and a circle of chapels extending along the entire length of the aisles, was completed (1569-78) according to the plans of Jacob Barozzi, named Vignola (1507-73), assisted by Alessi Galeazzo (1512-72). The Doric order was chosen. The basilica forms a Latin cross 416 feet long by 210 feet wide; above the middle of the transept rises the magnificent cupola, flanked by a single side-tower, the second never having been finished. In the night of 15 March, 1832, the arch of the three naves and of the choir fell in, in consequence of an earthquake, but the cupola escaped with a big crack. Gregory XVI had all restored (1836-40), and on 8 Sept., 1840, the basilica was reconsecrated by Cardinal Lambruschini. By Brief of 11 April, 1909, Pius X raised it to a "patriarchal basilica and papal chapel". The high altar was therefore immediately rebuilt at the expense of the Franciscan province of the Holy Cross (also known as the Saxon province), and a papal throne added.

The new altar was solemnly consecrated by Cardinal De Lai on 7 Dec., 1910. Under the bay of the choir, resting against the columns of the cupola, is still preserved the cell in which St. Francis died, while, a little behind the sacristy, is the spot where the saint, during a temptation, is said to have rolled in a briar-bush, which was then changed into thornless roses. During this same night the saint received the Portiuncula Indulgence. The representation of the reception of this Indulgence on the façade of the Portiuncula chapel, the work of Fr. Overbeck (1829), enjoys great celebrity.

The Portiuncula Indulgence could at first be gained only in the Portiuncula chapel between the afternoon of 1 Aug. and sunset on 2 Aug. On 5 Aug., 1480 (or 1481), Sixtus IV extended it to all churches of the first and second orders of St. Francis for Franciscans; on 4 July, 1622, this privilege was further extended by Gregory XV to all the faithful, who, after confession and the reception of Holy Communion, visited such churches on the appointed day. On 12 Oct., 1622, Gregory granted the same privilege to all the churches of the Capuchins; Urban VIII granted it for all churches of the regular Third Order on 13 Jan., 1643, and Clement X for all churches of the Conventuals on 3 Oct., 1670. Later popes extended the privilege to all churches pertaining in any way to the Franciscan Order, even to churches in which the Third Order held its meetings (even parish churches etc.), provided that there was no Franciscan church in the district, and that such a church was distant over an Italian mile (1000 paces, about 1640 yards). Some districts and countries have been granted special privileges. On 9 July, 1910, Pius X (only, however, for that year) granted the privilege that bishops could appoint any public churches whatsoever for the gaining of the Portiuncula Indulgence, whether on 2 Aug. or the Sunday following (*Acta Apostolicæ Sedis*, II, 1910, 443 sq.; *Acta Ord. Frat. Min.*, XXIX, 1910, 226). This privilege has been renewed for an indefinite time by a decree of the S. Cong. of Indul., 26 March, 1911 (*Acta Apostolicæ Sedis*, III, 1911, 233-4). The Indulgence is *toties-quoties*, that is, it may be gained as often as one wishes (i. e. visits the church); it is also applicable to the souls in purgatory.

While the declarations of the popes have rendered the Portiuncula Indulgence certain and indisputable from the juridico-canonistic standpoint, its historical authenticity (sc. origin from St. Francis) is still a subject of dispute. The controversy arises from the fact that none of the old legends of St. Francis mentions the Indulgence, and no contemporary document or mention of it has come down to us. The oldest document dealing with the Indulgence is a notary's deed of 31 October, 1277, in which Blessed Benedict of Arezzo, whom St. Francis himself received into the order, testifies that he had been informed by Brother Masseo, a companion of St. Francis, of the granting of the Indulgence by Honorius III at Perugia. Then follow other testimonies, for example, those of Jacob Cappoli concerning Brother Leo, of Fr. Oddo of Aquasparta, Peter Zalfani, Peter John Olivi (d. 1298, who wrote a scholastic tract in defence of this Indulgence about 1279), Blessed John of Laverna (Fermo; d. 1322), Ubertinus of Casale (d. after 1335), Blessed Francis of Fabriano (d. 1322), whose testimony goes back to the year 1268, etc. In addition to these rather curt and concise testimonies there are others which relate all details in connexion with the granting of the Indulgence, and were reproduced in numberless books: e. g. the testimony of Michael Bernardi, the letters of Bishop Theobald of Assisi (1296-1329) and of his successor Conrad Andrea (1329-37). All the testimonies were collected by Fr. Francesco Bartholi della Rossa in a special work, "*Tractatus de Indulgentia S. Mariæ de Portiuncula*" (ed. Sabatier, Paris, 1900). In his edition of this

work, Sabatier defends the Indulgence, although in his world-famous "Vie de S. François" (Paris, 1894), he had denied its historicity (412 sqq.); he explains the silence of St. Francis and his companions and biographers as due to reasons of discretion etc. Others seek to accord more weight to the later testimonies by accentuating their connexion with the first generation of the order; others again find allusions to the Indulgence in the old legends of St. Francis. On the other hand, the opponents regard the gap between 1216 and 1277 as unbridgable, and hold that the grounds brought forward by the defenders to explain this silence had vanished long before the latter date. No new documents have been found recently in favour of the authenticity of the Indulgence.

MICHAEL BIHL.

Portland, DIOCESE OF, in the State of Maine, suffragan of Boston, established by Pius IX, 8 Dec., 1854. When erected it included the territorial limits of the present States of Maine and New Hampshire. Previous to that time it was under the jurisdiction of the Bishop of Baltimore and later of the Bishop of Boston. In 1884 the diocese was divided, New Hampshire being made a separate diocese and the episcopal see located at Manchester (q. v.). The present Diocese of Portland includes all the State of Maine. It has an area of 29,895 square miles, and a Catholic population of 125,000, or one-sixth of the total population. The diocese is organized in the form of a corporation sole, the title of which is "Roman Catholic Bishop of Portland".

EARLY HISTORY.—The earliest attempts at Catholic colonization in the north or east of what is known as the United States took place in Southern Maine. In 1604, sixteen years before the Pilgrims landed at Plymouth, Henry IV, King of France, gave authority to Pierre du Gast, Sieur de Monts, to establish colonies between the 40th and 46th degrees of north latitude. He landed at Cape La Heve, on the southern part of the Nova Scotian coast, and after making several expeditions to the north in the vicinity of the St. Lawrence, sailed south and discovered and named the River St. John, thence south to an island which he named Ste-Croix, or Holy Cross, and now called De Monts Island. The Ste-Croix River derived its name from this island, and to-day flows by the easternmost part of the United States. A colony was established on this island, and in their chapel in July, 1604, Holy Mass was offered for the first time in New England by the Rev. Nicholas Aubray of Paris. The hardships of the severe winter were such that seventy-nine of the colonists died before the opening of spring.

From Ste-Croix Island on 12 September, 1605, Champlain set out on a voyage of discovery. He sailed west along the coast as far as the Penobscot River, which he ascended to the mouth of the Kennebec Stream, the present site of Bangor. The falls, a mile above, prevented further progress. Descending the Penobscot River, Champlain sailed west to the mouth of the Kennebec and then returned to the Island of Holy Cross. No doubt Holy Mass was offered up on this voyage. This was the first foothold of France and Catholicism in the North. Potrincoourt who succeeded De Mont, after receiving a blessing on his labours from the pope, applied himself to the work of colonization and Christianizing the natives. Two Jesuits, Fathers Peter Biard and Enemond Massé, who were sent to him after some work among the Micmacs of Nova Scotia, came to Maine, and began their very successful labours among the Abenaki. In a vessel under the command of La Saussaye, having on board also Fathers Quentin and Lalemant, and the lay brother Du Thet, who had lately come from France, they sailed to the west and came to Mt. Desert Island, where they landed, and having erected a cross, set up an altar, and, after offering the Holy Sacrifice of the Mass, founded a settlement which they called St. Sauveur, or Holy Redeemer. This settlement was destroyed by Argall, who came from Virginia. The Fathers were taken prisoners, and after many hardships were finally returned to France. Brother Du Thet was killed and buried on this island.

Some Capuchins were afterwards stationed along the coast in the French posts, and had a convent at Castine, and some settlements along the Kennebec. In 1646, Father Gabriel Druillettes was sent to the Kennebec and established the mission of the Assumption among the Abenaki, obtaining wonderful results from this docile people. In 1652, he returned to Canada, but in 1656 and 1657, came again and continued his work. Rev. Laurent Molin, a Franciscan, laboured at Pentagoet. In 1667, Father Morain was successful with the Penobscots and Passamaquoddy Indians. In 1667, Father Thury, a secular priest, came to the Penobscots and laboured successfully among them to the close of his life. In 1668, he established the mission at Panawaniski, at Oldtown. He was succeeded by Fathers Gaudin and Rageot, who remained among the Penobscots until 1703. In 1668, Father Bigot erected a chapel at Narantsouac, now Norridgewock, restoring the mission. The Jesuits, Fathers Joseph de la Chasse, Julian Binnéteau, Joseph Aubéry, Sebastian Rasle, Sebastian Lauvergat and Loyard, laboured in turn. Of these Father Rasle is the best known. He came to Norridgewock in 1695. There he found a chapel and had the Indians instructed. In 1705, the English destroyed the chapel and village. They were rebuilt in 1722, were once more destroyed, and Father Rasle's treasures were carried off, including his dictionary of the Abenaki language, now in Harvard College. Father Rasle was murdered and scalped on 23 August, 1724, and his scalp carried to Boston. His body was buried on the spot where the altar had stood. Father James de Sirene restored the mission at Norridgewock in 1730. For a long period during the wars the Indians were without missionaries, yet they remained faithful. Numbers of the Abenaki fought for the Colonies during the War of Independence. After the war, when Bishop Carroll was consecrated first Bishop of the United States, the Indians sent a deputation to him for a priest. Father Ciquard, a priest of St. Sulpice, was sent in answer to this appeal and remained for ten years, until 1794. In 1797, the Rev. John Cheverus, then a missionary at Boston, came to visit the Indians and remained three months, and while priest and first Bishop of Boston, visited them every year until 1804, built them a church and gave them Father Romagne as their pastor. The latter devoted him-

self for twenty years to the Penobscots and Passamaquoddy and to the scattered Catholic missions. Bishop Fenwick was consecrated in 1825, and continued the work. Father French, a Dominican, was stationed at Eastport, and from that place visited the Indian missions. In July, 1827, Bishop Fenwick visited them and at intervals later. In 1833, 109 years after the destruction of the mission at Norridgewock, Bishop Fenwick erected a monument to the memory of Father Rasle. Father Demilier continued the work until his death 23 July, 1843. Bishop Fitzpatrick, the successor to Bishop Fenwick, gave over the Abenaki mission to the Society of Jesus, and, in 1848, Father John Bapst was sent to Oldtown and became a zealous missionary to both whites and Indians. The Indians of Maine are, as a result of the careful teaching and self-sacrificing labours of the missionaries, Catholics.

In the latter part of the eighteenth century, some immigrants from Ireland came to Maine and settled in the towns of Newcasttle, Damariscotta, and Nobleboro. Seven Catholic families had settled at Damariscotta Bridge, and for them Father Cheverus said Mass in the barn of Matthew Cottrill. Later Mr. James Kavanaugh, a merchant of the town, had fitted up a neat chapel and Mass was celebrated there on the visitations of the priest. In 1800, Mr. Kavanaugh and his partner, Mr. Cottrill, subscribed \$1000 each for the new church, which was dedicated 17 July, 1808, Father Cheverus officiating. This was the second Catholic church in New England, and the first built by English-speaking Catholics in Maine. In 1822, Bishop Cheverus came to Portland at the request of some Catholics, and said the first Mass in Portland. Bishop Fenwick succeeded Bishop Cheverus and ruled the New England province from 1825 to 1845. The work of Bishop Cheverus among the Indians was continued by Bishop Fenwick, and he established in July, 1834, the Catholic colony at Benedicta in Northern Maine and to-day all the inhabitants of the township are Catholics. In 1853 the Holy See divided the diocese of Boston and erected a new see at Portland, and named its first bishop, David William Bacon (see BACON, DAVID WILLIAM).

JAMES AUGUSTINE HEALY, second bishop, b. at Macon, Ga., 6 April, 1830. He entered Holy Cross College, 1844, and graduated, 1849. His theological education was received at the Grand Seminary, Montreal, where he spent three years, then two years at St-Sulpice, Paris. He was ordained in the Cathedral of Notre Dame, Paris, by Archbishop Sibour, 10 June, 1854. He began his priestly labours in Boston as Secretary to Bishop Fitzpatrick, and became the first chancellor of the diocese. In March, 1866, he was named pastor of St. James' Church by Bishop Williams. A papal bull dated 12 Feb., 1875, designated him as second Bishop of Portland. He was consecrated in the Cathedral of the Immaculate Conception, Portland, 2 June, 1875. When he assumed the cares of the diocese he found the Church well established in the cities of Maine and New Hampshire. In the small towns, however, little was known of Catholic doctrine. Bishop Healy established many missions and new parishes and the Catholic name became known in all parts of the state. He introduced the Dominicans and Marists and some religious orders of women, and was instrumental in establishing the hospital and Healy Asylum in Lewiston. In February, 1877, the school begun in Portland by Bishop Bacon was completed at a cost of \$23,000. It is named the Kavanaugh School in honour of Miss Kavanaugh, a sister of Governor Edward Kavanaugh. In 1881, Bishop Healy purchased a splendid estate in Deering, then a separate town, but now a part of Portland, and opened a boarding school for girls, under the care of the Sisters of Mercy. It is known as St. Joseph's Academy, and has an enrollment of about 100 pupils.

He also caused to be built on the same grounds a home for aged women, and a neat chapel to serve the needs of the Catholics in the vicinity. In 1887, St. Elizabeth's Orphan Asylum, which had been transferred to North Whitefield, shortly after his accession, was re-established in Portland. The Sacred Heart School for boys was established by him in 1893. Bishop Healy died 5 August, 1900, respected and beloved by priests and people, as a scholar, a master of oratory, and a man of sanctity.

The third Bishop of Portland was William Henry O'Connell (see BOSTON).

LOUIS SEBASTIAN WALSH, fourth bishop, b. at Salem, Mass., 22 Jan., 1858, son of Patrick Walsh and Honora Foley. He was educated for the priesthood at the Grand Seminary, Montreal, and St-Sulpice Seminary, Paris, and later made profounder studies of canon law and theology at Rome. Ordained in St. John Lateran, Rome, 23 Dec., 1882, by Cardinal La Valetta, he was appointed assistant pastor at St. Joseph's Church, Boston, and professor and director at St. Joseph's Seminary, Brighton, at its opening in 1884, where for thirteen years he taught church history, canon law, and liturgy. In Sept., 1897, he was appointed supervisor of Catholic schools in the archdiocese. He was one of the founders of the "New England Catholic Historical Society", also of the "Catholic Educational Association". He was appointed Bishop of Portland in Aug., 1906, and consecrated in the cathedral at Portland on 18 Oct., 1906, by Rt. Rev. Matthew Harkins of Providence. New parishes and schools were soon established, and the mother-house of the Diocesan Sisters of Mercy was erected in the Deering district of Portland. Bishop Walsh opened in Sept., 1909, the Catholic Institute in the former mother-house of the Sisters of Mercy, wherein are taught 200 boys, also the Holy Innocents Home for Infants and St. Anthony's Guild for Working Girls. At Damariscotta in Aug., 1908, a celebration was arranged to commemorate the hundredth anniversary of the dedication of the parish church, and on this occasion was formed the "Maine Catholic Historical Society". At Norridgewock the monument erected by Bishop Fenwick to the memory of Father Rasle, S. J., was replaced and re-dedicated. On Mt. Desert Island in the town of Bar Harbor the arrival of the first missionaries, in 1604, was commemorated; and a beautiful church dedicated under the name given to the island by them, that of St-Sauveur or Holy Redeemer, was erected. The charities of the diocese have been arranged on a permanent basis. In general it may be said that there is a splendid advance in all that pertains to the Church.

STATISTICS.—Within the limits of the diocese, comprising the State of Maine, there are (1911) 125,000 Catholics. They are cared for by 125 seculars and 22 priests of religious orders. There are 70 churches with resident pastors and 49 mission churches, 36 chapels and 67 stations. There is one college, St. Mary's, Van Buren, conducted by the Marist Fathers. Nine academies have an enrollment of 500 pupils. St. Joseph's Academy of Maine, conducted by the Sisters of Mercy, is the largest and best, and furnishes instruction to 100 pupils. There are two schools for Indians caring for 132 pupils; three Catholic hospitals and one home for aged women. The orphans under Catholic care number 415. Total of young people under Catholic care, 12,274.

RELIGIOUS COMMUNITIES.—The Dominican Fathers are established in Lewiston and the Marists at Van Buren and Lower Grand Isle. The Diocesan Sisters of Mercy have their mother-house in Portland and number 185. The following Sisters and congregations are engaged in various parts of the state: The Sisters of Charity; Grey Nuns; Dominican Sisters; Little Sisters of the Holy Family; Little Franciscan Sisters of Mary; Sisters of the Holy Rosary;

Congregation of Notre Dame; Sister Servants of the Immaculate Heart of Mary; Daughters of Wisdom; Sisters of the Presentation; Ursuline Sisters; Sisters of St. Joseph.

JOHN W. HOULIHAN.

Port Louis, DIOCESE OF (PORTUS LUDOVICI), comprises the islands of Mauritius, Rodriguez, Chagos, and Diego Garcia. The Island of Mauritius was discovered by the Portuguese about 1507, but no settlement was formed. The Dutch who visited it in 1598 called it Mauritius in honour of the Stadtholder, Maurice of Nassau; they sent a colony there in 1644, but abandoned the island in 1710 or 1712. When the French took possession in 1715 they changed the name to Ile de France. It was long a French trading centre, and in 1789 became the seat of the French Government in the East. It was captured by the English in 1810, being formally ceded to Great Britain by the Treaty of Paris in 1814. The French language and law have been preserved, but the ancient name was restored by the British Government. Port Louis, the capital, on the north-west coast, is the seat of the Catholic and Anglican bishoprics, and also the residence of the colonial governor, at present (1911) Sir Cavendish Boyle, K. C. M. G. The census of 1901 gave the total population of the island as 373,336, of whom 113,244 were Catholics, and that of the town of Port Louis as 52,740. There are Government schools and denominational schools aided by the State; Catholics constitute 64.71 per cent of the pupils.

In 1712 a prefecture Apostolic, including the islands of Madagascar, Réunion (then Bourbon), Mauritius etc., was established in the Indian Ocean and confided to the Congregation of St. Vincent de Paul. By a Brief of 6 October, 1740, Benedict XIV made the mission dependent on the Archdiocese of Paris. After the British occupation of Mauritius a vicariate Apostolic was established which, by a Decree of 21 January, 1819, was confided to Rt. Rev. Edward Bede Slater, Vicar Apostolic of the Cape of Good Hope and the Island of Madagascar; shortly afterwards the region of New Holland was annexed to the vicariate. In 1829 the Island of Madagascar was separated from the vicariate, and in 1834 the district of New Holland was suppressed. The Cape of Good Hope, the Island of St. Helena, and the Seychelles Islands were cut off from the mission of Mauritius in 1837, 1851, and 1852 respectively, the Diocese of Port Louis having been erected by a Decree of 1 December, 1847. The present bishop, Rt. Rev. James R. Bilsborrow, elected to the see on 13 Sept., 1910, succeeded the Rt. Rev. Peter Augustus O'Neill (b. at Liverpool 22 Dec., 1841; made his profession as a Benedictine at Douai 10 Dec., 1861; was ordained 6 April, 1867; elevated to the episcopate 22 May, 1896, consecrated 29 June of that year). The present Catholic population of the diocese is 119,000; there are 52 priests, 27 churches, and 40 chapels. Religious orders include Jesuits and Fathers of the Holy Ghost, Loreto Sisters, Sisters of Charity of Perpetual Help, and the Daughters of Mary.

BLANCHE M. KELLY.

Porto. See OPORTO, DIOCESE OF.

Porto Alegre, ARCHDIOCESE OF (PORTALEGREN-SIS), in Eastern Brazil. Porto Alegre, the capital and chief port of the State of Rio Grande do Sul, is built on the northern extremity of Lagoa dos Patos and on the eastern shore of the estuary called Rio Guahyba. It was founded in 1742 by a colony of immigrants from the Azores, and was first known as Porto dos Cazaes. In 1770 Governor Jose Mar-

cellino de Figueiredo selected it as his official residence, and in 1773 the town received its present name. Raised to the rank of a city in 1822, it was given in 1841 in recognition of its loyalty the title "leal e valorosa". The city is the chief commercial centre of the state, and has a harbour accessible to vessels of not more than ten feet draught. The principal industry of the state is stock-raising, which was first organized by the Jesuit missionaries in the seventeenth century. The *município* has an area of 931 sq. miles; the latest census returns assign the city (including several districts not within the municipal boundaries) a population of 73,574 inhabitants, for the most part of German and Italian extraction. The climate, while cool and bracing in winter, is intensely hot during the summer; the average annual rainfall exceeds thirty inches. Porto Alegre has four newspapers, including the Catholic "Deutsches Volksblatt"; the state institutions include the municipal palace, the governor's palace, the school of engineering, the military college, school of medicine, and four general schools. Christianity was first introduced into the country by the Jesuits in the early part of the seventeenth century, after the Indian slave hunters of São Paulo had forced them to abandon their missions in Upper Paraná. In 1848 the state, which has an area of about 91,300 sq. miles, was formed into the Diocese of São Pedro do Rio Grande do Sul. On 4 March, 1910, Pius X divided the territory of the state between this see (which he raised to metropolitan rank with the title of Porto Alegre, now appointed its seat), and its newly created suffragans, Pelotas, Santa Maria, Uruguayana, and Florianopolis. The religious statistics at the time of the division were: 1,400,000 Catholics, 115,000 Protestants (including 5,000 Methodists), 134 parishes and parochial charges, 245 priests (including 225 regular), 68 brothers, 58 seminarians, nearly 400 sisters, 6 *gymnasiums*, 2 normal schools, 1 agricultural school, and more than 500 schools and colleges. The principal religious orders of the archdiocese are the Jesuits (St. Joseph's Church, *gymnasium* etc.), the Pallottini Fathers, the Sisters of St. Francis, the Sisters of St. Catherine, the Sisters of St. Joseph, the Evangelical School Brothers, the Capuchins (who have charge of the episcopal seminary). Nearly all the hospitals are managed by nuns. The chief churches are the Cathedral of Our Lady Madre de Deus, the church of Nossa Senhora des Dores, and the (Jesuit) church of St. Joseph. The present archbishop is the Most Reverend Claoudi Jose Gonçalves Ponce de Leão (b. 21 Feb., 1841), transferred from the Diocese of Goyaz to the former Diocese of Rio Grande on 13 May, 1881. On 21 February, 1906, Mgr João Antonio Pimenta, titular Bishop of Pentacomia, was appointed coadjutor with right of succession.

See list of general works in bibliography of article on BRAZIL. *Annuaire pontif. Cathol.* (Paris, 1911).

MOIRA K. COYLE.

Porto Alegre, DIOCESE OF (PORTALEGREN.), comprises the southern part of the State of Minas Geraes, and part of the State of São Paulo, Republic of Brazil. It was created a bishopric by Brief of 4 August, 1900; the see is located at the city of Porto Alegre, State of Minas Geraes. The first bishop was Mgr G. Bathista Correa Nery, succeeded by Mgr Antonio Augusto de Assis. The diocese proper has 62 parishes with 120 secular priests and 6 regular priests and a total Catholic population of 800,000 souls.

For the education of young men in the ecclesiastical career there is in Porto Alegre a theological seminary, founded in August, 1902, by Mgr Correa Nery. There is also an excellent high school known as the Diocesan College of San José, and founded in 1899 by Mgr de Andrade. For the conversion of infidels there are the Diocesan Missionaries of the Heart of

Mary, an order founded in 1902 by Mgr. Correa Nery, and composed of six priests under a superior.

The official organ of the diocese is the "Mensageiro Ecclesiastico", a monthly review of about 32 pages, whose present editor is Father Octavia Chagas de Miranda. There is besides another Catholic publication, "O Estudo", issued by the College of San José.

Annuaire Pontifical Catholique (Paris, 1911), s. v. *Pouso-Alegre*.

JULIAN MORENO-LACALLE.

Porto and Santa-Rufina, DIOCESE OF (PORTUENSIS ET SANCTÆ RUFINÆ), formed from the union of two suburbicarian sees. Porto, now a wretched village, was in ancient times the chief harbour of Rome. It owes its origin to the port built by Claudius on the right of the Tiber, opposite Ostia; Trajan enlarged the basin, and in a short time there grew around it a city which soon became independent of Ostia. It was near Porto that Julius Nepos compelled Emperor Glycerius to abdicate (474). During the Gothic War the town served the Goths (537 and 549) and the Byzantines (546-52) as a base of operations against Rome. In the ninth and tenth centuries it was sacked on several occasions by the Saracens. In 849 Leo IV fortified it and established there a colony of Corsicans for the defence of the coast and the neighbouring territory; but the city continued to decay. Naturally Christianity was early established there. Several martyrs of Porto are known, including Herculanus, Hyacinthus, Martialis, Saturninus Epictetus, Maprilis and Felix. The place was also famous as the probable see of St. Hippolytus (q. v.). In 314 Gregorius was bishop. The great *xenodochium*, or hospice, of Pammachius was built about 370. Among the other bishops should be mentioned Donatus (date uncertain), who built the basilica of St. Eutropius; Felix, a contemporary of St. Gregory the Great; Joannes, legate to the Sixth General Council (680); Gregorius, who accompanied Pope Constantine to Constantinople (710); Gregorius II (743-61); Citonatus, present at the consecration of the antipope Constantine (767); Radoaldus, who acted contrary to his instructions on the occasion of the difficulties with Photius at Constantinople (862), and who was deposed for having prevaricated in connexion with the divorce of Lothair II of Lorraine; Formosus, who became pope (891); Benedictus (963), who consecrated the antipope Leo VIII; Gregorio (c. 991), who built the irrigation system of the territory of the diocese; Benedict VIII and Benedict IX were bishops of Porto; Mauritius (1097), sent by Paschal II to establish order in religious affairs in the Holy Land; Callistus II (1119-24), who united to the See of Porto the other suburbicarian See of Silva Candida or Santa Rufina.

Santa Rufina grew up around the basilica of the Holy Martyrs Sts. Rufina and Secunda on the Via Aurelia, fourteen miles from Rome; the basilica is said to have been begun by Julius I, and was finished by Saint Damasus. In the ninth century this town was destroyed by the Saracens, and the efforts of Leo IV and Sergius III were unable to save it from total ruin: all that remains are the remnants of the ancient basilica and a chapel. The first notice of it as an episcopal see dates from the fifth century, when its bishop Adeodatus was present at the councils held by Pope Symmachus; its bishop St. Valentinus, Vicar of Rome during the absence of Vigilius, had his hands cut off by Totila. Among its other bishops mention should be made of Tiberius (594), Ursus (680), Nicetas (710), Hildebrand (906), and Peter (1026), whose jurisdiction over the Leonine City, the Trastevere, and the Insula Tiberina (island in the Tiber) was confirmed. The residence of the bishops of Silva Candida was on the Insula Tiberina beside the church of Sts. Adalbert and Paulinus, while that of the bishops of Porto was on the same island near the church of San Giovanni. The bishops of Silva Candida, moreover, enjoyed great prerogatives

in relation with the ceremonies of the basilica of St. Peter. The most famous of these prelates was Cardinal Humbertus, who accompanied Leo IX from Burgundy to Rome; he was appointed Bishop of Sicily by that pope, but, having been prevented by the Normans from landing on the island, he received the See of Silva Candida, and later was sent to Constantinople to settle the controversies aroused by Michael Cærularius. He wrote against the errors of the Greeks and against Berengarius (1051-63). The last Bishop was Mainardus. Historically, therefore, the Bishop of Porto became the second cardinal, Ostia being the first, and officiated on Mondays in the Lateran Basilica; he obtained, moreover, the other rights of the Bishop of Santa Rufina, but lost jurisdiction over the Leonine City and its environs, when they were united to the city of Rome. Among its better known cardinal-bishops are: Peter (1119), a partisan of Anacletus II; Theodevinus (1133), a German, sent on many missions to Germany and to the Holy Land; Bernardus (1159), who exerted himself to bring about peace between Adrian IV and Barbarossa; Theodinus (1177), who examined the cause of St. Thomas à Becket; Cencio Savelli (1219); Conrad (1219), a Cistercian; Romano Bonaventura (1227), who obtained the confirmation of all the rights of his see; Ottone Candido (1243), of the house of the marchesi di Monferrato, sent on several occasions as legate by Innocent IV to Frederick II; Robert Kilwardly, formerly Archbishop of Canterbury, poisoned at Viterbo (1280); Matteo da Acquasparta (1290), a former general of the Franciscans and a renowned theologian; Giovanni Minio (1302), a general of the Franciscans; Giacomo Arnaldo d'Euse (1312), who became Pope John XXII; Pietro Corsini (1374), who adhered, later, to the Western Schism; Louis, Duke of Berry, created in 1412 by John XXIII.

During the incumbency of Francesco Condulmer, Nicholas V separated the sees of Porto and Silva Candida, and gave the latter to John Kemp, Archbishop of Canterbury, at whose death (1445) the sees were reunited. Then came Guillaume d'Estouteville (1455); Rodrigo Borgia (1476), who became Pope Alexander VI; Raffaele Riario (1508); Gian Pietro Carafa (1553), who became Pope Paul IV; Giovanni Morone (1565); Cristoforo Madruzzo (1570); Alessandro Farnese (1578); Fulvio Corneo (1580); Francesco M. Brancati (1666); Ulderico Carpegna (1675), who left a legacy to defray the expenses of quadrennial missions; Carlo Rossetti (1680); Alderano Cibo (1683); Pietro Ottoboni (1687), who became Pope Alexander VIII; Flavio Chigi (1693), who enlarged the cathedral and richly furnished it; Nicolò Acciaiuolo (1700); Vincenzo M. Orsini (1715), who became Pope Benedict XIII; Giulio della Somaglia (1818); Bartolommeo Pacca (1821). In 1826, Civitavecchia was separated from the Diocese of Viterbo and Toscanella and united with that of Porto, but in 1854, with Corneto, it was made an independent see. Mention should be made of the Cardinal Bishop of Porto Luigi Lambruschini (1847), who restored the cathedral and the episcopal palace. From the sixteenth century, the incumbency of prelates of this see was, as a rule, of short duration, because most of the cardinal-bishops preferred the See of Ostia and Velletri, which they exchanged for their own as soon as possible. The Diocese of Cære, now Cervetri, has been united with that of Porto since the twelfth century. Cære was an ancient city, called at first Agylla, where the sanctuaries of Rome and the Vestals were hidden during the invasion of the Gauls; the Etruscan tombs scattered about its territory are important archaeologically. Cervetri had bishops of its own until the eleventh century; the first was Adeodatus (499), assuming that he was not the Adeodatus who signed himself Bishop of Silva-Candida in the third synod of Pope Symmachus (501). The last known was Benedictus, referred to in 1015 and 1029.

The Diocese of Porto and Santa Rufina has 18 parishes, with 4600 inhabitants.

U. BENIGNI.

Port of Spain, ARCHDIOCESE OF (PORTUS HISPANIE), an archiepiscopal and metropolitan see, including the Islands of Trinidad, Tobago, Grenada, the Grenadines, St. Vincent, and St. Lucia. The Catholic population is about 200,000. Christianity was introduced by the Spanish discoverers, and missions established in those islands where permanent settlements were effected. The first preachers of the Faith in Trinidad were Fathers Francisco de Cordova and Juan Garcés, both Dominicans, who died at the hands of the Indians in 1513. The Franciscans arrived in 1596, and maintained their connexion with Trinidad until the British occupation in the beginning of the nineteenth century. Fathers Esteban de San Felix, Marco de Vique, and a lay-brother, Ramon de Figuerola, Franciscans, were slaughtered by the natives in 1699. Their bodies were interred in the parish church of San José de Oruña, then the chief town of the colony, and they were venerated as martyrs of the Faith. The Governor of the colony, Don José de Leon, and a Dominican, Father Juan de Mosin Sotomayor, lost their lives defending them. The Dominicans and other religious laboured in Grenada and the other islands, but as these colonies fell into British hands they were replaced by the secular clergy. When in 1797 Trinidad was surrendered to Great Britain the status of the Catholic religion underwent no change, as stipulated in the terms of capitulation granted by Sir Ralph Abercrombie. The new authorities undertook to contribute to the maintenance of the clergy and continue to do so. In 1820 at the instance of Governor Sir Ralph Woodford, the Trinidad Catholics were withdrawn from the jurisdiction of the Bishop of Guayana, Venezuela, and Mgr. James Buckley was appointed the first bishop. The cathedral of Port of Spain was built during his administration. He was succeeded by Mgr. McDonnell, whose successor was Mgr. Richard Smith, the first archbishop. Mgr Vincent Spaccapietra, his successor, is held in veneration for his heroic exertions during an epidemic of cholera. On Mgr Spaccapietra's transfer to the See of Smyrna, Mgr. Ferdinand English was appointed to Port of Spain. He was succeeded by Mgr. J. L. Gonin, O.P., who requested the Dominicans to resume in Trinidad the work begun by their predecessors in early Spanish days. A small number arrived in 1864; their number increased under Mgr. Patrick Vincent Flood, O.P., and their work extended to Grenada. On Mgr. Flood's death in 1907, during an extended vacancy of the see, the name of a Canadian Dominican, Father Albert Knapp, unaccountably appeared as Archbishop of Port of Spain in many newspapers and a year book. The Holy See appointed the present archbishop, Mgr. Dowling, b. in County Kilkenny, Ireland, in 1886, consecrated 1909. Before his

elevation to the episcopate he held important offices in his order, having been professor, novice-master, and previous to his coming to Trinidad as vicar-general of the archdiocese, rector of the well-known College of San Clemente, Rome. Most of the clergy are from France, England, and Ireland, only a few are natives of the diocese. English is taught exclusively in the schools and most generally spoken, though Creole patois is widely used by the lower classes except in Tobago and St. Vincent. Spanish is spoken in some parishes of Trinidad and by Venezuelan residents of Port of Spain. There are also many Portuguese. Confessors with a knowledge of these languages are provided and sermons preached in English, French, Spanish, and Portuguese. Work amongst the East Indian immigrants makes a knowledge of the dialects of Hindustan needful. Number of parishes, 48; secular clergy, 20; Order of Preachers, 40; Congregation of the Holy Ghost, 15; Fathers of Mary Immaculate, 20; and a few members of the Order of St. Augustine. Higher schools for boys, 2, for girls, 4; 1 orphanage and 2 alms-houses. The Leper Asylum and the municipal

alms-house are under the care of the Sisters of St. Dominic, and many of the elementary schools under that of the Sisters of St. Joseph.

MICHAEL O'BYRNE.

ARCHBISHOP'S HOUSE, PORT OF SPAIN, TRINIDAD

Porto Rico (PUERTO RICO), the smallest and most easterly of the Greater Antilles, rec-

tangular in shape, with an area of 3670 square miles, and the most densely inhabited country in America, having a population of 1,118,012, over 304 to the square mile, according to the census of 1910; a growth of 125,769 the last ten years.

On 16 Nov., 1493, on his second voyage, the mountain El Yunque, on the north-east coast of the island then known as Boriquen, was seen by Columbus, whose fleet anchored in the port near Aguadilla. A monument erected in the fourth century of the discovery marks the site between Aguada and Aguadilla, where presumably the admiral took possession of the newly discovered territory in the name of his sovereign. The island was named San Juan in honour of St. John the Baptist.

Among those who accompanied Columbus was Vincent Yañez, the younger of the brothers Pinzon, who had commanded the ill-fated "Niña" on the voyage of the year previous. In 1499 a royal permit was granted him to fit out a fleet to explore the region south of the lands discovered by Columbus. After coasting along the shores of Brazil and advancing up the River Amazon, then called Marañon, he returned by way of Hispaniola, to be driven for refuge from storm into the port of Aguada.

From the natives, who received him kindly, it was learned that there was considerable gold in the island. On his return to Spain, Pinzon sought to obtain certain privileges to colonize San Juan de Boriquen. It was only after the death of Isabella that he obtained a royal permit from Ferdinand the Catholic, dated 24 April, 1505, authorizing him to colonize the island of San Juan de Boriquen, without intervention on the

part of Columbus, on condition that he would secure means of transportation within one year. Failing to do so his permit was without effect.

The colonizer and first governor of the island was another companion of Columbus, Juan Ponce, surnamed de Leon after his birth-place in Spain. The eastern portion of the Island of Hispaniola (Haiti), separated from Porto Rico by the Mono Channel, was at this time under his command.

In 1508 he secured permission to leave his command in the province of Higüey, in Hispaniola, and to explore San Juan de Boriquen. With fifty chosen followers, he crossed the channel, landing in Porto Rico 12 Aug., 1508, and was received by a friendly native cacique, who informed him of the existence of the harbour of San Juan on the north coast, then unknown to Europeans, which de Leon named "Puerto Rico" on account of the strategic and commercial advantages it offered for the colonization and civilization of the island. Having explored its interior, de Leon returned to his command in Hispaniola, now the eastern portion of Santo Domingo, to arrange with King Ferdinand and Orando to lead an expedition for the conquest and colonization of Boriquen. He made special request to have a body of priests assigned for his assistance.

In March, 1509, he sailed direct to the north coast for the harbour which he had named Puerto Rico, now known as San Juan. Anchoring about one mile from the entrance he established the first European settlement at a place then known as Caparra, now Pueblo Viejo, which remained capital of the island until it was officially transferred to the present site of San Juan in 1519.

ERECTION OF THE FIRST DIOCESES IN THE NEW WORLD.—On 15 Nov., 1504, Julius II by Bull "Illius fulciti" erected in the Island of Hispaniola the first ecclesiastical province in the New World, comprising the archiepiscopal See of Hyaguata, dedicated to the Blessed Virgin, under the title of Our Lady of the Annunciation, with two suffragans of Magua and Bayuna. This Bull, however, remained without effect, on account of inconveniences attending the sites selected, and of the opposition of King Ferdinand, who objected to the concession to the first prelates of the New World the right to participate in the *diezmos* (tithes) upon gold, silver, and precious stones then being discovered within the territory. This rendered the Bull inoperative, because in 1501 Alexander VI had granted to the Crown of Spain in perpetuity the right of collecting *diezmos* in her transoceanic colonies.

Seven years later, 8 Aug., 1511, the same pope by the Bull "Pontifex Romanus" declared as suppressed and extinguished in perpetuity the aforementioned ecclesiastical province, with the three sees comprised therein, and by the same Bull erected three new dioceses: two in Hispaniola (Santo Domingo and Concepcion de la Vega); the third was in the Island of San Juan, the name now given solely to the chief city of Porto Rico, but which then applied to the whole island. The new dioceses were made suffragans of the Province of Seville, Spain, and the three prelates previously designated to rule the extinct sees of 1504 were assigned by this later Bull to the new dioceses without the right, however, of sharing the *diezmos* upon any gold, silver, or precious stones that might be discovered within the limits of their jurisdiction.

Father Alonso Manso, canon of the cathedral of Salamanca, who had been elected Bishop of the See of Magua, was transferred by the Bull of 1511 to the newly-erected See of San Juan, of which he took possession two years later in 1513, arriving at a time when the island possessed only two European settlements, some two hundred white people and about five hundred native Christians. According to a letter which this prelate addressed later to the Spanish mon-

arch, he was the first bishop to reach the New World, a statement, however, that is at variance with the opinion that Father Bartholomew de las Casas had been ordained priest in 1510 in Santo Domingo, though it may be that he only sang his first Mass in America, as there is no record of the presence of any bishop there to ordain him at that early date.

Bishop Manso was the first Inquisitor General of the Indies, appointed in 1519 by Cardinal Adrian de Utrecht, afterwards Pope Adrian VI (1522). The cardinal made this appointment in the name of the Regent of Castile, whom he represented while Bishop of Tortosa. Juan de Quevedo, Bishop of Darien, is credited with having planted the Inquisition in America in 1515, but Bishop Manso was the first to be entitled "General Inquisitor of the Indies, Islands and the Mainland", with authority to act outside the jurisdiction of his diocese in union with the Vice-Provincial of the Dominicans, Pedro de Cordoba, who resided in Santo Domingo, until the establishment in 1522 of the Convent of St. Thomas Aquinas, the first religious community in Porto Rico. There is no evidence that this tribunal interfered in matters appertaining to the Holy Office outside the Diocese of San Juan. At least it did not interfere with the various bishops in their respective dioceses, who either *sui juris* or as delegates of the Holy Office exercised their functions in this regard.

It also has been stated that to the bishop, Manso, was assigned a number of Indians in the *repartimiento* made by the Crown, and that successive bishops had retained a number of natives as *Encomiendas* to care for the cathedral; but the aborigines in Porto Rico were always well treated by the early missionaries, who included Las Casas. In fact Paul III, as early as 1537, declared excommunicated all who dared to enslave the Indians in the newly-discovered lands, deprive them of their lands or fortunes, or disturb their tranquillity on the pretext that they were heathens.

In 1519, at the request of Bishop Manso, who complained that the revenue derived from San Juan was insufficient for his support, the Crown obtained from the Holy See an extension of territory for the diocese, so as to include all the Windward Islands of the Lesser Antilles from Santa Cruz to Dominica, thus rendering the jurisdiction of the bishop coextensive with the civil and military sway of the first governor and colonizer, Juan Ponce de Leon. The Islands of Margarita and Cubagua were also added to the diocese during the episcopate of Rodrigo de Bastidas, who was transferred in the Consistory of 6 July, 1541, from the See of Coro, Venezuela, to succeed Manso. On the appointment of Nicolas Ramos, 12 Feb., 1588, fifth Bishop of San Juan, the diocese was further extended to embrace the Island of Trinidad, and that tract of mainland in Venezuela which comprises Cumana and the region between the Amazon and the Upper Orinoco reaching almost to the present city of Bogota. Gradually the various islands were severed from the Spanish Crown and were made independent of the See of San Juan, which, on the erection of the Diocese of Guyana in Venezuela (1791), was restricted wholly to the limits of the Island of Porto Rico. At present the two small islands of Vieques and Culebra (the latter now a United States naval station) remain part of the See of Porto Rico. Over this ancient diocese, now within the territory of the United States, fifty prelates have ruled, several of whom were born in the New World, one in the city of San Juan itself, Arizmendi, co-founder of the conciliar seminary, who died on one of the arduous visitations of his diocese.

The first church was erected in 1511 at Caparra, and by order of King Ferdinand was dedicated to St. John the Baptist. The edifice was a temporary structure, which fell into ruin on the transfer of the capital. In 1512 a like structure was erected for the inhabitants on the southern coast at a point known as San Ger-

man, some distance from the actual site of the town of that name. For many years the Diocese of Porto Rico had only these two centres of worship, with little increase in population, owing to the larger opportunities then found in Mexico and South America.

The location of the actual cathedral of San Juan marks the site of the first church there erected in 1520 or 1521 by Bishop Manso. This wooden structure was replaced by Bishop Bastidas, who began the work in 1543, and in the year following informed the king that the building was still unfinished for lack of funds; that he "was assisted by the new dean, by four beneficiaries, some clerics, parish priests, chaplains, and an able provisor". Again in 1549 the bishop informed the same sovereign that the cathedral, upon which had already been spent more than six thousand *castellanos*, was still unfinished; that he had celebrated a synod, and that the *diezmos* amounted to six thousand pesos payable every four years on instalments. Successive structures have been destroyed by cyclones, earthquakes, and foreign invaders, to be replaced by others, each surpassing in beauty the former and continuing for four centuries on this spot the hallowed sanctuary of the mother church of the diocese.

The present cathedral, which is comparatively modern in its principal part, dates back to the early part of the eighteenth century. The rear portion, however, gives evidence of a distinct style of architecture of a much more remote period. On 12 August, 1908, the remains of Don Juan Ponce de Leon were solemnly conveyed from the church of San José to the cathedral, where a suitable monument now marks the resting place of the intrepid soldier and Christian cavalier.

CHURCH AND STATE.—On the withdrawal of Spain from Porto Rico, and the assumption by the United States of control over the island, many problems arose affecting the welfare of the Catholic Church. For four centuries the civil and religious authorities had been intimately associated, first by reason of the right of patronage over the Church of the Indies conferred on the kings of Spain by Julius II in 1508, and then by reason of the existing concordat.

Three distinct concordats or solemn agreements between the Holy See and the kings of Spain had been drawn up at various times relative to the mutual interests of Church and State in Porto Rico. The first was dated 13 May, 1418, between Martin V and John II of Castile. The second, between Philip V and Innocent XIII, may be regarded as the forerunner of the agreement made 2 January, 1753, by Benedict XIV and Ferdinand VI, which remained the basis of the union of Church and State in Spain and her colonies until the death of Ferdinand VII in 1833.

That concordat recognized in a solemn manner the right of patronage as appertaining to the Crown, the Church in consequence reserving to itself fifty-two benefices for its own appointment without any intervention of the State.

On the accession of Isabella II her adherents seemed to assume that Rome was unfavourable to the new dynasty, and, together with a vast portion of the Spanish clergy, was leaning towards the pretender Don Carlos. Eventually there followed a complete rupture with the Holy See. In the subsequent civil war opportunity was afforded the Isabellists to despoil the Church of her rights and suspend the allowances guaranteed by the Crown for the maintenance of religion.

Porto Rico felt in a very special manner the effects of this. In 1833 the saintly Bishop Pedro Gutierrez de Cos had died, leaving the diocese vacant until the nomination in 1846 of Bishop Francisco de La Puente, O.S.D. During this interval the Church was subjected to violent measures on the part of the governors of the island, who, taking advantage of its unsettled condition and of the Laws of Confiscation (applicable

only to Spain), despoiled the Church of much property and disbanded the only two communities of religious men, the Dominicans and Franciscans, appropriating to the State their convents and properties.

On 8 May, 1849, the Cortes authorized the Government to conclude a new concordat with the Holy See. This was done, 17 Oct., 1851, and, with modifications duly admitted in amendments (1859, 1867), was the law of Porto Rico at the time when it passed under American rule. The Spanish captain-general, besides being civil and military governor of the island, was also vice patron of the Catholic Church.

The question of the patronage previously exercised by the Crown of Spain seemed to offer little difficulty; on the part of the United States, there was no disposition to avail itself of this privilege, nor did the Church desire to have the civil or military government intervene in matters spiritual. The continuance of the concordat as to the support of Divine worship and its ministers was not claimed by the Church from the new government. It was tacitly admitted by both parties that the nature of the American Government made such continuance impossible. With this understanding the Catholic Church, through its Apostolic Delegate, Archbishop Chappelle, proceeded. But it was urged that the new government, in extending its authority over Porto Rico, should fulfil all obligations of justice towards the Catholic Church.

The maintenance of religion and its ministers in Spain and her colonies was not an act of mere piety or generosity towards the Church, but a partial and meagre compensation to the Church for repeated spoliation, particularly during the last century. On the acceptance by the Spanish Government of its obligation to support religion and its ministers, the popes, particularly Pius IX, had condoned many past acts of spoliation. In view of this act of the pope the Church in Porto Rico could not reclaim anything from the American Government. But there were certain church properties, particularly the former possessions of the now suppressed communities of religious men, which, by the distinct agreement between the Holy See and the Crown, should have been surrendered to the diocese; these, however, still remain in possession of the government. Both in Cuba and in Porto Rico claims were made for properties which in every sense of law and justice belonged to the Church, though administered by the government, which was repeatedly pledged by the terms of the concordat to restore the same to the Church.

The support of religion was the only title whereby in the past usufruct of these properties by the Crown of Spain could have been condoned; the failure of the American Government to assume this obligation deprived it of all title or pretext to these holdings.

Hence the Apostolic Delegate, Archbishop Chappelle, and the then Bishop of Porto Rico, Right Rev. James H. Blenk, made claim to the United States Government for the devolution of these properties or their equivalent, together with a rental of the edifices from the date of the American occupation of Porto Rico, as well as a small amount of *censos*. The United States military government in Cuba had speedily adjusted a similar claim involving a much larger amount, through the appointment of a commission. The prompt establishment of civil government in Porto Rico obliged Bishop Blenk to appeal to the civil tribunals on account of a special act of the legislature (12 March, 1904) conferring original jurisdiction upon the Supreme Court of the island to determine all questions at issue with the bishop of the diocese. This measure immediately led to a series of civil suits which involved the claim here mentioned as well as the ownership of the properties of the diocese, the episcopal residence, the seminary building, the cathedral, several parish churches, and the hospital. By the people of Porto Rico the claims of the Church were not dis-

puted, except the properties formerly belonging to the suppressed communities, which Spain had held for the last half century, allowing the suits in other cases to pass by default in favour of the Church. The Church property question was therefore duly brought before the Supreme Court of the island, which, after a long delay, handed down a decision by a vote of three to two, sustaining in principle the claims of the Church. From this decision an appeal was made to the Supreme Court of the United States.

Meanwhile the municipality of Ponce, unwilling to be guided by the policy of the insular Government, insisted upon laying claim to the two parish churches of that city, alleging that a goodly portion of the cost of the said edifices had been paid for with its funds. This suit was presented to the Supreme Court of the island, where judgment was given in favour of the bishop, and then carried immediately to Washington for a final decision. The importance of this matter was far in excess of the value of the properties at issue, for it involved not only ownership of nearly every church in the island, but also was bound largely to determine the outcome of the suit still pending before the same court in reference to all other church properties. The question of the bearing of the Concordat of 1851 upon the actual situation was most serious, involving the future security of the Church in the island.

In June, 1908, Chief Justice Fuller handed down a decision confirming the sentence obtained by the Catholic Church before the Supreme Court of the island against the municipality of Ponce, which was greatly enhanced by the luminous declaration contained in his opinion, upholding the force of the Concordat as an ancient law of the island and establishing beyond doubt the judicial personality of the head of the Catholic Church in Porto Rico, without being required to register under the laws governing business corporations.

This decision was accepted by the Porto Rican Government as a forerunner of a favourable outcome for the Church in its appeal then pending before the same court in reference to the properties in question. As the United States Government, both at Washington and in Porto Rico, was concerned in this decision, it was agreed by all parties interested to abide by the sentence of a commission appointed by President Roosevelt, composed of two members for the United States, two for the Church, and two for the Porto Rican Government.

Under the presidency of Robert Bacon, then assistant secretary of state, an agreement was speedily reached by the commission in August, 1908, by which the settlement of eleven claims at issue between the Catholic Church on one side and the United States and Porto Rican Government on the other was made on a basis of equity, whereby the Church was assured the sum of about \$300,000 for the release to the State of the properties involved in litigation.

More than one-half this sum was paid from insular funds, for which the approval of the Porto Rican Government was obtained in the following month. The part of the total sum that was apportioned to the Federal Government for properties utilized by the United States Army was likewise ratified by Congress in the following session, and approved by the President of the United States, thus terminating in an amicable manner a vexed question agitated for more than ten years and involving the only available income for the impoverished diocese.

The Diocese of Porto Rico at present is comprised of 78 parishes, which with few exceptions have resident clergy, a large number of whom are members of the religious bodies. The Lazarists, Augustinians, and Capuchins from Spain, the Dominicans from Holland, the Redemptorists from Baltimore, are each doing invaluable service for the preservation of the Faith. The people are poor and unaccustomed to con-

tribute to the support of their religion and its ministers. The amount received from the Government is invested so as to provide a limited annuity for aiding priests in the poorer missions, and assisting in the support of educational and charitable institutions. About 300 women belonging to the different religious communities are located in the diocese, engaged chiefly in the schools and hospitals. The Carmelite nuns, Sisters of Charity, Religious of the Sacred Heart, and Servants of Mary were established in Spanish times; since the American occupation the Mission Helpers of the Sacred Heart have erected an asylum for the deaf and dumb, and taken charge of the chapel of Perpetual Adoration of the Blessed Sacrament; the Sisters of St. Francis, from Buffalo, New York, have founded two parish schools and a novitiate for the reception of postulants. The Sisters of St. Dominic, of Brooklyn, New York, are in charge of the parish school at Bayamon, having been sent to the island by the Bishop of Brooklyn at the personal request of Pius X. By the Brief *Actum Præclaræ* of 20 Feb., 1903, the Diocese of Porto Rico was severed from the province of Santiago de Cuba, and made immediately subject to the Holy See, the two islands still continuing under the direction of the one Apostolic delegate.

On 8 Aug., 1911, the Diocese of San Juan will have completed the fourth centenary of its foundation. Extensive plans are devised for the proper celebration of this event. Apart from the contemplated renovation of the cathedral, it is hoped to establish a beneficent institution which will include a manual training school for both boys and girls.

W. A. JONES.

Portoviejo, DIOCESE OF (PORTUS VETERIS), a suffragan see of the Archdiocese of Quito, Republic of Ecuador. It was erected in 1871 and its jurisdiction extends over the political provinces of Manabi and Esmeraldas, with a Catholic population (1909) of 78,000 souls, and forty-six parishes. Besides the secular priests of the diocese, there are the following religious orders: Capuchins, in charge of the missions in the northern section of the Province of Esmeraldas; Oblates of the Sacred Heart of Jesus, engaged in secondary instruction. The religious orders of women are: Benedictines, Franciscans, and Sisters of Charity, all devoted to the education of girls. The Seminario Mayor is situated at Portoviejo, the see of the diocese, and was organized in 1888. There are also several schools and colleges, prominent among which is the College of San José, conducted by the Oblates of the Sacred Heart. The present bishop is Mgr Juan Maria Riesa, a Dominican, whose consecration took place 19 Dec., 1907.

Annuaire Pontifical Catholique (Paris, 1911), s. v.

JULIAN MORENO-LACALLE.

Portraits of the Apostles.—The earliest fresco representing Christ surrounded by the Apostles dates from the beginning of the fourth century. It was discovered in the cemetery of Domitilla, under a thick covering of stalactites. Christ is seated on a throne, His feet resting on a footstool, and His right hand raised in the oratorical gesture. Six other frescoes of this subject, Christ instructing the Apostles, have been found in the Roman catacombs. Besides these groups, showing the entire Apostolic college, portions of two other frescoes which originally represented only the two chief Apostles, St. Peter and St. Paul, on either side of Christ, have been discovered. In one of these frescoes the figure of St. Peter and a small portion of Christ's are preserved; no trace of St. Paul remains. The second fresco, on the other hand, preserves St.

Paul's figure entire. A third fresco of particular interest, in the cemetery of Priscilla, exhibits a subject frequently represented on sculptured sarcophagi, namely, Christ giving the law to St. Peter. Christ is standing on the globe, His right hand raised and extended, while, with His left, He is handing to St. Peter a roll which the Apostle receives with veiled hands. The author of this scene, which dates from about the middle of the fourth century, evidently regarded the Prince of the Apostles as holding an office under the New Law the counterpart of that of Moses under the Old. A fresco of the cemetery *Ad duas lauros*, dating from the middle of the third century, appears to have been inspired by the same idea: St. Peter is represented, seated on a low chair, with an open roll which he is carefully studying.

Such are the earliest painted representations of the Apostles still in existence. With the exception of St. Peter and St. Paul, according to Wilpert, the Apostles show no specially individualistic traits, some are portrayed with beard, some without, but merely for the sake of variety. The two chief Apostles, on the other hand, are always easily recognized and are of marked individuality. St. Peter appears as a man of great energy, with a short, thick beard, and close cut, curly hair, which in the earlier frescoes is partly, in the later wholly, gray. St. Paul is represented as the Apostle of intellect, bald, and with long, pointed beard, dark brown in colour. With slight changes this type of the two Apostles was always represented in cemeterial frescoes, mosaics and sculptured sarcophagi, and in fact persists to the present day. Indeed so familiar were Roman Christians with the conventional appearances of their favourite Apostles that, save in a few cases, the artists never thought it necessary to inscribe their names underneath their pictures, even when represented with other saints whose names are given. From this persistence of type Wilpert regards it as probable that, if the Romans did not actually possess portraits of Sts. Peter and Paul, at least a tradition existed as to their general appearance, and that catacomb representations of them conform to this tradition. The historian Eusebius informs us that he has heard of "likenesses of the Apostles Peter and Paul" as well as of "Our Lord, being preserved in paintings (*Hist. eccl.*, VII, xvi).

The most perfect of the ancient representations of St. Peter and St. Paul are those of the well-known bronze medal, dating from the second century, discovered by Boldetti in the catacomb of Domitilla and now in the Christian museum of the Vatican. The types of the catacomb frescoes are here readily recognized: the close cut, curly hair and short beard of St. Peter, and the longer beard and fine head of St. Paul. Portraits of St. Peter and St. Paul exist also on a number of the gold glasses found in the catacombs; on these the familiar type is reproduced, but the workmanship is of inferior order. Allusions to the office of St. Peter as head of the Church, besides the *traditio legis* pictures mentioned above, are seen in those monuments in which Peter takes the place of Moses as the miracle-worker striking the rock in the wilderness, and also in several parallel scenes on sarcophagi contrasting Moses with Peter. In catacomb frescoes of the third and fourth centuries Christ is frequently represented performing miracles by means of a wand. Peter is the only Apostle, in early Christian monuments, who is shown with a staff or wand, apparently as a symbol of his superior position. The keys are seen for the first time on sarcophagi of the fifth century; from this date on these attributes of St. Peter appear with increasing frequency on the monuments, until, from the end of the sixth century, they become the rule. The oldest fresco of the giving of the keys to the Prince of the Apostles is in the crypt of Sts. Felix and Adauctus; it is attributed to the beginning of the sixth century.

The famous bronze statue of St. Peter in the basilica of this Apostle in Rome is by some regarded as a work of the fifth or sixth century, by others as pertaining to the thirteenth. The latter date is adopted by Kraus and Kaufmann among others; Lowrie, however, maintains that "no statue of the Renaissance can be compared with this for genuine understanding of the classic dress", and, therefore, this writer holds for the more ancient date. The marble statue of St. Peter taken from the old basilica, now in the crypt of the Vatican, was originally, in all probability, an ancient consular statue which was transformed into a representation of the Prince of Apostles. The now familiar symbol of St. Paul, the sword, made its first appearance in Christian art in the tenth century. St. Peter and St. Paul quite naturally appear much more frequently in Roman and western monuments than the other Apostles; as founders of the Roman Church, and one of them as head of the universal church, their memory was revered in the centre of Christianity. In all representations also they occupy the place of honour, to the right and left of Christ. Curiously enough, St. Paul is generally, though not invariably, on the right and St. Peter on the left. De Rossi, however, regards this arrangement as a matter of no particular moment, and points out that in some classic representations Juno, the wife of Jupiter and queen of the gods, appears on the left of her spouse, while Minerva occupies the right.

MAURICE M. HASSETT.

Port-Royal, a celebrated Benedictine abbey which profoundly influenced the religious and literary life of France during the seventeenth century. It was founded in 1204 by Mathilde de Garlande, wife of Mathieu de Montmorency, in the valley of Chevreuse, six leagues (between sixteen and seventeen miles) from Paris, where the village of Magny-les-Hameaux, in Seine-et-Oise, now stands. Subject first to the Rule of St. Benedict and then to that of Cîteaux, it suffered greatly during the English invasions and the wars of religion. At the beginning of the seventeenth century its discipline was completely relaxed, but in 1608 it was reformed by Mère Angélique Arnauld, aided by the advice and encouragement of St. Francis de Sales. Nuns trained at Port-Royal then spread all over France, working for the reform of the other monasteries. In 1626 Port-Royal, besides being very unhealthful, no longer afforded adequate accommodation, and the community migrated to Paris, settling in the Faubourg St-Jacques. Renouncing the ancient privileges granted by the popes, the new abbey placed itself under the jurisdiction of the Archbishop of Paris; the nuns, devoted henceforth to the worship of the Holy Eucharist, took the name of Daughters of the Blessed Sacrament. In 1636 the Abbé de St-Cyran became the spiritual director of the monastery, which he soon made a hotbed of Jansenism. He gathered around him the Abbé Singlin, the two brothers of Mère Angélique, Arnauld d'Andilly and Antoine, the great Arnauld, their three nephews, Antoine Lemaître, Lemaître de Lacy, and Lemaître de Séricourt, Nicole, Lancelot, Hamon, Le Nain de Tillemont, and others, who, urged by a desire for solitude and study, withdrew to the monastery "of the fields".—There was then a Port-Royal of Paris, and a Port-Royal "of the fields".—In 1638 they opened what they called the *petites écoles*, in which Lancelot, Nicole, Guyot, and M. de Selles taught the nephews of St-Cyran and some other children. They were transferred to Paris in 1647, then brought back to the country to Les Granges, near Port-Royal, to Trous, at the home of M. de Bagnols, to Le Chesnay, at the residence of M. de Bunières.

The Jansenist dispute was then being vigorously waged. In 1639 St-Cyran had been arrested by Richelieu's order and cast into prison, from which he was not set free till 1643, dying a little later. In 1640 the "Augustinus" of Jansenius had appeared, and in 1643 Arnauld's work, "La fréquente communion", which gave rise to violent discussions. Port-Royal was then the heart and soul of the opposition. The women there were as stubborn as the men, and all the partisans of the new teaching in Paris and in France turned towards the monastery for light and support. Solitaries and nuns flocked thither. The convent in Paris, in its turn, became too small to contain their numbers, and a multitude settled once more in the country. Unfortunately, in 1653 and 1656, five propositions extracted from the "Augustinus", which, though not found in it verbatim, were, according to Bossuet, "the soul of the book", were condemned by the Sorbonne, the bishops, and two papal Bulls. From that time began the persecution of Port-Royal which the pleading of Arnauld, the famous distinction of fact and law, and the "Provinciales" of Pascal only increased. Port-Royal, having refused to subscribe to the formulary drawn up by the Assembly of the Clergy in 1657, all the *petites écoles* were successively closed, the novices were driven out from the abbey, and the confessors expelled. But in vain; the doctors, even the Archbishop of Paris, Hardouin de Pérèfixe, endeavoured by their learning and their patience to bring the recalcitrants to reason. "They are as pure as angels", said the latter, "but proud as demons." Only a few consented to sign; the more obstinate were finally sent to the country or dispersed in different communities. In 1666 the director, Lemaître de Lacy, was imprisoned in the Bastille.

At length, after interminable negotiations, in 1669, what was called "The Peace of the Church" was signed; Port-Royal became again for some years an intellectual and religious centre, shining on all that was most intelligent and noble in the city and at the Court. But the fire was smouldering beneath the ashes. In 1670 Arnauld was obliged to fly to the Low Countries, and Louis XIV, who had begun to suspect and hate the stubborn Port-Royal community, resolved to subdue them. In 1702 the quarrel broke out anew on the condemnation by the Sorbonne of a celebrated "case of conscience". In 1704 Port-Royal des Champs (Port Royal of the Fields) was suppressed by a Bull of Clement IX. In 1709 the last twenty-five nuns were expelled by the public authorities. Finally, in 1710, to blot out all traces of the centre of revolt, the buildings of Port-Royal were razed, the site of the chapel turned into a marsh, and even the ashes of the dead were dispersed. Port-Royal was destroyed, but its spirit lived on, especially in the Parliament and the University, and during almost all the eighteenth century France was distracted by the ever-recurring struggle between its heirs and its adversaries. (See JANSENIUS AND JANSENISM.)

By the rigour of its moral code, which carried the Christian ideal to extremes, by the intense effort which it demanded of the human will, by the example with which it illustrated its teaching, by the writings which it issued or inspired—St-Cyran's and Mère Angélique's "Lettres spirituelles", Arnauld's "Fréquente communion", Le Nain de Tillemont's "Histoire ecclésiastique", Pascal's "Provinciales" and "Pensées"; the "Logique"—Port-Royal produced a great impression on the seventeenth century. Almost all the great writers felt its influence. Two were its direct product: Racine, its pupil, and Pascal, its most distinguished champion. The others were more or less indebted to it. Boileau remained till the end united in heart and soul with it (cf. "Épître sur l'amour de Dieu"). Mme de Sévigné was passionately fond of Nicole's "Essais". La Rochefoucauld's pessimism is closely related to theirs, as is that of the gentler La

Bruyère; St-Simon is devoted to them, and Bossuet himself is not altogether a stranger to their influence.

What contributed most to the power of these "Messieurs" was the *petites écoles* and their pedagogy. Their educational principle was: that human knowledge, science itself, is not an end, but a means; it should serve only to open and develop the mind, and raise it above the matter of teaching. In teaching they adopted an openly Cartesian and rationalistic method; they strove to cultivate the intellect and the reasoning faculty much more than the memory, and they appealed constantly to personal reflection. Breaking with the traditions of the Jesuits and the University, who taught in Latin, they taught in French. The child learned the alphabet in French, and was instructed in the mother tongue before studying the dead languages. He wrote in French before writing in Latin. He had to compose short dialogues, stories, letters, the subject of which he chose from among the things he had read. Translation, and especially verbal translation, took precedence over written themes. Finally, Greek, of which they were unrivalled teachers, received more attention and a more important place. Even in matters of discipline they introduced reforms: they endeavoured to combine severity with gentleness. Punishment was reduced to a minimum, and the school was likened to the home as far as possible. They suppressed in the pupil the desire to surpass a fellow-pupil, and developed in him only that natural attraction of the interest presented by the subjects. These admirable teachers and educationists have left us several school books of the highest merit, some of which have remained classics for nearly two centuries—the "Grammaire", edited by Lancelot, but in reality the work of Arnauld; the "Logique" of Arnauld and Nicole, the "Jardin des racines grecques" of Lancelot; the "Méthodes" for learning Greek, Latin, Italian, Spanish, etc. Not everything in their books or in their system of education is worthy of admiration, but it is incontestable that they contributed to the progress of pedagogy against the older Scholastic methods.

J. LATASTE.

Portsmouth, DIOCESE OF (PORTUS MAGNUS, or PORTEMUTHENSIS). This diocese was created by a Brief of Leo XIII, dated 19 May, 1882, and was formed out of the western portion of the Diocese of Southwark as constituted at the re-establishment of the English Hierarchy in 1850. It comprises the Counties of Hampshire and Berkshire, on the mainland, the Isle of Wight, and the Channel Islands, and is thus almost coterminous with the limits of the old Catholic See of Winchester. However, according to its consistent policy in England, the Holy See avoided the old centre of government and fixed upon Portsmouth—the great naval port—as the cathedral city for the new diocese. John Virtue (1826-1900) was named its first bishop, and upon him devolved the task of organizing the new diocese. He had about seventy priests and forty missions. In Portsmouth there was a portion of a large church, newly built, which would serve as a cathedral. With this he made a start, and the eighteen years of his episcopate was a slow and steady growth in every department of diocesan life—the founding of new missions, the establishment of religious communities, and the gradual increase in the ranks of the clergy. He enlarged the cathedral and completed its interior decorations. He built an

episcopal residence and a large hall adjoining, which, with the cathedral, form a group of buildings artistic in design, and architecturally, the most noteworthy structure, among the ecclesiastical buildings in the Borough of Portsmouth. The Diocesan college at Woolhampton was extended as regards accommodation, and the buildings reconstructed through the generosity of a benefactress. The bishop's influence in Portsmouth was great. He was well known in all branches of public life, and at his death the esteem in which he was held by the people of the borough, was attested by their liberal subscriptions to his memorial chapel in the cathedral. He was succeeded by his auxiliary bishop and vicar-general, John Baptist Cahill (1841-1910), a man of exceptional administrative ability.

Bishop Cahill had been Rector of Ryde since 1868, and vicar-general of the diocese since its foundation, he was consecrated coadjutor (titular of Thagora) only three weeks before the death of Bishop Virtue.

The ten years of his episcopate were marked by the same steady progress that characterized his predecessor's. He completed the cathedral by adding the west front, and carried out several important changes in the interior. His episcopate was particularly marked by the influx of religious communities, owing to the French persecutions. It was thus that the diocese was enriched by the presence of such congregations as the Benedictines of Solesmes, both monks

and nuns. Five Abbeys (Douai, Quarr, Farnborough, Ryde, and East Cowes) have been founded in the diocese. The good which they and the other exiled religious are doing should alone suffice to perpetuate the memory of Bishop Cahill. He died 2 August, 1910, and was succeeded by his friend and auxiliary, William Timothy Cotter (1866) who was educated at Maynooth for the Diocese of Cloyne (Ireland), but afterwards came to the English Mission. He was consecrated auxiliary to Bishop Cahill, 19 March, 1905, as titular Bishop of Clazomenæ, and was transferred to Portsmouth, 24 November, 1910. The statistics of 1910 were: churches, 100; secular clergy, 70; regulars, 203; communities of men, 21; of women, 43. The estimated Catholic population, 45,000.

JOHN HENRY KING.

Portugal.—I. GEOGRAPHY AND PHYSICAL CHARACTERISTICS.—Portugal is situated on the west of the Iberian Peninsula, being bounded on the north and east by Spain and on the west and south by the Atlantic Ocean. It lies between latitudes 37 and 42 north, and longitudes $6\frac{1}{4}$ and $9\frac{1}{2}$ west of Greenwich. The form is approximately rectangular, with a maximum length of 362 miles, a maximum breadth of 140 miles, and an area of 35,490 square miles. For purposes of administration it is officially divided into districts, but the old division into provinces (which originated in the differences of soil, climate, and character of the population) has not lost its meaning and is still employed in common parlance. The names of these provinces are Entre-Douro-e-Minho, Traz-os-Montes, Beira, Estremadura, Alemtejo, and

Algarve. The island groups of Madeira with Porto Santo and the Azores are considered as part of Continental Portugal, the other possessions being colonies. Excluding these islands, Portugal has a seaboard of nearly 500 miles and a land frontier of about 620 miles, the greater part of which is marked by rivers or mountains. But though only a small portion of this frontier is conventional, Portugal and Spain are not separated by a strongly marked natural boundary such as divides some countries; indeed they are geographically one.

As regards the nature of the soil, Portugal may be roughly divided into three zones: (1) the northern, which is mountainous and rises from 1800 to 5000 feet, including the Serra do Gerez, notable for its vegetation and thermal springs; (2) the central, a zone of extensive plains divided by mountain ranges, among the latter being the Serra da Estrella (6540 feet), the highest and largest in the country; (3)

the southern, the most extensive of the three, almost entirely composed of low-lying plains and plateaus of small altitude. In all these regions the mountains are usually prolongations of Spanish systems. The only independent range of importance is the Serra de Monchique. Briefly, in the north, Portugal has many chains of mountains, plateaus of considerable height, and deep narrow valleys; in the centre, together with high and extensive mountains,

we find broad valleys and large plains. Lastly, south of the Tagus, the country is one of plains throughout the Alemtejo, but in the Algarve it again becomes hilly, though the altitudes are rarely considerable. The chief rivers are: (a) the Minho, which forms the northern frontier; (b) the Douro, which rises in Spain and enters the sea near Oporto, about one-third of its course being in Portugal; (c) the Mondego, the largest river rising in Portugal, which enters the sea at Figueira after a course of 140 miles; (d) the Tagus, which rises in Spain, forms above Lisbon a gulf more than eight miles wide, and enters the sea below that city, after a total course of nearly 500 miles, about one-third in Portugal; (e) the Sado, which flows out in a large estuary at Setubal; (f) the Guadiana, which serves in part as frontier between the two countries. The Tagus is navigable for small vessels as far as Santarem; the Guadiana, as far as Mertola. There are no lakes worthy of mention, the *ria* at Aveiro connecting with the sea.

Portugal has few good natural harbours. That of Lisbon is the best, and indeed one of the largest in Europe, and is of easy access at all times. The bar of the Douro is shallow and difficult; a fine artificial port has therefore been built at Leixões to serve Oporto. Setubal is a fair harbour, ■ is Villa Real de S. Antonio, in the Algarve, while Lagos Bay, in the same province, affords a secure anchorage for a numerous fleet. The other ports are only suitable for small craft and are continually being blocked by sand. Portugal is rich in metalliferous deposits, including antimony, copper, manganese, uranium, lead, tin, and iron. Coal is scarce and of poor quality. The country has more than a hundred mineral springs,

THE RUINS OF NETLEY ABBEY, NEAR SOUTHAMPTON, ENGLAND

of which the most important are Gerez and Vizella (Minho), Vidago, Pedras Salgadas, and Moledo (Traz-os-Montes), S. Pedro do Sul and Felgueira (Beira Alta), Caldas da Rainha (Estremadura), Moura (Alentejo), and Monchique (Algarve). A branch of the Gulf Stream runs down the West Coast and the climate is temperate, but it differs from province to province according to soil, distance from the sea, etc.; while equable on the coasts, it is subject to sudden changes inland. The plateaux of Traz-os-Montes and Beira are cold and harsh, while the Algarve littoral is hot, but even where the temperature is most extreme, the thermometer rarely rises to 3 Fahrenheit or descends to 2 below freezing. Snow only falls in winter in the high mountains and in the north. The rainfall is more abundant in the North than the South, and on the littoral than inland. The humidity produces fogs which render the coasts dangerous to shipping. The most usual winds are north-west, north, and north-east, but in winter south-west winds prevail, accompanied by storms. The *nortada* and the east wind are dry and disagreeable. Generally speaking, the climate is healthy, the mean temperature being 61 Fahrenheit. In the eighteenth century Lisbon was much recommended by English physicians. ■ a health resort, and Mont' Estoril, on the sea outside the estuary of the Tagus, is now increasing in favour as a winter residence.

The vegetation is rich, including nearly all the vegetable species of temperate climates and a large number of those found in hot countries. Among trees the pine is the most characteristic, but it does not grow south of the Sado. The *pinhal* of Leiria planted by King Denis is the largest

forest and the *mato* of Busaco is famous for the size and variety of its trees. Fruit trees abound, especially on the Upper Douro, and in Beira. Olives and oranges are everywhere, the Algarve produces figs, and Traz-os-Montes almonds. The vine is universal and forms Portugal's principal wealth. The chief wines are port, which comes from the Douro region, and the wines of Beira and the Peninsula of Lisbon (Collares and Carcavellos), but the largest vineyard is found just south of the Tagus and is a recent creation. The cereals most grown are wheat, maize (Indian corn), and rye, but Portugal still has to depend on foreign countries for a portion of its bread supply. Wine, oil, fruit, vegetables, cattle, and cork are exported in large quantities, and the chief manufactures are cotton, wool, gold and silver work, lace, and pottery. The fisheries are the main occupation of the coast population, and the sardine industry at Setubal is a flourishing one.

II. HISTORY.—The lifework of Alfonso Henriques first King of Portugal (1128-85) consisted in his assertion, by fighting and diplomacy, of the political independence of the country, and in his enlargement of its boundaries by conquests from the Moors who occupied more than half the present kingdom when he began to rule. Though he had assumed the government in 1128, it was only after a period of fifteen

years, during which he suffered a series of reverses, that he was able to obtain recognition of his kingship from Alfonso VII of Leon, to which kingdom the territory of Portugal had formerly belonged. Alfonso Henriques early resolved to protect himself against the claims of his powerful neighbour and overlord, and in 1142 he offered his kingdom to the Church, declared himself the pope's vassal, and promised, for himself and his successors, to pay an annual feudal tribute of four ounces of gold. Lucius II ratified the agreement, taking Portugal under his protection and recognizing its independence, and in 1179 another pope, Alexander III, confirmed Alfonso Henriques in his royal dignity. The latter now gave up all idea of extending his dominions, beyond the Minho and the Douro, which rivers formed its boundaries to the north and east, and endeavoured to increase them to the south. He carried on a persistent warfare against the infidel by sudden incursions into Moorish territory and by midnight assaults on Moorish towns, and on the whole he was successful. In 1147 he took the almost impregnable city of Santarem. In the same year, after a four months' siege, the great city of Lisbon, containing "154,000

men, besides women and children", fell to his arms assisted by a Northern fleet of 164 ships which was on its way to the Second Crusade. The king thereupon moved his capital to the Tagus, appointed Gilbert, an Englishman, its bishop, transported the body of St. Vincent to the cathedral, and perpetuated the saint's memory in the arms he gave to Lisbon, viz., a ship and two crows, in allusion to the manner in which the relics were transported from Cape St. Vincent and to the birds which were

THE CASTLE OF THE PENHA (ROCK)
Cintra, Portugal

said to have accompanied them during the whole journey.

The reduction of the neighbouring strongholds followed, but the king had to wait for the arrival of another crusading fleet before he could take Alcaacer do Sol, in 1158. The cities of Evora and Beja fell into his hands soon afterwards, but he could not hold so extensive a territory, and the country south of the Tagus was taken and retaken more than once. At the end of his life an unwarrantable attack on Badajoz placed him in the power of King Ferdinand of Leon, and his last years were full of defeats and humiliations. Nevertheless, when he died the independence of Portugal had been secured, its area doubled, and the name of the little realm was famous throughout Europe for its persistent struggle against the enemies of the Cross. A rough warrior, an astute politician, and a loose liver, Alfonso Henriques was yet a man of strong faith. He corresponded with St. Bernard and put his country under the protection of the Blessed Virgin, decreeing that an annual tribute should be paid to the abbey of Clairvaux. For the Cistercian Order, to whose prayers he attributed the capture of Santarem, he founded the great monastery of Alcobaca, the most famous in Portugal, and endowed it handsomely, so that its lands stretched to the ocean and contained thirteen towns in which the monks

exercised authority and levied taxes. They corresponded to such generosity by reducing that great territory to cultivation, and Alcobaça became the mother of numerous daughter monasteries, while its chartulary served in early times as that of the kingdom. The Abbot of Alcobaça had the post of chief almoner and sat in the Royal Council and the Cortes with the honours of a bishop. Furthermore, Alfonso Henriques, in 1132, established for the Augustinian Canons the monastery of Santa Cruz at Coimbra, which rivalled Alcobaça in its wealth and social mission, and for the same order he built S. Vicente in Lisbon, which is now the residence of the Patriarch.

Sancho I (1185-1211) continued the work of reconquest, and a large part of the Algarve fell into his hands, but a fresh invading wave of Moors from Africa ultimately pushed the Christian frontier back to the Tagus. In the intervals of peace allowed him, the king was active in building towns and settling his territory, thus deserving his name of "The Peopler", and, being a thrifty man, he amassed a large treasure. On his accession, he asked and obtained the papal confirmation of his title, which protected him against his Christian neighbours, and after some delay paid the tribute to the Holy See. This was continued by his immediate successors, but afterwards fell into abeyance. Sancho imitated his father's liberality to the Church and gave further endowments to bishoprics and abbeys; he likewise favoured the military Orders of the Temple of Hospitalers of Aviz, and of S. Thiago, which, besides their pious works, supplied the best disciplined soldiers for the war against the Moors and garrisoned the frontier towns and castles. But he was a man of irascible temperament, and his superstition led him to keep a "wise woman" in his company whom he used to consult on his enterprises. His disputes with the clergy and the violent measures he dealt out to them are explained partly by his character and partly by the influence of his chancellor Julian, who had studied Roman Law at Bologna and aimed at increasing the royal authority. Sancho intervened in a question between the Bishop of Oporto and the citizens and ignored the interdict with which Innocent III punished his high-handed proceedings. He also came in conflict with the Bishop of Coimbra, whom he imprisoned and treated with great cruelty.

Sancho persisted in invading the rights of the Church and in particular refused to recognize the ecclesiastical forum and clerical immunity from military service. Though he made some concessions before his death, the conflict he had opened lasted through the next two reigns, and for nearly a century the clergy and the Crown were involved in a struggle over the limits of their respective powers. All the early kings were wont to reward services by extensive grants of lands, and in these lands they gave up the royal jurisdiction. In time, so large a part of the country was held in mortmain, or had passed into the hands of the nobles, that the rest did not produce enough revenue to meet the increasing expenses of government. The monarchs then tried to overcome the difficulty by a revocation of grants, which naturally met with resistance from the nobility and clergy. Denis, though so generally favourable to the Church, employed a more equitable remedy by prohibiting, in 1286, the purchase of real estate by clerics, but this and a stricter law of 1291 were found too severe and had to be modified. The evil was a great and growing one and, had there been no other cause of discord, would have sufficed to set the Crown and landowning classes at issue. Alfonso II (1211-23) took care to obtain the confirmation of his title from the Holy See, and at the Cortes of Coimbra he sanctioned the concessions made by his father to the Church, whose

help he hoped to have when he came to annul the large bequests of land which Sancho had made to his children. In this he was disappointed, for the pope intervened as arbiter, and Alfonso's sisters got their legacies, but they all took the veil, and his brothers never obtained the estates which had been left to them.

This was a victory for the king, who now, on the advice of his chancellor, sent a commission of enquiry through the kingdom to ascertain the titles to land and either confirm or revoke them, as seemed to him just. So far he had kept on good terms with the clergy, but Alfonso's determination to increase the power of the Crown and fill his treasury affected their immunities, and his action in a dispute between the Bishop of Lisbon and his dean showed that the king's attitude towards the Church had changed. By 1221 the old differences had appeared again, and in an acute form: Alfonso had seized church property, compelled ecclesiastics to plead before secular justices and to serve in the wars. The learned and holy Archbishop of Braga convoked an assembly of prelates in which he accused the king of his breaches of faith and scandalous life. The latter met this by confiscating the goods of the prelate, who fled to Rome. Honorius dispatched three Spanish bishops to remonstrate with Alfonso, and, as this had no effect, they excommunicated him a year later. The pope then threatened to absolve the king's subjects from their allegiance and hand over the realm to any prince who cared to take it. A further papal Brief, in 1222, insisting on reparation, together with an attack of leprosy induced Alfonso to enter into negotiations for peace, and these were in progress when he died.

The reign of this excommunicated king witnessed a religious revival which was rendered necessary by the general laxity of both clergy and laity. The Franciscans were introduced by the king's sister and, although they soon won the affection of the people, they were received with little cordiality on the part of the secular clergy and the other orders, who saw their pecuniary interests damaged. In a Bull of Gregory IX (1233) the pope complains of the hostility shown to the friars by bishops and clergy. At Oporto the bishop ordered them out of the city, sacked their convent, and burned it, but the citizens sided with them, and in the end they were able to return. The order soon spread over the country, convents were built for them, members of the royal family chose their churches as burial places, and the popes bestowed bishoprics on friars and charged them with delicate missions. It was the custom for testators to leave a part of their property to the Church, and Bishop Sueiro of Lisbon promulgated a statute that one-third should be so bequeathed under pain of refusal of the sacraments and canonical burial. The citizens appealed to the pope against this violence, and Honorius condemned it, and charged the superiors of the Dominicans and Franciscans to see that the practice was discontinued. The Dominicans had entered Portugal between 1217 and 1222, and, by virtue of their austere morals, poverty, and humility, they obtained a welcome second only to that given the Franciscans. Sancho II (1223-48) was still only a boy when he succeeded his father. His ministers bound him to make satisfaction for the material losses inflicted on the Church by Alfonso II, and to punish the guilty parties. They also promised that ecclesiastical privileges should be respected, but those responsible for the outrages of the last reign remained in power, and the king had small control over them.

The bishops showed as little desire for peace as the nobles, and vied with them in vexing the monasteries by their monetary exactions. With each succeeding year a state of anarchy increased over the kingdom.

The bellicose Bishop of Oporto, Martinho Rodrigues, presented to the pope a long list of accusations against the monarch, in reply to which Cardinal John de Abavila was dispatched to Portugal on a reforming mission, but though he did much good he was unable to end the discords. Bishop Saeiro then put himself at the head of the malcontents and painted in dark colours the condition of the Church. The clergy were blackmailed and deprived of their property, the king and nobles despised ecclesiastical censures, public offices were given to Jews, and so on. Pope Gregory thereupon sent a commission to require the king to correct abuses under threat of penalties, but at first there were some difficulties in the way of reform. The bishops too often abused their immunities, they admitted men to orders who were only anxious to evade military service, and sometimes to avoid answering to the secular courts for their crimes. The pope remedied these evils, but the Government failed to repress those which were charged against it. Yet the Holy See was averse to extreme measures, because it appreciated Sancho's crusading energy—

for, though a bad man and an indolent administrator, he was a bold soldier. An ancient dispute between bishop and citizens as to jurisdiction over the City of Oporto revived again, and bishop and king were soon at issue. Furthermore, the latter roused strong opposition by refusing to allow ecclesiastical bodies or individuals to accept gifts of land, or to purchase it, and, not content with robbing and profaning churches, he slew some priests. He brought matters to a climax when he intervened in a disputed succession to the bishopric of Lisbon and used the most brutal methods to enforce his will and Gregory IX, who had previously threatened, now confirmed a sentence of interdict.

Sancho gave way for the moment, and peace was made, the king turning his arms against the Moors, but in an interval between his successful campaigns he became enamoured of a widow, Doña Meia Lopes de Haro, whom he met during a visit to the Court of Castile, and under her influence his character deteriorated. The bishops renewed their complaints of the disorders in Portugal, and in 1245, by the Bull "Grandi non immerito", Innocent IV committed the government to Sancho's brother Alfonso, who was living in France. The latter undertook to remedy the ills of the kingdom and grievances of the Church, and on his arrival the greater part of the country accepted him for regent in accordance with the papal directions. Sancho, finding resistance hopeless, passed into Spain, where he died a year later. In the reign of Alfonso III (1248-79) Portugal attained its farthest European limits by the conquest of the Algarve from the Moors, but Alfonso X of Castile claimed the kingdom, and the Portuguese king was forced to recognize Castilian suzerainty and, though already married, to further purchase his possessions by agreeing to wed Beatrice, his brother monarch's illegitimate daughter. Fortunately, the first wife of Alfonso III died shortly afterwards, and the king's

bigamous union with Beatrice and their issue were legitimated by Urban IV at the request of the bishops.

So far there had been peace between king and clergy, but the former did not intend to keep the promises on the strength of which he had ascended the throne, and the latter would not abate their claims. In 1258 Alfonso sent a commission of inquiry through the kingdom to determine the royal rights and the fiscal obligations of his subjects, and as a result he revoked, in 1265, many of the crown grants of land. Seven of the bishops took up the challenge, and in 1267 appealed to Clement IV. They alleged that the king, besides seizing their possessions, deprived them of their liberty of action, refused to pay tithes, exacted forced loans, compelled ladies to marry men of no birth, and men of family to wed low women, or those of Moorish or Jewish race. The abuses of civil administration were dealt with in five articles, ecclesiastical grievances occupied forty-three. The charges were true in the main, but the king met them by presenting to the pope a petition signed by all

THE CONVENT CHURCH OF THOMAR, PORTUGAL.

the *concelhos* in favour of his rule, and, to defeat the bishops by a policy of delay, he took the Cross for a crusade led by St. Louis, but never went. Moreover, the pope and some of the protesting bishops died, while certain abuses were remedied. Relying on his good fortune he became more oppressive than ever, usurping the revenues of four sees, and in 1273 Gregory X ordered the heads of the Franciscan and Dominican Orders in Lisbon to remonstrate with the king. It was long before

Alfonso would see them and then he assembled the Cortes at Santarem and had a committee appointed to correct everything done "without reason". This committee was composed of his friends so that the concession was illusory. On hearing of the king's duplicity, the pope sent him a strongly-worded Bull, dated 4 Sept., 1275, reminding him of what he owed the Church and requiring him to keep the agreement made in Paris under pain of censure and, in the last resort, of losing the realm.

Again, however, time favoured the king, for Gregory and his two successors all died in 1276, and, though the Portuguese John XXI took the matter up, the king would do nothing until the terms of Gregory's Bull, which he called *ordinatio diabolica*, were softened. An interdict was therefore pronounced on the realm, and Alfonso's subjects were absolved from their allegiance, but without effect, for the king had a stronger position than Sancho II. However, he relented when death approached; he promised restitution to the Church and made his heir swear to perform what he himself had promised. His understanding with the municipalities enabled Alfonso III to consolidate the power of the Crown by limiting that of the nobility, both lay and clerical, and even to brave the censures of the Church, which by constant repetition had lost some of their effect. Denis (1279-1325), a cultured man, abstained from foreign wars and devoted himself to developing the resources of the country, his care of agriculture win-

ning him the title of "the Cultivator". He favoured commerce, founded the royal navy, and above all gave peace to the Church. After long negotiations a concordat of forty articles was signed in 1289, and this was followed by two others. The *beneficium regium* was abandoned, the property seized by Alfonso III was restored, and the king bound himself to respect ecclesiastical privileges and immunities, and to observe the old laws and customs of the realm. The free election of bishops was secured, and the extortions practised by lay patrons of churches and monasteries were prohibited.

The long struggle between Church and Crown terminated; but if the first gained most of the points contended for, its commanding position ceased. The times were different. With the increasing weakness of the papacy, the clergy became more dependent on the monarch. Moreover, the complete nationalization of the military orders effected by Denis also tended to increase the central power, and it was said of him "that he did all he wished". On the initiative and at the expense of the Priors of Santa Cruz at Coimbra, S. Vicente at Lisbon, and Santa Maria at Guimaraens and the Abbot of Alcobaça, a university was established at Lisbon and confirmed, in 1290, by papal Bull, with faculties of arts, canon and civil law, and medicine, but not theology, which was studied in the monasteries. The king showed great liberality to the new foundation, which was subsequently, by papal permission, moved to Coimbra. When the Templars were suppressed, John XXII allowed their property to go to the new Order of Christ established in 1319.

If Denis proved a wise and just ruler, some of the credit is due to his wife, St. Isabel. She intervened successfully more than once to end the rebellions of his son. Alfonso IV, (1325-57) continued his father's policy. He lived on good terms with the other peninsular sovereigns, but when his daughter was illtreated by her husband, Alfonso XI, he invaded Castile. Once more St. Isabel intervened. Leaving her convent of Poor Clares at Coimbra, she came between the opposing armies at Estremoz and settled the dispute so effectually that when, in 1340, the King of Morocco crossed into Spain to aid the King of Granada against the Christians, Alfonso IV obeyed the papal summons and led a contingent which helped Alfonso XI to win the great battle of the Salado. His later years were clouded by the Black Death and by the rebellion of his son Pedro, who, though married, had become enamoured of the beautiful Doña Ines de Castro. To end this infatuation, Alfonso was unfortunately persuaded to consent to her assassination, whereupon the prince rose in arms against his father and devastated the country. Benedict XII exacted the payment of the tribute promised by Alfonso Henriques and took measures against the incontinency of the clergy (a recurring evil in Portuguese history), while Clement VI answered the complaints of the Kings of Portugal and Castile as to the appointment of foreigners to ecclesiastical benefices. The chief characteristic of Pedro I (1357-67), was the pleasure he took in seeking out and punishing lawbreakers, whether laymen or clerics; hence his title, "the Doer of Justice". Allying himself with Pedro the Cruel of Castile, he took summary vengeance on the murderers of his mistress. He repressed the violence of the nobles and the usury of the Jews, and this with his generosity earned him the respect of the people, savage despot though he was. It is noteworthy that though an especial avenger of adulteries, as well as of witchcraft, he himself lived an immoral life and had several bastards, one of whom became King John I.

The chief ecclesiastical interest of this uneventful reign is centred in the Cortes of Elvas, in which the clergy submitted a list of thirty-three grievances,

some of which received attention. As regards the admission of papal letters, the king promised to see them and order their publication in so far as was right. It was a shuffling reaffirmation of the *beneficium regium*. Ferdinand (1367-83) had his father's generosity without his strength, and, though he deserves the credit for wise laws encouraging navigation and agriculture, and for the fortification of Lisbon, he fell a victim to animal passion and foolish ambition. His first attempt to win the Throne of Castile against Henry of Trastámara failed, and in 1371 the Peace of Alcoutim was made under the auspices of Gregory XI, Ferdinand agreeing to marry Henry's daughter. But he could never keep a treaty, and, having fallen in love with Doña Leonor Telles, the wife of one of his nobles, he married her, notwithstanding the angry protest of the citizens of Lisbon. Moreover, he entered into an agreement to assist John of Gaunt, who claimed the crown of Castile. Henry thereupon invaded Portugal, in 1373, and would have captured Lisbon, had not Cardinal Guy de Bologne, the papal legate, forced him to retire and make peace with Ferdinand at Vallada. Leonor now entirely dominated her vacillating and indolent husband, and by obtaining honours and lands for her kinsfolk and friends provided against the time when he should die. Losing all scruples, she engineered the murder of her own sister, and betrayed the king by an intrigue with the Galician noble, Andeiro, whom she persuaded him to create Count of Ourem. A few years later Lisbon was again besieged unsuccessfully by a Castilian army, and in 1381 Ferdinand undertook a war of revenge with the help of an English force under the Duke of Cambridge. He invaded Castile, but when in the presence of the enemy took fright and made peace with King John, one of the terms being that the latter should wed Ferdinand's heiress Beatrice, which would have led to the union of Portugal and Castile.

At the beginning of the Great Schism it was only the firmness of the bishops that kept Portugal true to Urban VI and prevented the king from offering his obedience to the anti-pope, Clement VII. The resistance of Lisbon to two Castilian sieges had saved Portuguese independence, and by a Bull of Boniface IX its see was raised to metropolitan rank. The people would not submit to a foreign king, and shortly after Ferdinand's death the citizens of Lisbon rose against Leonor; Andeiro and the archbishop were slain, and John, Grand Master of Aviz, illegitimate son of Pedro I, became defender of the realm. The King of Castile laid siege to Lisbon, but a pestilence compelled him to retire, and in April, 1385, thanks to the eloquence of the great lawyer John das Regras, the Grand Master of Aviz was elected king (1385-1433) at the Cortes of Coimbra. On 14 August he totally defeated the Castilians at Aljubarrota, and this, together with the victories gained by Nuno Alvares Pereira, "the Holy Constable", secured Portuguese independence. The king erected on the field of battle the great monastery of Batalha and there he and his sons were buried. On 9 May, 1388, he made the Treaty of Windsor with England and, though a cleric, sealed the alliance by wedding Philippa, daughter of John of Gaunt. In 1391 Boniface IX legitimated the marriage.

Portugal now turned her face to the ocean and prepared to become a great maritime power. The overseas conquest began with the capture of Ceuta, in 1415, and under the auspices of Prince Henry the Navigator the voyages were organized which ultimately led to the discovery of the road to India round the Cape of Good Hope. The pope encouraged these efforts, which had for their object the spread of Christianity as well as of commerce, and, by a Bull of 4 April, 1418, confirmed to the king all the lands

he should take from the Moors. In the previous year Ceuta had been created a diocese, and it was the first of the many sees erected in non-Christian countries where the Portuguese carried their faith and flag. John made two concordats with the Church, the first at the Cortes of Elvas, the second, in 1427, at the Cortes of Santarem, but he did not abandon the *beneplicium regium*. He had been compelled to make large grants of lands to the nobles as the

THE NUN'S WINDOW, THOMAR

price of their support in the War of Independence. One of the first acts of his son Edward (in Portuguese Duarte—1433–38) was to promulgate the “Lei Mental” which enacted that these properties should only descend in the direct male line of the grantee, on the failure of which they reverted to the Crown. The ill result of the expedition against Tangier, which was undertaken against the advice of Eugenius IV and ended in the captivity of the Infanta Ferdinand, hastened the end of the crowned philosopher, and Alfonso V (1438–81) succeeded to the throne in childhood. The people would not accept his mother, Queen Leonor, as regent, and that office was conferred on the Infanta Pedro, Edward’s brother. The queen and her party never forgave this act; they stirred up Alfonso against his uncle, who was defeated and slain at the battle of Alfarroeira. The authors of this tragedy were excommunicated by the pope, and relations between Portugal and Rome ceased, but were reestablished in 1451, and from 1452 onwards became very close.

Alfonso, a typical medieval knight, full of the crusading spirit, was bent on fighting the Moors, and he received every encouragement. Nicholas V, by a Bull of 8 January, 1454, conceded to him all conquests in Africa from Cape Non to Guinea, with power to build churches the patronage of which should be his, and prohibited any vessels from sailing to those parts without leave from the King of Portugal. By another Bull of the same date the pope extended Portuguese dominion over all the seas from Africa to India. A subsequent Bull granted to the Order of Christ authority in spirituals over the peoples subdued by the Portuguese as far as India, and provided

that no one but the King of Portugal should be entitled to send expeditions of discovery to those parts. Finally, in 1481, Sixtus IV confirmed to the kings of Portugal all islands and territories discovered now or in the future from Cape Non to India. The voyages continued during Alfonso’s reign, and the equator was passed in 1471. But the king thought more of land conquests in North Africa, where he made three successful expeditions, and continued to covet the throne of the neighbouring country until he was defeated, in 1476, at the battle of Toro. His reign was rendered notable by the publication, in 1446, of the Alfonsine Code.

John II (1481–95) showed great energy in the work of discovery, which had been somewhat neglected since the death of Prince Henry, and under his auspices Bartholomew Diaz passed the Cape of Good Hope in 1486, and in 1498 Vasco da Gama reached India. A firm believer in absolute government and a man of inflexible will, John broke the power of the nobility, which had become enormous through the unwise liberality of his father, following on the donations of John I. He deprived them of their right to administer justice on their estates, and when they resisted, led by the Duke of Braganza, the king had him arrested and beheaded, and completed his work by himself stabbing the Duke of Viseu and ordering the execution of the Bishop of Evora and others. A great confiscation of estates followed and enriched the Crown, which now became the one power of the realm. John maintained good relations with Castile and, in 1494, made the Treaty of Tordesillas, confirmed by the Bull of Alexander VI, by which the limits of the possessions of Spain and Portugal in the regions discovered by their seamen were fixed by an imaginary line drawn at 360 leagues west of Cape Verde, the Spaniards acquiring the right to all lands lying to the west and the Portuguese getting those to the east. Under this division of the world most of the coastline of Brazil found in 1500 fell to Portugal, and the rest of America and the West Indies to Spain.

Provincial and diocesan synods had become less frequent with each succeeding century (in the fifteenth century not one provincial synod was held) with the result that ecclesiastical discipline declined. The bishops of the best-endowed sees were almost invariably chosen from noble families and some of them lived away from their diocese. This was the case with those of Ceuta and Tangier. By a Brief of 13 October, 1501, issued at the instance of King Emanuel, the bishops were ordered to fulfil their duty of visitation, which they seem to have generally neglected. From the beginning, the monastic orders and the chapters had attracted the best talents, and the parochial clergy were usually as ignorant as they were poor. Innocent VIII had to issue a Bull in 1485, providing that no one unable to construe Latin well should be ordained. The prevailing laxity had affected the monasteries, but the orders themselves responded to the desires of the king and the Holy See. A reform of the Dominican monasteries began at Bemfica and spread to the other houses. The zeal of the Franciscans was equally marked, no less than twenty-three convents of Observants were founded within a century, and these, despite the opposition of the Conventuals, restored the order to its pristine purity.

King Emanuel (1495–1521) reaped the harvest sown by his predecessors, and every year of his reign witnessed some new discovery, some great deed. The genius of Albuquerque gave him the maritime keys of Asia, and the monopoly of the Eastern trade made him the richest king in Christendom. In 1514 the monarch sent his splendid embassy to Rome to offer the tribute of India at the feet of Leo X, to urge the pope to proceed with the reform of the Church, and

to secure a league of Christian princes against the Turks. Though these objects failed, the king obtained many personal favours, including the amplification of the *Padroado*, or right of patronage over churches in non-Christian countries. The pope received the submission of the Abyssinian Church through Emanuel and, recognizing the king as the chief protector and propagator of the Faith, twice sent him the Golden Rose. Emanuel was especially anxious to add Castile to his world-wide dominions, and he made three marriages to that end, but all in vain. It was a condition of his first marriage (to the eldest daughter of Ferdinand and Isabella) that he should expel the Jews and unconverted Moors. The Jews had enjoyed the protection of previous kings and had supplied them with trusted servants, but, as both the clergy and people hated them for their usury, and envied their talents and wealth, Emanuel sacrificed them, against the protests of some of his best councillors. They were given the choice of conversion or exile, and naturally, from worldly motives, the greater part accepted the former alternative and became known as "new Christians", intermarrying with old Christians. Many of these converts went back to Judaism and became the victims of bitter and continual persecution, when the Inquisition was established.

King Emanuel and his son, John III, were great builders; the former erected the Hieronymite church and monastery at Belem, to commemorate Vasco da Gama's discovery, and the latter made great additions to the superb convent of Christ at Thomar. Though the Golden Age apparently continued, Portugal began to decline in the reign of John III (1521-57). Emigration drained the best blood of the country; the East corrupted, while it enriched, its conquerors; the cultivation of the soil was left to slaves; commerce was blighted by the Inquisition, which drove capital abroad. The Government could not make both ends meet, and the wealth of the Hebrews invited their spoliation. The king, a serious, conscientious man, but of small education, satisfied the complaints of the people against that race by petitioning the Holy See in 1531 to establish the Inquisition. After a twenty years' struggle at Rome with the Hebrews, marked by disgraceful bribery on both sides, John forced the pope's consent in 1547, and the bigoted Infanta Henry, afterwards king, became chief inquisitor. The tribunal was popular and practically destroyed Judaism, but its methods divided the nation into spies and victims, encouraged blackmail and false denunciations, and contributed to undermine the national character. It put a new weapon into the hands of the monarch, who now had no check on his rule, for the Cortes had lost their power by the end of the preceding century. In 1540 the first Jesuits came, and the king became a warm patron of their early missionary labours in the East. In addition to the ministry of the confessional and the pulpit, the Society devoted itself to teaching and opened colleges which were crowded by youths of the better classes. The university, which since its foundation had moved to and fro between Lisbon and Coimbra, was fixed at the latter place in 1537, and distinguished professors, Portuguese and foreign, raised its intellectual level. Experience proved however that their learning was superior to their orthodoxy and morals, and they were replaced by the Jesuits, who by degrees obtained that control of higher education which they held for two centuries.

John deserves credit for his policy of peace abroad and for the colonization of Brazil, in which he had the assistance of the Jesuits, who civilized the natives and protected them from the European settlers. A number of new colonial dioceses were founded in this reign, and Portuguese theologians, among them Ven. Bartholomew of the Martyrs, took a prominent part

in the Council of Trent. On John's death, his widow became regent for her grandson Sebastian (1557-78), who was a minor. The latter grew up an exalted mystic and knight errant of the Cross, without interest in the work of government. Though pressed by St. Pius V, he refused to marry and obstinately insisted on attempting to conquer North Africa without sufficient men or money. His rout and death at the battle of Alcacer decided the fate of Portugal, for Cardinal Henry (1578-80) lived less than two

SOUTH DOOR OF THE HIERONYMITE CHURCH, BELEM

years, and in 1580 Philip II of Spain claimed the throne as next heir. Partly by force and partly by bribery, he secured election as Philip I of Portugal (1580-98) at the Cortes of Thomar in 1581, and for sixty years the Crowns of Portugal and Spain were united. If Philip I and II (1598-1621) ruled well, the period was none the less a disastrous one from a religious, as from a political point of view, and Portugal suffered heavily in the duel between the Protestant Powers and Spain. Her Eastern possessions fell into the hands of the English and Dutch, and the latter seized a large part of the coastline of Brazil. The monetary exactions of Philip III (1621-40) and the determination of his minister, Olivares, to destroy the liberties of Portugal, aroused in all classes a fierce hostility to foreign rule. The lower clergy and religious orders embraced the popular cause. The tolerance shown to the Jews, who were permitted to return, and the expulsion of the papal nuncio, Castracani, outraged their feelings, and the increasing burden of taxation pressed them hard, so that they encouraged their flocks to look for a deliverer in the Duke of Braganza and greatly contributed to the issue.

The revolution of 1640 raised John IV (1540-56) to the throne, and liberated Portugal and her remaining possessions from a foreign yoke, but it led to an exhausting war with Spain which lasted twenty-eight years. Moreover, owing to Spanish pressure, the popes refused to recognize the new monarch; see after see fell vacant and remained so, and ecclesiastical discipline became relaxed. These evils con-

tinued during the reign of Alfonso VI (1656-83), an imbecile youth of criminal tastes, who was deposed in 1667, his brother Pedro becoming regent and, on Alfonso's death, ascending the throne. The reign of Pedro (1683-1706) is marked by the discovery of gold in Brazil, by the signature of the Methuen Treaty with England, and by the participation of Portugal in the War of the Spanish Succession, when an Anglo-Portuguese army entered Madrid. Though the Portuguese had lost most of their possessions in the East, their missionaries continued to spread the faith in pagan countries and actually defended remote possessions like Timor against the Dutch. In 1690 the Bishoprics of Pekin and Nankin were established by Alexander VIII, and, after a conflict with the Propaganda, the claim of Portugal to nominate prelates for all sees in the East was allowed.

In 1691 the Cortes met for the last time previous to the Revolution of 1820. The leading ecclesiastical figure of the age was Father Antonio Vieira, preacher, protector of the Indians of Brazil, and confidential agent of John IV. The relations between the Jesuits and the Inquisition had never been cordial, and the tribunal, aware of Vieira's sympathy for the converted Jews, and anxious to humble the Society, condemned certain propositions taken from his writings, sentenced him to seclusion in a college, and deprived him of the right to preach. Thereupon Vieira went to Rome and presented a memorial to the pope, who ordered an inquiry into the methods of the Inquisition and suspended it until reforms should be introduced. It submitted after a struggle, and, when Innocent XI revoked the suspension in 1681, the tribunal had to adopt a milder procedure. The gold and diamonds of Brazil enabled John V (1706-50) to imitate Louis XIV in magnificence. To licentious habits he united a taste for ecclesiastical pomp. He displayed his piety by building an enormous pile, church, monastery, and palace in one, at Mafra, by providing the large sums required in connexion with the canonization of various saints, and by obtaining from the pope the elevation of the Archbishopric of Lisbon to the dignity of a patriarchate, together with the title, for himself and his successors, of "Most Faithful Majesty". Except in the case of the Lisbon aqueduct, the country reaped small benefit from the vast sums expended by the artistic, pleasure-loving monarch; and if religion was outwardly honoured, the bad example set by John helped to lower the already impaired national standard of morals. The nobility had by this time ceased to visit their estates and degenerated into a race of mere courtiers. The interests of the common people were neglected by the Government, almost their only friends being the religious orders. At the pope's bidding, John sent a fleet against the Turks which helped to win the battle of Matapan in 1717.

The reign of Joseph (1750-77) is made famous by the administration of the Marquess of Pombal, the real ruler of Portugal for over twenty years. The energy he displayed at the time of the great earthquake of 1755 confirmed his hold over the king, and with royal support he was able to use the alleged "Tavora Conspiracy" to humble the nobility and to continue the campaign he was directing against the Jesuits, whom he was determined to master. His accusations against them of seditious conduct in the missions and of illicit trading were merely pretexts. He had already dismissed them from Court, delated them to Rome and secured the appointment of a friend of his, Cardinal Saldanha, as their reformer, and when an attempt was made on the king's life he attributed it to Jesuit machinations, confiscated the property of the company in the Portuguese dominions and expelled the Portuguese Jesuits, retaining the foreigners in prison. The pope had re-

fused to incriminate the whole company for the faults of individuals, and Pombal's reply was to dismiss the nuncio and break off relations with Rome. Henceforth the real head of the Church in Portugal was the Minister. He heaped ignominy on the Jesuits by securing the burning of Father Malagrida by the Inquisition, and his work was completed when, under pressure from the Catholic Powers, Clement XIV suppressed the Society in 1773. Pombal's ruin of the Foreign Missions was perhaps his greatest crime and was by no means compensated for by his abolition of slavery and of the distinction between old and new Christians. He undoubtedly made great and necessary reforms in internal administration and freed Portugal for the time from its subservience to England, but his commercial policy was a failure, and the harm he did far outweighed the good. Above all he forged those fetters for the Church which still paralyse her action.

The death of Joseph brought about the fall of the minister, but the new sovereigns Pedro and Maria (1777-1816), while opening the prisons which Pombal had filled with his opponents, left much of his work untouched. The king died early, the queen lost her reason, and their son John, a sympathetic but weak man, was named regent. French ideas—those of the Encyclopedists and of the Revolution—were kept out of the country as long as possible, but the ambition of Napoleon gave little hope of security to a small kingdom which was regarded as the dependent of England. The Treaty of Fontainebleau divided the country between France and Spain; the famous proclamation was issued, stating that the House of Braganza had ceased to reign, and Junot with a French army occupied Lisbon in 1807. The royal family fled to Brazil, and Portugal was governed from there until 1820. Queen Maria died at the close of the Peninsular War, which led to the overthrow of the Napoleonic power, and John VI (1816-26) came to the throne. The Revolution of 1820 forced him to return home, and he had to accept a constitution of a most radical character, for which the country was entirely unfitted. One calamity succeeded another. The opening of the ports of Brazil to foreign ships ruined Portuguese commerce, the separation of the colony diminished the prestige of the mother country, which was reduced to a miserable plight by the long war, and internal feuds were added to external troubles. On the death of John, his son Pedro IV gave a new constitution, called "the Charter", and then resigned the throne in favour of his infant daughter Maria II, naming his brother Miguel regent. The Conservatives, or Absolutist Party, however, who hated the Charter as the work of Liberals and Freemasons, desired him as king, and he summoned a Cortes of the old type which placed him on the throne in 1828. The Radicals and Chartists at once organized resistance to what they called the usurpation and, after a long civil war, were successful. By the Convention of Evora Monte, Miguel had to abandon his claims and leave the country. The victorious Liberals initiated an era of persecution and robbery of the Church, the effects of which are still felt. The religious orders were the first to go. The orders of men were suppressed, and their property confiscated, nominally to enrich the treasury, but private individuals reaped the benefit. The orders of women were allowed to die out, further professions being prohibited. The people, deprived of the monks and friars, who were their teachers, preachers, and confessors, gradually lost their knowledge of religious truths, because the secular clergy were unprepared to take the place of the orders; besides which, the bishops and clergy were bound hand and foot to the State.

The last half-century of the Portuguese Monarchy, embracing the reigns of Pedro V (1853-61), Louis

I (1861-89), and Charles I (1889-1908), was one of internal peace and increasing material prosperity. But only in the last few years have Portuguese Catholics begun to emerge from a state of lethargy. Modern Portuguese statesmen, usually Catholic only in name, have interested themselves in ecclesiastical affairs to preserve old privileges, such as the *Padroado* in the East, but hardly ever to assist the Church in the performance of her Divine mission. The Concordat of 1886 regulated many of the questions in dispute with the State and Hintze Ribeiro's decree of 1896 authorized the existence of religious orders under certain conditions. The prospect of better conditions for the Church vanished, however, with the coming of the Revolution in 1910, which drove the Braganza dynasty from the throne, and delivered Portugal into the hands of the Radicals, whose hostility to the Catholic religion was made evident by the adverse course of the Provisional Government set up by the Revolutionists. On 1 February, 1908, King Charles and the Crown Prince were assassinated in the streets of Lisbon. The murder was perpetrated by a man named Buica and several associates, and was applauded by the Republican press. The succession devolved on the second son, who ascended the throne as Emanuel II. His reign was, however, brief. On 3 October, 1910, a revolution, which had been arranged for 10 October, broke out prematurely, and Emanuel fled from the capital to Gibraltar, where he shortly afterwards embarked for England. A provisional government, republican in form, was proclaimed, with Theophilus Braga, a native of the Azores, as President. He immediately set to work to carry out the radical measures of the republican programme, the first of which was the summary and violent expulsion of the religious congregations, the seizure of their property by the State, the abolition of the Senate and all hereditary privileges and titles. The separation of Church and State was also arbitrarily decreed by the provisional government.

On 20 April, 1911, a second decree, in 196 articles, was promulgated, regulating in detail the previously sweeping enactments. Article 38 of this decree prohibits any minister of religion, under the penalties of article 137 of the Criminal Code and the loss of the material benefits (pensions) of the State, from criticizing "in the exercise of his ministry and on the occasion of any act of worship, in sermons or in public writings, the public authority or any of its acts, or the form of the government or the laws of the Republic, or denying or calling into question the rights of the State embodied in this decree or in other legislation relative to the Churches". Chapter iv devotes twenty-seven articles to the ownership and administration of church buildings and property. Churches, chapels, lands, and chattels, hitherto applied to the public worship of the Catholic religion are declared property of the State, unless *bona fide* ownership by some private individual or corporation can be proved. Chapter v, in twenty-four articles, provides for boards of laymen (after the manner of the French Law of Associations) to take charge of and administer the temporalities needed for Catholic worship. This arrangement is, however, revocable at the pleasure of the grantor (the State). Buildings intended for religious purposes, but not yet utilized, whether in course of construction or completed; buildings which for a year have not been used for religious purposes and such as by 31 December, 1912, shall have no board of laymen to administer them, shall be taken by the State for some social purpose. Only Portuguese citizens who have made their theological studies in Portugal may officiate. Chapter vi deals with the question of pensions for the ministers of the Catholic religion, and permits them to marry. Article 175, chapter vii, stipulates that "ministers of religion enjoy no privileges and

are authorized to correspond officially by mail with the public authorities only, and not with one another".

A Constituent Assembly, elected early in the summer of 1911, on 19 June of that year formally decreed the abolition of the Portuguese monarchy.

III. ACTUAL CONDITIONS.—A. *Ecclesiastical Organization*.—By the Constitutional Charter Catholicism was, prior to the Republic, the religion of the State, but all other religions were tolerated, so long as they were not practised in a building having the exterior form of a church. Continental Portugal is divided ecclesiastically into three metropolitan provinces, containing twelve dioceses (nine suffragan). The Patriarchate of Lisbon has for suffragan sees Guarda and Portalegre; the Archbishopric of Braga has those of Bragança, Lamego, Coimbra, Oporto, and Vizeu; the Archbishopric of Evora, those of Beja and Faro. The Patriarch of Lisbon is considered to be entitled to a cardinal's hat, and the archbishop of Braga bears the title of "Primate of the Spains", an honour which, however, is disputed by Toledo. The Azores and Madeira each contain an episcopal see and the colonial sees include those of Cape Verde, Angola, Goa (a patriarchate), Damão, Cochín, Mylapur, Macao, Mozambique, and St. Thomas (S. Thomé).

According to the Concordat of 1886, bishops were nominated by the Government, appointed by the pope, and paid by the State. Parish priests were appointed by the minister of justice, after information as to their fitness supplied by the bishops, so that they were State functionaries, and often owed their positions to political influence. To qualify for any ecclesiastical post, they had to obtain a government license before taking orders. In the Islands the parish priests were paid by the State, but on the Continent their income was derived partly from a fund called *Congrua*, which consisted of contributions levied on the parishioners, and partly from stole fees. There were twelve seminaries for the education of the clergy on the Continent, two in the Islands, and four in other colonies. There is also a Portuguese College in Rome and one for Foreign Missionaries in Portugal. The seminaries were supported partly by their own funds and partly by the Junta Geral da Bulla da Cruzada, an ancient institution which derived its income from offerings made for dispensations, etc. The clergy were exempt from military and jury service, and were ineligible for any administrative position, except the Parish Council (*Junta da Parochia*), of which the parish priest is the president. These councils administered the property of the parish church and taxed the parishioners for the construction and repair of church and presbytery, the expenses of worship, church ornaments and vestments, etc. The *confrarias* and *irmandades*, which numbered about 9000, were independent bodies, ruled by their own statutes.

B. *Religious Orders*.—How the Jesuits were expelled by Pombal, and how, in 1834, the religious orders of men were suppressed and their property seized by the State, has been told above. At the same time the orders of women were prohibited from taking novices and were allowed to die out, after which their convents also passed to the State, but by the Decree of 18 April, 1901, religious congregations were permitted to exist when they were dedicated exclusively to instruction or good works, or to spreading Christianity and civilization in the colonies. Long before this decree, the Jesuits had returned and opened colleges for the education of youth, and a number of orders and religious institutes were eventually established in Portugal. These included Missionaries of the Holy Ghost, Benedictines, Franciscans, Irish Dominicans, Little Sisters of the Poor, Sisters of the Third Order of St. Dominic,

Franciscan Sisters, Servite Sisters, Dorotheans, Sisters of the Missions, Salesians, Sisters of St. John of God, Sisters of St. Joseph of Cluny, Marist Sisters, Sisters of St. Vincent de Paul, and Portuguese Sisters of Charity (Trinas).

C. Statistics of Population.—The population of Portugal, according to the census of 1900, was 5,423,132, the greater portion (68 per cent) being rural. The North is more thickly populated than

CLOISTER OF THE HIERONYMITE MONASTERY, BELEM

the South, the maximum of density being reached between the rivers Douro and Ave. Emigration is increasing. In 1907, 45,000 individuals left their homes, 24,000 of these for Brazil and 6000 for North America.

D. Education.—The first modern law providing for the general instruction of the people was that of the Marquess of Pombal, dated 6 November, 1772. But this law remained a dead letter, and, though the Constitutional Charter guaranteed free primary instruction to all citizens, and a multitude of statutes dealing with the question have been subsequently passed, at least 70 per cent of the population can neither read nor write. The direction of primary education was formerly exercised by the University of Coimbra, but it now belongs to the Home Office, the cost being borne partly by the Concelhos, partly by the State. At the end of 1904 there were 4968 primary schools on the Continent and the adjacent islands, 2953 being for boys, 1549 for girls and 466 mixed, but some of these only exist on paper, and some hundreds of parishes have no school. Moreover, the conditions of a large proportion of the schools are not good, while the teachers are ill-prepared and ill-paid. The backward condition of Portugal is largely attributable to its lack of instruction, and in view of the want of interest shown by the Government in non-political questions, private societies are endeavouring to apply the remedy. Among these

are the Moveable Schools which teach according to the methods of the poet João de Deus, the recently formed National League of Instruction and other bodies, most of which are Freethinking in character. Before the Revolution the Republicans had identified themselves with a movement for lay-teaching, and their various centres had free schools attached, for the instruction of the children of their members.

Secondary instruction is given in the *lyceos*, which are found in all the principal towns, and in technical schools; but the boys of the better classes, prior to the Republic, were largely confided to the care of the Jesuits, and the girls to one of the many educational convents which then existed. There are also many private schools, some conducted by foreigners, where an ordinary business education can be had. The religious instruction of the people was far from satisfactory, and since the advent of the Republic is less so. Catechism used to be included in the curriculum of the government primary schools, but under the Republican regime is altogether excluded. There is no religious teaching in the *lyceos*, which are day schools, without proper discipline or any attempt at the formation of character. Higher education is given in the University of Coimbra (with about 1450 students) and in various establishments of a special character, such as the Curso Superior das Letras, the Medical, Army, Navy, and Polytechnic Schools, in Lisbon and Oporto. The university has a theological faculty, with but very few students, owing to its unorthodox character. Ignorance of religion and of church history, and the reading of bad literature go far to explain the anti-clerical feeling which prevails among the people generally in the towns, and especially in the capital. The Press is intellectually of little account, and its moral tone is low, especially in the case of the Republican organs, some of the most circulated of which are not fit for perusal by women. The Catholic organs, "Portugal" of Lisbon and "Palavra" of Oporto, before they were suppressed by the Republic, enjoyed an increasing circulation, but an avowedly religious paper is suspected by the great majority of educated Catholics, who fear to be dubbed reactionary. It is the commonest ambition to be considered Liberal, though the word is a misnomer in Portugal, where it stands for many ideas and aspirations essentially illiberal. The Republicans, though many of them profess Catholicism, have always been an anti-clerical party. They claim to defend the native secular clergy against religious orders who are mostly composed of foreigners, and especially against the Jesuits. They generally favour civil marriage, a divorce law, the abolition of religious processions in the streets etc. The Socialists go further and are frankly godless.

D. Laws Affecting Religion.—Previous to the Revolution of 1910, a testator might only dispose freely of a third part of his property by will; this is called the *terça*. The remaining two-thirds go to form the *legitima* of his heirs in the ascending and descending line. A testator may not bequeath more than a third of his *terça* to be spent in prayers and masses for his soul, and ecclesiastical corporations may not benefit under his will to an amount exceeding the third of his *terça*. The testamentary dispositions of a sick person in favour of his confessor, except such as are merely remunerative, are void if he dies of the illness during which he has made them. Professed religious women cannot make wills until they become secularized or their communities are suppressed, nor can they acquire anything by will, except by way of aliment, or money legacy, or other moveables. The Civil Code makes no mention of men bound by religious vows, because the law does not know them.

There was, under the Monarchy, no divorce law

in Portugal, but a marriage could be declared null for reasons allowed by the Church. The canonical impediments were recognized by the Code. Civil marriage and interment were permitted, but made small headway, and the parish registers continued to be almost universally used, though there was a civil register of births, marriages, and deaths. The courts could decree separation of persons and goods (1) in case of adultery by the wife, (2) in case of adultery and desertion by the husband, or public scandal; (3) when one of the parties was condemned to a life penalty, or (4) when one of the parties had been guilty of outrageous cruelty to the other. Children born out of wedlock were legitimated by the subsequent marriage of their parents, when the latter formally recognized them, or when the children themselves obtained a judicial sentence in their favour.

Cemeteries were provided and controlled by the municipalities in the chief places of each district. Outside of these, they were established at the expense of the parishioners by the parish council, to which they belonged. The death penalty has long been abolished in Portugal, which may account in part for the large number of murders. Criminals sentenced to long terms of imprisonment were sent to the Penitenciária in Lisbon and there are *casas de correção*, or reformatories, for small boys and girls. Good Shepherd homes for fallen women existed at Lisbon and Oporto, but were suppressed by the Provisional Government at the time of the Revolution. Charitable institutions abounded, and Portugal had, under the Monarchy, some 370 *Misericórdias* and hospitals. In the various districts of Lisbon, the *cozinhas economicas*, an institution founded and largely supported by the late Duchess of Palmella, provided cheap meals for the poor, and Queen Amelia's crusade against tuberculosis led to the establishment of free consulting hospitals and sanatoria in different parts of the country.

As a result of the encyclicals of Leo XIII on Christian democracy, the movement for the establishment of Catholic circles for workingmen was inaugurated in Portugal, and these mutual-aid societies existed in the principal centres of population, furnished education to the workmen and their children, and kept them together by conferences, concerts, and excursions. The associations of Catholic youth in Lisbon and Oporto also deserve mention. But the sweeping measures inaugurated by the Republican Government effected a complete rupture of the former relations between Church and State, and the status of the various Catholic organizations, aside from the religious congregations (which were immediately dissolved), has become very uncertain.

EDGAR PRESTAGE.

PORTUGUESE LITERATURE.—The Portuguese language was developed gradually from the *lingua rustica* spoken in the countries which formed part of the Roman Empire and, both in morphology and syntax, it represents an organic transformation of Latin without the direct intervention of any foreign tongue. The sounds, grammatical forms, and syntactical types, with a few exceptions, are derived from Latin, but the vocabulary has absorbed a number of Germanic and Arabic words, and a few have Celtic or Iberian origin. Before the close of the middle ages the language threatened to become almost as

abbreviated as French, but learned writers, in their passion for antiquity, re-approximated the vocabulary to Latin. The Renaissance commenced a separation between literary men and the people, between the written and spoken tongue, which with some exceptions lasted until the beginning of the nineteenth century. Then the Romanticists went back to tradition and drew on the poetry and every day speech of the people, and, thanks to the writings of such men as Almeida-Garrett and Camillo Castello Branco, the literary language became national once again.

I. EARLY VERSE.—An indigenous popular poetry existed at the beginning of Portuguese history, but the first literary activity came from Provence. It was quickened by the accession of King Alfonso III, who had been educated in France, and the productions of his time are preserved in the "*Cancioneiro de Ajuda*", the oldest collection of peninsular verse. But the most brilliant period of Court poetry, represented in the "*Cancioneiro da Vaticana*", coincided with the reign of King Denis, a cultivated man, who welcomed singers from all parts and himself wrote a large number of erotic songs, charming ballads, and pastorals. This thirteenth century Court poetry, which deals mainly with love and satire, is usually copied from Provençal models and conventional, but, where it has a popular form and origin, it gains in sincerity what it loses in culture. By the middle of the fourteenth century troubadour verse was practically dead, but the names of some few bards have survived, among them Vasco Peres de Camoens, ancestor of the great epic poet, and Macias "the enamoured". Meanwhile the people were elaborating a ballad poetry of their own, the body of which is known as the *Romanceiro*. It consists of lyric-narrative poems treating of war, chivalry, adventure, religious legends, and the sea, many of which have great beauty and contain traces of the varied civilizations which have existed in the peninsula. When the Court poets had exhausted the artifices of Provençal lyricism, they imitated the poetry of the people, giving it a certain vogue which lasted until the Classical Renaissance. It was then thrust into the background, and though cultivated by a few, it remained unknown to men of letters until the nineteenth century, when Almeida-Garrett began his literary revival and collected folk poems from the mouths of the peasantry.

II. EARLY PROSE.—Prose developed later than verse and first appeared in the fourteenth century in the shape of short chronicles, lives of saints, and genealogical treatises called "*Livros de Linhagens*". Portugal did not elaborate her own *chansones de gestes*, but gave prose form to foreign medieval poems of romantic adventure; for example, the "*History of the Holy Grail*" and "*Amadis of Gaul*". The first three books of the latter probably received their present shape from João Lobeira, a troubadour of the end of the thirteenth century, though this original has been lost and only the Spanish version remains. The "*Book of Æsop*" also belongs to this period. Though the cultivated taste of the Renaissance affected to despise the medieval stories, it adopted them with alterations as a homage to classical antiquity. Hence came the cycle of the "*Palmerins*" and the "*Chronica do Emperador Clarimundo*" of João de Barros. The medieval romance of chivalry gave place to the pastoral novel, the first example of which is the "*Sauzades*" of Bernardim Ribeiro, followed by the "*Diana*" of Jorge de Montemôr, which had a numerous progeny. Later in the sixteenth century Gonçalo Fernandes Trancoso, a fascinating storyteller, produced his "*Historias de Proveito e Exemplo*".

III. FIFTEENTH CENTURY.—A. *Prose.*—A new epoch in literature dates from the Revolution of 1383-5. King John wrote a book of the chase, his sons, King Duarte and D. Pedro, composed moral

treatises, and an anonymous scribe told with charming *naïveté* the story of the heroic Nuno Alvares Pereira in the "Chronica do Condestavel". The line of chroniclers which is one of the boasts of Portuguese literature began with Fernão Lopes, who compiled the chronicles of the reigns of Kings Pedro, Fernando, and John I. He combined a passion for accurate statement with an especial talent for descriptive writing and portraiture, and with him a new epoch dawned. Azurara, who succeeded him in the post of official chronicler, and wrote the "Chronicle of Guinea" and chronicles of the African wars, is an equally reliable historian, whose style is marred by pedantry and moralizing. His successor, Ruy de Pina, avoids these defects and, though not an artist like Lopes, gives a useful record of the reigns of Kings Duarte, Alfonso V, and John II. His history of the latter monarch was appropriated by the poet Garcia da Resende, who adorned it, adding many anecdotes he had learned during his intimacy with John, and issued it under his own name.

B. Poetry.—The introduction of Italian poetry, especially that of Petrarch, into the peninsula led to a revival of Spanish verse which, owing to the superiority of its cultivators, dominated Portugal throughout the fifteenth century. Constable Dom Pedro, friend of Marquis de Santillana, wrote almost entirely in Castilian and is the first representative of the Spanish influence which imported from Italy the love of allegory and reverence for classical antiquity. The court poetry of some three hundred knights and gentlemen of the time of Alfonso V and John II is contained in the "Cancioneiro Geral", compiled by Resende and inspired by Juan de Mena, Jorge Manrique, and other Spaniards. The subjects of these mostly artificial verses are love and satire. Among the few that reveal special talent and genuine poetical feeling are Resende's lines on the death of D. Ignez de Castro, the "Fingimento de Amores" of Diogo Brandão, and the "Coplas" of D. Pedro. Three names appear in the "Cancioneiro" which were destined to create a literary revolution, those of Bernardino Ribeiro, Gil Vicente, and Sá de Miranda.

IV. EARLY SIXTEENTH CENTURY.—**A. Pastoral Poetry.**—Portuguese pastoral poetry is more natural and sincere than that of other nations because Ribeiro, the founder of the bucolic school, sought inspiration in the national *serranilhas*, but his eclogues, despite their feeling and rhythmic harmony, are surpassed by the "Crisfal" of Christovão Falcão. These and the eclogues and sententious "Cartas" of Sá de Miranda are written in *versos de arte mayor*, and the popular *medida velha* (as the national metre was afterwards called to distinguish it from the Italian *endecasyllable*), continued to be used by Camoens in his so-called minor works, by Bandarra for his prophecies, and by Gil Vicente.

B. Drama.—Though Gil Vicente did not originate dramatic representations, he is the father of the Portuguese stage. Of his forty-four pieces, fourteen are in Portuguese, eleven in Castilian, the remainder bilingual, and they consist of *autos*, or devotional works, tragicomedies, and farces. Beginning in 1502 with religious pieces, conspicuous among them being "Auto da Alma" and the famous trilogy of the "Barcas", he soon introduces the comic and satirical element by way of relief and for moral ends, and, before the close of his career in 1536, has arrived at pure comedy, as in "Ignez Pereira" and the "Floresta de Enganos", and developed the study of character. The plots are simple, the dialogue spirited, the lyrics often of finished beauty, and while Gil Vicente appeared too early to be a great dramatist, his plays mirror to perfection the types, customs, language, and daily life of all classes. The playwrights who followed him had neither superior talents nor court patronage and, attacked by the classical school for their lack of culture and by the Inquisition for their grossness, they were reduced to

entertaining the lower class at country fairs and festivals.

V. THE RENAISSANCE produced a pleiad of distinguished poets, historians, critics, antiquaries, theologians, and moralists which made the sixteenth century a golden age.

A. Lyric and epic poetry.—Sá de Miranda introduced Italian forms of verse and raised the tone of poetry. He was followed by Antonio Ferreira, a superior stylist, by Diogo Bernardes, and Andrade Caminha, but the *Quinhentistas* tended to lose spontaneity in their imitation of classical models, though the verse of Frei Agostinho da Cruz is an exception. The genius of Camoens (q. v.) led him to fuse the best elements of the Italian and popular muse, thus creating a new poetry. Imitators arose in the following centuries, but most of their epics are little more than chronicles in verse. They include three by Jeronymo Corte Real, and one each by Pereira Brandão, Francisco de Andrade, Rodriguez Lobo, Pereira de Castro, Sá de Meneses, and Garcia de Mascarenhas.

B. The classical plays.—Sá de Miranda endeavoured also to reform the drama and, shaping himself on Italian models, wrote the "Estrangeiros". Jorge Ferreira de Vasconcellos had produced in "Eufrosina" the first prose play, but the comedies of Sá and Antonio Ferreira are artificial and stillborn productions, though the latter's tragedy, "Ignez de Castro", if dramatically weak, has something of Sophocles in the spirit and form of the verse.

C. Prose.—The best prose work of the sixteenth century is devoted to history and travel. João de Barros in his "Decadas", continued by Diogo do Couto, described with mastery the deeds achieved by the Portuguese in the discovery and conquest of the lands and seas of the Orient. Damião de Goes, humanist and friend of Erasmus, wrote with rare independence on the reign of King Manuel the Fortunate. Bishop Osorio treated of the same subject in Latin, but his interesting "Cartas" are in the vulgar tongue. Among others who dealt with the East are Castanheda, Antonio Galvão, Gaspar Correia, Bras de Albuquerque, Frei Gaspar da Cruz, and Frei João dos Santos. The chronicles of the kingdom were continued by Francisco de Andrade and Frei Bernardo da Cruz, and Miguel Leitão de Andrade compiled an interesting volume of "Miscellanea". The travel literature of the period is too large for detailed mention: Persia, Syria, Abyssinia, Florida, and Brazil were visited and described and Father Lucena compiled a classic life of St. Francis Xavier, but the "Peregrination" of Mendes Pinto, a typical Conquistador, is worth all the story books put together for its extraordinary adventures told in a vigorous style, full of colour and life, while the "Historia Tragico-Maritima", a record of notable shipwrecks between 1552 and 1604, has good specimens of simple anony-

JOÃO DE BARROS, CALLED THE
PORTUGUESE LIVY

mous narrative. The dialogues of Samuel Usque, a Lisbon Jew, also deserve mention. Religious subjects were usually treated in Latin, but among moralists who used the vernacular were Frei Heitor Pinto, Bishop Arraez, and Frei Thomé de Jesus, whose "Trabalhos de Jesus" has appeared in many languages.

VI. SEVENTEENTH CENTURY.—The general inferiority of seventeenth-century literature to that of the preceding age has been charged to the new royal absolutism, the Inquisition, the Index, and the exaggerated humanism of the Jesuits who directed higher education; nevertheless, had a man of genius appeared he would have overcome all obstacles. In fact letters shared in the national decline. The taint of Gongorism and Marinism attacked all the *Seiscentistas*, as may be seen in the "Fenix Renascida", and rhetoric conquered style. The Revolution of 1640 liberated Portugal, but could not undo the effects of the sixty years' union with Spain. The use of Spanish continued among the upper class and was preferred by many authors who desired a larger audience. Spain had given birth to great writers for whom the Portuguese forgot the

earlier ones of their own land. The foreign influence was strongest in the drama. The leading Portuguese playwrights wrote in Spanish, and in the national tongue only poor religious pieces and a witty comedy by D. Francisco Manuel de Mello, "Autodo Fidalgo Aprendiz", were produced. The numerous Academies which arose

LUIZ DE CAMOENS

with exotic names aimed at raising the level of letters, but they spent themselves in discussing ridiculous theses and determined the triumph of pedantry and bad taste. Yet though *culteranismo* and *conceptismo* infected nearly everyone, the century did not lack its big names.

A. *Lyric Poetry*.—Melodious verses relieve the dullness of the pastoral romances of Rodriguez Lobo, while his "Corte na Aldea" is a book of varied interest in elegant prose. The versatile D. Francisco Manuel de Mello, in addition to his sonnets on moral subjects, wrote pleasing imitations of popular romances, but is at his best in a reasoned but vehement "Memorial to John IV", in the witty "Apologos Dialogas", and in the homely philosophy of the "Carta de Guia de Casados", prose classics. Other poets of the period are Soror Violante do Ceo, and Frei Jeronymo Vahia, convinced Gongorists, Frei Bernardo de Brito with the "Sylvia de Lizardo", and the satirists, D. Thomas de Noronha and Antonio Serrão de Castro.

B. *Prose*.—The century had a richer output in prose than in verse, and history, biography, sermons, and epistolary correspondence all flourished. Writers on historical subjects were usually friars who worked in their cells and not, as in the sixteenth century, travelled men and eye-witnesses of the events they describe. They occupied themselves largely with questions of form and are better stylists than historians. Among the five contributors to the ponderous "Monarchia Lusitana", only the conscientious Frei Antonio Brandão fully realized the importance of documentary evidence. Frei Bernardo de Brito begins his work with the creation and ends it where

he should have begun; he constantly mistakes legend for fact, but was a patient investigator and a vigorous narrator. Frei Luiz de Sousa, a famous stylist, worked up existing materials into the classical hagiography "Vida de D. Frei Bertholameu dos Martyres" and "Annaes d'el Rei D. João III". Manoel de Faria y Sousa, historian and arch-commentator of Camoens, by a strange irony of fate chose Spanish as his vehicle, as did Mello for his classic account of the Catalonian War, while Jacintho Freire de Andrade told in grandiloquent language the story of the justice-loving viceroy, D. João de Castro.

Ecclesiastical eloquence was at its best in the seventeenth century and the pulpit filled the place of the press of to-day. The originality and imaginative power of his sermons are said to have won for Father Antonio Vieira in Rome the title of "Prince of Catholic Orators" and though they and his letters exhibit some of the prevailing faults of taste, he is none the less great both in ideas and expression. The discourses and devotional treatises of the Oratorian Manuel Bernardes, who was a recluse, have a calm and sweetness that we miss in the writings of a man of action like Vieira and, while equally rich, are purer models of classic Portuguese prose. He is at his best in "Luz e Calor" and the "Nova Floresta". Letter writing is represented by such master hands as D. Francisco Manuel de Mello in familiar epistles, Frei Antonio das Chargas in spiritual, and by five short but eloquent documents of human affection, the "Cartas de Marianna Alcoforada".

VIII. EIGHTEENTH CENTURY.—Affectation continued to mark the literature of the first half of the eighteenth century, but signs of a change gradually appeared and ended in that complete literary reformation known as the Romantic Movement. Distinguished men who fled abroad to escape the prevailing despotism did much for intellectual progress by encouragement and example. Verney criticized the obsolete educational methods and exposed the literary and scientific decadence in the "Verdadeiro Methodo de Estudar", while the various Academies and Arcadias, wiser than their predecessors, worked for purity of style and diction, and translated the best foreign classics.

A. *The Academies*.—The Academy of History, established by John V in 1720 in imitation of the French Academy, published fifteen volumes of learned "Memoirs" and laid the foundations for a critical study of the annals of Portugal, among its members being Caetano de Sousa, author of the voluminous "Historia da Casa Real", and the bibliographer Barbosa Machado. The Royal Academy of Sciences, founded in 1780, continued the work and placed literary criticism on a sounder basis, but the principal exponents of belles-lettres belonged to the Arcadias.

B. *The Arcadias*.—Of these the most important was the *Arcadia Ulisiponense* established in 1756 by the poet Cruz e Silva—"to form a school of good example in eloquence and poetry"—and it included the most considered writers of the time. Garção composed the "Cantata de Dido", a classic gem, and many excellent sonnets, odes, and epistles. The bucolic verse of Quita has the tenderness and simplicity of that of Bernardin Ribeiro, while in the mock-heroic poem, "Hyssope", Cruz e Silva satirizes ecclesiastical jealousies, local types, and the prevailing gallomania with real humour. Intestine disputes led to the dissolution of the Arcadia in 1774, but it had done good service by raising the standard of taste and introducing new poetical forms. Unfortunately its adherents were too apt to content themselves with imitating the ancient classics and the *Quinhentistas* and they adopted a cold, reasoned style of expression, without emotion or colouring. Their whole outlook was painfully academic. Many of the Arcadians followed the example of a latter-day Mæcenas, the Conde

de Ericeira, and endeavoured to nationalize the pseudo-classicism which obtained in France. In 1790 the "New Arcadia" came into being and had in Bocage a man who, under other conditions, might have been a great poet. His talent led him to react against the general mediocrity and though he achieved no sustained flights, his sonnets vie with those of Camoens. He was a master of short improvised lyrics as of satire, which he used to effect in the "Pena de Talião" against Agostinho de Macedo.

This turbulent priest constituted himself a literary dictator and in "Os Burros" surpassed all other bards in invective, moreover he sought to supplant the *Lusiads* by a tasteless epic, "Oriente". He, however, introduced the didactic poem, his odes reach a high level, and his letters and political pamphlets display learning and versatility, but his influence on letters was hurtful. The only other Arcadian worthy of mention is Curvo Semedo, but the "Dissidents", a name given to those poets who remained outside the Arcadias, include three men who show independence and a sense of reality, José Anastácio da Cunha, Nicolau Tolentino, and Francisco Manoel de Nascimento, better known as *Filinto Elysio*. The first versified in a philosophic and tender strain, the second sketched the custom and follies of the time in *quintilhas* of abundant wit and realism, the third spent a long life of exile in Paris in reviving the cult of the sixteenth-century poets, purified the language of Gallicisms and enriched it by numerous works, original and translated. Though lacking imagination, his *contos*, or scenes of Portuguese life, strike a new note of reality, and his blank verse translation of the "Martyrs" of Chateaubriand is a high performance. Shortly before his death he became a convert to the Romantic Movement, for whose triumph in the person of Almeida-Garrett he had prepared the way.

C. *Brazilian Poetry*.—During the eighteenth century the colony of Brazil began to contribute to Portuguese letters. Manoel da Costa wrote a number of Petrarchian sonnets, Manoel Ignacio da Silva Alvarenga showed himself an ardent lyricist and cultivator of form, Thomás Antonio Gonzaga became famous by the harmonious verses of his love poem "Marília do Dirceu", while the "Poesias sacras" of Sousa Caldas have a certain mystical charm though metrically hard. In epic poetry the chief name is that of Basílio da Gama, whose "Uruguay" deals with the struggle between the Portuguese and the Paraguay Indians. It is written in blank verse and has some notable episodes. The "Caramuru" of Santa Rita Durão begins with the discovery of Bahia and contains, in a succession of pictures, the history of Brazil. The passages descriptive of native customs are well written and these poems are superior to anything of the kind produced contemporaneously by the mother country.

D. *Prose*.—The prose writing of the century is mainly dedicated to scientific subjects, but the letters of Antonio da Costa, Antonio Ribeiro Sanches, and Alexandre de Gusmão have literary value and those of the celebrated Cavalheiro d'Oliveira, if not so correct, are even more informing.

E. *Drama*.—Though a Court returned to Lisbon in 1640, it preferred, for one hundred and fifty years, Italian opera and French plays to vernacular representations. Early in the eighteenth century several authors sprung from the people vainly attempted to found a national drama. Their pieces mostly belong to low comedy. The "Operas Portuguezas" of Antonio José da Silva, produced between 1733 and 1741, have a real comic strength and a certain originality, and, like those of Nicolau Luiz, exploit with wit the faults and foibles of the age. The latter divided his attention between heroic comedies and comedies *de capa y espada* and, though wanting in ideas and taste, they enjoyed a long popularity. At the same

time the Arcadia endeavoured to raise the standard of the stage, drawing inspiration from the contemporary French drama, but its members lacked dramatic talent and achieved little. Garção wrote two bright comedies, Quita some stillborn tragedies, and Manuel de Figueiredo compiled plays in prose and verse on national subjects, which fill thirteen volumes, but he could not create characters.

IX. THE NINETEENTH CENTURY.—A. *Poetry*.—The early nineteenth century witnessed a literary reformation which was commenced by Almeida-Garrett who had become acquainted with English and French Romanticism in exile and based his work on the national traditions. In the narrative poem "Camoês" (1825) he broke with the established rules of composition and followed it with "Flores sem Fructo" and a collection of ardent love poems "Folhas Cahidas", while the clear elegant prose of this true artist is seen in a miscellany of romance and criticism, "Viagens na minha terra". The poetry of the austere Herculano has a religious or patriotic motive and is reminiscent of Lamennais. The movement initiated by Garrett and Herculano became ultra-Romantic with Castilho, a master of metre, who lacked ideas, and the verses of João de Lemos and the melancholy Soares de Passos record a limited range of personal emotions, while their imitators voice sentiments which they have not felt deeply or at all. Thomas Ribeiro, author of the patriotic poem "D. Jayme", is sincere, but belongs to this same school which thought too much of form and melody. In 1865 some young poets led by Anthero de Quental and Theophilo Braga rebelled against the domination over letters which Castilho had assumed, and, under foreign influences, proclaimed the alliance of philosophy with poetry. A fierce pamphlet war heralded the downfall of Castilho and poetry gained in breadth and reality, though in many instances it became non-Christian and revolutionary. Quental produced finely wrought, pessimistic sonnets inspired by neo-Buddhistic and German agnostic ideas, while Braga, a Positivist, compiled an epic of humanity, the "Visão dos Tempos". Guerra Junqueiro is mainly ironical in the "Morte de D. João", in "Patria" he evokes and scourges the Braganza kings in some powerful scenes, and in "Os Simples" interprets nature and rural life by the light of a pantheistic imagination. Gomes Leal is merely anti-Christian with touches of Baudelaire. João de Deus belonged to no school; an idealist, he drew inspiration from religion and women, and the earlier verses of the "Campo de Flores" are marked, now by tender feeling, now by sensuous mysticism, all very Portuguese. Other true poets are the sonneteer João Penha, the Parnassian Gonçalves Crespo, and the symbolist Eugénio de Castro. The reaction against the use of verse for the propaganda of radicalism in religion and politics has succeeded and the most considered poets of to-day, Corrêa de Oliveira and Lopes Vieira, are natural singers with no extraneous purpose to serve. They owe much to the "Só" of Antonio Nobre, a book of true race poetry.

B. *Drama*.—After producing some classical tragedies, the best of which is "Cato", Garrett undertook the reform of the stage on independent lines, though he learnt something from the Anglo-German school. Anxious to found a national drama, he chose subjects from Portuguese history and, beginning with "An Auto of Gil Vicente", produced a series of prose plays which culminated in "Brother Luiz de Sousa", a masterpiece. His imitators, Mendes Leal and Pinheiro Chagas, fell victims to ultra-Romanticism, but Fernando Caldeira and Gervasio Lobato wrote life-like and witty comedies and recently the regional pieces of D. João da Camara have won success, even outside Portugal. At the present time, with the historical and social plays of Lopes de Mendonça,

Julio Dantas, Marcellino Mesquita, and Eduardo Schwalbach, drama is more flourishing than ever before and Garrett's work has fructified fifty years after his death.

C. *The Novel* is really a creation of the nineteenth century and it began with historical romances in the style of Walter Scott by Herculano, to whom succeeded Rebello da Silva with "A Mocidade de D. João V", Andrade Corvo, and others. The romance of manners is due to the versatile Camillo Castello Branco, a rich impressionist who describes to perfection the life of the early part of the century in "Amor de Perdição", "Novellas do Minho", and other books. Gomes Coelho (*Julio Diniz*), a romantic idealist and subjective writer, is known best by "As Pupillas do Snr Reitor", but the great creative artist was Eça de Queiroz, founder of the Naturalist School, and author of "Primo Basilio", "Correspondencia de Fradique Mendes", "A Cidade e as Serras". His characters live and many of his descriptive and satiric passages have become classical. Among the lesser novelists are Pinheiro Chagas, Arnaldo Gama, Luiz de Magalhães, Teixeira de Queiroz, and Malheiro Dias.

D. *Other prose*.—History became a science with Herculano whose "Historia de Portugal" is also valuable for its sculptural style and Oliveira Martins ranks high as a painter of scenes and characters in "Os Filhos de D. João" and "Vida de Nun' Alvares". A strong gift of humour distinguishes the "Farpas" of Rama'ho Ortigão, as well as the work of Fialho d'Almeida and Julio Cesar Machado, and literary criticism had able exponents in Luciano Cordeiro and Moniz Barreto. The "Panorama" under the editorship of Herculano exercised a sound and wide influence over letters, but since that time the press has become less and less literary and now treats of little save politics.

X. **BRAZILIAN LITERATURE**.—The literature of independent Brazil really began with the Romantic Movement, which was introduced in 1836 by Domingos de Magalhães, whose "Suspiros Poeticos" reveal the influence of Lamartine. This religious phase was immediately followed by that of *Indianism* suggested by Chateaubriand and Fenimore Cooper, which had its chief exponent in Gonçalves Dias, a melodious lyricist. Byron and Musset were the fathers of the next phase of Romanticism and its interpreters included Alvares de Azevedo, the introducer of humour, and Casimiro de Abreu, two poets whose popularity has endured. Lucindo Rebello belongs to the same epoch, but shows a more spontaneous inspiration, and the verse of Fagundes Varela forms a link with a new school in which the ardour and humanitarianism of Hugo inspired the patriotic muse of Tobias Barreto, an objective poet of wide sympathies, imagination, and feeling, and of Castro Alves, who sang the horrors of slavery while, later still, Parnassianism overran the whole of poetry.

Brazil has yet to produce drama, but in the romance she has acknowledged masters in José de Alencar whose "Guarany" and "Iracema" are standard books, and in the psychologist, Machado de Assis. The Romanticists mostly addressed themselves to the emotions rather than to the intelligence, but Machado de Assis rises to a more general conception of life, both in prose and verse. In "Bras Cubas" he has the irony of Sterne, and the pure, simple diction and distinguished style of Garrett, together with a reserve rarely found in a modern Latin writer. Brazil has now emancipated herself from mere imitation of foreign models and her novelists and critics of to-day show an originality and strength which promises much for the future of a literature still in its youth.

EDGAR PRESTAGE.

Portuguese East Africa consists of the Province of Mozambique. Portuguese activity on that coast began in 1505 with the foundation of the Captaincy of Sofala, and in 1558 a fortress was built at Mozambique, the port of call for ships bound to and from India, and the centre from which the discoverers penetrated into the interior, over-running the native empire of Monomotapa in quest of gold. For centuries these territories were ruled from Goa, but in 1752 they became an independent government, though, until recently, Portuguese authority was almost limited to the coast line. While much diminished in size by virtue of the Anglo-Portuguese Treaty (11 June, 1891), which settled a serious boundary quarrel with England, the province comprises 1428 miles of coast line from Cape Delgado to the southern limit of the district of Lourenço Marques, with a superficial area of 292,631 square miles. The greater part of the sea coast is low lying, with coral reefs, sand dunes and swamps, and the climate is hot and unhealthy, but the hinterland has mountainous districts and elevated table lands which are suitable for European colonization. The mean annual temperature is high. The rainy season lasts from November to March, the cool, from April to August. The province is served by a number of fine harbours, including Lourenço Marques, the best in south-east Africa, which is connected with the Transvaal by a railway, Beira, the outlet for the produce of the Mashona gold fields and joined to them by rail, Inhambane, Chinde, Quillimane, Ibo, and Mozambique. Besides the river Zambesi and its tributaries, other large rivers give communication to the interior, such as the Incomati and the Limpopo, and Lake Nyassa, with an area of 11,551 square miles, is on the frontier between Portuguese and British territory. Mozambique is connected with Europe by several lines of steamers, English, German, and Portuguese.

For administrative purposes the province is divided into the following districts, Mozambique, Zambezia, Tete, Inhambane, Lourenço Marques and the military district of Gaza, each having a governor, while there is also a governor-general for the province who resides in Lourenço Marques. Major Freire de Andrade, the late governor-general, did much for the progress of the colony which of late has been rapid. Its commercial movement in 1892 was valued at 4951 *contos de reis*, but in 1901 it had reached 21,542 *contos*, and that of the Port of Lourenço Marques increased tenfold between 1892 and 1899. Since then the rate of progress has been well maintained. Inland trade is chiefly in the hands of Indians (Banyans), while that of the coast is done by English houses. The system of government by chartered companies, which succeeded in neighbouring British colonies, has been tried here and the Mozambique and Nyassa Companies have jurisdiction over large territories, undeveloped for lack of funds. It is only recently that the Portuguese Government has completed the occupation of the province. Mozambique is rich in minerals, and among vegetable products sugar is raised in increasing quantities, while the extensive forests have valuable timber trees. The native population is of Bantu race and numbers about three millions. The whites number only a few thousand. For purposes of justice the province is divided into seven *comarcas* and the town of Mozambique has a Tribunal of Second Instance composed of three judges; for ecclesiastical purposes it has a prelacy with jurisdiction

over the city but subordinate to the Patriarch of the East Indies at Goa. A force of 2730 men of the first line form the colonial army and the policing of the rivers and harbours is done by flotillas of gunboats. The custom houses are subordinate to that of Lourenço Marques. Primary schools exist in the principal centres, but very little has been done for education.

EDGAR PRESTAGE.

Portuguese West Africa, the name usually given to the Province of Angola. It has a coast line of 1015 miles from the Congo to the Cunene Rivers and an area of 490,525 sq. miles, including the territories of Cabinda, Molendo, and Massabi, on the coast north of the Congo. These are surrounded by the French Congo, while the rest of the province is bounded by Belgian, British, and German territory. The Congo was first entered by Diego Cam in 1484, who erected a pillar in token of occupation, and with him was Martin Behaim the cosmographer. Ever since it has belonged to Portugal, except for a period of Dutch domination (1640-48), the Hollanders being expelled by Admiral Correa de Sá e Benevides. Only in recent years has this great territory been explored, and even now the whole of it is not effectively occupied, though military expeditions from the mother-country have conquered the most warlike tribes, and a chain of fortified posts keeps them in subjection. The coast is low, and a sandy, barren plain stretches some way inland; beyond this the province is mountainous and very fertile. St. Paul de Loanda, the capital, has an anchorage ground of 1700 acres; Benguella, Mossamedes, and Porto Alexandre are good ports; while the only drawback to Lobito, the terminus of the new railway, is that it lacks potable water, as does the Bahia dos Tigres, which could otherwise shelter 5000 vessels in its 63,000 acres of water, as deep as 117 feet. The province is irrigated by the Rivers Chiloango, Congo, and Cuanza, while the Zambesi skirts its south-east frontier. The coast abounds in fish, and the territory in minerals, such as malachite, iron, petroleum, salt, lead, and sulphur, but its principal wealth lies in coffee (of which Loanda exported 4112 tons in 1894), india-rubber, gum, wax, and ivory, which are sent to Portugal and exchanged for cotton and woollen goods and wine. Formerly Angola depended for its prosperity almost entirely on the slave trade, and during the seventeenth and eighteenth centuries many thousands of natives were transported annually to Brazil. The native population is reckoned at four millions; their religion is Fetichism, and they include a great variety of races. There is only a small proportion of whites.

For administrative purposes the province is divided into six districts, and then into *concelhos*. Their names are Congo, Loanda, Benguella, Mossamedes, Huilla, and Lunda. The governor-general possesses civil and military attributes and resides at Loanda, while each district has a subordinate governor. For purposes of justice there are five *comarcas*, each with a judge; and a tribunal of second instance, composed of five judges, sits at Loanda. Each *comarca* has a commercial tribunal of first instance, and each parish a judge of the people, appointed annually. The military establishment consists of an army of 3200 men, partly European, partly native. For ecclesiastical purposes the province is subject to the Bishop of Loanda, and belongs to the Lisbon Province.

The Province of Guinea, another West African possession of Portugal, comprising 4450 sq. miles, is surrounded by French possessions, and its coast is cut up by innumerable inlets. It is a low-lying and well-watered territory, the chief rivers being the Cacheo, Mansoa, and Geba. The climate is unhealthy for Europeans. The soil is generally of great fertility, and the province is fit for plantations on a large scale. Its

products are tobacco, sugar, india-rubber, wax, and leather, which are exported through the commercial centres of Geba, Bissau, Farin, and Bolama.

The population numbers about 67,000 and belongs to ten races, subdivided into many tribes. There are very few whites resident. The country has one *concelho*, that of Bolama, the seat of government, and is divided otherwise into four military commands. It is generally in a state of war, the natives being turbulent. A vicar-general and six missionary rectors form the religious staff of the province, and these latter are also professors of primary instruction.

EDGAR PRESTAGE.

Port Victoria (AUSTRALIA). See NORTHERN TERRITORY, PREFECTURE APOSTOLIC OF.

Port Victoria, DIOCESE OF (PORTUS VICTORIÆ SEYCHELLARUM), comprises the Seychelles Islands in the Indian Ocean. With their dependencies, these eighty-nine islands, the principal of which are Mahé, Praslin, Silhouette, Curieuse, and La Digue, cover an area of 148½ sq. miles. The French occupied the islands about 1742, but they were captured by the British in 1794, and were formally ceded to Great Britain in 1848. Port Victoria, the capital of Mahé and situated on the north-eastern side of the island, is the seat of the colonial government, the present governor being Walter Edward Davidson, C.M.G. In December, 1909, the estimated population of the islands was 22,409. Both Catholic and Church of England primary schools are aided by the State. The principal exports are vanilla, coconuts, cocoa-nut oil, tortoise-shell, soap, and guano. The double cocoa-nut known as *Coco de Mer* is grown in Mahé and Praslin, while Aldabra, a dependency about 680 miles from Mahé, is famous for enormous land tortoises. By a Papal Decree of 26 November, 1852, the Seychelles were separated from the Diocese of Port Louis and made a prefecture Apostolic, to which a Decree of 6 December, 1854, joined the Amirantes and Agalega Islands, likewise separated from Port Louis. The first prefect Apostolic was the Right Reverend Jeremias Paglietti, who as a missionary had laboured successfully in the region for many years. In 1863 the mission was confided to the Capuchins, and was made a vicariate Apostolic on 31 Aug., 1880. As the Diocese of Port Victoria (erected 14 July, 1892), it was a suffragan of Colombo, Ceylon, but by a Decree of 3 June, 1899, it became directly subject to the Holy See. The present bishop is the Right Reverend Bernard Thomas Clarke, O.M.Cap. (b. at London, 12 November, 1856; made titular Bishop of Tingis, 19 March, 1902, and Vicar Apostolic of Arabia). On 10 June, 1910, he was transferred to Port Victoria, where he succeeded Bishop Marc Hudrisier (b. at Faverge, France, 27 July, 1848; became Bishop of Port Victoria, 21 July, 1892; d. Feb., 1910). Besides Capuchins there are in the diocese Marist Brothers and Sisters of St. Joseph of Cluny. There are 18 ecclesiastical residences, 18 churches or chapels, 1 infirmary, 24 schools with 2170 pupils, 2 colleges with 215 students, 2 orphanages with 67 orphans.

Posen. See GNESEN-POSEN, ARCHDIOCESE OF.

Positivism, a system of philosophical and religious doctrines elaborated by Auguste Comte. As a philosophical system or method, Positivism denies the validity of metaphysical speculations, and maintains that the data of sense experience are the only object and the supreme criterion of human knowledge; as a religious system, it denies the existence of a personal God and takes humanity, "the great

being", the object of its veneration and cult. We shall give a brief historical sketch of Positivism, an exposition of its fundamental principles, and a criticism of them.

I. HISTORY OF POSITIVISM.—The founder of Positivism was Auguste Comte (b. at Montpellier, 19 Jan., 1798; d. at Paris, 5 Sept., 1857). He entered the *Ecole polytechnique* at Paris in 1814, was a disciple of Saint-Simon until 1824, and began to publish his course of philosophy in 1826. About this period he became temporarily deranged (1826–27). After recovering, he was appointed instructor (1832–52) and examiner in mathematics (1837–44) at the *Ecole polytechnique*, giving meanwhile a course of public lectures on astronomy. The unhappiness of his married life and his strange infatuation for Mme Clotilde de Vaux (1845–46) greatly influenced his naturally sentimental character. He realized that mere intellectual development is insufficient for life, and, having presented Positivism as the scientific doctrine and method, he aimed at making it a religion, the religion of humanity. Comte's chief works are his "Cours de philosophie positive" [6 vols.: Philosophie mathématique (1830), astronomique et physique (1835), chimique et biologique (1838), partie dogmatique de la philosophie sociale (1839), partie historique (1840), complément de la philosophie sociale et conclusions (1842); translated by Harriet Martineau (London, 1853)] and his "Cours de politique positive" (3 vols., Paris, 1815–54). Various influences concurred to form Comte's system of thought: the Empiricism of Locke and the Scepticism of Hume, the Sensism of the eighteenth century and the Criticism of Kant, the Mysticism of the Middle Ages, the Traditionalism of De Maistre and de Bonald, and the Philanthropy of Saint-Simon. He maintains as a law manifested by history that every science passes through three successive stages, the theological, the metaphysical, and the positive; that the positive stage, which rejects the validity of metaphysical speculation, the existence of final causes, and the knowableness of the absolute, and confines itself to the study of experimental facts and their relations, represents the perfection of human knowledge. Classifying the sciences according to their degree of increasing complexity, he reduces them to six in the following order: mathematics, astronomy, physics, chemistry, biology, and sociology. Religion has for its object the "great being" (humanity), the "great medium" (world-space), and the "great fetic" (the earth), which form the positivist trinity. This religion has its hierarchical priesthood, its positive dogmas, its organized cult, and even its calendar on the model of Catholicism (cf. Comte, "Catéchisme positiviste").

At the death of Comte, a division arose among the Positivists, the dissident group being formed with Littré as its leader, and the orthodox group under the direction of Pierre Laffitte. Emile Littré (q. v.) accepted Positivism in its scientific aspect: for him Positivism was essentially a method, viz. that method which limits human knowledge to the study of experimental facts and neither affirms nor denies anything concerning what may exist outside of experience. He rejected as unreal the religious organization and cult of Positivism. He considered all religions from the philosophical point of view, to be equally vain, while he confessed that, from the historical point of view, Catholicism was superior to all other religions. The true end of man, he maintained, was to work for the progress of humanity by studying it (science and education), loving it (religion), beautifying it (fine arts), and enriching it (industry). The official successor of Comte and leader of the orthodox group of Positivists was Pierre Laffitte, who became professor of the general history of sciences in the Collège de France in 1892. He maintained both the scientific

and the religious teaching of Positivism with its cult, sacraments, and ceremonies. Other orthodox groups were formed in England with Harrison as its leader and Congreve, Elliot, Hutton, Morrison etc. as its chief adherents; in Sweden with A. Nystrom. An active and influential group was also founded in Brazil and Chile with Benjamin Constant and Miguel Lemos as leaders, and a temple of humanity was built at Rio Janeiro in 1891. The principles of Positivism as a philosophical system were accepted and applied in England by J. Stuart Mill, who had been in correspondence with Comte (cf. "Lettres d'Aug. Comte à John Stuart Mill, 1841–1844", Paris, 1877), Spencer, Bain, Lewes, Maudsley, Sully, Romanes, Huxley, Tyndall etc.; in France by Taine, Ribot, de Roberty etc.; in Germany by Dühring, Avenarius etc. Thus, the principles and spirit of Positivism pervaded the scientific and philosophical thought of the nineteenth century and exercised a pernicious influence in every sphere. They had their practical consequences in the systems of positive or so-called scientific morality and utilitarianism in ethics, of neutrality and naturalism in religion.

PRINCIPLES OF POSITIVISM.—The fundamental principle of Positivism is, as already said, that sense experience is the only object of human knowledge as well as its sole and supreme criterion. Hence abstract notions or general ideas are nothing more than collective notions; judgments are mere empirical colligations of facts. Reasoning includes induction and the syllogism: induction has for its conclusion a proposition which contains nothing more than the collection of a certain number of sense experiences, and the syllogism, taking this conclusion as its major proposition, is necessarily sterile or even results in a vicious circle. Thus, according to Positivism, science cannot be, as Aristotle conceived it, the knowledge of things through their ultimate causes, since material and formal causes are unknowable, final causes illusions, and efficient causes simply invariable antecedents, while metaphysics, under any form, is illegitimate. Positivism is thus a continuation of crude Empiricism, Associationism, and Nominalism. The arguments advanced by Positivism, besides the assertion that sense experiences are the only object of human knowledge, are chiefly two: the first is that psychological analysis shows that all human knowledge can be ultimately reduced to sense experiences and empirical associations; the second, insisted upon by Comte, is historical, and is based on his famous "law of the three stages", according to which the human mind in its progress is supposed to have been successively influenced by theological preoccupations and metaphysical speculation, and to have finally reached at the present time the positive stage, which marks, according to Comte, its full and perfect development (cf. "Cours de philosophie positive", II, 15 sqq.).

CRITICISM.—Positivism asserts that sense experiences are the only object of human knowledge, but does not prove its assertion. It is true that all our knowledge has its starting point in sense experience, but it is not proved that knowledge stops there. Positivism fails to demonstrate that, above particular facts and contingent relations, there are not abstract notions, general laws, universal and necessary principles, or that we cannot know them. Nor does it prove that material and corporeal things constitute the whole order of existing beings, and that our knowledge is limited to them. Concrete beings and individual relations are not only perceptible by our senses, but they have also their causes and laws of existence and constitution; they are intelligible. These causes and laws pass beyond the particularness and contingency of individual facts, and are elements as fundamentally real as the individual facts which they produce and control. They cannot be per-

ceived by our senses, but why can they not be explained by our intelligence? Again, immaterial beings cannot be perceived by sense experience, it is true, but their existence is not contradictory to our intelligence, and, if their existence is required as a cause and a condition of the actual existence of material things, they certainly exist. We can infer their existence and know something of their nature. They cannot indeed be known in the same way as material things, but this is no reason for declaring them unknowable to our intelligence (see AGNOSTICISM; ANALOGY). According to Positivism, our abstract concepts or general ideas are mere collective representations of the experimental order—for example, the idea of “man” is a kind of blended image of all the men observed in our experience. This is a fundamental error. Every image bears individual characters; an image of man is always an image of a particular man and can represent only that one man. What is called a collective image is nothing more than a collection of divers images succeeding one another, each representing an individual and concrete object, as may be seen by attentive observation. An idea, on the contrary, abstracts from any concrete determination, and may be applied identically to an indefinite number of objects of the same class. Collective images are more or less confused, and are the more so as the collection represented is larger; an idea remains always clear. There are objects which we cannot imagine (e. g. a myriagon, a substance, a principle), and which we can nevertheless distinctly conceive. Nor is the general idea a name substituted as a sign for all the individual objects of the same class, as stated by Taine (*De l'Intelligence*, I, 26). If a certain perception, says Taine, always coincides with or follows another perception (e. g. the perception of smoke and that of fire, the smell of a sweet odour and the sight of a rose), then the one becomes the sign of the other in such a way that, when we perceive one, we instinctively anticipate the presence of the other. So it is, Taine adds, with our general ideas. When we have perceived a number of different trees, there remains in our memory a certain image made up of the characters common to all trees, namely the image of a trunk with branches. We call it “tree”, and this word becomes the exclusive sign of the class “tree”; it evokes the image of the individual objects of that class as the perception of every one of these evokes the image of the sign substituted for the whole class.

Cardinal Mercier rightly remarks that this theory rests upon a confusion between experimental analogy and abstraction (*Critériologie générale*, I, III, c. iii, § 2, pp. 237 sqq.). Experimental analogy plays indeed a large part in our practical life, and is an important factor in the education of our senses (cf. St. Thomas, “*Anal. post.*”, II, xv). But it should be remarked that experimental analogy is limited to the individual objects observed, to particular and similar objects; its generality is essentially relative. Again, the words which designate the objects correspond to the characters of these objects, and we cannot speak of “abstract names” when only individual objects are given. Such is not the case with our general ideas. They are the result of an abstraction, not of a mere perception of individual objects, however numerous; they are the conception of a type applicable in its unity and identity to an indefinite number of the objects of which it is the type. They thus have a generality without limit and independent of any concrete determination. If the words which signify them can be the sign of all the individual objects of the same class, it is because that same class has first been conceived in its type; these names are abstract because they signify an abstract concept. Hence mere experience is insufficient to account for our general ideas. A careful study of Taine's theory

and the illustrations given shows that the apparent plausibility of this theory comes precisely from the fact that Taine unconsciously introduces and employs abstraction. Again, Positivism, and this is the point especially developed by John Stuart Mill (following Hume), maintains that what we call “necessary truths” (even mathematical truths, axioms, principles) are merely the result of experience, a generalization of our experiences. We are conscious, e. g. that we cannot at the same time affirm and deny a certain proposition, that one state of mind excludes the other; then we generalize our observation and express as a general principle that a proposition cannot be true and false at the same time. Such a principle is simply the result of a subjective necessity based on experience. Now, it is true that experience furnishes us with the matter out of which our judgments are formed, and with the occasion to formulate them. But mere experience does not afford either the proof or the confirmation of our certitude concerning their truth. If it were so, our certitude should increase with every new experience, and such is not the case, and we could not account for the absolute character of this certitude in all men, nor for the identical application of this certitude to the same propositions by all men. In reality we affirm the truth and necessity of a proposition, not because we cannot subjectively deny it or conceive its contradictory, but because of its objective evidence, which is the manifestation of the absolute, universal, and objective truth of the proposition, the source of our certitude, and the reason of the subjective necessity in us.

As to the so-called “law of the three stages”, it is not borne out by a careful study of history. It is true that we meet with certain epochs more particularly characterized by the influence of faith, or metaphysical tendencies, or enthusiasm for natural science. But even then we do not see that these characteristics realize the order expressed in Comte's law. Aristotle was a close student of natural science, while after him the neo-Platonic School was almost exclusively given to metaphysical speculation. In the sixteenth century there was a great revival of experimental sciences; yet it was followed by the metaphysical speculation of the German idealistic school. The nineteenth century beheld a wonderful development of the natural sciences, but we are now witnessing a revival of the study of metaphysics. Nor is it true that these divers tendencies cannot exist during the same epoch. Aristotle was a metaphysician as well as a scientist. Even in the Middle Ages, which are so generally considered as exclusively given to a priori metaphysics, observation and experiment had a large place, as is shown by the works of Roger Bacon and Albertus Magnus. St. Thomas himself manifests a remarkably keen spirit of psychological observation in his “*Commentaries*” and in his “*Summa theologia*”, especially in his admirable treatise on the passions. Finally, we see a harmonious combination of faith, metaphysical reasoning, and experimental observation in such men as Kepler, Descartes, Leibniz, Pascal etc. The so-called “law of the three stages” is a gratuitous assumption, not a law of history.

The positivist religion is a logical consequence of the principles of Positivism. In reality human reason can prove the existence of a personal God and of His providence, and the moral necessity of revelation, while history proves the existence of such a revelation. The establishment of a religion by Positivism simply shows that for man religion is a necessity.

GEORGE M. SAUVAGE.

Possession, DEMONIAL.—Man is in various ways subject to the influence of evil spirits. By original sin he brought himself into "captivity under the power of him who thence [from the time of Adam's transgression] had the empire of death, that is to say, the Devil" (Council of Trent, Sess. V, de pecc. orig., 1), and was through the fear of death all his lifetimes subject to servitude (Heb., ii, 15). Even though redeemed by Christ, he is subject to violent temptation: "for our wrestling is not against flesh and blood; but against principalities and powers, against the rulers of the world of this darkness, against the spirits of wickedness in the high places" (Eph., vi, 12). But the influence of the demon, as we know from Scripture and the history of the Church, goes further still. He may attack man's body from without (*obsession*), or assume control of it from within (*possession*). As we gather from the Fathers and the theologians, the soul itself can never be "possessed" nor deprived of liberty, though its ordinary control over the members of the body may be hindered by the obsessing spirit (cf. St. Aug., "De sp. et an.", 27; St. Thomas, "In II Sent.", d. VIII, Q. i; Ribet, "La mystique divine", Paris, 1883, pp. 190 sqq.).

CASES OF POSSESSION.—Among the ancient pagan nations diabolical possession was frequent (Maspero, "Hist. anc. des peuples de l'Orient", 41; Lenormant, "La magie chez les Chaldéens"), as it is still among their successors (Ward, "History of the Hindoos", v., I, 2; Roberts, "Oriental Illustrations of the Scriptures"; Doolittle, "Social Life of the Chinese"). In the Old Testament we have only one instance, and even that is not very certain. We are told that "an evil spirit from the Lord troubled" Saul (I Kings, xvi, 14). The Hebrew word *rûah* need not imply a personal influence, though, if we may judge from Josephus (Ant. Jud., VI, viii, 2; ii, 2), the Jews were inclined to give the word that meaning in this very case. In New-Testament times, however, the phenomenon had become very common. The victims were sometimes deprived of sight and speech (Matt., xii, 22), sometimes of speech alone (Matt., ix, 32; Luke, xi, 14), sometimes afflicted in ways not clearly specified (Luke, viii, 2), while, in the greater number of cases, there is no mention of any bodily affliction beyond the possession itself (Matt., iv, 24; viii, 16; xv, 22; Mark, i, 32, 34, 39; iii, 11; vii, 25; Luke, iv, 41; vi, 18; vii, 21; viii, 2). The effects are described in various passages. A young man is possessed of a spirit "who, whosoever he taketh him, dasheth him, and he foameth, and gnasheth with his teeth, and pineth away, . . . and oftentimes hath he [the spirit] cast him into the fire and into waters to destroy him" (Mark, ix, 17, 21). The possessed are sometimes gifted with superhuman powers: "a man with an unclean spirit, who had his dwelling in the tombs, and no man now could bind him, not even with chains. For having been often bound with fetters and chains, he had burst the chains, and broken the fetters in pieces, and no one could tame him" (Mark, v, 2-4). Some of the unfortunate victims were controlled by several demons (Matt., xii, 43, 45; Mark, xvi, 9; Luke, xi, 24-26); in one case by so many that their name was Legion (Mark, v, 9; Luke, viii, 30). Yet, evil as the possessing spirits were, they could not help testifying to Christ's Divine mission (Matt., viii, 29; Mark, i, 24, 34; iii, 12; v, 7; Luke, iv, 34, 41; viii, 28). And they continued to do so after His Ascension (Acts, xvi, 16-18).

The history of the early Church is filled with instances of similar diabolical agency. A quotation from Tertullian will suffice to bring before us the prevalent conviction. Treating of true and false divinity, he addresses the pagans of his time: "Let a person be brought before your tribunals who is plainly under demoniacal possession. The wicked spirit, bidden speak by the followers of Christ, will as readily make the truthful confession that he is a demon as elsewhere he has falsely asserted that he is a god" (Apolog., tr. Edinburgh, p. 23). The facts associated with possession prove, he says, beyond question the diabolical source of the influence—"What clearer proof than a work like that? What more trustworthy than such a proof? The simplicity of truth is thus set forth: its own worth sustains it; no ground remains for the least suspicion. Do you say that it is done by magic or by some trick of the sort? You will not say anything of the sort if you have been allowed the use of your ears and eyes. For what argument can you bring against a thing that is exhibited to the eye in its naked reality?" And the Christians expel by a word: "All the authority and power we have over them is from our naming of the name of Christ and recalling to their memories the woes with which God threatens them at the hands of Christ as Judge and which they expect one day to overtake them. Fearing Christ in God and God in Christ, they become subject to the servants of God and Christ. So at our touch and breathing, overwhelmed by the thought and realization of those judgment fires, they leave at our command the bodies they have entered." Statements of this kind embody the views of the Church as a whole, as is evident from the facts, that various councils legislated on the proper treatment of the possessed, that parallel with the public penance for catechumens and fallen Christians there was a course of discipline for the energumens also, and, finally, that the Church established a special order of exorcists (cf. Martigny, "Dict. des antiq. chrét.", Paris, 1877, p. 312).

All through the Middle Ages councils continued to discuss the matter: laws were passed, and penalties decreed, against all who invited the influence of the Devil or utilized it to inflict injury on their fellowmen (cf. the Bulls of Innocent VIII, 1484; Julius II, 1504; and Adrian VI, 1523); and powers of exorcism were conferred on every priest of the Church. The phenomenon was accepted as real by all Christians. The records of criminal investigations alone in which charges of witchcraft or diabolical possession formed a prominent part would fill volumes. The curious may consult such works as Des Mousseaux, "Pratiques des démons" (Paris, 1854), or Thiers, "Superstitions", I, or, from the Rationalistic point of view, Lecky, "Rise and Influence of Rationalism in Europe", I, 1-138, and, for later instances, Constans, "Relation sur une épidémie d'hystéro-démonopathie" (Paris, 1863). And though at the present day among civilized races the cases of diabolical possession are few, the phenomena of Spiritism, which offer many striking points of resemblance, have come to take their place (cf. Pauvert, "La vie de N. S. Jésus-Christ", I, p. 226; Raupert, "The Dangers of Spiritualism", London, 1906; Lepicier, "The Unseen World", London, 1906; Miller, "Sermons on Modern Spiritualism", London, 1908). And if we may judge from the accounts furnished by the pioneers of the Faith in missionary countries, the evidences of diabolical agency there are almost as clear and defined as they were in Galilee in the time of Christ (cf. Wilson, "Western Africa", 217; Waffelaert in the "Dict. apol. de la foi cath.", Paris, 1889, s. v. Possession diabol.).

II. REALITY OF THE PHENOMENON.—The infidel policy on the question is to deny the possibility of possession in any circumstances, either on the supposition, that there are no evil spirits in existence,

or that they are powerless to influence the human body in the manner described. It was on this principle that, according to Lecky, the world came to disbelieve in witchcraft: men did not trouble to analyse the evidence that could be produced in its favour; they simply decided that the testimony must be mistaken because "they came gradually to look upon it as absurd" (op. cit., p. 12). And it is by this same a priori principle, we believe, that Christians who try to explain away the facts of possession are unconsciously influenced. Though put forward once as a commonplace by leaders of materialistic thought, there is a noticeable tendency of late years not to insist upon it so strongly in view of the admission made by competent scientific inquirers that many of the manifestations of Spiritism cannot be explained by human agency (cf. Miller, op. cit., 7-9). But whatever view Rationalists may ultimately adopt, for a sincere believer in the Scriptures there can be no doubt that there is such a thing as possession possible. And if he is optimistic enough to hold that in the present order of things God would not allow the evil spirits to exercise the powers they naturally possess, he might open his eyes to the presence of sin and sorrow in the world, and recognize that God causes the sun to shine on the just and the unjust and uses the powers of evil to promote His own wise and mysterious purposes (cf. Job, *passim*; Mark v, 19).

That mistakes were often in the diagnosis of cases, and results attributed to diabolical agency that were really due to natural causes, we need have no hesitation in admitting. But it would be illogical to conclude that the whole theory of possession rests on imposture or ignorance. The abuse of a system gives us no warrant to denounce the system itself. Strange phenomena of nature have been wrongly regarded as miraculous, but the detection of the error has left our belief in real miracles intact. Men have been wrongly convicted of murder, but that does not prove that our reliance on evidence is essentially unreasonable or that no murder has ever been committed. A Catholic is not asked to accept all the cases of diabolical possession recorded in the history of the Church, nor even to form any definite opinion on the historical evidence in favour of any particular case. That is primarily a matter for historical and medical science (cf. Delrio, "Disq. mag. libri sex", 1747; Alexander, "Demon. Possession in the N. T.", Edinburgh, 1902). As far as theory goes, the real question is whether possession has ever occurred in the past, and whether it is not, therefore, possible that it may occur again. And while the cumulative force of centuries of experience is not to be lightly disregarded, the main evidence will be found in the action and teaching of Christ Himself as revealed in the inspired pages of the New Testament, from which it is clear that any attempt to identify possession with natural disease is doomed to failure.

In classical Greek *δαίμων*, it is true, means "to be mad" (cf. Eurip., "Phœn.", 888; Xenophon, "Memor.", I, i, ix; Plutarch, "Marc.", xxiii), and a similar meaning is conveyed by the Gospel phrase *δαίμονιον ἔχειν*, when the Pharisees use it of Christ (Matt., xi, 18; John, vii, 20; viii, 48), especially in John, x, 20, where they say "He hath a devil, and is mad" (*δαίμονιον ἔχει, καὶ μάλεται*); *δαίμων*, however, is not the word used by the sacred writers. Their word is *δαμονίζεσθαι*, and the meanings given to it previously by profane writers ("to be subject to an appointed fate"; Philemon, "Incert.", 981; "to be deified"; Sophocles, "Fr.", 180) are manifestly excluded by the context and the facts. The demoniacs were often afflicted with other maladies as well, but there is surely nothing improbable in the view of Catholic theologians that the demons often afflicted those who were already diseased, or that the very fact of obsession or possession produced these diseases ■ a

natural consequence (cf. Job, ii, 7; Görres, "Die christ. mystik", iv; Lesêtre in "Dict. de la Bible", s. v. Démoniaques). Natural disease and possession are in fact clearly distinguished by the Evangelists: "He cast out the spirits with his word: and all that were sick he healed" (Matt., viii, 16). "They brought to him all that were ill and that were possessed with devils . . . and he healed many that were troubled with divers diseases; and he cast out many devils" (Mark i, 32, 34); and the distinction is shown more clearly in the Greek: *πάντας τοὺς κακῶς ἔχοντας καὶ τοὺς δαμονιζομένους*.

A favourite assertion of the Rationalists is that lunacy and paralysis were often mistaken for possession. St. Matthew did not think so, for he tells us that "they presented to him all sick people that were taken with divers diseases [*ποικίλαις νόσοις*] and torments [*βασάνοις*], and such as were possessed by devils [*δαμονιζομένους*], and lunatics [*σεληνιαζομένους*], and those who had the palsy [*παρλυτικούς*], and he cured them" (iv, 24). And the circumstances that attended the cures point in the same direction. In the case of ordinary diseases they were effected quietly and without violence. Not so always with the possessed. The evil spirits passed into lower animals with dire results (Matt., viii, 32), or cast their victim on the ground (Luke, iv, 35) or, "crying out, and greatly tearing him, went out of him, and he became as dead, so that many said: He is dead" (Mark, ix, 25; cf. Vigouroux, "Les livres saints et la crit. rationaliste", Paris, 1891).

Abstracting altogether from the fact that these passages are themselves inspired, they prove that the Jews of the time regarded these particular manifestations as due to a diabolical source. This was surely a matter too closely connected with Christ's own Divine mission to be lightly passed over as one on which men might, without much inconvenience from the religious point of view, be allowed to hold erroneous opinions. If, therefore, possession were merely a natural disease and the general opinion of the time based on a delusion, we might expect that Christ would have proclaimed the correct doctrine as He did when His followers spoke of the sin of the man born blind (John, ix, 2, 3), or when Nicodemus misunderstood His teaching on the necessity of being born again in Baptism (ibid., iii, 3, 4). So far from correcting the prevalent conviction, He approved and encouraged it by word and action. He addressed the evil spirits, not their victims; told His disciples how the evil spirit acted when cast out (Matt., xii, 44, 45; Luke, xi, 24-26), taught them why they had failed to exorcize (Matt., xvii, 19); warned the seventy-two disciples against glorying in the fact that the demons were subject to them (Luke, x, 17-20). He even conferred express powers on the Apostles "over unclean spirits, to cast them out, and to heal all manner of diseases, and all manner of infirmities" (Matt., x, 1; Mark, vi, 7; Luke, ix, 1), and, immediately before His Ascension, enumerated the signs that would proclaim the truth of the revelation His followers were to preach to the world: "In my name they shall cast out devils: they shall speak with new tongues. They shall take up serpents; and if they shall drink any deadly thing it shall not hurt them: they shall lay hands on the sick and they shall recover" (Mark, xvi, 17-18). Thus does the expulsion of demons become so closely bound up with other miracles of the Christian dispensation as to hardly permit of separation.

The problem, therefore, that confronts us is this: If a belief so intimately connected in Christ's own mind with the mission He came to accomplish was based on a delusion, why did He not correct it? Why rather encourage it? Only two answers appear possible. Either He was ignorant of a religious truth, or He deliberately gave instructions that He knew to be false—instructions that misled His followers, and that were eminently calculated, as indeed the issue proved,

to have very serious consequences, often of a most painful and deplorable kind, in the whole subsequent history of the Church He founded. No Catholic can dream of admitting either of the explanations. The theory of accommodation formulated by Winer ("Biblisches Realwörterbuch", Leipzig, 1833) may at once be dismissed (see DEMONIACS). Accommodation understood as the toleration of harmless illusions having little or no connexion with religion might perhaps be allowed; in the sense of deliberate inculcation of religious error, we find it very hard to associate it with high moral principle, and entirely impossible to reconcile it with the sanctity of Christ.

Why possession should manifest itself in one country rather than another, why it should have been so common in the time of Christ and so comparatively rare in our own, why even in Palestine it should have been confined almost entirely to the province of Galilee, are questions on which theologians have speculated but on which no sure conclusion can ever be reached (cf. Delitzsch, "Sys. der biblis. Psychol.", Leipzig, 1861; Lesêtre, op. cit.; Jailer in "Kirchenlexikon", II, s. v. "Besessene"; St. Aug., X, xxii, De civ. Dei, 10, 22). The phenomenon itself is preternatural; a humanly scientific explanation is, therefore, impossible. But it might fairly be expected, we think, that since Christ came to overthrow the empire of Satan, the efforts of the powers of darkness should have been concentrated at the period of His earthly life, and should have been felt especially in the province where, with the exception of a few brief visits to neighbouring lands, His private and public life was passed. (See EXORCISM, EXORCIST.)

II, c. ii; TYLOR, *Primitive Culture* (London, 1891), cc. xiv, xv; SPENCER, *Principles of Sociology*, I.

M. J. O'DONNELL.

Possevinus, ANTONIUS, theologian and papal envoy, b. at Mantua in 1533 or 1534; d. at Ferrara, 26 Feb., 1611. At sixteen years of age he went to Rome to study, familiarized himself with many languages, and became secretary to Cardinal Ercole Gonzaga. In 1559 he entered the Society of Jesus, and in 1560 was sent to preach against heresy in Savoy. Passing on to France, he was ordained priest in 1561, and preached at Paris, Bayonne, Rouen, and elsewhere, converting many Calvinists. He became rector of the colleges of Avignon and of Lyons, and in 1573 was secretary to the general of the Society, Everardo Mercuriano. Gregory XIII himself was among those who learned to appreciate his merit while he occupied the last-named position. When John III of Sweden expressed his desire to become a Catholic, the pope, in 1577, made Possevinus his special legate to that Court, and Possevinus also had to negotiate with the Courts of Bavaria and Bohemia to secure support for John in the event of political complications. The Jesuit envoy, attired as a secular, was received with great honour in Sweden, and the king made his profession of the Catholic Faith.

Many difficulties arose when measures for the conversion of Sweden were debated. Possevinus returned to Rome with proposals, some of which were judged inadmissible. Through his constant efforts several colleges (the German College at Rome, those of Braunsberg, Fulda, Olmütz, Prague, and others) received Swedish youths, with the object of forming a national Catholic clergy. At the close of 1578 he returned to Sweden as nuncio and Vicar Apostolic of Scandinavia. On his way, he again visited the Duke of Bavaria, the King of Poland, and the emperor. Disconcerted by the refusal of Rome to accept the King's terms, and thwarted by the sectarians, who had the advantage in numbers and influence, Possevinus could do nothing but comfort and encourage the few Catholics remain-

ing in Sweden. He displayed the greatest devotion on the occasion of an epidemic, when the sick were left helpless by the Protestant ministers.

In 1580 he returned to Rome. In the meantime the Tsar Ivan IV sought the pope's mediation with Stephen Báthori, King of Poland, in the cause of peace. Possevinus was sent as papal legate (1581) to negotiate the re-union of the Russian Church with Rome. The negotiations made with the Russian envoys in Poland proved nugatory, as the King of Poland insisted upon profiting by his successes in war, and Possevinus went to Russia to treat with the Tsar. He wisely laid down as preliminary conditions of peace with Poland the liberty of Catholic worship for foreigners in Russia and free passage for pontifical legates. These were granted *pro forma*. His overtures of reconciliation with Rome were met only with reassuring words. In 1582 the Tsar signed a treaty of peace, compelled by Polish victories. Possevinus left Moscow laden with honours, but not deceived as to the success of his efforts: Ivan the Terrible had negotiated with the pope only to mislead both Rome and Poland. Having returned to Rome, Possevinus was immediately sent back to Poland as nuncio, to induce the king to combat heresy in Livonia and Transylvania. He himself visited these countries, preaching and arguing with the heretics.

At the Diet of Warsaw, in 1583, he obtained the passage of resolutions favourable to Catholicism. His efforts were ineffectual in the treaties between Poland and the emperor, on which business he went twice to the Court of Rudolph II. He still stayed in the North, preaching in Livonia, Saxony, Bohemia, and Transylvania, writing treatises against the innovators and distributing books on Catholic doctrine. He did much towards the reconciliation of the Ruthenians, and had a large share in founding the college of the Jesuits at Vilna. He also wrote treatises against the adversaries of the re-union. Through his exertions the Collegium Hosianum of Braunsberg was enlarged for the reception of Swedes and Ruthenians; at Olmütz and Claudiopolis, in Transylvania, colleges were established for similar purposes. In 1587 he was invited to teach theology at Padua, where he remained for four years. Among his disciples there was St. Francis of Sales. Returning to Rome, he devoted his time to theological, historical, and philosophical studies. Having played an important rôle in the recognition of Henry IV of France, he was expelled from Rome by the Spanish party. He then made extended tours to visit the libraries of Italy in quest of books, as on former occasions, in which task he was generously aided by Paul V.

Antonius Possevinus represented the literary, scientific, and diplomatic type of Jesuit, performing important political missions, establishing schools of science and letters, and applying himself to diplomatic protocols and classical authors with equal assiduity. Had he not met with insurmountable difficulties in Sweden and Russia, and in negotiating the treaties between Poland and the empire, he would have left a still deeper trace on the political history of the Church and of Europe. His writings include "Moscovia" (Vilna, 1586), an important authority on Russian history; "Del sacrificio della Messa", followed by an appendix, "Risposta a P. Vireto" (Lyons, 1563); "Il soldato cristiano" (Rome, 1569); "Notæ Verbi Dei et Apostolicæ Ecclesiæ" (Posen, 1586). His most celebrated works are the "Apparatus sacer ad Scripturam Veteris et Novi Test." (Venice, 1603-06), where he records and analyzes more than 8000 books treating of Sacred Scripture; and the "Bibliotheca Selecta" (Rome, 1593), treating of the method of study, teaching, and practical use of various sciences; the second part contains a critical bibliography of various sciences. (Several chapters of this book have been published separately.) Part of his letters were

published by A. M. Gratianus Borgo in "De scriptis ab Ant. Possevino ad Aloysium fratrem litteris" (Florence, 1645-46).

U. BENIGNI.

Possidius, SAINT, Bishop of Calama in Numidia, author of a short life of St. Augustine and of an *indculus* or list of St. Augustine's writings. The dates of his birth and death are unknown; he was alive and in exile in 437 according to Prosper, who, in his "Chronicle", records that Possidius and two other bishops were persecuted and expelled from their sees by the Vandal king, Genseric, who was an Arian. Possidius (Vita S. Augustini, xxxi), after describing the death of St. Augustine, speaks of his unbroken friendship with him for forty years. He also, speaking of himself in the third person, lets it be known that he was one of the clergy of St. Augustine's monastery (ibid., xii). The date of his promotion to the episcopate was, according to Tillemont, about 397. He followed St. Augustine's example and established a monastery at Calama. At a council, held at Carthage, Possidius challenged Crispinus, the Donatist Bishop of Calama, to a public discussion which the latter declined. Shortly afterwards one of Crispinus's clergy, bearing the same name as his bishop, attempted to assassinate Possidius. Legal proceedings were instituted against Crispinus, the bishop, who refused to punish his presbyter. He was proved to be a heretic and was heavily fined, but at the intercession of Possidius the fine was not exacted ("Vita", xii; St. Augustine, "Ep.", cv, 4; "Contra Crescon.", III, xlvi). In 407, Possidius served, with St. Augustine and five other bishops, on a committee appointed to adjudicate upon some ecclesiastical matter, the particulars of which are not known. In 408 he nearly lost his life in a riot stirred up by the pagans at Calama (St. Augustine, "Epp.", xc, xci, xciii). In 409 he was one of four bishops deputed to go to Italy to obtain the protection of the emperor against the Donatists. He was one of the seven bishops chosen to represent the Catholic party at the "Collatio" of 411 (see DONATISTS: The "Collatio" of 411). In 416 he assisted at the Council of Milevum, where fifty-nine Numidian bishops addressed a synodal letter to Innocent I, asking him to take action against Pelagianism. He joined with St. Augustine and three other bishops in a further letter to Innocent on the same subject, and was at the conference between St. Augustine and the Donatist Emeritus. When the Vandals invaded Africa, he fled to Hippo and was present at the death of St. Augustine (430). His "Vita S. Augustini", composed before the capture of Carthage (439), is included in all editions of the works of St. Augustine, and also printed in Hurter's "Opusc. SS. Patr.". His *indculus* will be found in the last volume of Migne's edition of the works of St. Augustine and in the tenth volume of the Benedictine edition.

CEILLIER, *Hist. des auteurs ecclés.*, XII; TILLEMONT, *Mémoires*, XIII.

F. J. BACCHUS.

Postcommunion.—The Communion act finishes the essential Eucharistic service. Justin Martyr (I Apol., lxxv-lxxvi) adds nothing after describing the Communion. However, it was natural that the people should not be dismissed without a final prayer of thanksgiving and of petition, so every rite ends its liturgy with a short prayer or two and a blessing before the dismissal. The earliest complete liturgy extant, that of the "Apostolic Constitutions", VIII, contains

two such prayers,—a thanksgiving (XV, ii-vi), and a blessing (XV, vii-ix). A significant resemblance between the Roman Rite and that of the "Apostolic Constitutions" is that at Rome, too, there were formerly at every Mass two prayers of the same nature. In the "Leonine Sacramentary" they have no title; but their character is obvious. As examples, those for the summer ember days may serve (ed. Feltoe, p. 51, "In jejunió"), the first *Gratias tibi referimus*, the second *Oculis tuæ miserationis intende*. The Gelasian Sacramentary calls the first *postcommunio*, the second *ad populum*. In both sacramentaries these two prayers form part of the normal Mass said throughout the year, though not every Mass has both; the prayers "*ad populum*" in the later book are comparatively rare. They also begin to change their character. The formerly constant terms *tuere*, *protege* etc. are rarer; many are ordinary collects with no pronounced idea of prayers for blessing and protection. In the "Gregorian Sacramentary" the second prayer, now called *Super populum*, occurs almost only from Septuagesima to Easter; the first, *Ad complendum*, continues throughout the year, but both have lost much of their original character. The *Ad complendum* prayer (Postcommunion) has become a collect formed on the model of the collect at the beginning of Mass, though generally it keeps some allusion to the Communion just received. That is still the state of these prayers after the Communion. The second, *Oratio super populum*, is said only in ferial Masses in Lent. This restriction apparently results from the shortening of the Mass (which explains many omissions and abbreviations) and the tendency of Lent to keep longer forms. The Mass was shortened for practical purposes except (in many cases) during Lent, which keeps the long *preces* in the Office omitted at other times, sometimes more than two lessons at Mass, and so on. The medieval commentators (Amalarius, "De divinis officiis", III, xxvii; Durandus, "Rationale", VI, xxviii; Honorius of Autun, "Gemma animæ", lix) explain this mystically; Honorius thinks the prayer to be a substitute for the Eastern blessed bread (*ἀντίδοπον*). The *Oratio super populum* is now always the prayer at vespers on the same day. It has been suggested that its use at Mass in Lent may be a remnant of a custom, now kept only on Holy Saturday, of singing vespers at the end of Mass (Gihl, op. cit., 711). There remains the first prayer, called *Ad complendum* in the "Gregorian Sacramentary". Its name was uncertain through the Middle Ages. Durandus (op. cit., IV, lvii) calls it merely *Oratio novissima*, using the name *Postcommunio* for the Communion antiphon. The first "Roman Ordo" calls the prayer *Oratio ad complendum* (xxi); Rupert of Deutz calls it *Ad complendum* (De divinis officiis, II, xix). But others give it the name it had already in the Gelasian book, *Postcommunio* (Sicardus, "Mitrale", III, viii); so also many medieval missals (e. g., the Sarum). This is now its official name in the Roman Rite. The Postcommunion has lost much of its original character as a thanksgiving-prayer and has absorbed the idea of the old *Oratio ad populum*. It is now always a petition, though the note of thanksgiving is often included (e. g. in the Mass *Statuit*, for a confessor pontiff). It has been affected by the Collect on which it is modelled, though there is generally an allusion to the Communion.

Every Postcommunion (and secret) corresponds to a collect. These are the three fundamental prayers of any given Proper Mass. The Postcommunion is said or chanted exactly like the Collect. First comes that of the Mass celebrated; then, if other Masses are commemorated, their Postcommunions follow in the same order and with the same final conclusion as the collects. After the Communion, when the celebrant has arranged the chalice, he goes to the epistle side and reads the Communion antiphon. He then comes to the middle and says or sings *Dominus Vobiscum*

(in the early Middle Ages he did not turn to the people this time—"Ordo Rom.", I, n. 21), goes back to the Epistle side, and says or sings one or more Postcommunions, exactly as the collects. At ferial Masses in Lent the *Oratio super populum* follows the last Postcommunion. The celebrant sings *Oremus*; the deacon turning towards the people chants: *Humiliate capita vestra Deo*, on *do* with the cadence *la, do, si, si, do* for the last five syllables. Meanwhile, everyone, including the celebrant, bows the head. The deacon turns towards the altar and the celebrant chants the prayer appointed in the Mass. At low Mass the celebrant himself says: *humiliate capita vestra Deo* and does not turn towards the people. The deacon's exclamation apparently was introduced when this prayer became a specialty of Lent. Durandus mentions it (VI, xxviii).

ADRIAN FORTESCUE.

Postgate, NICHOLAS, VENERABLE, English martyr, b. at Kirkdale House, Egton, Yorkshire, in 1596 or 1597; d. at York, 7 August, 1679. He entered Douay College, 11 July, 1621, took the college oath, 12 March, 1623, received minor orders, 25 December, 1624, the subdiaconate, 18 December, 1627, the diaconate, 18 March, 1628, and the priesthood two days later. He was sent to the mission, 29 June, 1630, and laboured in his native country with great benefit to hundreds of souls. Thomas Ward, who later wrote about him, knew him well. He was apprehended by the excise-man Reeves, at the house of Matthew Lyth, of Sleights, Little Beck, near Whitby, and was condemned under 27 Elizabeth, c. 2 for being a priest. His quarters were given to his friends and interred. One of the hands was sent to Douay College. His portable altar-stone is now venerated at Dodding Green, Westmoreland.

JOHN B. WAINWRIGHT.

Postulant.—Postulancy is a preliminary stage to the novitiate existing from the institution of monasticism.

(1) In the East, the would-be monk had to submit to many rebuffs, and, while he continued to pray for admission, he was discouraged in various ways, the hardships of religious life being exaggerated to test the sincerity of his intentions and the reality of his vocation. From the East this custom passed into the West. Cassian recommends it in his "institutions" (IV, iii), and St. Benedict introduced it into his rule: "Let not the newly arrived candidate be admitted too easily, but let care be taken, as the Apostle St. John advises, to try the spirits if they be of God: therefore after the aspirant has repeated his request for admission, if for four or five days he seems to bear patiently the rebuffs given him, and the difficulties put in the way of his entrance, and still persists in his attempt, let the door be opened to him" (c. 58). This period of trial used to last in the different orders from three to ten days. After this, in the older orders, followed the novitiate of one, two, or three years, which was formerly considered rather as a preparation for, than a first period of the religious life. Thus, after his reception, the candidate returned to the world with unlimited leave of absence and liberty to re-enter when he thought fit. In the Customs of St. Victor, xxiv (see Martène, "*De antiquis ecclesiæ ritibus*", Appendix, p. 265), this practice is mentioned as common to many monasteries; and, although it is not altogether condemned, it is shown to have had many disadvantages, for in this way it was made easy for undesirable persons to place themselves under the protection of the Church.

(2) This system of outside probation has long been abolished. In most orders, however, the candidate, when admitted to the religious life, is not allowed at once to mingle with the other novices, but receives separately a preliminary initiation, more or less prolonged as custom may require. The time occupied in this initiation is sometimes, but not always, reckoned as part of the novitiate.

(3) According to existing law, persons who aspire to the religious life, but have not yet been admitted into any particular order, may be called postulants in the wide sense of the word; such are pupils of an apostolic school, or persons who, having decided to enter the religious state, remain as guests in the monastery, while waiting for their admission. Postulants, in the strict sense of the word, are those who are taking their first steps in the religious life, without having yet received the habit. Common law forbade regulars to receive as postulants in the wider sense of the word young persons under twenty years of age (see the decree of Clement X dated 16 May, 1675), and postulant lay-brothers could not be received before the age of nineteen full years (see Clement VIII, "Cum ad regularem", 19 March, 1603; this constitution has not been everywhere carried into effect). No general law compelled religious to observe a period of candidature. However, by the recent decree of 1 Jan., 1911, in orders where lay brothers make solemn profession, the general may, in individual cases, allow provincials to receive candidates for the grade of lay brother, after they have completed their seventeenth year; moreover, for valid profession, lay brothers must have made a postulation of two years (or longer, if the Constitutions so require). The same Decree prescribes that postulants shall be placed under the direction of a virtuous and experienced father. Nuns under solemn vows (at least in Italy) are ordered by the decree of the Sacred Congregation to make a retreat of ten days before receiving the habit. The Regulations (Normæ) of 1901 require that sisters shall remain as postulants for a period varying from six months to a year. The superior-general may extend the time fixed by the Congregation for not more than three months. The time of the postulant's probation is most conveniently passed in the novitiate house, but may be spent elsewhere.

For bibliography see NOVICE.

A. VERMEERSCH.

Postulation (Lat. *postulare*, to request), a petition presented to a competent ecclesiastical superior, that he may promote to a certain dignity a person who is not strictly eligible on account of some canonical impediment which is usually dispensable. Such impediments are, for example, illegitimate birth, defect of requisite age, or the condition of a person, such as a bishop, even a titular one, or a regular, who cannot accept a new dignity without leave of their ecclesiastical superior. When a postulation is simultaneous with an election, it is required that the votes be twice the number sufficient if the person were canonically eligible. Occasionally, the Holy See dispenses with the necessity of postulation by granting an indult of eligibility to the person in question, or by empowering the electors to proceed to a choice without having recourse to a formal postulation. Postulation is called solemn, when it is addressed to the superior who can dispense with the defect in the candidate. It is called simple, when the superior in question can not dispense in the canonical impediment yet his consent is required for the candidate's promotion, such as is the case with regulars promoted to the episcopal dignity, who need the licence of their religious superior to accept the charge. Postulation is employed only for those who have a dispensable defect, and in the petitionary document all impediments must be expressed under pain of nullity. After a postulation has been

signed and sealed, presented to, and accepted by, the proper superior, those making it can not recede from, nor change, it. The person in whose favour the postulation has been made must signify within a month his willingness to accept the dignity offered.

FERRARIS, *Bibliotheca Canonica*, VI (Rome, 1890), *s. v.* *Postulatio*.

WILLIAM H. W. FANNING.

Potawatomi Indians, an important tribe of Algonquin linguistic stock, closely related dialectically to the Ojibwa and Ottawa, and living when first known to the French (about 1640) on and about the islands at the mouth of Green Bay, Lake Michigan, having recently been driven from their homes in the lower peninsula by the Iroquoian tribes living toward the east. At a later period and until their removal to the west (about 1835-40) they held both shores of Lake Michigan from about Manitowoc (44°) on the west around to about Grand River (43°) on the east, and southward to the Wabash, comprising territory in Wisconsin, Illinois, Indiana, and Michigan, with some fifty villages, including those on the sites of Milwaukee, Chicago, South Bend (St. Joseph), and Grand Rapids. Much of this territory had been held earlier by the Illinois and Miami. According to tradition, which seems corroborated by linguistic evidence, the Potawatomi were originally one people with the Ojibwa and Ottawa, and derived their name, properly in plural form Potewatmik, "people of the fire place" or "fire-makers", from having moved off to the southward and kindled a new fire, i. e. formed a separate government for themselves. The three tribes have always been known as close confederates. It is very probable that the "Prairie Band" of Potawatomi, the Muskodensug of northern Illinois, are identical with the ancient Mascoutens, the so-called "Fire Nation".

The Potawatomi were first met by the adventurous French explorer Jean Nicolet, the first white man in Wisconsin (1634-5). In 1641 they appear to have been present at the "feast of the dead" attended by the Jesuits Raymbaut and Jogues in the Huron country. In 1658-9 the explorers Radisson and Groseilliers, on their own invitation, spent the winter among them on Green Bay. They were occasional visitors at the mission of Saint-Esprit at La Pointe Chegoimegon (now Bayfield, Wis.) on Lake Superior, founded by Allouez in 1665, and in December, 1669, the same devoted Jesuit pioneer established the mission of Saint Francis Xavier near the head of Green Bay, Wisconsin, for the neighbouring Potawatomi, Sank, Foxes, and Winnebago, with visiting stations in their various villages. The war between the French and Iroquois, beginning about ten years later, gave temporary check to all the missions, and in 1687 the Green Bay mission was burned by the pagan Indians while the resident priest, Fr. Jean Enjahan, was absent with Denonville's troops. On his return the next year it was restored, and a second mission, St. Joseph, was established by Allouez for the same tribe, on the river of that name, near the present South Bend, Ind. This mission continued with one long interruption until the removal of the tribe to the West, when the missionaries accompanied the Indians and re-established work in the new field. Political changes of administration, the rising struggle with England for control of the West, and a long war with the Foxes (1712-48) conspired to discourage the mission work. In 1721 Charlevoix found the mission at Green Bay, then under Fr. J. B. Chardon, devoted chiefly to the Sank and Winnebago, while that on St. Joseph River was occupied jointly by Potawatomi and Miami. The suppression of the Jesuits in the French colonies in 1762 closed all their missions and for thirty years there was no priest west of Detroit, while the almost

continuous wars for forty years—French and Indian, Pontiac's, the Revolution, and later to the Greenville treaty in 1795—almost wiped out all recollection of Christian teaching. "Deprived of pastors, constantly in motion, mingling with war parties of pagan tribes and sharing in their superstitious rites, they soon relapsed into many of the old customs of their race" (Shea). The Potawatomi were a fighting race and in the Fox war and the French and Indian war sided actively with the French, continuing the struggle under Pontiac against the English until 1765. On the outbreak of the Revolution in 1775 they took up arms for England against the Americans and continued the war under Little Turtle and other Indian leaders until compelled to join in the treaty of Greenville in 1795 consequent upon Wayne's decisive victory over the confederated tribes in the preceding year. A part of them under Winamac joined the English again under Tecumseh's leadership in 1812, and made final treaty of peace in 1815. The Prairie Band, under their chief Gomo, held to the American interest. By these wars they suffered heavily and the close of the War of 1812 found them prostrated, while the immediate influx of whisky traders worked a wholesale demoralization, aggravated by constant fear of final removal as their territories were curtailed by repeated cessions under pressure.

In 1822 the first Protestant work in the tribe was begun by the Baptists at Carey mission near South Bend and continued until 1830 when it was discontinued, in consequence of the inauguration of the removal policy, to be renewed shortly afterward among the immigrant Indians in Kansas. In the meantime, on formal request of the Ottawa chiefs to Congress (1823) for Jesuit missionaries, the old missions had been re-established through the efforts of Bishop Rézé of Detroit, that of St. Joseph being confided to the secular, Fr. Stephen Badin. The main pillar of this mission was the distinguished chief Pokagan, baptized by Rézé, and father of the still more noted Catholic chief and author, Simon Pokagan (1830-99), to whose memory a monument has been erected in Jackson Park, Chicago. Fr. Badin was shortly succeeded by Fr. Desseille, who remained until his death in 1837 and was succeeded by Fr. Benjamin Petit. In the meantime, by successive treaties the Potawatomi territory had been steadily curtailed in the various states originally occupied by them and band after band, much against their will, transported to new homes in Iowa and Kansas, beyond the Mississippi. Before the end of 1836 over sixteen hundred had been thus removed and others were on the road. Some eight hundred in Indiana, led by a chief who had steadily refused to sign away his lands, refused to go, and in September, 1838, were surrounded by the troops, while assembled at church, and driven out upon the long and weary foot journey to the West. On special request of the officer in charge, who dreaded an attempt to escape or resistance, Father Petit, who had already offered his services, was appointed to accompany them, which he did, traversing on foot with them the long way across Indiana, Illinois, and Missouri, until in Kansas he confided his suffering and diminished flock to the Jesuit Fr. J. Hoecken, and returned to St. Louis. A few refugees escaped to Canada and settled on Walpole Island in Lake St. Clair. Other bands were removed to the West as late as 1841, a few hundred still continuing to remain in their old country. As early as 1836 Father Hoecken had re-established work among the immigrant tribes in Kansas, and before the end of that year the mission of Saint Mary, destined to become so well known, was founded by Frs. De Smet and Verreydt, assisted by Brother Mazelli, among the still heathen and obdurate prairie Potawatomi. It was soon afterward placed in charge of Fr. Hoecken, under whom the mission

claimed twelve hundred Catholic Indians, principal among whom were the chiefs Pokagan and Bourassa, with two flourishing schools, conducted jointly by the Jesuits and the Sisters of the Sacred Heart.

The official Indian report for 1855 contains an interesting account of this mission by Fr. J. B. Duerinck, then in charge. It was then the only mission existing in the tribe, the Baptist work having been abandoned. Concerning Saint Mary's the agent in charge says (Ind. Rept. for 1855): "The missionary labors at Saint Mary's are divided into two establishments. The boys are under the charge of the 'fathers' of the institution, whilst the girls are under the kind care of the 'Ladies of the Sacred Heart'. I cannot speak in terms too highly of the condition of these establishments. Besides the ordinary literary course the girls are taught sewing, knitting, embroidery, and the various other branches of housekeeping. In connexion with the institution is a manual labor school, where the boys are taught the practical and useful departments of farming, gardening, etc. Mr. Duerinck is a man of great energy and business habits, united with a devotion to the welfare of the Potawatomi Indians, to whom he has proved a father and friend, and by whom he is highly esteemed. I have no hesitancy in expressing my conviction that this institution is of great service to these Indians. This influence is seen in the neat cottages and little fields of the 'Mission Indians' and the air of comfort and good order apparent throughout the neighborhood."

Owing to friction between the progressive element and the conservative Prairie Band, the former were segregated in 1861 and took lands in severalty under the name of "Citizen Potawatomi". In 1868 they removed to Oklahoma, where they now reside. About three hundred are rated as Catholic, with two prosperous mission schools at Sacred Heart, St. Mary's (girls) in charge of the Sisters of Mercy, and St. Benedict's (boys) in charge of the Benedictines. The rest of the tribe, for whom no religious statistics are given, is still in Kansas or east of the Mississippi. The whole tribe originally may have numbered 5000 souls. In 1855 they were officially estimated at about 4000, of whom about 3700 were in Kansas. They number now in round numbers about 3500; Oklahoma (Citizen), 1660; Kansas (Prairie), 725; Wisconsin (no agent), 440; Michigan (including "Huron" band), 450; Walpole Island, Ontario, Canada (Methodist), 225. The linguistic material of Potawatomi is meager, consisting chiefly of a few printed or manuscript vocabularies, the latter with the Bureau of American Ethnology, together with one or two small publications by the Baptist mission board, at Shawnee Mission, Kansas (about 1837). The Potawatomi were organized upon the clan system, having, according to Morgan, 15 *gentes*: Wolf, Bear, Beaver, Elk, Loon, Eagle, Sturgeon, Carp, Bald Eagle, Thunder, Rabbit, Crow, Fox, Turkey, Black Hawk. Like most of the Algonquin tribes of the central area they were semi-sedentary and semi-agricultural, but subsisted also largely by hunting and fishing, as well as by the gathering of wild rice and the preparation of maple sugar. They built communal bark-covered lodges, and buried in the ground or in hollow logs, excepting the Rabbit *gens*, which practiced cremation. They sacrificed chiefly to the sun, and each man had also his personal tutelary, which was chosen at their great "dream feast". Their ordinary dress was of buckskin, but the men frequently went almost naked excepting for the breechcloth. Their primitive weapons were the bow, tomahawk, and knife; they fought generally on foot. Polygamy was common, but the women were noted for their reserve, as were the men for their humane and refined disposition as compared with other tribes. They were also experts in the athletic game of la-

crosse. The majority of the tribe are now fairly prosperous farmers.

JAMES MOONEY.

Pothier, ROBERT JOSEPH, a celebrated French lawyer, b. at Orléans, 9 January, 1699; d. there, 2 March, 1772. His father was a judge of the petty court, a position later filled by the son (1750), who at the same time was professor of French law at the University of Orléans (1750). His life, devoted to teaching and the administration of justice, was not marked by any important events; his considerable influence was exercised in his lectures and his works. Of an austere life, modest, disinterested, and profoundly religious, he was a characteristic representative of the legal profession under the old regime. His principal work was rather an arrangement of the texts of the Roman Law: "Pandectæ Justinianæ in novum ordinem digestæ", 3 vols. (Paris, 1748-52) several times re-edited, and published under the patronage of the Chancellor d'Aguesseau, who offered him a professorship after the appearance of the first volume. Having written in collaboration with Prévost de la Jannès and Jousse, a remarkable "Introduction à la coutume d'Orléans (Orléans, 1740), he published "Les Coutumes d'Orléans" (1760). He is especially known for a series of treatises on duties, sales, constitution of rents, exchange, hiring, leases, leasing of cattle, contracts of beneficence, contracts aleatory, contracts of marriage, the community, dowry, law of habitation, tenure of the estate, possession, and title; they were published between 1761 and 1772; all collected in his "Traité sur différentes matières du droit civil" (Orléans, 1781). Other essays left in manuscript, principally on fiefs, successions, donations, civil and criminal procedure, were published between 1776 and 1778. All these works, in plain clear compilation, perfectly planned, were in the hands of the jurists who edited the new French Civil Code (Code Napoléon). As the editors took into account both the Roman and the common law, Pothier's writings were exceedingly useful for the purposes of the new codification which owed considerable to them, especially as regards questions of duties and contracts. See Thézard, "De l'influence des travaux de Pothier et du Chancelier d'Aguesseau sur le droit civil moderne" (Paris, 1866). Pothier's most interesting work, from a religious point of view, is his "Traité du contrat de mariage", in which he exposes in all their fullness the current Gallican doctrines. According to French lawyers, not only is the marriage contract distinct from the sacrament, and becomes such only through the nuptial benediction, but it is subject to the authority of princes, who can legislate on the marriages of their subjects, remove obstacles, and regulate the formalities; thus marriages of minors contracted without the consent of their parents are declared null and void. Further, marriage matters, not alone of separation or divorce, but of nullification, pertain to the secular tribunals. In this way he was a forerunner of the secularization of marriage, and the establishment of civil marriage (Esmein, "Le mariage en droit canonique" Paris, 1891, I, 33 sq.).

DUPIN, *Dissertation sur la vie et les ouvrages de Pothier* (Paris, 1825); FRÉMONT, *Vie de Rob.-Jos. Pothier* (Orléans, 1850).

A. BOUDINHON.

Pothinus, SAINT. See GAUL, CHRISTIAN.

Pouget, JEAN-FRANÇOIS-ALBERT DU, MARQUIS DE NADAILLAC, b. in 1817; d. at Rougemont, Cloyes, 1 October, 1904; the scion of an old French family, and one of the most distinguished among modern men of anthropologic science. He devoted his earlier years to public affairs, and served in 1871 and 1877 respectively as prefect of the Departments of Basses-Pyrénées and Indre-et-Loire, proving himself an able and sympathetic administrator. On completing his term of office he retired into private life and devoted himself to scientific research, chiefly in the lines of palæontology and anthropology, giving particular attention to American questions, upon which he was a leading authority. He had much to do with the exploration of the caves of southern France, being especially interested in the evidence of artistic development in the primitive occupants. He was probably the foremost authority on cave drawings. He studied deeply the relation of science to faith, and was one of the first to warn the French nation of the impending danger of race suicide. To a dignified presence he united an exquisite politeness which sprang from a kind heart. Of a spiritual temperament, he was an earnest Catholic. He died at his ancestral chateau of Rougemont, near Cloyes, Department of Eure-et-Loir, in his 87th year, and, as officially announced, "fortified by the sacraments of the Church", combining in himself the highest type of Christian gentleman and profound scientist. He was a member of learned societies in every part of the world, including several in the United States, and he held decorations from half a dozen Governments, besides being a chevalier of the Legion of Honour. He was also a correspondent of the Institute of France.

His published volumes and shorter papers cover a remarkably wide range of interest. In this country he is probably best known for his great work on Prehistoric America (in French), published in Paris in 1883, and in English at New York in 1884. Among other important papers may be noted those on "Tertiary Man" (1885); "Decline of the Birthrate in France" (1886); "The Glacial Epoch" (1886); "Manners and Monuments of Prehistoric Peoples" (Paris, 1888); "Origin and Development of Life upon the Globe" (1888); "Prehistoric Discoveries and Christian Beliefs" (1889); "Most Ancient Traces of Man in America" (1890); "The First Population of Europe" (1890); "The National Peril" (1890); "The Progress of Anthropology" (1891); "Intelligence and Instinct" (1892); "The Depopulation of France" (1892); "The Lacustrine Population of Europe" (1894); "Faith and Science" (1895); "Evolution and Dogma" (1896); "Unity of the Human Species" (1897); "Man and the Ape" (1898); "Painted or Incised Figures . . . of Prehistoric Caverns" (1904). Most of these appeared first, either in the journal of the Institute or in the *Revue des Questions Scientifiques* of Louvain and Brussels.

GAUDRY, in *L'Anthropologie*, XV, No. 5 (Paris, Sept., 1904); MCGUIRE, in *Am. Anthropologist*, N. S., VII, No. 1 (Lancaster, Jan., 1905).

JAMES MOONEY.

Pounde, THOMAS, lay brother, b. at Beaumont (or Belmont), Farlington, Hampshire, 29 May, 1538 or 1539; d. there, 26 Feb., 1612-13; eldest son of William Pounde and Helen, sister or half-sister to Thomas Wriothesley, Earl of Southampton. He is reported to have been educated at Winchester College. He was admitted to Lincoln's Inn 16 Feb., 1559-60, and his father dying in the same month, he then succeeded to Beaumont, and soon after was appointed esquire of the body to Queen Elizabeth. He acted the part of Mercury in Gascoigne's *Masque*, performed before the queen at Kenilworth in 1565. During the revelries of

Christmastide, 1569, after dancing before the queen, he received a public affront from her, which induced him to retire from the court.

Shortly afterwards he was reconciled to the Church, probably by Father Henry Alway, and after some time of seclusion at Beaumont, began an active career as proselytizer. He was in the Marshalsea for six months in 1574; in Winchester Gaol for some months in 1575-6; and in the Marshalsea again from 9 March, 1575-76, to 18 Sept., 1580, being made a Jesuit lay-brother by a letter dated 1 Dec., 1578, from the Father-General Mercurian, sent at the instance of Father Thomas Stevens, S.J., the first Englishman to go to India. From the Marshalsea Pounde was removed to Bishop's Stortford Castle, and thence to Wisbech. Then he was in the Tower of London 13 Aug., 1581, to 7 Dec., 1585. He was in the White Lion, Southwark, from 1 Sept., 1586, till he was sent back to Wisbech in 1587, where he remained nearly ten years. He was again in the Tower of London from Feb., 1596-7, to the autumn of 1598, when he was again committed to Wisbech. From Wisbech he was relegated to the Wood Street Counter, where he remained for six weeks from 19 Dec., 1598. After that he was in the Tower again until 7 July, 1601. He was then in Framlingham Castle for a year. In 1602 he was in Newgate, and in the following year he was indicted at York. Afterwards he was in the Gatehouse, Westminster, for some time, then in the Tower (for the fourth time) for four months, and lastly in the Fleet for three months. He was finally liberated late in 1604 or early in 1605, having spent nearly thirty years in prison. These facts are but the dry bones of the career of an heroic man, whose real biography has yet to be written. The "life" by Father Matthias Tanner, S.J., is full of inaccuracies.

JOHN B. WAINEWRIGHT.

Poussin, NICOLAS, French painter, b. at Les Andelys near Rouen in 1594; d. at Rome, 19 November, 1666. His early history is obscure; his father had been a soldier, his mother was a peasant. In 1612, Varin, a wandering painter, brought him to Paris, where he experienced great distress. In despair he tried his fortune in the provinces but nothing remains of what he did at that time in Poitou and later with the Capuchins at Blois, as well as the six pictures he painted in eight days for the Jesuit college at Paris. He studied under Varin, Lallemand, and Ferdinand Elle, but they had no share in his development. The French school was then in a languid condition. The religious wars of the time rendered abortive the attempt of Francis I to inaugurate the Renaissance, and Henry IV had other things to engross his attention besides the arts. His successor sought rather such foreign artists as John of Bologna, Pourbus, and Rubens. At this juncture Poussin learned of some engravings by Marc Antonio after Giulio Romano and Raphael. This was his road to Damascus. Antique beauty was revealed to him through the works of these sons of Italy and thenceforth he lived in the past. All modern civilization seemed barbarous to him. His experience was an illumination, a veritable conversion. Henceforth he had no rest until he found the fatherland of his heart and his ideas. Three attempts he made to reach Rome. Compelled to return to Paris he there encountered Marini, the famous author of the "Adonis", who contracted a warm friendship for the enthusiastic boy: "Che ha", said he, "una furia di diavolo". With him he finally reached Rome in 1624; but Marini died within a few months and Poussin was alone in a strange city, help-

less, ill, without means, and reduced to doing hack work. The poor artist then met a countryman, the cook Dughet, who took pity on him, sheltered and cured him, and whose daughter he married (1629).

At the time of his arrival at Rome the school was divided into two parties, that of the mannerists who followed Guido, and that of the brutal naturalists who followed Caravaggio, both in Poussin's opinion quackery, equally dishonest and remote from reality. He detested the affected airs of the fashionable painters, their sentimentality, their insipidity, their ecstasy. Nor was he less hard on the affectation of the "naturalists and their partiality for ugliness and vulgarity". He called Caravaggio's art "painting for lackeys", and added: "This man is come to destroy painting". Both schools sought to execute more beautifully or more basely than nature; Art was endangered for lack of rule, conscience, and discipline. It was time to escape from caprice and anarchy, from the despotism of tastes and temperaments. And this was what Poussin sought to achieve by his doctrine of "imitation". To imitate the antique was to approach nature, to learn conformity with reality, to recover life in its most lasting, noble, and human forms. Such at least was the doctrine and faith which he practised unceasingly in his works and letters. For this he became an archæologist, a numismatist, a scholar. He used scientific

methods, measuring statues, consulting bas-reliefs, studying painted vases, sarcophagi, and mosaics. Every point was based on an authentic document. In this he was doubtless influenced by a certain narrowness and misunderstanding of the claims of realism. To a certain extent his art is for the initiated, the taste for it requires culture. More, this pure ideal implies a singular anachronism. Poussin presents the strange case of a man isolated in the past and who never descended in history lower than the Antonines. By his turn of mind this man of austere virtue was scarcely Christian. He rarely painted scenes from the Gospel. His Christ is certainly one of his weakest types. Let me dare to say it: as an artist Poussin thinks somewhat like a Leconte de Lisle or like the Renan of the "Prière sur l'Acropole". Poussin had no desire to see the modern world. He left but a single portrait, his own. He is wholly expressed in Bernini's words: "Veramente quest' uomo è stato grande istoriatore e grande favoleggiatore". He was a great historian, a great teller of fables, an epic poet, in a word the foremost of his time and one of the foremost of all time.

His works are very numerous. The first group contains subjects borrowed from sacred and profane

antiquity. Among these to mention only dated works are: "The Rape of the Sabines", and "The Plague of the Philistines" (1630, Louvre); "The Testament of Eudamidas" (Copenhagen); "Hebrews Gathering Manna" (1639); "Moses Rescued from the Waters" (1647); "Eliezer and Rebecca" (1648); "The Judgment of Solomon" (1649); "The Blind Men of Jericho" (1650); "The Adulteress" (1653); all these last-named pictures are at the Louvre. To these must be added the important double series of pictures known as the "Seven Sacraments". The first, painted (1644-8) for Cavaliere del Pozzo, is now at the Bridge-water Gallery, London. The second is a very different variation of the former and was painted for M. de Chantelou, his correspondent and active protector. It is now in the collection of the Duke of Rutland at Belvoir Castle. This historical portion of his work seems to have been most in favour with his contemporaries. It immediately became classic and it is certainly filled with the highest beauty. Despite their high and strong qualities, however, these works no longer attract us, for we often find therein an intellectual affront, a some-

thing too literary or too rationalistic which seems to us foreign to the genius of painting. But that this was relished by the French of the seventeenth century is shown by their commentaries on these works. The description of the two pictures, "Eliezer" and the

"Manna", fills forty quarto pages in Félibien. Apart from these historical scenes which "relate" and "prove" there is a purely lyric side. In it are evident the wonderful skill of the designer and the poet, detached from any attempt at anecdote or "illustration". Such were the "Bacchanalia", the "Triumph of Flora", the "Childhood of Jupiter", which do little more than repeat the theme of the joy and beauty of living. Here Poussin's genius freed of all re-

straint can only be compared to that of great musicians such as Rameau or Gluck. Properly speaking it is the genius of rhythm. This is his true sphere, as original as that of any master, and the inexhaustible source of his emotion and poetry. In a sense his work may be considered as a ballet. This was his idea in his famous letter on the modes of the ancients, who distinguished as many as seven, the Dorian, Phrygian, Lydian, Hypolydian etc. "I desire", he added, "before another year to compose a picture in the Phrygian manner". This phrase would have aroused less amusement if Whistler's works, with his "symphonies", "harmonies", "nocturns", and "sonatas", had been known. But this music of painting which Whistler made chiefly a matter of colour seemed to Poussin a question of

movement. For him it meant life understood as a dance which the Greeks made a science.

Finally the landscape becomes more and more important in this lyrical or poetical side of his work. Nature accompanies with its profound harmony the human sentiments which transpire on its surface, the persons are merely a melodious figure outlined against the chorus of things. As a landscape artist he is without a peer, unless it be Titian. Constable finds something religious in his landscapes; in fact when contemplating his "Polyphemus" or his "Cacus" (St. Petersburg), it is easy to understand (what no one since Virgil has felt) the naturalistic and mysterious origin of myths. Beyond doubt this is something far removed from the pious Franciscan tenderness as it finds expression in the "Canticle of creatures"; it is rather the religion of Epicurus or Lucretius, which teaches conformity with the ends of the universe and as supreme wisdom counsels harmony with the rhythm of nature. Towards the end of his life Poussin seems to have renounced the personal or dramatic element. His last works, the "Four Seasons" of the Louvre (1664-65), are simply four landscapes which please by variety of sense. Like the ancient sage the master leaves history and psychology, and devotes himself simply to music. Between 1624 and his death he was absent from Rome only once (1641-2) at the command of Richelieu, who summoned him to Paris to superintend the work at the Louvre with the title of painter to the king. This journey was otherwise unfortunate. The artist was misunderstood by the painters, who soon succeeded in driving him away. All that remains of this period are two large pictures, a "Last Supper", very mediocre, painted for St. Germain en Laye, a "Miracle of St. Francis Xavier", painted for the Jesuit novitiate, and a ceiling, the "Triumph of Truth", painted for Richelieu's chateau at Rueil. These three canvases are at the Louvre. On his return to Rome Poussin found his authority much increased by his official title. He lived not far from the Trinità de' Monti in a little side street where he had as neighbours Claude Lorrain and Salvator. Among artists he exercised a singular influence. Nearly all the Frenchmen who came to Rome to study, from Mignard to Le Brun and Sebastien Bourdon, not to mention his brother-in-law Gaspard Dughet (called "Guaspre"), imitated him and claimed him as master; but as usual none of them understood him. In his century he was an isolated genius, but his glory has not been useless to us; it shone more brilliantly in the decadence of the Italian school and it gave to the French school what it had hitherto lacked—titles and an ancestor.

LOUIS GILLET.

Poverty. I. THE MORAL DOCTRINE OF POVERTY.

—Jesus Christ did not condemn the possession of worldly goods, or even of great wealth; for He himself had rich friends. Patristic tradition condemns the opponents of private property; the texts on which such persons rely, when taken in connexion with their context and the historical circumstances, are capable of a natural explanation which does not at all support their contention (cf. Vermeersch, "Quæst. de justitia", n. 210). Nevertheless it is true that Christ constantly pointed out the danger of riches, which,

He says, are the thorns that choke up the good seed of the word (Matt., xiii, 22). Because of His poverty as well as of His constant journeying, necessitated by persecution, He could say: "The foxes have holes, and the birds of the air nests: but the son of man hath not where to lay his head" (Matt., viii, 20), and to the young man who came to ask Him what he should do that he might have life everlasting, He gave the counsel, "If thou wilt be perfect, go sell what thou hast, and give to the poor" (Matt., xix, 16-21). The renunciation of worldly possessions has long been a part of the practice of Christian asceticism; the Christian community of Jerusalem in their first fervour sold their goods "and divided them to all, according as every one had need" (Acts, ii, 45), and those who embraced the state of perfection understood from the first that they must choose poverty.

Does this mean that poverty is the object of a special virtue? Gury (Theolog. moralis II, n. 155) answers the question in the affirmative, and many religious writers favour the same opinion, which is supported by the ordinary conventual and ascetic literature; what is prescribed by the vow of poverty is compared therein with the virtue of poverty, just as we compare the vows of obedience and chastity with the corresponding virtues. But this is erroneous; for the object of a virtue must be something honourable or praiseworthy in itself: now poverty has no intrinsic goodness, but is good only because it is useful to remove the obstacles which stand in the way of the pursuit of spiritual perfection (St. Thomas, "Contra Gentiles", III, cxxxiii; Suarez, "De religione", tr. VII, l. VIII, c. ii, n. 6; Bucceroni, "Inst. theol. mor.", II, 75, n. 31). The practice of poverty derives its merit from the virtuous motive ennobling it, and from the virtues which we exercise in regard to the privations and sacrifices accompanying it. As every vow has for its object the worship of God, poverty practised under a vow has the merit of the virtue of religion, and its public profession, as enjoined by the Church, forms a part of the ritual of the Catholic religion.

The ancients understood the nobility of making themselves independent of the fleeting things of earth, and certain Greek philosophers lived in voluntary penury; but they prided themselves on being superior to the vulgar crowd. There is no virtue in such poverty as this, and when Diogenes trampled Plato's carpet, saying as he did so: "Thus do I trample on Plato's pride", "Yes", answered Plato, "but only through your own pride." Buddhism also teaches the contempt of riches; in China the tenth precept of the novices forbids them to touch gold or silver, and the second precept of female novices forbids them to possess anything of their own; but their ignorance of a personal God prevents the Buddhist monks from having any higher motive for their renunciation than the natural advantage of restraining their desires (cf. Wiegner, "Bouddhisme chinois", pp. 153, 155, 183, 185). If voluntary poverty is ennobled by the motive which inspires it, the poverty which puts aside temporal possessions for the service of God and the salvation of souls is the most noble of all. It is the apostolic poverty of the Christian religion, which is practised in the highest degree by missionaries in pagan countries, and to a certain degree by all priests: all these voluntarily give up certain possessions and advantages in order to devote themselves entirely to the service of God.

Voluntary poverty is the object of one of the evangelical counsels. The question then arises, what poverty is required by the practice of this counsel or, in other words, what poverty suffices for the state of perfection? The renunciation which is essential and strictly required is the abandonment of all that is superfluous, not that it is absolutely necessary to give up the ownership of all property, but a man must be contented with what is necessary for his own use. Then

only is there a real detachment which sufficiently mortifies the love of riches, cuts off luxury and vain glory, and frees from the care for worldly goods. Cupidity, vain glory, and excessive solicitude are, according to St. Thomas, the three obstacles which riches put in the way of acquiring perfection (Summa, II-II, Q. clxxxviii, a. 7). This abandonment of superfluities was the only way in which voluntary poverty could be understood before the introduction of the common life. The state of perfection, understood in its proper sense, requires also that the renunciation should be of a permanent character; and in practice this stability follows as the result of a perpetual vow of poverty. The warnings and counsels of Jesus Christ are valuable even to those who are not vowed to a state of perfection. They teach men to moderate their desire for riches, and accept cheerfully the loss or deprivation of them; and they inculcate that detachment from the things of this world which our Lord taught when He said, "Every one of you that doth not renounce all that he possesseth, cannot be my disciple" (Luke, xiv, 33).

II. THE CANONICAL DISCIPLINE OF POVERTY.—Among the followers of perfection, the spirit of poverty was manifested from the first by giving up temporal possessions; and among those living in community, the use of goods as private property was strictly forbidden, being contrary to that common life which the patriarchs of monasticism, St. Pachomius and his disciple Schénoudi, St. Basil, and St. Benedict, imposed upon their followers. But there was at that time no express vow of poverty, and no legal disability; the monastic profession required nothing but the rigorous avoidance of all that was unnecessary (cf. De Buck, "De sollemnitate votorum, præcipue pauperatis religiosæ epistola", x). Justinian ordained that the goods of religious should belong to the monastery (Novel. 5, iv sqq.; 123, xxxviii and xlii). This law gradually came into force, and in time created a disability to acquire property, although in the twelfth century, and even later, there were religious in possession of property. The rule of French law, under which a religious was considered as civilly dead, contributed to establish a necessary connexion between the vow of poverty and the idea of disability.

The express vow of renunciation of all private property was introduced into the profession of the Friars Minor in 1260. About the same time another change took place; hitherto no limit had been placed on the common possessions of religious, but the mendicant orders in the thirteenth century forbade the possession, even in common, of all immovable property distinct from the convent, and of all revenues; and the Friars Minor of the strict observance, desiring to go one step further, assigned to the Holy See the ownership of all their property, even the most indispensable. Following the example of St. Francis and St. Dominic, many founders established their orders on a basis of common poverty, and the Church saw a large increase in the number of the mendicant orders until the foundation of the clerks regular in the sixteenth century; even then, many orders united common poverty with the regular clerical life: such were the Theatines (1524), whose rule was to live on alms and contributions spontaneously given; and the Society of Jesus (1540). It soon became evident that this profession of poverty which had so greatly edified the thirteenth century was exposed to grave abuses, that a certain state of destitution created more cares than it removed, and was not conducive either to intellectual activity or to strict observance; and that mendicity might become an occasion of scandal. Consequently the Council of Trent (Sess. XXV, c. iii, de reg.) permitted all monasteries, except those of the Friars Minor Observantines and the Capuchins, to possess immovable property, and consequently the income derived therefrom; but the Carmelites and the Society of Jesus, in

its professed houses, continue to practise the common poverty which forbids the possession of assured incomes.

Congregations with simple vows were not bound by the canonical law forbidding the private possession or acquisition of property by members of approved orders: the disability of private possession was thus considered as an effect of the solemn vow of poverty; but this bond between the incapacity to possess and the solemn vow is neither essential nor indissoluble. So far as the effect of the vow on private possession is concerned, the vow of poverty taken by the formed coadjutors of the Society of Jesus has the same effect as the solemn vow of the professed fathers. St. Ignatius instituted in his order a simple profession preparatory to the final one with an interval between them during which the religious retains his capacity to possess property. A similar rule has been extended to all orders of men by Pius IX and to orders of women by Leo XIII (see PROFESSION, RELIGIOUS). On the other hand, since the Rescript of the Penitentiary of 1 Dec., 1820, confirmed by the declaration to the bishops of Belgium dated 31 July, 1878, the solemn profession of religious in Belgium (and Holland appears to enjoy the same privilege) does not prevent them from acquiring property, or keeping and administering it, or disposing of it: they are bound, however, in the exercise of their rights, to observe the submission they owe to their legitimate superiors.

The Vow of Poverty in General.—The vow of poverty may generally be defined as the promise made to God of a certain constant renunciation of temporal goods, in order to follow Christ. The object of the vow of poverty is anything visible, material, appreciable at a money value. Reputation, personal services, and the application of the mass, do not fall under this vow; relics are included only on account of the reliquary which contains them, and (at least in practice) manuscripts, as such, remain the property of the religious. The vow of poverty entirely forbids the independent use, and sometimes the acquisition or possession of such property as falls within its scope. A person who has made this vow gives up the right to acquire, possess, use, or dispose of property except in accordance with the will of his superior. Nevertheless certain acts of abdication are sometimes left to the discretion of the religious himself, such as the arrangements for the administration and application of income which professed religious under simple vows are required to make; and the drawing up of a will, by which the religious makes a disposition of his property to take effect after his death, may be permitted without any restriction. This license with regard to wills is of great antiquity. The simple fact of refusing to accept, for example, a personal legacy, may be contrary to charity, but cannot be an offence against the vow of poverty. The vow of poverty does not debar a religious from administering an ecclesiastical benefice which is conferred upon him, accepting sums of money to distribute for pious works, or assuming the administration of property for the benefit of another person (when this is consistent with his religious state), nor does it in any way forbid the fulfilment of obligations of justice, whether they are the result of a voluntary promise—for the religious may properly engage to offer a Mass or render any personal service—or arise from a fault, since he is bound in justice to repair any wrong done to the reputation of another person.

Submission to a superior (as we call the person whose permission, by the terms of the vow, is required for all acts disposing of temporal goods) does not necessarily call for an express or formal permission. A tacit permission, which may be inferred from some act or attitude and the expression of some other wish, or even a reasonable presumption of permission, will be sufficient. There is no violation of the vow, when

the religious can say to himself, "the superior, who is acquainted with the facts, will approve of my acting in this way without being informed of my intention". The case is more difficult, when he knows that the superior would expect to be informed, and asked for permission, even though he would willingly have given his consent: if it seems probable that he regards the request for permission as a condition of his approval, the inferior offends against the vow of poverty, if he acts without asking leave; but there is no offence if he knows that the superior and himself are agreed as to the essential nature of the act; and the question whether the presumption is reasonable or otherwise may depend on the customs of different orders, the importance of the object, the frequent necessity of the act, the age and prudence of the inferior, his relations with his superior, the facility of obtaining access to him, and other similar considerations. Any admission of luxury or superfluity in daily life is derogatory to the religious state and the first conception of voluntary poverty; but it is not clear that this want of strictness is necessarily contrary to the vow. To decide this, regard must be had to the manner in which each particular vow, with all its circumstances, is generally understood.

A sin against the vow of poverty is necessarily an offence against the virtue of religion, and when committed in connexion with religious profession it is even a sacrilege. It may be a grave or a slight offence. The question, what matter is grave, causes great difficulty to moral theologians; and while some regard the appropriation of one franc as a grave matter, others are more lenient. Most theologians are inclined to compare the sin against the vow of poverty with the sin of theft, and say that the same amount which would make theft a mortal sin would, if appropriated contrary to the vow, constitute a grave offence against poverty. With the exception of Palmieri (*Opus morale*, tr. IX, c. i, n. 123) and Génicot (*Theol. mor.*, II, n. 98) moralists admit that as in the case of sins against justice, so here circumstances may be considered. While many persons consider the importance and the wealth or poverty of the community in which the offence is committed, we are of opinion that it is rather the extent of the vow that should be considered, since the act does not violate the vow by reason of the harm it causes, but by its being a forbidden appropriation. If the fault is aggravated by injustice it must, as an unjust act, be judged according to the usual rules; but when considered as an offence against the vow, its gravity will be measured by the condition of the person who commits it. Thus a sum which would be very large for a beggar will be insignificant for a man who had belonged to a higher class. The social position should be considered; is it that of the poor or mendicant class? One cannot without grave fault dispose independently of a sum which without grave fault one could not take away from a beggar. For many existing congregations, the matter will be that of a mortal sin of theft committed to the detriment of a priest of honourable condition. It follows that in the case of incomplete appropriation, we must consider the economical value of the act in question; whether, for example, it is an act of simple use of administration; and when the religious does nothing but give away honourably goods of which he retains the ownership, the amount must be very large before the reasonable disposal of it can be regarded as a grave sin for want of the required authorization. If the sin consists, not in an independent appropriation, but in a life of too great luxury, it will be necessary to measure the gravity of the fault by the opposition which exists between luxury and the poverty which is promised by vow.

Variety in the Vows of Poverty.—The vow of poverty is ordinarily attached to a religious profession; a person may however bind himself to a modest and

frugal life, or even to follow the direction of an adviser in the use of his property. The vow may be perpetual or temporary. It may exclude private possession, or even to a certain point possession in common. It may entail legal disability or be simply prohibitive. It may extend to all goods possessed at present, or expected in the future; or it may be limited to certain classes of property; it may require the complete renunciation of rights, or simply forbid the application to personal profit, or even the independent use of the property. According to the present discipline of the Church, the vow of poverty taken by religious always involves a certain renunciation of rights: thus the religious is understood to give up to his order for ever the fruit of his work or personal industry, stipends of Masses, salary as professor, profits of any publication or invention, or savings from money allowed him for personal expenses. The independent disposal of any of these would be contrary not only to the vow, but also to justice. We have, moreover, to distinguish in the religious life between the solemn vow of poverty and the simple vow. The latter may be a step towards the solemn vow, or it may have a final character of its own.

The Solemn Vow of Poverty.—The solemn vow by common law has the following special characteristics: it extends to all property and rights; it renders one incapable of possessing property, and therefore of transferring it; it makes all gifts or legacies which a religious receives, as well as the fruits of his own work, the property of the monastery; and in case property is inherited, the monastery succeeds in place of the professed religious, in accordance with the maxim: *Quicquid monachus acquirit monasterio acquirit*. Some orders are incapable of inheriting on such occasions, e. g., the Friars Minor Observantines, the Capuchins, and the Society of Jesus. The inheritance then passes to those who would succeed under the civil law in default of the professed religious. Sometimes before solemn vows are made by a religious, his monastery gives up its right of inheritance by arrangement with the family, and sometimes the religious is allowed to dispose of his share in anticipation. (As to these arrangements and their effect, see Vermeersch, "*De relig. instit. et pers.*", II, 4th ed., supp. VI, 70 sqq.) As long as monasteries were independent, the monastery which inherited in place of the professed monk was the house to which he was bound by his vow of stability; but in more recent orders, the religious often changes his house, and sometimes his province, and has therefore no vow of stability, except as to the entire order; in such cases, the monastery according to the common usage is the whole order, unless some arrangement is made for partition among provinces or houses. (See Sanchez, "*In decalogum*", VII, xxxii sqq.; De Lugo, "*De iustitia et iure*", d. iii, nn. 226 sqq.) We have already said that the religious of Belgium preserve their capacity to acquire property and dispose of it: their acts therefore are valid, but they will only be licit if done with the approval of their superior. It will be the duty of the latter to see that the rigour of observance and especially the common life do not suffer by this concession, which is, indeed, in other respects most important for their own civil security.

The Simple Vow of Religious Poverty.—The simple vow of poverty has these common characteristics: it leaves the capacity to acquire intact, and permits the religious to retain certain rights of ownership. In exceptional cases the simple vow may involve incapacity, as is characteristic of the last simple vows of the Society of Jesus. We have now to distinguish between the simple vow which is preparatory to the solemn vow, and the final simple vow.

(a) The simple vow in preparation for the solemn vow.—The Decree "*Sanctissimus*" of 12 June, 1858, with the subsequent declarations, constitutes the

common law on the subject of this simple vow. (See Vermeersch, "De religiosis institutis etc.", II, 4th ed., nn. 61 sqq., pp. 178 sqq.) This vow permits the religious to retain the ownership of property possessed at the time of his entrance into religion, to acquire property by inheritance, and to receive gifts and personal legacies. The administration and usufruct and the use of this property must before the taking of the vow pass either to the order (if it is able and willing to approve of the arrangement), or into other hands, at the choice of the religious. Such an arrangement is irrevocable as long as the religious remains under the conditions of the vow, and ceases should he leave the order; he seems authorized also to make or complete the resignation which he may have omitted to make or complete previously. Except so far as he is affected by the decree of the Council of Trent, which forbids novices to make any renunciation which would interfere with their liberty to leave their order, the religious who is bound by this simple vow may, with the permission of his superior, dispose of his property by a donation *inter vivos*, and apparently has full liberty to make a will. But the Decree "Perpensis" of 3 May, 1902, which extends to nuns the simple profession of orders of men, without mentioning a will, declares simply that women are not permitted to make final disposition of their property except during the two months immediately preceding their solemn profession.

(b) The final simple vow.—With the exception of the Society of Jesus, in which the simple vow of formed coadjutors entails the same personal obligations and the same disability as the solemn vow, the final simple vow is known only in religious congregations, and the practice differs in different congregations (cf. Lucidi, "De visitatione SS. liminum", II, v, sec. 8, nn. 319 sqq.), and very often resembles that of the vow preparatory to the solemn vow; but according to the Regulations (*Normæ*) of 23 June, 1901, the transfer of property by donations *inter vivos* cannot be licitly made before the perpetual vows; after these vows, the complete renunciation requires the permission of the Holy See, which reserves to itself also the right to authorize the execution or modification of a will after profession. Any arrangements made before profession for the administration of property and the application of the revenues may be subsequently modified with the consent of the superior. In diocesan institutes, there is no question of the capacity of the religious; but the bishops generally reserve to themselves the right of approving the more important acts of administration.

The Peculium.—Certain goods, for example sums of money, independent of the common stock, and made over to the religious to be used without restriction for their private wants, form what is called the *peculium*. Only that which is irrevocably put out of the power of the superior is contrary to the vow of poverty; but all *peculium* is an injury to that common life, which since the earliest times was considered so important by the founders of religious communities. The Holy See constantly uses its efforts to abolish it, and to establish that perfect common life which provides that there shall be in the convent one common treasury for the personal needs of all.

Possession in Common.—The vow of poverty does not necessarily or as a general rule exclude the capacity to possess in common, that is to say, to have a common stock of property at the common disposal of the possessors, provided that they do not dispose of it in any manner contrary to the accepted rules and customs. It is a great mistake to argue from the vow of poverty that it is just to deny to religious this real common possession.

A. VERMEERSCH.

Poverty and Pauperism.—In a legal and technical sense, *pauperism* denotes the condition of persons who are supported at public expense, whether within or outside of almshouses. More commonly the term is applied to all persons whose existence is dependent for any considerable period upon charitable assistance, whether this assistance be public or private. Not infrequently it denotes an extreme degree of poverty among a large group of persons. Thus, we speak of the pauperism of the most abject classes in the large cities. *Poverty* is even less definite, and more relative. In Catholic doctrinal and ascetical treatises and usage, it indicates merely renunciation of the right of private property; as in speaking of the vow of poverty, or the poverty of the poor in spirit recommended in the Sermon on the Mount. Apart from this restricted and technical signification, *poverty* means in general a condition of insufficient subsistence, but different persons have different conceptions of sufficiency. At one extreme poverty includes paupers, while its upper limit, at least in common language, varies with the plane of living which is assumed to be normal. As used by economists and social students, it denotes a lack of some of the requisites of physical efficiency; that is, normal health and working capacity. Like pauperism, it implies a more or less prolonged condition; for to be without sufficient food or clothing for a few days is not necessarily to be in poverty. Unlike pauperism, poverty does not always suppose the receipt of charitable assistance. As the definition just given sets up a purely material and utilitarian standard, namely, productive efficiency, we shall in this article substitute one that is more consonant with human dignity, yet which is substantially equivalent in content to the economic conception.—*Poverty*, then, denotes that more or less prolonged condition in which a person is without some of those goods essential to normal health and strength, an elementary degree of comfort, and right moral life.

One question which at once suggests itself is: whether the amount of poverty and pauperism existing to-day is greater or less than that of former times. No general answer can be given that will not be misleading. Even the partial and particular estimates that are sometimes made are neither certain nor illuminating. Economic historians like Rogers and Gibbins declare that during the best period of the Middle Ages—say, from the thirteenth to the fifteenth century, inclusive—there was no such grinding and hopeless poverty, no such chronic semi-starvation in any class, as exists to-day among large classes in the great cities (cf. "Six Centuries of Work and Wages", and "Industry in England"). Probably this is true as regards the poorest of the poor at these two periods. In the Middle Ages there was no class resembling our proletariat, which has no security, no definite place, no certain claim upon any organization or institution in the socio-economic organism. Whether the whole number of persons in poverty in the earlier period was relatively larger or smaller

than at present, we have no means of knowing. The proportion of medieval persons who lacked what are to-day regarded as requisites of elementary comfort was probably larger, while the proportion that had to go without adequate food and clothing for long periods of time was not improbably smaller. One of the great causes of poverty—namely, insecurity of employment, of residence, and of shelter—was certainly much less frequent in the older time. If we compare the poverty of to-day with that of one century ago, we find all authorities agreeing that it has decreased both absolutely and relatively. Against this general fact, however, we must note one or two circumstances that are less gratifying. Both the intensity and the extent of the lowest grade of poverty are probably quite as great now as they were at the beginning of the nineteenth century; and there are some indications that the improvement occurring during the last twenty-five years has been less than in the preceding half-century.

Owing to lack of statistical data, it is impossible to estimate, even approximately, the proportion of the people of any country that is in poverty. On the basis of unemployment statistics, eviction statistics, cases of charity relief, and other evidences of distress, Robert Hunter declared that the number of persons in poverty in the United States in 1904 was ten millions; that is, they were "much of the time underfed, poorly clothed, and improperly housed" ("The New Encyclopedia of Social Reform", 940; cf. also his work on Poverty). Ten millions represented at that time about one-eighth of our total population. Professor Bushnell estimated the number of persons known to be in receipt of public or private relief at three millions (Modern Methods of Charity, 385-90). Of course the total number of persons who received charitable aid was much larger, for a large proportion of such cases do not come to the knowledge of statisticians or social students. On the other hand, not all who are charitably assisted are paupers, nor strictly speaking in poverty. Mr. Hunter's estimate is perhaps too high. After a very careful and thorough investigation of the poor in London, completed in 1902, Charles Booth found that nearly thirty-one per cent of the people of that city were in poverty (cf. "Life and Labor of the People in London"). This estimate was fully and remarkably confirmed by the studies of Seebohm Rowntree in the City of York, where the proportion of the inhabitants in poverty appeared as twenty-eight per cent (cf. "Poverty: a Study of Town Life"). There are good reasons for thinking that both these estimates are under-statements, if poverty be understood according to the definition adopted in this article. For example, Rowntree placed above the poverty line all persons who were in a condition of present physical efficiency, even though many of them were unable to make any outlay for carfare, amusement, recreation, newspapers, religion, societies, or insurance against old age. Evidently, physical efficiency in such circumstances can be maintained only for a few years. At any rate, this condition is not elementary comfort nor decent existence. Since wages and their purchasing power are quite high in England as in any other country of Europe, the proportion of poverty is probably as great in the latter as in the former.

The causes of poverty are very numerous and very difficult to classify satisfactorily. While the division of them into social and individual causes is useful and suggestive it is not strictly logical; for each of these is often to some extent responsible for the other. Where both causes affect the same person, it is frequently impossible to say which is the more important. A better classification is that of immediate and original causes; but it is not always possible to determine which is the true original cause, nor how many

of the intermediate causes have operated as mere instruments, and contributed no special influence of their own. As a rule, each case of poverty is due to more than one distinct factor, and it is not possible to measure the precise contribution of each factor to the general result. In any particular situation, the most satisfactory method is to enumerate all the chief causes and to state which seems to be the most potent. Professor Warner applied this method to more than 110,000 cases which had been investigated in London, in five American cities, and in seventy-six German cities ("American Charities", 1st ed., 22-58). He found the principal cause to be: in 21.3 per cent of the whole number of instances, misconduct, such as drink, immorality, inefficiency, and a roving disposition; in 74.4 per cent, misfortune, under which head he included such factors as lack of normal support, matters of employment, and individual incapacity as distinguished from individual fault. Misfortune was, therefore, the predominant cause in three and one-half times as many cases as misconduct. Among the particular chief factors drink was credited with 11 per cent, lack of employment with 17.4, no male support with 8, sickness or death in family with 23.6, old age with 9.6, insufficiency of employment with 6.7, poorly paid employment with 4.4, and inefficiency and shiftlessness with 8.26. In a general way these figures support the contention of Dr. E. T. Devine, that poverty "is economic, the result of maladjustment, that defective personality is only a halfway explanation, which itself results directly from conditions which society may largely control" (Misery and its Causes, 11).

It must be noted, however, that Professor Warner aims to state the immediate causes only. In a large proportion of cases these are the result of some other cause or causes. Thus, disease, accident, or unemployment might be due to immorality or intemperance in the more or less distant past; and what is now classified as culpable inefficiency or shiftlessness might be ultimately traceable to prolonged unemployment. The important lesson conveyed by this and every other attempt to estimate the comparative influence of the various causes of poverty is that we must never regard our estimates as more than very rough approximations. Certain factors are known to be very important everywhere. They are: intemperance, sexual immorality, crime, improvidence, inefficiency, heredity and associations, insufficient wages and employment, congenital defects, injurious occupations, sickness, accident, and old age. Every one of these is not only capable of producing poverty on its own account, but of inducing or supplementing one of the other causes. Intemperance leads to sickness, accident, inefficiency, immorality, and unemployment; on the other hand, it often appears as the effect of these. Almost all of the other factors may properly be regarded in the same light, as causes and as effects reciprocally.

Among the principal effects of poverty are physical suffering, through want of sufficient sustenance, through sickness, and other forms of disability; moral degeneration and immorality in many forms; intellectual defects and inefficiency; social injury through diminished productive efficiency, and unnecessary expenditures for poor relief; finally, more poverty through the vicious circle of many of the effects just enumerated. For example, intemperance, improvidence, sickness, and inefficiency are at once effects and causes. In a word, the effects of poverty are sufficiently numerous and sufficiently destructive to elicit the fervent wish that this condition might be totally abolished.

The relief of poverty, especially under the direction of the Church, has been discussed at length in the article CHARITY AND CHARITIES. Here we merely note the fact that the poor are now assisted by the

public authorities, by churches, by religious and secular associations, and by private individuals. All these methods are subject to abuses, but all are necessary. In many countries old-age pensions and insurance, housing activities, and insurance against sickness and other forms of disability, prevent a considerable amount of poverty, and thus relieve it in the most effective fashion. At present poor-relief is to a much greater extent carried on by the State, and to a much less extent by the Church, than in the period before the Protestant Reformation. The remedies and preventives of poverty are as numerous and various as the causes. Persons who attribute it almost wholly to social influences propose social correctives, such as legislation, and frequently some simple form of social reconstructing—for example, the single tax or Socialism. Persons who believe that the individual is almost always responsible for his poverty or for the poverty of his natural dependents reject social remedies and insist upon the supreme and sufficient worth of reformation of character through education and religion. In times past the latter attitude was much more common than to-day, when the tendency is strongly and quite generally toward the social viewpoint. Both are exaggerations, and lead, therefore, to the use of one-sided and inefficient methods of dealing with poverty. While a large proportion of the individual causes of poverty are ultimately traceable to social causes, to congenital defects, or to pure misfortune, many of them nevertheless exert an original and independent influence. This is clearly seen in the case of two persons who have had precisely the same opportunities, environment, and natural endowments, only one of whom is in poverty. For such cases individual remedies are obviously indispensable. On the other hand, it is only the crassly ignorant who can honestly think that all poverty is due to individual defects, whether culpable or not. Individual remedies, such as regeneration of character, cannot lift out of poverty the wage-earner who is without employment. Individual and social causes originate, produce respectively their own specific influences, and can be effectively counteracted only by measures that affect them directly.

Of the individual causes that must be prevented in whole or in part by individual regeneration, the principal are intemperance, immorality, indolence, and improvidence. All these would be responsible for many cases of poverty even if the environment and the social arrangements were ideal. Each of them is, indeed, frequently affected by social forces, and consequently is preventible to some extent by social remedies. Thus, intemperance can be diminished by a better regulation of the liquor traffic, and by every measure that makes better provision for food, clothing, housing, security, and opportunity among the poor. Immorality can be lessened by more stringent and effective methods of detection and punishment. Indolence can be discouraged and to some extent prevented by compulsory labour colonies, as well as by penalties inflicted upon persons who refuse to provide for their natural dependents. Improvidence can be greatly lessened by laws providing larger economic opportunities, insurance against disability, and better methods of saving. Yet, in every one of these cases, the remedy which aims at improvement of character will be beneficial; and in many cases it will be indispensable. The chief causes of poverty to be removed by social methods are: unemployment, low wages, sickness, accident, old age, improper woman labour and child labour, unsanitary and debilitating conditions of employment, refusal of head of family to provide for support of family, and industrial inefficiency. The necessary social remedies must be applied by individuals, by voluntary associations and by the State; and the

greater part of them will fall under the general head of larger economic opportunity. If this were attained to a reasonable degree, persons who are at or below the poverty line would enjoy adequate incomes and better conditions of employment generally, and thus would be enabled to protect themselves against most of the other causes of poverty which have just been enumerated. In great part, this larger economic opportunity will have to come through legislation directed towards a better organization of production and distribution, and towards an efficient system of industrial education. Legal provision must also be made for insurance against sickness, accident, unemployment, and old age, and for the coercion and punishment of negligent husbands and fathers. Since, however, many of these social causes of poverty are frequently due, in part at least, to individual delinquencies, they are curable to a considerable extent by individual remedies. Sickness, accident, inefficiency, and unemployment are often the results of intemperance, immorality, and indolence. Whenever this is the case, the reformation of character must enter into the remedy. In a word, we may say that the correctives of some causes of poverty must be dominantly social, of others dominantly individual; but that in nearly all cases both methods will be to some extent effective.

The abolition of all poverty which is not due to individual fault, congenital defect, or unusual misfortune is one of the ideals of contemporary philanthropy and social reform. It is a noble aim, and it ought not to be impossible of realization. Against it are sometimes quoted the words of Christ: "The poor you have always with you"; but this sentence is in the present tense, and it was obviously addressed to the Disciples, not to the whole world. Until the words have been authoritatively given a universal application, the repetition of them as an explanation of current poverty, or as an argument against the abolition of poverty, will be neither convincing nor edifying. Equally irrelevant is the fact that poverty is highly honoured in ascetical life and literature. In the first place, there is question here of the abolition of the poverty that is involuntary, not that which is freely embraced. In the second place, religious poverty generally includes those things the lack of which makes the other kind of poverty so undesirable, namely, the requisites of elementary health and comfort, and decent living. Nor should we oppose the abolition of poverty on the ground that this would lessen the opportunities of the poor to practise humility, and of the rich to exercise benevolence. At present the majority of the people are not in poverty, yet no one urges that they should descend to that condition for the sake of the greater opportunity of humility. There would still be abundant room for the exercise of both these virtues after all involuntary poverty had disappeared, for there would be no lack of suffering, misfortune, and genuine need. On the other hand, those who had escaped poverty, or been lifted out of it, would be better able to practise many other virtues more beneficial than compulsory humility.

Poverty has, indeed, been a school of virtue for many persons who otherwise would not have reached such heights of moral achievement, but these are the exceptions. The vast majority of persons are better off, physically, mentally, and morally, when they are above the line which marks the lower limit of elementary health, comfort, and decency. For the great majority, the wish of the Wise Man, "neither poverty nor riches", represents the most favourable condition for right and reasonable life. If any person sees in poverty better opportunities for virtuous living, let him embrace it, but no man ought to be compelled to take this course. After all, the proposal

to abolish involuntary poverty is merely the proposal to enable every person to have a decent livelihood, and enjoy that reasonable and frugal comfort which Leo XIII declared to be the natural right of every wage-earner, and which, consequently, is the normal condition of every human being. It merely seeks to lift the lowest and weakest classes of the community to that level which Father Pesch believes is both desirable and practicable: "Permanent security in living conditions which are in conformity with the contemporary state of civilization, and in this sense worthy of human beings" (op. cit. infra., II, 276).

JOHN A. RYAN.

Powel, PHILIP, VENERABLE (*alias* MORGAN, *alias* PROSSER), martyr, b. at Tralon, Brecknockshire, 2 Feb., 1594; d. at Tyburn 30 June, 1646. He was the son of Roger and Catharine Powel, and was brought up to the law by David Baker, afterwards Dom Augustine Baker, O.S.B. At the age of sixteen he became a student in the Temple, London, but went to Douai three or four years later, where he received the Benedictine habit in the monastery of St. Gregory (now Downside Abbey, Bath). In 1618 he was ordained priest and in 1622 left Douai for the English mission. About 1624 he went to reside with Mr. Poyntz of Leighland, Somersetshire, but, when the Civil War broke out, in 1645, retired to Devonshire, where he stayed for a few months with Mr. John Trevelyan of Yarncombe and then with Mr. John Coffin of Parkham. He afterwards served for six months as chaplain to the Catholic soldiers in General Goring's army in Cornwall, and, when that force was disbanded, took ship for South Wales. The vessel was captured on 22 February, 1646; Father Powel was recognized and denounced as a priest. On 11 May he was ordered to London by the Earl of Warwick, and confined in St. Catherine's Gaol, Southwark, where the harsh treatment he received brought on a severe attack of pleurisy. His trial, which had been fixed for 30 May, did not take place till 9 June, at Westminster Hall. He was found guilty and was hanged, drawn, and quartered at Tyburn. At the instance of the Common Council of London the head and quarters were not exposed, but were buried in the old churchyard at Moorfields. The martyr's crucifix, which had formerly belonged to Feckenham, last Abbot of Westminster, is preserved at Downside, with some of his hair and a cloth stained with his blood.

G. ROGER HUDLESTON.

Powell, EDWARD, BLESSED. See THOMAS ABEL, BLESSED.

Poynter, WILLIAM, b. 20 May, 1762, at Petersfield, Hants; d. 26 Nov., 1827, in London. He was educated at the English College at Douai, where he was ordained in 1786. He remained as professor, and afterwards prefect of studies till the college came to an end during the Terror. After undergoing eighteen months imprisonment, the collegians were set free, and returned to England in March, 1795. Poynter with the students from the South went to

Old Hall, where he took a leading part in the foundation of St. Edmund's College, being first vice-president, then (1801-13) president. In 1803, Bishop Douglass of the London district being in declining health, Dr. Poynter was consecrated his coadjutor, remaining at the same time president of the college. On the death of Bishop Douglass in 1812, Bishop Poynter succeeded as vicar Apostolic. His position was rendered difficult by the persistent attacks of Bishop Milner in pamphlets and even in his pastorals (see MILNER, JOHN). Dr. Poynter endured all Milner's accusations in silence, having the support of all the other English and Scotch bishops; but when in May, 1814, on the issue of the famous Quarantotti Rescript, which sanctioned all the "security" restrictions, Milner went to Rome to obtain its reversal, Dr. Poynter followed him there and wrote his "Apologetical Epistle" defending himself to Propaganda. Quarantotti's Rescript was withdrawn, and in its place was substituted a "Letter to Dr. Poynter", dated from Genoa, where the pope had taken refuge. A limited veto was sanctioned, but the exequatur was refused. Milner was directed to abstain from publishing pastorals or pamphlets against Dr. Poynter. He obeyed this injunction, but continued his attacks in letters to the "Orthodox Journal" until he was peremptorily prohibited by order of the pope, under pain of being deposed.

During his episcopate Dr. Poynter paid four visits to Paris of several months each (1814, 15, 17, and 22), with the object of reclaiming the property of the colleges at Douai and elsewhere, which had been confiscated during the Revolution. He received the support of the Duke of Wellington and Lord Castlereagh, and of the British commissioners appointed to deal with the claims. He succeeded eventually in recovering the colleges themselves and about £30,000 which had been kept in the names of the bishops, but the main claim amounting to £120,000 was lost. The French indeed paid it to the British commissioners, but these refused to hand it over, on the plea that it would be applied to purposes considered by English law as "superstitious". The final decision was given in November, 1825. It is said that the disappointment of the failure of his long labours notably shortened the bishop's life. His principal works are: "Theological Examinations of Columbanus" (London, 1811); "Epistola Apologetica", tr. by Butler (London, 1820), also appeared in Butler, "Hist. Mem.", 3rd edition; "Prayerbook for Catholic Sailors and Soldiers" (London, 1858); "Evidences of Christianity" (London, 1827); "New Year's Gift" in Directories (1813-28); numerous pamphlets, pastorals etc. There is a portrait of him by Ramsay (1803) at St. Edmund's College, another in "Catholic Directory" for 1829; also a bust by Turnerelli and another at Moorfields.

BERNARD WARD.

Pozzo (PUTEUS), ANDREAS, Italian painter and architect of the Baroque period, b. at Trent, 1642; d. at Vienna, 1709. The greater part of his life was spent at Genoa, Rome, Turin, and Vienna. After his literary studies, he devoted himself to painting, and at twenty-four entered the Society of Jesus as a lay brother. After his death he was commemorated by a memoir and a medal. Pozzo was an unrivalled master of perspective; he used light, colour, and an architectural background as means of creating illusion. In the Baroque period, instead of employing

panels ornamented with stucco work, painting was used not only to cover the domes and semi-domes but also the ceilings and vaultings. Michelangelo had painted the ceiling of the Sistine Chapel, but Bramante did not follow him in treating the main vaulting of St. Peter's. It had begun to be customary to fill the sunken panels or large cartouches, and finally the entire vault, as, for example, the domes, with perspective paintings in the advanced style of Correggio. Michelangelo's device of painting in architectural framework to divide the different portions of the painting was no longer in vogue, nor even actual architectural members. Pozzo was a master in this new style of painting; he gives full instructions concerning this method in his manual. His frescoes on the ceiling, dome, and apse of the church of San Ignazio at Rome are greatly admired. By the skilful use of linear perspective, light, and shade, he made the great barrel-vault of the nave of the church into an idealized aula from which is seen the reception of St. Ignatius into the opened heavens. About the painting there is a wonderful effect of supernatural majesty, but the whole composition is more a feat of skill than a work of art. Only the Baroque era could regard it as a genuine devotional picture. Pozzo executed a similar work in San Bartolommeo at Modena. In the Abbey of the Cassinese at Arezzo and in the Pinacotheca at Bologna the magical effect is produced by the architectural perspective alone. Importance is laid on the profiles of the ornamental architectural members, not in the life and movement. According to his theory, columns must be twisted; they can even be bent and cracked. Coloured stones and metals must also aid in securing the pictorial effect. An extraordinary increase in bulk, therefore, would be required to obtain the necessary constructive strength. In making the altar for the Jesuit church at Venice, he erected for the plastic work of the centre a temple of ten columns, with twisted entablature. He also constructed the high altar of Gli Scalzi at Venice. The altar of St. Ignatius in the Gesù at Rome is an example of the greatest magnificence. His manual gives directions for making all kinds of church furniture. Pozzo's decorative work, logically systematized, shows his great talent which perfectly suited the characteristic taste of the period and the pomp then customary in religious services.

G. GIETMANN.

Pozzoni, DOMENICO. See HONG-KONG, VICARIATE APOSTOLIC OF.

Pozzuoli, DIOCESE OF (PUTEOLANA).—The city of Pozzuoli in the province of Naples, southern Italy, on the gulf of the same name, was founded by the Cumæans, whose port it became, under the name of Dicæarchia. It was used by the Carthaginians in the Second Punic War. The Romans took possession of it, fortified it, and gave it the name of Puteoli. Hannibal sought in vain to take this place, which became a Roman colony in 194 B. C. and was thereafter the most important port of Italy, enjoying exceptional municipal liberties. The harbour was set off from the sea by a line of pilasters supporting a long arcade, which was restored later by Antonius Pius. Caligula connected the ports of Pozzuoli and of Baiæ with a pontoon bridge. In the third century Pozzuoli fell into decadence. In 410, it was besieged and sacked by Alaric, in 545 by Totila, and in 715 by Grimoaldo II, Duke of Benevento, who, however, did not succeed in taking it from its Byzantine masters; in the tenth century, it was several times the object of Saracen incursions. In 1014 Pozzuoli was taken by the Neapolitans, and later passed, with Naples, into the King-

dom of the Two Sicilies. In 1448 and 1538, it suffered from severe earthquakes; in 1550 the Turks landed and wrought frightful havoc in the town. Abundant ruins of villas and temples attest its ancient splendour. Among the temple ruins, the most important are those of the Temple of Serapis, which was at once a temple and an establishment of therapeutic baths; there remain the cella and many of its columns, also sixteen bath-rooms for baths in the mineral water that flows near by. The work of excavation (1838) exposed the ruins of an amphitheatre that had a capacity of 30,000; there are also the ruins of a theatre, and of thermæ or hot baths, where was found, among other objects, the Venus Anadyomene of the Naples Museum. The object of greatest interest at Pozzuoli, however, are the sulphur caves, the "forum Vulcani" of the ancients, which, through crevices in the earth, exude sulphuretted hydrogen and sulphurous acid. In 1190 there was a severe volcanic eruption from these caves. There are also four mineral springs, and two caverns, known as the "Grotta del Cane", which exudes carbonic acid, and the "Grotta dell' Ammoniaca".

On his voyage to Rome, St. Paul landed at Pozzuoli, where he met some "brothers" (Acts, xxviii, 13, 14), and among these Jews there may have been Christians; no doubt the Apostle took advantage of the opportunity to preach to his countrymen the mystery of the Messiah already come. That St. Patrobas, a disciple of St. Paul, was first Bishop of Pozzuoli is a fabrication of the notorious Dositheos; on the other hand, the Bishops St. Celsus and St. Joannes governed the diocese before the fourth century. Proculus, Acutius, Eutyches, and St. Artemas were martyrs of Pozzuoli, and St. Januarius of Benevento and his companions suffered martyrdom here. In the fourth century the bishop of this see was Florentius, against whom Pope Damasus was compelled to seek the assistance of the emperors. Bishop St. Theodorus died in 435; Julianus was pontifical legate to the Robber Council of Ephesus in 449; the Bishop Stephanus, whom Cappelletti names at this period, should be referred to the seventh century, or later. Other bishops were Gaudiosus (680); St. Leo (about 1030), later a hermit; Ludovico di Costanzo, who, with the assistance of Alfonso of Aragon, was at first a usurper of this see, but was later recognized by Nicholas V; Carlo Borromeo (1537), a relative of the saint of the same name; Gian Matteo Castaldi (1542), who rebuilt the cathedral; Lorenzo Mongevio (1617), a good orator, formerly Auxiliary Bishop of Salzburg and of Valencia (he was a Franciscan, unjustly accused, and held prisoner in Castel Sant' Angelo; Martin Leon y Cardenas (1619), to whom a public monument was erected, in recognition of his many merits. The cathedral rises on the ruins of the Temple of Augustus; it contains some good pictures, among them the Martirio di San Gennaro by Guido Reni. The churches of Santa Maria delle Grazie and of Santa Croce are worthy of note. The diocese is a suffragan of Naples; has 10 parishes, with 57,100 inhabitants, 1 religious house of men, and 3 of women, and 1 educational establishment for girls.

U. BENIGNI.

Prades, JEAN-MARTIN DE, theologian, b. about 1720 at Castelsarrasin (Diocese of Montauban), d. in 1782 at Glogau, famous through an irreligious thesis. Having finished his preliminary studies, he went to Paris, where he lived in many seminaries, especially in that of St-Sulpice. He very soon became acquainted with the principal publishers of the "Encyclopédie", and supplied them with the article on "Certitude". About the end of 1751, he presented himself for the doctorate, driven, as a *mémoire* of that time says, "by the incredulous, who, in order to justify his blasphemies, wanted to have his doc-

trine approved by the Faculty". Prades wrote a very long thesis, which the examiners accepted without reading. The defence, which took place on 18 November, was very sharp, and the scandal broke out. On 15 December following, the Faculty declared several propositions to be "worthy of blame and censures". On 15 January following, the censure was published. According to Abbé de Prades, the soul is an unknown substance; sensations are the source of our ideas; the origin of civil law is might, from which are derived all notions of just and of unjust, of good and evil; natural law is empiric; revealed religion is only natural religion in its evolution; the chronology of Moses's books is false; the healings operated by Jesus Christ are doubtful miracles, since those operated by Esculapius present the same characteristics. The archbishop of Paris and several bishops approved the censure; afterwards, on the 2 March, Benedict XIV condemned the thesis; at last the Parliament of Paris issued a decree against the author; further, Stanislas, Duke of Lorraine, incited the Faculty against the Abbé.

The latter found a refuge in Holland, where he published his "Apology" (1752). It consists of two parts: a third part containing "reflexions upon the Pastoral Letter of the bishop of Montauban and the Pastoral Instruction of the bishop of Auxerre" as written by Diderot. Le Père Brotier published "the Survey of the Apology of the Abbé de Prades" (1753). The question is whether the Abbé de Prades is not the author of an "Apology of the Abbé de Prades" in verse. Upon the recommendation of Voltaire and of the Marquis of Argens, the Abbé became lector to Frederick of Prussia and went to Berlin. Frederick gave him a pension and two canonries, the one at Oppeln, the other at Glogau. From the year 1753, negotiations were entered upon between the Abbé de Prades and the Bishop of Breslau, Philip von Schaffgotsch, with a view to a recantation. Frederick himself induced the Abbé to return to "the bosom of the Church". Benedict XIV and the Cardinal of Vencein wrote the formula of recantation which was signed by the Abbé. In 1754, the Faculty of Paris again inscribed the Abbé upon the list of bachelors. The Abbé de Prades became the archdeacon of the Chapter of Glogau, and died in that town in 1782.

Besides the works quoted, he left an "Abrégé de l'histoire ecclésiastique de Fleury", tr. Berne (Berlin, 1767), II vols., with a violently anti-catholic preface written by Frederick II. This would make us doubt the sincerity of the recantation of the Abbé de Prades. To him is generally ascribed "le Tombeau de la Sorbonne" translated from Latin (1782). According to Quérard, he left in manuscript a complete translation of Tacitus, which remains unpublished. What has become of the manuscript is unknown. It is said also that he worked, before leaving France, at a Treatise on "the Truth of Religion".

JOSEPH DEDIEU.

Prado, JEROME DE, exegete, b. at Baeza in Spain, 1547; d. at Rome, 13 Jan., 1595. He entered the Society of Jesus in 1572; taught literature; and then filled the chair of Scripture at Cordova for sixteen years. His great work is "Tomus primus in Ezechiel" (fol. pp. 360; Rome, 1596). After sixteen years spent on this tome he died at Rome, where he was seeking illustrations for it. He had reached the twenty-sixth chapter. The remainder of Ezechiel was interpreted by John Baptist Villalpando S.J., of Cordova, who added two volumes: Of these the second is in two parts: I. "Explanatio in Ezechielis prophetæ, pars prima, in tredecim capita sequentia" (fol. pp. 104; Rome, 1604); II. "De postrema Ezechielis prophetæ visione" (fol. pp. 655; Rome, 1605). This

second part of the second volume goes into a detailed archaeological study of the Temple. The third volume of this commentary on Ezechiel is entitled "Apparatus urbis ac templi Hierosolymitani" (fol. pp. xvi, 603; Rome, 1604). There are two parts to the volume, and both are the joint work of Prado and Villalpando. Commentaries on Isaia, Zachary, Micheas, the Epistle to the Hebrews, together with a book on Biblical chronology are among the MSS. works left by Prado, several of which are in the National Library of Madrid. The volumes published by Villalpando were dedicated to Philip II, at whose request and cost the work begun by Prado was brought to a successful completion. These three volumes have always been highly esteemed for their thorough and scientific study of Jewish coins, weights, and measures; likewise for the care with which the Temple and City of Jerusalem are reconstructed from the very few data then at hand. Cardinal Wiseman found the work of Prado to be "still the great repertory to which every modern scholiast must recur, in explaining the difficulties of the book" (Science and Revealed Religion, II, London, 1851, 199). The younger Rosenmüller calls these volumes "a work replete with varied erudition, and most useful to the study of antiquity" ("Ezechielis Vaticinia", I, Leipzig, 1826, 32, in Wiseman, l. c.). Among those whom Prado inspired with his thoroughness and enthusiasm in the study of the Bible were his pupils John Pineda and Louis de Alcazar.

WALTER DRUM.

Prælati Nullius (i. e. *Diocesani*), a prelate who exercises quasi-episcopal jurisdiction in a territory not comprised in any diocese. The origin of such prelates must necessarily be sought in the Apostolic privileges, for only he whose authority is superior to that of bishops can grant an exemption from episcopal jurisdiction. Such exemption, therefore, comes only from the pope. The rights of prelates *nullius* are quasi-episcopal, and these dignitaries are supposed to have any power that a bishop has, unless it is expressly denied to them by canonical law. When they have not received episcopal consecration, such prelates may not confer sacred orders, but they have the privilege (if they are abbots and priests) of advancing candidates to tonsure and minor orders. If not consecrated episcopally, they have not the power to exercise those functions of consecrating oils, etc., which are referred to the episcopal order only analogously. Prelates *nullius* may take cognizance of matrimonial causes within the same limits as a bishop; they may dispense from the proclamation of matrimonial bans, grant faculties for hearing confessions and preaching, reserve certain cases to themselves, publish indulgences and jubilees, exercise full jurisdiction over the enclosure of nuns, and invite any bishop to confirm in their quasi-diocese. These prelates may not, however, without special permission of the Holy See, convoke a synod or institute synodal examiners. Neither may they confer parochial benefices. They are not allowed to grant indulgences, or absolve from the reserved cases and secret irregularities whose absolution is restricted to the pope ordinarily, but allowed to bishops by the Council of Trent; nor promote secular clerics to orders, nor grant dimissorial letters for ordination, nor exercise jurisdiction over regulars as Apostolic delegates. Prelates *nullius* are, however, bound to residence, to preach the Word of God, to offer up Mass for their people, to make the visit *ad limina*, and in concurrence with the neighbouring bishop to make a visitation of their quasi-diocese. The only prelate *nullius* in the United States is the Abbot of Maryhelp, Belmont, North Carolina. (See ABBOT.)

Prætextatus, CATACOMB OF. See CEMETERY, subtitle, EARLY ROMAN CHRISTIAN CEMETERIES.

Pragmatic Sanction (*pragmatica sanctio, lex, jus-sio*, also *pragmatica* or *pragmaticum*) meant in the latter period of the Roman Empire an edict formally issued by the emperor. They were called pragmatic, from *πράγμα*, the affair or matter of sanction. In later times the best known are:—

I. *The Sanctio Pragmatica said to have been issued by St. Louis IX of France in 1269.*—Its purpose was to oppose the extension of papal power, the demands of tribute made by Rome, and the increase of papal reservations in regard to the filling of offices. The rights of prelates, patrons, and the regular collators of benefices were protected against papal collation of benefices. Free elections, promotions, and collations were guaranteed to the cathedrals and other churches. This was directed against the papal right of reservation and presentation, not against the filling of offices by the king. It was further laid down that all promotions, collations, and bestowals of Church offices must be in accordance with the common law, the early councils and the ancient regulations of the Fathers. Simony was forbidden. Papal taxes and imposts were permitted only in case of necessity, and with the permission of the king and the French Church. The liberties and privileges granted to churches, monasteries, and priests by the kings were guaranteed. The investigations of Thomassy (1844), Gérin (1869), Viollet (1870), and Scheffer-Boichorst (1887), have proved that it is a forgery which appeared between 1438 and 1452.

II. *The Pragmatic Sanction of Bourges.*—The Council of Basle (1431–7) had issued many useful decrees concerning reform, but finally came into conflict with Eugenius IV and was suspended by him. Both parties, pope and council, now sought the support of the secular powers. It was to the interest of these to prevent a new schism and not to permit the complete failure of the reforms of Basle. The position of France in regard to these questions was to be discussed at a national council that King Charles VII commanded to meet at Bourges in May, 1438. This council declared itself neutral in the dispute between the pope and the synod, but accepted the greater part of the Basle decrees on reform, modifying some on account of the special conditions in France; these changes were made with the expectation that the council would ratify the modifications. On 7 July, 1438, the king issued a decree, the Pragmatic Sanction, in which he accepted the decisions and ordered the observance of them. Essentially it contains the tenets of the supremacy of an œcumenical council over the pope, of the regular holding of general councils, and of the limitation of papal reservations and demands of tribute. The suppression of annates by the Council of Basle was added, but with the modification that a fifth of the former tax was conceded to the papal see.

By this edict the French king issued a law of the secular legislative authority in purely ecclesiastical affairs. The recognition of the authority of the Council of Basle was only formal, for the validity of its decisions in France rested solely upon the edict of the king. As the law was recorded in the Parliaments these, especially the Parliament of Paris, received the right of interfering in the internal affairs of the Church. In addition, no attention had been paid to the pope, consequently every effort was made at Rome to have the law set aside. Pius II (1458–64) declared it an infringement of the rights of the papal see, and called upon the French bishops to aid in its suppression. Charles VII appealed against this to a general council. His successor Louis XI promised the pope to repeal the sanction, but the Parliament of Paris and the university resisted, and the king let the matter drop. In 1499 Louis XII by explicit declaration renewed the en-

forcement of the sanction. Leo X effected its annulment by means of a Concordat made with Francis I in 1516.

III. *The German Pragmatic Sanction of 1439.*—At the Diet of Frankfort held in March, 1438, the German ruling princes also declared their neutrality in the struggle between Eugenius IV and the Council of Basle. A new diet was held for further discussion of the matter in March, 1439, at Mainz, and this diet also accepted a series of the Basle decrees of reform with modifications in individual cases. The diet reserved to itself the right to make other changes, and at a convenient time the council was to pass decisions on such points. This is the substance of the "Instrumentum acceptationis" of 26 March, 1439. The designation pragmatic sanction is, however, misleading, for it was not confirmed by the emperor.

IV. *The Pragmatic Sanction of the Emperor Charles VI.*—This edict, issued by the last German male member of the House of Hapsburg regulating the succession to his hereditary lands, was read 19 April, 1713, before the ministers and councillors, but was temporarily kept secret. The law ordained that all the Austrian hereditary lands should always remain united, and that on the failure of male descendants they should pass to the daughters that might be born to the emperor; and not until their descendants died out should the right of succession revert to the daughters of his brother, the Emperor Joseph I (1705–11), and to their male and female descendants. This pragmatic sanction was accepted by the estates of the Austrian lands in 1720–4; then in the course of time it was also recognized and guaranteed by the Powers of Europe, so that after the death of Charles VI his daughter Maria Theresa could succeed.

V. *The Pragmatic Sanction of Charles III of Spain.*—Charles III was King of Naples and Sicily until he succeeded his brother Ferdinand upon the throne of Spain in 1759. The pragmatic sanction that he issued 6 Oct., 1759, before he left Naples, is also an edict of succession. As earlier treaties forbade the union of Spain and Naples, he transferred Naples and Sicily to his third son Ferdinand. Up to Ferdinand's sixteenth year Naples was to be administered by a regency. The eldest son, Philip, was weak-minded; the second son Charles was to receive Spain. Charles III also provided that in case Ferdinand's line should become extinct his brothers Philip and Louis were to have the succession. The union of Naples and the Two Sicilies was expressly forbidden in the edict.

KLEMENS LÖFFLER.

Pragmatism, as a tendency in philosophy, signifies the insistence on usefulness or practical consequences as a test of truth. In its negative phase, it opposes what it styles the formalism or rationalism of Intellectualistic philosophy. That is, it objects to the view that concepts, judgments, and reasoning processes are representative of reality and the processes of reality. It considers them to be merely symbols, hypotheses and *schemata* devised by man to facilitate or render possible the use, or experience, of reality. This use, or experience, is the true test of real existence. In its positive phase, therefore, Pragmatism sets up as the standard of truth some non-rational test, such as action, satisfaction of needs, realization in conduct, the possibility of being lived, and judges reality by this norm to the exclusion of all others.

I. **THE ORIGINS OF PRAGMATISM.**—Although the Pragmatists themselves proclaim that Pragmatism is but a new name for old ways of thinking, they are not agreed as to the immediate sources of the Pragmatic

movement. Nevertheless, it is clear that Kant, who is held responsible for so many of the recent developments in philosophy and theology, has had a deciding influence on the origin of Pragmatism. Descartes, by reason of the emphasis he laid on the theoretical consciousness, "I think, therefore I exist", may be said to be the father of Intellectualism. From Kant's substitution of moral for theoretical consciousness, from his insistence on "I ought" instead of "I think", came a whole progeny of Voluntaristic or non-rational philosophies, especially Lotze's philosophy of "value instead of validity", which were not without influence on the founders of Pragmatism. Besides the influence of Kant, there is also to be reckoned the trend of scientific thought during the last half of the nineteenth century. In ancient and medieval times the scientist aimed at the discovery of causes and the establishment of laws. The cause was a fact of experience, ascertainable by empirical methods, and the law was a generalization from facts, representing the real course of events in nature. With the advent of the evolution theory it was found that an unproved hypothesis or hypothetical cause, if it explains the facts observed, fulfils the same purpose and serves the same ends as a true cause or an established law. Indeed, if evolution, as a hypothesis, explains the facts observed in plant and animal life, or if a hypothetical medium, like ether, explains the facts observed in regard to light and heat, there is no reason, say the scientists, why we should concern ourselves further about the truth of evolution or the existence of ether. The hypothesis functions satisfactorily, and that is enough. From this equalization of hypothesis with law and of provisional explanation with proved fact arose the tendency to equalize postulates with axioms, and to regard as true any principle which works out well, or functions satisfactorily. Moreover, evolution had familiarized scientists with the notion that all progress is conditioned by adjustment to new conditions. It was natural, therefore, to consider that a problem presented to the thinking mind calls for the adjustment of the previous content of the mind to the new experience in the problem pondered. A principle or postulate or attitude of mind that would bring about an adjustment would satisfy the mind for the time being, and would, therefore, solve the problem. This satisfaction came, consequently, to be considered a test of truth. This account, however, would be incomplete without a mention of the temperamental, racial, and, in a sense, the environmental determinants of Pragmatism. The men who represent Pragmatism are of the motor-active type; the country, namely the United States, in which Pragmatism has flourished most is pre-eminently a country of achievement, and the age in which Pragmatism has appeared is one which bestows its highest praise on successful endeavour. The first of the Pragmatists declares that Pragmatism rests on the axiom "The end of man is action", an axiom, he adds, which does not recommend itself to him at sixty as forcibly as it did when he was thirty.

II. THE PRAGMATISTS.—In a paper contributed to the "Popular Science Monthly" in 1878 entitled "How to make our Ideas clear", Mr. C. S. Peirce first used the word Pragmatism to designate a principle put forward by him as a rule to guide the scientist and the mathematician. The principle is that the meaning of any conception in the mind is the practical effect it will have in action. "Consider what effects which might conceivably have practical bearings we consider the object of our conception to have. Then our conception of these effects is the whole of our conception of the object." This rule remained unnoticed for twenty years, until it was taken up by Professor William James in his address delivered at the University of California in 1898. "Pragmatism", according to James, "is a temper of mind, an attitude; it is also a theory of the nature of ideas and truth; and finally, it

is a theory about reality" (Journal of Phil., V, 85). As he uses the word, therefore, it designates (a) an attitude of mind towards philosophy, (b) an epistemology, and (c) a metaphysics. James's epistemology and metaphysics will be described in sections III and IV. The attitude which he calls Pragmatism he defines as follows: "The whole function of philosophy ought to be to find out what definite difference it will make to you and me, at definite instants of our lives, if this world-formula or that world-formula be the true one" (Pragmatism, p. 50). Thus, when one is confronted with the evidence in favour of the formula "the human soul is immortal", and then turns to the considerations put forward by the sceptic in favour of the formula "the human soul is not immortal", what is he to do? If he is a Pragmatist, he will not be content to weigh the evidence, to compare the case for with the case against immortality; he will not attempt to fit the affirmative or the negative into a "closed system" of thought; he will work out the consequences, the definite differences, that follow from each alternative, and decide in that way which of the two "works" better. The alternative which works better is true. The attitude of the Pragmatist is "the attitude of looking away from first things, principles, categories, supposed necessities; and of looking towards last things, fruits, consequences, facts" (op. cit., 55).

This view of the scope and attitude of philosophy is sustained in Professor James's numerous contributions to the literature of Pragmatism (see bibliography), in lectures, articles, and reviews which obtained for him the distinction of being the most thorough-going and the most eminent, if not the most logical, of the Pragmatists. Next in importance to James is Professor John Dewey, who in his "Studies in Logical Theory" and in a number of articles and lectures, defends the doctrine known variously as Instrumentalism, or Immediate Empiricism. According to Dewey, we are constantly acquiring new items of knowledge which are at first unrelated to the previous contents of the mind; or, in moments of reflection, we discover that there is some contradiction among the items of knowledge already acquired. This condition causes a strain or tension, the removal of which gives satisfaction to the thinker. An idea is "a plan of action", which we use to relieve the strain; if it performs that function successfully, that is, satisfactorily, it is true. The adjustment is not, however, one-sided. Both the old truths in the mind and the new truth that has just entered the mind must be modified before we can have satisfaction. Thus there is no static truth, much less absolute truth; there are truths, and these are constantly being made true. This is the view which, under the names Personalism, and Humanism, has been emphasized by Professor F. S. Schiller, the foremost of the English exponents of Pragmatism. "Humanism", and "Studies in Humanism" are the titles of his principal works. Pragmatism, Schiller thinks, "is in reality only the application of Humanism to the theory of knowledge" (Humanism, p. xxi), and Humanism is the doctrine that there is no absolute truth, but only truths, which are constantly being made true by the mind working on the data of experience.

On the Continent of Europe, Pragmatism has not attained the same prominence as in English-speaking countries. Nevertheless, writers who favour Pragmatism see in the teachings of Mach, Ostwald, Avenarius, and Simmel a tendency towards the Pragmatic definition of philosophy. James, for instance, quotes Ostwald, the illustrious Leipzig chemist, as saying, "I am accustomed to put questions to my classes in this way: in what respects would the world be different if this alternative or that were true? If I can find nothing that would become different, then the alternative has no sense" (Pragmatism, p. 48). Avenarius's "Criticism

of Experience", and Simmel's "Philosophie des Geldes" tend towards establishing the same criterion. In France, Renouvier's return to the point of view of practical reason in his neo-Criticism, the so-called "new philosophy" which minimizes the value of scientific categories as interpretations of reality, and which has its chief representative in Poincaré, who, as James says, "misses Pragmatism only by the breadth of a hair", and, finally, Bergson, whom the Pragmatists everywhere recognize as the most brilliant and logical of their leaders, represent the growth and development of the French School of Pragmatism. Side by side with this French movement, and not uninfluenced by it, is the school of Catholic Immanent Apologists, beginning with Ollé-Laprune and coming down to Blondel and Le Roy, who exalt action, life, sentiment, or some other non-rational element into the sole and supreme criterion of higher spiritual truth. In Italy, Giovanni Papini, author of "Introduzione al pragmatismo", takes his place among the most advanced exponents of the principle that "the meaning of theories consists uniquely in the consequences which those who believe them true may expect from them" (Introd., p. 28). Indeed, he seems at times to go farther than the American and English Pragmatists; when, for instance, in the "Popular Science Monthly" (Oct., 1907), he writes that Pragmatism "is less a philosophy than a method of doing without philosophy".

III. PRAGMATIC THEORY OF KNOWLEDGE.—In fairness to the Pragmatists it must be recorded that, when they claim to shift the centre of philosophic inquiry from the theoretical to the practical, they explain that by "practical" they do not understand merely the "bread and butter" consequences, but include also among practical consequences such considerations as logical consistency, intellectual satisfaction, and harmony of mental content; and James expressly affirms that by "practical" he means "particular and concrete". Individualism or Nominalism is, therefore, the starting-point of the Pragmatist. Indeed Dr. Schiller assures us that the consequences which are the test of truth must be the consequences to some one, for some purpose. The Intellectualism against which Pragmatism is a revolt recognizes logical consistency among the tests of truth. But while Intellectualism refers the truth to be treated to universal standards, to laws, principles, and to established generalizations, Pragmatism uses a standard which is particular, individual, personal. Besides, realistic Intellectualism, such as was taught by the Scholastics, recognizes an order of real things, independent of the mind, not made by the mind, but given in experience, and uses that as a standard of truth, conformity to it being a test of truth, and lack of conformity being a proof of falseness. Pragmatism regards this realism as naïve, as a relic of primitive modes of philosophizing, and is obliged, therefore, to test newly-acquired truth by the standard of truth already in the mind, that is, by personal or individual experience. Again, there underlies the pragmatic account of knowledge a Sensist psychology, latent, perhaps, so far as the consciousness of the Pragmatist is concerned. For the Pragmatist, although he does not affirm that we have no knowledge superior to sense knowledge, leaves no room in his philosophy for knowledge that represents universally and necessarily and, at the same time, validly.

Knowledge begins with sense-impressions. At this point the Pragmatist falls into his initial error, an error, however, of which the idealistic Intellectualist is also guilty. What we are aware of, say both the Pragmatist and the Idealist, is not a thing, or a quality of an object, but the state of self, the subjective condition, the "sensation of whiteness", the "sensation of sweetness" etc. This error, fatal as it is, need not detain us here, because, as has been said, it is common to Idealists and Pragmatists. It is, in fact, the luck-

less Cartesian legacy to all modern systems. Next, we come to percepts, concepts, or ideas. Incidentally, it may be remarked that the Pragmatist, in common with the Sensist, this time, fails to distinguish between a percept, which is particular and contingent, and an idea or concept, which is universal and necessary. Let us take the word concept, and use it as he does, without distinguishing its specific meaning. What is the value of the concept? The Realist answers that it is a representation of reality, that, as in the case of the impression, so here, too, there is a something outside the mind which the concept represents and which is the primary test of the truth of the concept. The Pragmatist rejects the notion that concepts represent reality. However the Pragmatists may differ later on, they are all agreed on this point: James, Schiller, Bergson, Papini, the neo-Critics of science and the Immanentists. What, then, does the concept do? Concepts, we are told, are tools fashioned by the human mind for the manipulation of experience. James, for example, says "The notions of one Time, one Space . . . the distinctions between thoughts and things . . . the conceptions of classes with subclasses within them . . . surely all these were once definite conquests made at historic dates by our ancestors in their attempts to get the chaos of their crude individual experiences into a more shareable and manageable shape. They proved of such sovereign use as *Denkmittel* that they are now a part of the very structure of our mind" (Meaning of Truth, p. 62).

A concept, therefore, is true if, when we use it as a tool to manipulate or handle our experience, the results, the practical results, are satisfactory. It is true if it functions well; in other words, if it "works". Schiller expresses the same notion in almost identical words. Concepts, he tells us, are "tools slowly fashioned by the practical intelligence for the mastery of experience" (Studies in Humanism, p. 64). They are not static but dynamic; their work is never done. For each new experience has to be subjected to the process of manipulation, and this process implies the readjustment of all past experience. Hence, as Schiller says, there are truths but there is no truth; or, as James expresses it, truth is not transcendent but ambulatory; that is to say, no truth is made and set aside, or outside experience, for future reference of new truth to it; experience is a stream out of which we can never step; no item of experience can ever be verified definitely and irrevocably; it is verified provisionally now, but must be verified again to-morrow, when I acquire a new experience. Verifiability and not verification is the test of experience; and, therefore, the function of the concept, of any concept or of all of them, goes on indefinitely.

Professor Dewey agrees with James and Schiller in his description of the meaning of concepts. He appears to differ from them merely in the greater emphasis which he lays on the strain or stress which the concept relieves. Our first experience, he says, is not knowledge properly so-called. When to this is added a second experience there is likely to arise in the mind a sense of contradiction, or, at least, a consciousness of the lack of coördination, between the first and the second. Hence arises doubt, or uneasiness, or strain, or some other form of the throes of thinking. We cannot rest until this painful condition is remedied. Therefore we inquire, and continue to inquire until we obtain an answer which satisfies by removing the inconsistency which existed, or by bringing about the adjustment which is required. In this inquiry we use the concept as a "plan of action"; if the plan leads to satisfaction, it is true, if it does not, it is false. For Dewey, as for James and Schiller, each adjustment means a going over and a doing over of all the previous contents of experience, or, at least, of those contents which are in any way relevant or referable to the newly-acquired item. Here, therefore, we have once

more the doctrine that the concept is not static but dynamic, not fixed but fluent; its meaning is not its content but its function. The same doctrine is brought out very forcibly by Bergson in his criticism of the categories of science. The reality which science attempts to interpret is a stream, a *continuum*, more like a living organism than a mineral substance. Truth in the mind of the scientist is, therefore, a vital stream, a succession of concepts, each of which flows into its successor. To say that a given concept represents things as they are can be true only in the fluent or functional sense. A concept cut out of the *continuum* of experience at any moment no more represents the reality of science than a cross-section of a tissue represents the specific vital function of that tissue. When we *think* we cut our concepts out of the *continuum*: to use our concepts as they were intended to be used, we must keep them in the stream of reality, that is, we must live them.

If we pass now from the consideration of concepts to that of judgment and reasoning, we find the same contrast between the intellectual Realist and the Pragmatist as in the case of concepts. The intellectual Realist defines judgment as a process of the mind, in which we pronounce the agreement or difference between two things represented by the two concepts of the judgment. The things themselves are the standard. Sometimes, as in self-evident judgments, we do not appeal to experience at the moment of judging, but perceive the agreement or difference after an analysis of the concepts. Sometimes, as in empirical judgments, we turn to experience for the evidence that enables us to judge. Self-evident truths are axiomatic, necessary, and universal, such as "All the radii of a given circle are equal", or "The whole is greater than its part". Truths that are not self-evident may change, if the facts change, as, for instance, "The pen I hold in my hand is six inches long". There are necessary truths, which are a legitimate standard by which to test new truths; and there are truths of fact, which, as long as they remain true, are also legitimate tests of new truth. Thus, systems of truth are built up, and part of the system may be axiomatic truths, which need not be re-made or made over when a new truth is acquired.

All this is swept aside by the Pragmatist with the same contempt as the naïve realism which holds that concepts represent reality. There are no necessary truths, there are no axioms, says Pragmatism, but only postulates. A judgment is true if it functions in such a way as to explain our experiences, and it continues to be true only so long as it does explain our experiences. The apparent self-evidence of axioms, says the Pragmatist, is due, not to the clearness and cogency of the evidence arising from an analysis of concepts, much less is it due to the cogency of reality; it is due to a long-established habit of the race. The reason why I cannot help thinking that two and two are four is the habit of so thinking, a habit begun by our ancestors before they were human and indulged in by all their descendants ever since. All truths are, therefore, empirical: they are all "man-made"; hence Humanism is only another name for Pragmatism. Our judgments being all personal, in this sense, and based on our own experience, subject to the limitations imposed by the habits of the race, it follows that the conclusions which we draw from them when we reason are only hypothetical. They are valid only within our experience, and should not be carried beyond the region of verifiable experience. Pragmatism, ■ James pointed out, does not look backward to axioms, premises, systems, but forward to consequences, results, fruits. In point of fact, then, we are, if we believe the Pragmatist, obliged to subscribe to the doctrine of John Stuart Mill that all truth is hypothetical, that "can be" and "cannot be" have reference only to our experience, and that, for all we know,

there may be in some remote region of space a country where two and two are five, and a thing can be and not be at the same time.

IV. PRAGMATIC THEORY OF REALITY.—The attitude of Pragmatism towards metaphysics is somewhat ambiguous. Professor James was quoted above (Sec. II) as saying that Pragmatism is "finally, a theory of reality". Schiller, too, although he considers metaphysics to be "a luxury", and believes that "neither Pragmatism nor Humanism necessitates a metaphysics", yet decides at last that Humanism "implies ultimately a voluntaristic metaphysics". Papini, as is well known, puts forward the "corridor-theory", according to which Pragmatism is a method through which one may pass, or must pass, to enter the various apartments indicated by the signs "Materialism", "Idealism", etc., although he confesses that the Pragmatist "will have an antipathy for all forms of Monism" (Introduzione, p. 29). As a matter of fact, the metaphysics of the Pragmatist is distinctly anti-Monistic. It denies the fundamental unity of reality and, adopting a word which seems to have been first used by Wolff to designate the doctrines of the Atomists and the Monadism of Leibniz, it styles the Pragmatic view of reality Pluralistic. Pluralism, the doctrine, namely, that reality consists of a plurality or multiplicity of real things which cannot be reduced to a basic metaphysical unity, claims to offer the most consistent solution of three most important problems in philosophy. These are: (1) The possibility of real change; (2) the possibility of real variety or distinction among things; and (3) the possibility of freedom (see art. "Pluralism" in Baldwin, "Dict. of Philosophy and Psychology"). It is true that Monism fails on these points, since (1) it cannot consistently maintain the reality of change; (2) it tends to the Pantheistic view that all distinctions are merely limitations of the one being; and (3) it is inevitably Deterministic, excluding the possibility of true individual freedom (see art. MONISM).

At the same time, Pluralism goes to the opposite extreme, for: (1) while it explains one term in the problem of change, it eliminates the other term, namely the original causal unity of all things in God, the First Cause; (2) while it accounts for variety, it cannot consistently explain the cosmic harmony and the multitudinous resemblances of things; and (3) while it strives to maintain freedom, it does not distinguish with sufficient care between freedom and causalism. James, the chief exponent of Pragmatic Pluralism, contrasts Pluralism and Monism as follows: "Pluralism lets things really exist in the each-form or distributively. Monism thinks that the all-form or collective-unit form is the only form that is rational. The all-form allows of no taking up and dropping of connexions, for in the 'all' the parts are essentially and externally co-implicated. In the each-form, on the contrary, a thing may be connected by intermediate things, with a thing with which it has no immediate or essential connexion. . . . If the each-form be the eternal form of reality no less than the form of temporal appearance, we still have a coherent world, and not an incarnate incoherence, as is charged by so many absolutists. Our 'multiverse' still makes a 'universe'; for every part, though it may not be in actual or immediate connexion, is nevertheless in some possible or mediate connexion with every other part, however remote" (A Pluralistic Universe, 324). This type of union James calls the "strung-along type", the type of continuity, contiguity, or concatenation, as opposed to the co-implication or integration type of unity advocated by the absolute Monists. If one prefers a Greek name, he says, the unity may be called *synechism*. Others, however, prefer to call this *tychism*, or mere chance succession. Peirce, for instance, holds that the impression of novelty which a new occurrence produces is explicable

only on the theory of chance, and Bergson seems to be in no better case when he tries to explain what he calls the *devenir réel*.

The gist of Pluralism is that "Things are 'with' one another in many ways, but nothing includes everything or dominates over everything" (*ibid.*, p. 321). One of the consequences of this view is that, as Schiller says ("Personal Idealism", p. 60), "the world is what we make it". "Sick souls", and "tender-minded" people may, as James says, be content to take their places in a world already made according to law, divided off into categories by an Absolute Mind, and ready to be represented in the mind of the beholder, just as it is. This is the point of view of the Monist. But, the "strenuous", and the "tough-minded" will not be content to take a ready-made world as they find it; they will make it for themselves, overcoming all difficulties, filling in the gaps, so to speak, and smoothing over the rough places by establishing actual and immediate connexions among the events as they occur in experience. The Monistic view, James confesses, has a majesty of its own and a capacity to yield religious comfort to a most respectable class of minds. "But, from the human (pragmatic Pluralist) point of view, no one can pretend that it does not suffer from the faults of remoteness and abstractness. It is eminently a product of what I have ventured to call the Rationalistic temper.

... It is dapper, it is noble in the bad sense, in the sense in which it is noble to be inapt for humble service. In this real world of sweat and dirt, it seems to me that when a view of things is 'noble', that ought to count as a presumption against its truth, and as a philosophic disqualification" (*Pragmatism*, pp. 71 and 72). Moreover, Monism is a species of spiritual laziness, of moral cowardice. "They [the Monists] mean that we have a right ever and anon to take a moral holiday, to let the world wag its own way, feeling that its issues are in better hands than ours and are none of our business" (*ibid.*, p. 74). Pluralistic strenuosity suffers no such restraints; it recognizes no obstacle that cannot be overcome. The test of its audacity is its treatment of the idea of God. For the Pluralist, "God is not the absolute, but is Himself a part.

... His functions can be taken as not wholly dissimilar to those of the other smaller parts—as similar to our functions, consequently, having an environment, being in time, and working out a history just like ourselves. He escapes from the foreignness from all that is human, of the static, timeless, perfect absolute" (*A Pluralistic Universe*, p. 318). God, then, is finite. We are, indeed, internal parts of God, and not external creations. God is not identical with the universe, but a limited, conditioned, part of it. We have here a new kind of Pantheism, a Pantheism of the "strung-along" type, and if James is content to have his philosophical democratic strenuosity judged by this result, he has very effectively condemned his own case, not only in the estimation of aristocratic Absolutists but also in that of every Christian philosopher.

V. PRAGMATISM AND RELIGION.—It has been pointed out that one of the secrets of the popularity of Pragmatism is the belief that in the warfare between religion and Agnosticism the Pragmatists have, somehow, come to the rescue on the side of religious truth (Pratt, "What is Pragmatism", p. 175). It should be admitted at once that, by temperamental disposition, rather than by force of logic, the Pragmatist is inclined to uphold the vital and social importance of positive religious faith. For him, religion is not a mere attitude of mind, an illumination thrown on facts already ascertained, or a state of feeling which disposes one to place an emotional value on the truths revealed by science. It adds new facts and brings forward new truths which make a difference, and lead to differences, especially in conduct. Whether

religions are proved or not, they have approved themselves to the Pragmatist (*Varieties of Religious Experience*, p. 331). They should be judged by their intent and not merely by their content. James says expressly: "On Pragmatic principles, if the hypothesis of God works satisfactorily in the widest sense of the word, it is true" (*Pragmatism*, p. 299). This is open to two objections. In the first place, what functions or "works satisfactorily" is not the existence of God, but belief in the existence of God. In the struggle with Agnosticism and religious scepticism the task of the Christian apologist is not to prove that men believe in God but to justify that belief by proving that God exists; and in this task the assistance which he receives from the Pragmatist is of doubtful value. In the second place, it will be remembered that the Pragmatist makes experience synonymous with reality. The consequences, therefore, which follow from the "hypothesis of God" must fall within actual or possible human experience, not of the inferential or deductive kind, but experience direct and intuitional. But it is clear that if we attach any definite meaning at all to the idea of God, we must mean a Being whose existence is not capable of direct intuitional experience, except in the supernatural order, an order which, it need hardly be said, the Pragmatist does not admit. We do not need the Pragmatist to tell us that belief in God functions for good, that it brings order into our intellectual chaos, that it sustains us by confidence in the rationality of things here, and buoys us up with hope when we look towards the things that are beyond. What we need is assistance in the task of showing that that belief is founded on inferential evidence, and that the "hypothesis of God" may be proved to be a fact.

VI. ESTIMATE OF PRAGMATISM.—In a well-known passage of his work entitled "Pragmatism", Professor James sums up the achievements of the Pragmatists and outlines the future of the school. "The centre of gravity of philosophy must alter its place. The earth of things, long thrown into shadow by the glories of the upper ether, must resume its rights. ... It will be an alteration in the 'seat of authority' that reminds one almost of the Protestant Reformation. And as, to papal minds, Protestantism has often seemed a mere mess of anarchy and confusion, such, no doubt, will Pragmatism often seem to ultra-Rationalist minds in philosophy. It would seem so much trash, philosophically. But life wags on, all the same, and compasses its ends, in Protestant countries. I venture to think that philosophic Protestantism will compass a not dissimilar prosperity" (*Pragmatism*, p. 123). It is, of course, too soon to judge the accuracy of this prophecy. Meantime, to minds papal, though not ultra-Rationalistic, the parallel here drawn seems quite just, historically and philosophically. Pragmatism is Individualistic. Despite the disclaimers of some of its exponents, it sets up the Protagorean principle, "Man is the measure of all things". For if Pragmatism means anything, it means that human consequences, "consequences to you and me", are the test of the meaning and truth of our concepts, judgments, and reasonings. Pragmatism is Nominalistic. It denies the validity of content of universal concepts, and scornfully rejects the mere possibility of universal, all-including or even many-including, reality. It is, by implication, Sensistic. For in describing the functional value of concepts it restricts that function to immediate or remote sense-experience. It is Idealistic. For, despite its disclaimer of agreement with the intellectual Idealism of the Bradley type, it is guilty of the fundamental error of Idealism when it makes reality to be co-extensive with experience, and describes its doctrine of perception in terms of Cartesian Subjectivism. It is, in a sense, Anarchistic. Discarding Intellectualistic logic, it discards principles, and has no substitute

for them except individual experience. Like the Reformers, who misunderstood or misrepresented the theology of the Schoolmen, it has never grasped the true meaning of Scholastic Realism, always confounding it with Intellectual Realism of the Absolutist type. Finally, by bringing all the problems of life within the scope of Pragmatism, which claims to be a system of philosophy, it introduces confusion into the relations between philosophy and theology, and still worse confusion into the relations between philosophy and religion. It consistently appeals to future prosperity as a Pragmatic test of its truth, thus leaving the verdict to time and a future generation. But with the elements of error and disorganization which it has embodied in its method and adopted in its synthesis, it has done much, so the Intellectualist thinks, to prejudice its case.

XVIII, XIX, etc. In defence of Pragmatism many articles have appeared in the *Journal of Phil. Psychol.* etc., and in *Mind*. A recent article on the French School of Pragmatism is entitled *Le pragmatisme de l'école française* in *Rev. de phil.* (April, 1910).

WILLIAM TURNER.

Prague, ARCHDIOCESE OF (PRAGENSIS), in Bohemia. From about the middle of the sixth century Slavonic tribes advancing into Bohemia drove the Marcomanni to the borders of the country. The Slavs soon came under the influence of the Carolingian civilization. In 845 Czech princes and their warriors appeared at the Court of Louis the German at Ratisbon, where they were baptized on the octave of Epiphany (13 January) by the Bishop of Ratisbon. Although many German priests now came into Bohemia to aid in the spread of Christianity, the land soon fell under the dominion of Moravia, which was naturally followed by the appearance of Slavonic priests from Great Moravia. It is supposed, though it cannot be proved, that the Bohemian Duke Bořivoi was baptized by Methodius, the apostle to the Slavs. The first Duke of Bohemia of whom there is historic certainty that he was a Christian is Bořivoi's son, Spitigniew, who in 895 allied himself to Carlmann's son, Arnulf of Carinthia. Spitigniew's brother and successor, Wratislaw I, built the church of St. George upon the Hradschin (castle hill) at Prague. His wife Drahomira, who belonged to a pagan Slavonic family, though probably baptized, was not Christian at heart. Their sons, St. Wenceslaus and Boleslaw I the Cruel, were still minors at the death of their father. The most important factor in the history of Bohemia at this time was the opposition between the pagan or national party and the Christian or German party. Wenceslaus hoped to gain everything from the Germans. Desiring to build a church upon the Hradschin he requested permission from the diocesan bishop who came to the consecration. The church was dedicated to St. Vitus, as Henry I the Saxon of Germany had sent a present of a precious relic of this

saint. The struggle between pagan and Christian divided even the ducal family. On 28 September, 935, Wenceslaus was murdered by his brother Boleslaw and his accomplices at the door of the church in Altbunzlau. Yet Boleslaw found himself obliged to rule in a manner favourable to the Christian-German party. Much was done for the Christian civilization of Bohemia by his children, Boleslaw II the Pious, Milada, and Dubravka. Boleslaw II desired to be independent of Germany in ecclesiastical matters and sought to have Prague made a bishopric. Otto II of Germany aided this effort, for he regarded it as a protection against Hungary. John XIII consented on condition that the Latin Rite should be used. Milada, sister of the duke, who lived in a Benedictine abbey at Rome, was appointed by the pope under the name of

THE CATHEDRAL OF ST. VITUS, PRAGUE

Maria abbess of the Abbey of St. George on the Hradschin, the first monastic foundation in Bohemia. Bohemia then formed a part of the Diocese of Ratisbon, suffragan of Salzburg. St. Wolfgang drew up the charter for the new diocese and it was made a suffragan of Mainz.

Thietmar, a monk from Magdeburg who had a thorough knowledge of the Slavonic language, was appointed (973) the first Bishop of Prague. The new diocese included: Bohemia, Silesia including Cracow, and Lusatia; Moravia, western Hungary as far as the Waag and Danube Rivers; Lower Austria between Taja and Kamp. In Moravia, Vracen was appointed bishop. St. Adalbert, second Bishop of Prague, appointed by Otto II at Verona, was consecrated by Willigis of Mainz. He proved in Bohemia and Moravia a stern censor of morals, striving to suppress concubinage among the clergy, polygamy, and heathen practices, but, obliged to withdraw, took refuge in a monastery at Rome. At the request of the Bohemians he returned with twelve monks from Monte Cassino, among them Christinus, Benedictus, and Matthæus. In 993 Adalbert founded for these monks the first monastery for men in Bohemia, that of Břewnow near Prague (St. Margaret), and appointed his teacher Radla (Anastasius) abbot. Two years later Adalbert was again obliged to flee. The

pope now dissolved his connexion with Prague and Adalbert died (997) a martyr in Prussia. Severus, sixth Bishop of Prague, was one of the retinue of Duke Břetislav Achilles, who brought (1039) the relics of St. Adalbert from Gnesen to Prague. The ambitious Břetislav wished to be independent of Germany. It was his intention to make use of the Benedictine monastery of Sazawa, founded in 1037, with a Greek-Slavonic liturgy, as a national church; he appointed St. Procopius the first abbot of this monastery. A part of his plan was that Bishop Severus, as the lawful successor of St. Methodius, should receive the pallium. As, however, the Polish Church complained of the robbery of the relics of St. Adalbert, the duke and bishop became involved in an investigation and they were condemned to found a monastery as penance. Břetislav established the collegiate chapter of Altbunzlau in 1096 and two years later founded Raigern, the first monastery in Moravia. Raigern was united with Břewnow. The next duke, Spithnew, founded (1058) the collegiate church of St. Stephen at Leitmeritz. The Slavonic monks, who were replaced by Latin monks, were transferred to the monasteries of Vesprim, Vyšehrad, Csanad, and Arad. Nicholas II granted the duke the honour of "the mitre" (a cloak) for an annual payment of one hundred marks; this honour was regarded as a sign of royal dignity. Spithnew's brothers, Wratislaw II, who succeeded him, and Jaromir (Gebhard), who was appointed Bishop of Prague, were men very different in character. In 1063 the duke gave his consent to the establishment of the Diocese of Olmütz. The Bishop of Prague received compensation for what he lost in tithes and fiefs, and a monk named John, belonging to the monastery of Břewnow, was appointed first Bishop of Olmütz. The new bishop had much to suffer from Jaromir, who attacked and ill-treated him in his episcopal residence. Alexander II sent to Prague the legate Rudolphus, who held there a synodal diet at which, however, Jaromir did not appear. Jaromir was declared to be deposed; Gregory VII summoned the contending bishops to Rome. At the Easter synod of 1074, Jaromir expressed his regret for his ill-usage of John but was unwilling to yield the fief of Podvin. The pope now wrote to Wratislaw that if necessary he should drive Jaromir away by force.

In the struggle over Investitures Wratislaw II and Jaromir supported Henry IV. After the death of Bishop John, Jaromir secured the union of Olmütz with Prague (1085-91), as his brother had received the title of king from Henry IV and consequently was entirely on the king's side. Wratislaw soon deserted the emperor and gave Olmütz to his court chaplain Wečel (Andreas I), who was made bishop. Jaromir died at Gran, where he was preparing to fight his rival. After Wečel's death Henry IV invested the canon Andreas at Mantua with the ring and crozier, but he was not consecrated until two years later. At Easter (1138) Bishop Henry of Olmütz, called Zdik after his native town, entered the Premonstratensian Order in the church of the Holy Sepulchre at Jerusalem. On his return, he persuaded the Bishop of Prague, John I, to bring Premonstratensians from Steinhof near Cologne and establish them at Strahow. Bitter contention arose between Zdik and his clergy when the princes of Moravia rebelled against Wladislaw II, Duke of Bohemia. Zdik adhered to the duke, and was, therefore, obliged to flee to Prague; after giving warnings in vain he placed the rebels and the land under bann and interdict, which were later removed by the legate Guido. He deposed ecclesiastics who had concubines. Ordinations were only permitted on definite conditions. Wladislaw supported the legate so vigorously that it was said of him that he had enforced clerical chastity throughout Bohemia. Wladislaw also granted Podvin in perpetuity to the

bishop and bestowed on him the right to have a mint. Lucius II invited Zdik to Rome. On the way he was attacked and robbed near Boscowicz, and escaped to Leitomischl. In 1143, Bishop Otto settled Cistercians from Waldsassen at Sedlek. When the Second Crusade was preached Bishop Henry of Olmütz was the subdelegate of St. Bernard for Bohemia and Moravia. Henry himself went to Pomerania, but soon returned unsuccessful. In 1156, the Order of St. John of Jerusalem was introduced in the hospice of St. Mary near the Prague bridge. Frederick I Barbarossa in 1158 made Wladislaw a king in return for his aid against Lombardy. The right to crown the king was assigned to the Bishops of Prague and Olmütz. The Bohemian king and Bishop Daniel I supported Frederick in his bitter struggle with Alexander III. The king and bishop were excommunicated and when in 1167 the bishop died the clergy of Prague refused to recite the Office for the Dead. It was during the quarrel between Duke Přemysl Ottokar I and Bishop Henry Břetislav that Kacim, Bishop of Olmütz, ordained deacons and priests at Prague in 1193 but forgot the laying on of hands. Two years later his successor, Engelbert, performed this part of the rite, but the cardinal legate Peter suspended the ordination and in 1197 the entire ordination had to be repeated. At the renewed ordination the cardinal legate insisted positively upon the vow of chastity. The candidates rebelled at this and Peter had to leave the church. Not long after, the legate succeeded in making a synod pass his demands, and the prosperity of the Bohemian Church rapidly increased. About this time St. Hrozata founded the Premonstratensian Abbey of Tepl, which he entered.

Přemysl Ottokar I made Bohemia a hereditary kingdom, and independent of Germany; hence the Bishops of Prague and Olmütz no longer received investiture from the emperor but from the King of Bohemia. The cathedral chapter was to elect the bishop. Ottokar wished to make Prague an archbishopric with Olmütz as its suffragan. Innocent III, however, had all the less reason to be gracious to the Bohemian king as Ottokar had just changed his political adherence from Otto IV to Philip of Swabia, against the wishes of the pope. The first king who received Bohemia by inheritance desired to annul the immunity of the clergy and take the church tithes for himself, while Bishop Andreas wished to enforce the decrees of the fourth Synod of Laberno. The king would not permit this. Andreas placed Bohemia under an interdict, the king cut off all the bishop's revenues. The pope commanded that Robert of Olmütz, who, in spite of the interdict, had celebrated Mass at Prague, should be punished. With the aid of a legate a fairly satisfactory agreement was reached (Concord of Skačenze, 1220). One of Ottokar's daughters, St. Agnes, corresponded with St. Clare of Assisi, and founded the convent of St. Clare, called later St. Agnes, in 1234 at Prague; as *soror major* Agnes was the head of it. She also aided the foundation of the Order of the Knights of the Cross of the Red Star at Prague. While on his journey to Poland St. Hyacinth brought Dominicans to Prague, who established themselves in the monastery of St. Clement. Wenceslaus granted to the Franciscans the monastery of St. James in the Altstadt, Prague. Bohemian nobles who went to France became acquainted there with the Knights Templars. They introduced them into Bohemia and the order flourished to such extent that in 1240 Bohemia became a national priory and Prague had two commanderies, the Temple and St. Laurence. Church life flourished in Bohemia at this era; the country seemed "to breathe nothing but holiness". King Wenceslaus remained a firm adherent of Frederick II even after his deposition by the Council of Lyons. An interdict was pronounced over Bohemia and Bishop Nicholas

of Bohemia ■■■ suspended. Mass was only celebrated in the monasteries and there behind closed doors without the ringing of bells. For some time, the Teutonic Knights had been fighting against the natives of Prussia. In 1225 Přemysl Ottokar II assumed the cross; he wished to gain the favour of the pope and Christendom. The name of the city of Königsberg preserves the memory of the king, who was called not only the Golden but also the Iron. About this time (1256) the first heresy appeared in Bohemia; the Flagellants came from Germany (see FLAGELLANTS). In gratitude for the successful issue of his struggle with Béla IV (battle of Kressenbrunn) Přemysl Ottokar II in 1263 founded the Cistercian monastery of Goldenkron, so named because of a relic of the Crown of Thorns set in gold that had been given by St. Louis. Ottokar's viceroy in Austria, Peter of Rosenberg, founded the monastery of Hohenfurt in expiation of his sins and for the salvation of the souls of his ancestors. Bishop John III of Bohemia attended the Council of Vienna in 1276, which had been summoned by the king. The council's nineteen canons treat of the behaviour of the clergy, of the penal power of bishops and abbots, and the relations between Christians and Jews. The Jews were to be distinguished by pointed hats, and on Good Friday they were not to appear in public. Bishop Bruno of Olmütz had brought to Ottokar from the Council of Lyons a letter written by the pope calling upon him to support the election of Rudolph of Hapsburg as Emperor of Germany. When Ottokar recommenced, he was excommunicated; consequently it was not until eighteen years after he had been killed in battle that he was buried in consecrated ground in the Cathedral of Prague. During this time, it is said, there were not less than twenty-one thousand Beghards in Bohemia. The country was also disturbed by off-shoots of the Waldensians who called themselves "Apostolic Brethren", and "Brethren of the Holy Spirit". They even wished to have wives and property in common and sought to live underground. They claimed that God did not trouble Himself about what happened under the earth and so have been called *Grubenheimer*.

Bishop John IV of Prague had taken part in preparing the decrees concerning the dispute between the Mendicant Orders and the secular priests, which were drawn up at Vienna. After his return, he desired to execute these decrees. The Mendicants were only to preach in their own churches and not there during the service at the parish church; they were not in any way to encroach upon the pastoral work, and must have episcopal authority to hear confessions. The Mendicants appealed to their exemption and made loud complaint that the bishop denied the validity of confessions heard by them. The parish priests of Prague announced that they would publish the decisions of the Council of Vienna in their churches. The Mendicants also made their preparations. Bishop John established the Court of the Inquisition as the council had desired. When in the course of a year, however, this court delivered to the State fourteen heretics who were burned at the stake, the bishop sent the Inquisitors away and opened their prisons. Complaint having been made against him, he had to go to Avignon, and after an investigation of eleven years he finally returned home. After the suppression of the Knights Templar, their lands were given by King John of Luxemburg to other orders of knights, and he substituted religious houses founded by him. He also established the first Carthusian monastery in Bohemia, Maria Garten am Smichow, and at Raudnitz a monastery of Augustinian Canons. The increasing prosperity of the Church reached its most flourishing period during the reign of Charles IV. The emperor had been educated at the French court; his teacher and friend Peter de Rosières was now

Clement VI. It was, therefore, not difficult for Charles to obtain from him in 1344 a Bull raising Prague to an archbishopric, with the suffragan Dioceses of Olmütz and of the newly founded Leitomischl. The archbishop was to anoint and crown the Bohemian kings; thus he was the Primate of Bohemia. The first archbishop was St. Ernst of Pardubitz, the advisor of Charles IV in his great undertakings. Charles brought Matthias of Arras from Avignon to Prague so that, with the aid of Peter Parler of Gmünd (in Suabia), he might build the beautiful Cathedral of St. Vitus, the corner-stone of which had been laid by the emperor's father. It is yet unfinished. The emperor even included his crown among the treasures with which he thought to enrich the cathedral; from that time it adorned the head of St. Wenceslaus. The crown jewels were kept in the Castle of Karlstein built by Arras. The chapel of Castle Karlstein was built in the shape of a cross; its walls were inlaid with Bohemian garnets on a gold ground, so that the lights of the altar were reflected many hundred times. At Emaus Charles founded an abbey for Benedictines, who were to use the Glagolitic Liturgy in celebrating Mass. The foundation in which Charles was most interested was the University of Prague, established in 1348, the oldest German university. The archbishop was to be its chancellor (*Protektor studiorum et Cancellarius*). In 1349 Archbishop Ernst held the celebrated provincial synod that defined the rights and duties of the clergy. *Correctores Cleri* were provided who were to supervise the carrying out of the *Statuta Ernesti* and to supply what was lacking.

Now began a religious movement that plunged Bohemia and the surrounding countries into war, seriously retarded the growth of the Church, and left the See of Prague vacant for one hundred and forty years (1421-1561). For details of this period, see HUS AND HUSSITES; CONSTANCE, COUNCIL OF: III. THE REPRESSION OF HERESY. These hundred years of religious unrest had prepared a fruitful soil for the Reformation. Matthias preached Luther's doctrines openly on the public roads; Thomas Münzer and Gallus Cahera preached them in Prague. King Ferdinand, who had taken up his residence on the Hradschin, checked the growth of Protestantism, but the war over the Hungarian throne and the struggle with the Turks impeded his efforts. The Utraquist Consistory of Prague obtained in Mistopol an administrator who was even inclined to Lutheranism. During the Smalkaldic war the Bohemian Brethren united with the Protestants. After the battle of Mühlberg (1547), the religious reformers, driven out of the cities of Bohemia, went to Poland and Prussia, which were added by the Bohemian Brethren as a third province to Bohemia and Moravia. The greatest aid received by the Catholic Church came from the Jesuits. In 1556, Peter Canisius brought the first twelve Jesuits to St. Clement's at Prague; their college there, called Clementinum, ranked with the Carolinum. In 1561, Prague again received an archbishop, Anton Brus of Müglitz in Moravia. At the Council of Trent the archbishop sought to gain the cup for the laity, which Pius IV granted in 1567 for the countries ruled by Ferdinand. As, however, the result expected from this concession did not appear, the Utraquists becoming more largely Lutheran, Pius V recalled the permission. Maximilian II was more favourable to Protestantism. In 1567 he annulled the *Compacts* for the benefit of the Utraquists. Not only the Utraquistic Catholics, but also all Utraquists (Protestants) were to be tolerated. At the Diet of Prague they demanded the introduction of the Augsburg Confession. The "Bohemian Confession" was drawn up in twenty-five articles; it maintained Luther's teachings, but was indefinite on the doctrine of the Eucharist. The administrator of the consistory was to ordain their priests also, while fifteen defenders were to be added

to the consistory. Thus the imperial cities which had been Utraquist rapidly became Lutheran. At Prague three Lutheran parishes were soon formed. When Rudolph II shut himself up in the castle on the Hradschin the archdukes of Austria selected Matthias as the head of the Hapsburg dynasty. The Bohemian estates, taking advantage of the family quarrel of the Hapsburgs, elected a directory and raised an army. They remained indeed loyal to Rudolph, but forced from him in 1609 the royal charter (*Majestätsbrief*), which confirmed the Bohemian Confession, opened the university to the evangelical estates, granted them the right to elect defenders, and also permitted the three secular estates of lords, knights, and imperial cities to build Protestant churches and schools. Rudolph finally abdicated and in 1611 Cardinal Dietrichstein of Olmütz crowned Matthias King of Bohemia (1611-9). Contrary to the regulations of the royal charter granted by Rudolph, subjects of the Archbishop of Prague built a Protestant church at Klostergrab and subjects of the Abbot of Braunau one at Braunau. The archbishop commanded these to be closed, and when the Emperor Matthias sanctioned this order the result was the Third Defenestration of Prague, with which the Thirty Years' War began. A government of thirty directors was formed, and the head of the Protestant Union and of the German Calvinists, Frederick V, Elector of the Palatinate, was elected King of Bohemia. The Cathedral of Prague was arranged for Calvinistic services; altars were torn down, pictures and statues destroyed. The court preacher Scultetus drew up an independent liturgy for Bohemia.

A sovereign has seldom begun his reign under greater difficulties than Ferdinand II (1619-37). The insurgents under Thurn were at the gates of Vienna; within the city the non-Catholic estates made common cause with the besiegers. Ferdinand, however, never yielded. After the battle of the White Mountain (1620) he took more severe measures against the disturbers; they were driven out of the country, the royal charter that had been the source of so much disorder was annulled, and a system of government introduced in 1627 that among other things made the clergy the first estate. It granted the bishops, prelates, and abbots seats and votes in the diet (the ecclesiastical bench) and the title of *Primas regni* to the archbishop. Only the Catholic religion was to be permitted. An imperial commission of reform ("dragonnades", "saviours") was to traverse the country purging it of preachers, heretical schoolmasters and books. Thirty-six thousand families were welcomed in neighbouring countries, but with all this the country was not made thoroughly Catholic. Many conformed only externally and the varying phases of the Thirty Years' War, for which in the end religion was merely the excuse, constantly favoured Protestantism. In the Peace of Westphalia (1648), however, Ferdinand III did not allow himself to be dictated to. During the period when princes were absolute rulers, events protected the Church against fresh attacks. Pastoral care, instruction, and ecclesiastical administration were improved. The Montserratines, Piarists, Theatines, and Ursuline nuns were introduced into the country, the clerical seminary was founded, and the new Dioceses of Leitmeritz (1655) and Königgrätz (1665) were erected. The old University of Prague and the Clementinum, the Jesuit college, were united into the Caroline-Ferdinand University. The tax of fifteen kreuzers on salt, either mined in Bohemia or imported, was applied to Church purposes, the St. Wenceslaus fund was used to distribute good books, and the Emeritus fund was employed to aid poor priests. For two years from 1712 the churches even in Prague were closed on account of the plague. In 1729 the canonization of St. John Nepomucene was celebrated with great festivities. The power of the sovereign over the Church was introduced by Protestantism. The Catholic rulers at

first only assumed this position as regards their Protestant subjects. In the course of time, however, they began to exercise this power also as regards their Catholic subjects. As the maintenance of religion (the Counter-Reformation) was their work and they obtained the chief patronage of the Church, a State Church was the natural consequence. Even in the reign of Maria Theresa edicts were issued concerning ecclesiastical matters. No one could take the vows of an order until fully twenty-four (1770); monastic prisons were to be suppressed (1771). As the basis of theological instruction were to be used: Sagan's Catechism (1772), Riegger's "*Institutiones jurisprudentiæ ecclesiasticæ*", and Rautenstrauch's "*Synopsis juris ecclesiastici*". Trumpets and drums could no longer be used in the churches; in the lessons of the Breviary for the feast of St. Gregory VII the places concerning the power of the pope to depose kings were to be omitted. Parish priests were expressly forbidden to speak abusively of the laws of the country. Within ten years Joseph II issued sixty-two hundred laws, orders of the court, and ordinances. Even what was good showed marks of haste; laws and ordinances contradicted one another. When in 1781 the patent of toleration was issued quite a number who had been Protestants in secret now appeared as such openly. The Bull "*In cœna Domini*" and "*Unigenitus*" were to be suppressed. It was forbidden to study theology at Rome, Roman dignities and titles could only be assumed after obtaining permission of the ruler. A general seminary was established at Prague, where both secular priests and candidates for the orders were to be educated. Even the number of Masses to be held in a church and the number of candles that could be used at such services were prescribed by law; the litany of the Trinity was forbidden "on account of various additions". Many monasteries were suppressed, the remaining ones were regulated by the State, and fell into decay. One good measure of the emperor was, that he formed a fund for the maintenance of religion from the property of the suppressed monasteries and used it to increase the number of parishes. In this way Joseph II founded eighty-one parishes and three hundred and fourteen dependent churches in Bohemia. He also established the Diocese of Budweis.

Joseph's brother Leopold II soon changed conditions. The general seminaries were abolished, there was no further suppression of monasteries, and books for theological instruction were submitted to the censorship of the bishop. Francis II was a pious ruler, who took a serious view of his duty in regard to conscience and religious duties, but for nearly a generation the war with France claimed all the strength and energy of the Government. In the meantime both laity and clergy grew more and more accustomed to the Josephine reforms of the Church. Were any ecclesiastical concessions made the Josephinists raised a cry over the unjustifiable demands of the Church and the unheard of concessions of the Government. One of the results of the French war was the demand of the Government for the silver plate in 1806, 1809 etc., when all the Church silver not absolutely necessary went to the mint. In return, the churches received from the Government an acknowledgment of the indebtedness. During this period the priest, Bernhard Bolzano, a philosophical writer and professor of theology at the University of Prague, wrote: "*Lehrbuch der Religionswissenschaft*" (4 vols.); "*Wissenschaftslehre*"; "*Logik*" (4 vols.); "*Athanasia oder die Gründe für die Unsterblichkeit der Seele*"; "*Erbaunngsreden an die akademische Jugend*" (4 vols.); "*Ueber die Perfektibilität des Katholizismus*". The authorities were suspicious of him on account of his teachings, but his archbishop, Prince von Salm, protected him. In 1820 he was removed from his professorship and died in 1848. In 1848 Alois, Freiherr von

Schrenk became Prince Archbishop of Prague. On 15 March, the emperor announced his intention of granting a constitution. Schrenk may have thought that "freedom is a great good for those who know how to use it". On 22 March he issued a censure, as some priests, forgetting their sacred calling, turned the pulpit into a political platform. The freedom gained should rather be the signal for greater activity. His address at the Easter festival, posted on the streets in Czech and German, sought to allay the hostility to the Jewish population. A meeting of thirty-five ecclesiastics, parish priests, members of orders, cathedral canons, professors, and prelates, called together without asking the consent of the archbishop by F. Nahlowsky, principal of the seminary for Wends, Upper Lusatia, was held at the seminary on 18 and 22 May. In his address Nahlowsky expressed his opinion concerning the unsuitability of the unessential system of celibacy; the monasteries should be thoroughly reformed. The proceedings of this assembly even appeared in print. Naturally both the archbishop and Bishop Hille of Leitmeritz, of which diocese Nahlowsky was a priest, expressed "their deep sorrow". Late in August the pamphlet issued by the Bohemian episcopate appeared. The contents discussed the two questions: What is the position of the Church towards the State in general and what are the special rights of the Church in dogma, liturgy, and administration. The strain he had undergone shattered the health of the archbishop and he died in March, 1849, at the age of forty-seven. His successor was Cardinal Schwarzenberg. The present prince archbishop is Leo Cardinal von Skrbensky.

The Archdiocese of Prague (1911) has a population of 2,228,750 Catholics, 63,475 Protestants, 51,016 Jews. There are: 570 parishes; 1348 secular, 258 regular priests; 1517 nuns in 76 orders. (See BOHEMIA; MORAVIA.)

C. WOLFSGRUBER.

UNIVERSITY OF PRAGUE, founded by Charles IV with the consent of the Estates on the model of the universities of Paris and Bologna and confirmed at the emperor's request by Clement VI as a *studium generale*. It was established by the Golden Bull of 7 April, 1345, and received imperial sanction 14 September, 1349. Archbishop Ernst of Pardubitz took an active part in the foundation by obliging the clergy to contribute. Its official title is "Imperial and Royal Franz Ferdinand University"; at the present time it is divided into two completely separated universities, one German and the other Bohemian or Czech, each having four faculties (namely, theology, jurisprudence, philosophy, and medicine), each its own rector and four deans. Both universities are national and are under the immediate control of the Imperial and Royal Ministry of Education at Vienna. All professors are appointed by the State, even the theological professors; these latter are appointed in agreement with the Archbishop of Prague, who is chancellor of both theological faculties.

I. HISTORY.—From the time of its founding the University of Prague was equipped with four faculties, of which each came gradually to elect its dean for one half-year, and jointly the rector, at first for a year, then later for a half-year. On account of a dispute

about an inheritance the faculty of law separated from the rest of the university in April, 1372, and from that time on, with the consent of the king, formed what might be called an independent university under the direction of a dean of its own; the chancellor was the only official whose authority extended to all the faculties; this office was held in perpetuity by the Archbishop of Prague. The list of matriculations from 1372 to 1418 of the faculty of law is still in existence. The lectures were held in the colleges, of which the oldest was the Carolinum. The chapel of the Carolinum still stands and serves as the chapel of the university for the ceremony of giving degrees. Theological instruction was given in the Carolinum and in the monasteries. For the administration of its affairs the university was divided into four "nations", according to the native land of the teachers and students, namely: the Bohemian, including Bohemians, Moravians, southern Slavs, and Hungarians; the Bavarian, including Austrians, Swabians, natives of Franconia and of the Rhine provinces; the Polish, including Silesians, Poles, Russians; the Saxon, including inhabitants of the Margravate of Meissen, Thuringia, Upper and Lower Saxony, Denmark, and Sweden. Each nation had a vote in all deliberations regarding the affairs of the university. This was changed in 1409.

Although in 1403 the university had forbidden its members to follow the teachings of Wyclif, yet his doctrine constantly gained adherents in the Bohemian nation, the most conspicuous being the magister, Jerome of Prague, and John Hus. The latter had translated Wyclif's "Trialogue" into Czech. In 1401-02 Hus had been dean of the faculty of arts, in 1402-03 rector of the university; he had also been an exceedingly popular preacher at the Bethlehem chapel. The majority of the other three nations of the university had declared themselves, together with the Archbishop of Prague, on the side of Gregory XII, to whom King Wenceslaus IV was opposed, and Hus knew how to make use of the king's displeasure at this to obtain from him what is called the "Kuttenberg Decree" of 18 January, 1409. This gave the Bohemian nation three votes in all the affairs of the university and only one vote to all the other nations together; the result of this decree was the emigration of the German professors and students to Leipzig in May, 1409. In 1408 the university had about 200 doctors and magisters, 500 bachelors, and 30,000 students; it now lost a large part of this number, accounts of the loss varying from 5000 to 20,000 including 46 professors. This was the beginning of the decline of the university, from now on a national Bohemian institution, which sank to a very low status. For the faithfulness of Hus's opponents led to a far-reaching division between the theological and the secular faculties, as the latter held firmly to his teachings even after he was burnt by the Council of Constance (1414). The faculty of arts became a centre of the Hussite movement, and the chief doctrinal authority of the Utraquists.

On account of the part taken by the university in ecclesiastico-political affairs, its position as a centre of learning suffered. No degrees were given in the years 1417-30; at times there were only eight or nine professors, as in 1419 the faculties of theology and law disappeared, and only the faculty of arts remained in existence. There were also very few students, for many were unwilling to study under the Calixtine faculties and therefore went into foreign countries. The holdings of the university were taken by the Emperor Sigismund as his personal property. Under the impulse of Humanism some progress was made by the philosophical faculty when the Emperor Rudolf II (1612) took up his residence in Prague, but it did not last long. The only thing to the credit of the university was what it did in directing the school

system of the country. In the meantime the Emperor Ferdinand I had called the Jesuits to Prague, in 1556, and these had opened an academy near St. Clement's, the imperial letter of foundation being dated 1562. This academy comprised a *gymnasium* of six classes as well as an institute for teaching theology and philosophy arranged according to the "Plan of Study" (*Ratio studiorum*) of the Society. At first there was only one teacher for each of the two departments of theology and philosophy. In addition, a large college was built near St. Clement's, which on this account was called the Clementina, or, after its founder, the Ferdinanda. The right of giving degrees, which it received from the emperor in 1562, was sharply contested by the old university, the Carolina.

After the battle of the White Mountain, the Jesuits, who had been expelled in the years 1618-21, came to have a predominant influence over the emperor in matters concerning instruction on account of their "Plan of study", and the great work they did for Catholicism. An imperial decree of 19 September, 1622, gave them the supreme control of the entire school system of Bohemia, Moravia, and Silesia. In November of the same year, after the resignation of the remaining four professors, they were also given control of the Carolina together with nine colleges, and all the rights and revenues of these, so that whoever was rector of the Jesuit college was the future rector of the Carolo-Ferdinanda. The right of giving degrees, of holding the chancellorship, and of appointing the secular professors was also granted to the Jesuits. Cardinal Ernst, Count von Harrach, who opposed this union of the university with another institution and the withdrawal of the archiepiscopal right to the chancellorship, prevented the drawing-up of the imperial Golden Bull for the confirmation of these grants. He also founded an archiepiscopal seminary of his own, the Collegium Adalbertinum, in order to secure his influence over the students in training for the priesthood. In 1638 Ferdinand III limited the monopoly of teaching enjoyed by the Jesuits by taking from them the rights, properties, and archives of the Carolina, the faculties of law and medicine, and making these once more independent under an imperial protector. During the last year of the Thirty Years' War the Karls Bridge of Prague was courageously defended against the Swedes by the students of the Carolina and Clementina under the leadership of the Jesuit Father George Plachý. After this war the university received its permanent constitution and by a formal ceremony (4 March, 1654) the Carolo-Ferdinanda was again united and placed under a chancellor, the Archbishop of Prague, and an imperial superintendent. The Jesuits retained all the professorships in the philosophical and theological faculties up to 1757, when a Dominican and an Augustinian were also appointed to give theological instruction. In the two secular faculties the number of lay professors increased after the abolition, in 1612, of the obligatory celibacy of the professors. The secular professors were appointed by the emperor, the Jesuit professors were merely presented to him. They held closely to the *Ratio studiorum* of the Society and, in regard to discipline and jurisdiction, they were entirely their own masters. The theological faculty had four regular professorships; that of law, four to six; the philosophical, three to five; the medical, five.

The dilapidated Carolinum was rebuilt in 1718 by Max Kanka at the expense of the State. The university was strictly Catholic: the profession of faith that had to be made on receiving a degree before the chancellor, the Archbishop of Prague, excluded non-Catholics from the professorships; the rector granted the degrees for the ecclesiastical chancellor (*pro cancellario*). The laws of the university prescribed

that the whole teaching corps should receive Communion on Maundy Thursday, and (after 1602) should take part as a body in the Corpus Christi procession. From 1650 those who received degrees took an oath to maintain the Immaculate Conception of the Blessed Virgin as long as the Church did not decide against it, and this oath was annually renewed on 8 December by all the *cives academici*. Such, on the whole, was the status which continued until the bureaucratic reform of the universities of Austria in 1752 and 1754. This reform deprived the universities of many of their corporate rights, and rectors appointed by the State were placed at the head of the faculties; as neither the rectors nor the deans so appointed were professors, the Senate was little more than an ornamental body. Matters remained thus until 1849. A great change was brought about in the entire school system of Austria by the suppression of the Jesuits in 1773: secular priests now received positions in the theological faculty, and laymen were appointed to the philosophical faculty. In 1781 the prevailing Josephinism opened academic offices to non-Catholics, and this was followed, in 1785, by the appointment of the first Protestant as professor in the philosophical faculty; in 1781 Jews were permitted to study at the university, and in 1790 they were allowed to receive degrees. The *juramentum de Immaculata Conceptione* and the profession of faith on receiving a degree were dropped in 1782. The new regulations concerning studies (1784) increased the number of professorships and teaching positions in all the faculties; German was made the language of instruction, only pastoral theology and obstetrics were taught in Czech. In 1784 the professors dropped the dress peculiar to the university, which has been retained to the present only by the five proctors, the upper proctor and the proctors for the four faculties. The university was completely under the guardianship of the state, which prescribed the text-books, themes for disputation, semi-annual examinations and fees; in making all these changes, practical training was kept in view. It was not until the revolutionary year of 1848 in which the students of the University of Prague took up arms that a radical change was made.

The "regulation respecting study" of 1 October, 1850, is based upon freedom of teaching and learning. By this law and that "concerning the organization of academic boards of control" the early autonomy of the university with its independent election of rectors and deans was restored. The religious limitations upon academic degrees and positions were to be entirely removed; although as late as 1863 a Protestant elected dean of the philosophical faculty failed of confirmation by the State. Since that time the election of non-Catholics as deans and rectors has been of common occurrence. Jews, also, have held the office of dean, but not, so far, that of rector, two who were elected having declined the position. Great difficulties have arisen from the national conditions. One indication of the constitutional tendency was a constant development of the national and political consciousness of the Czech majority of the Bohemian people. The university recognized this to a limited degree by founding parallel Czech professorships. Thus, in 1863, out of 187 lecture courses 22 were in Czech; the number was increased but even this did not satisfy the Czechs. Consequently, after long negotiations, the Carolo-Ferdinanda was divided into a German and a Bohemian Karl-Ferdinand University, by the law of 28 February, 1882. The academic authorities and institutions of each section are entirely independent of the other section; only the *aula* in the Carolinum and the university library are in common. The separation came into effect in the winter semester of 1882-83, but it did not include the theological faculty.

where lectures are generally given in Latin, on account of the opposition of Cardinal Schwarzenburg. Under Schwarzenburg's successor, Cardinal Count Schönborn, this faculty was also divided in the winter semester of 1891-2, while the archiepiscopal seminary for priests remained mixed in nationality. The sum of 93,000 kronen is required for the maintenance of the 150 students of this seminary—i. e. about 620 kronen apiece (a krone is twenty cents). Of this amount 32,043 kronen come from the revenues of the seminary; the rest is granted by the State. The separation and the constantly increasing needs of the work of teaching make new buildings necessary. Two new university buildings to replace the inadequate Carolinum are in course of construction.

II. PRESENT CONDITION.—In the winter semester of 1909-10 the German Karl-Ferdinand University had 1778 students; these were divided into: 58 theological students, for both the secular priesthood and religious orders; 755 law students; 376 medical; 589 philosophical. Among the students were about 80 women. The professors were divided as follows: theology, 7 regular professors, 1 assistant professor, 1 docent; law, 12 regular professors, 2 assistant professors, 4 docents; medicine, 15 regular professors, 19 assistant, 30 docents; philosophy, 30 regular professors, 8 assistant, 19 docents, 7 lecturers. The budget for the year (not including building expenses) was: 1,612,246 kronen (\$322,450) for regular expenses, 94,534 kronen for extraordinary expenses. The student associations, copied from those in the German Empire, are highly developed. The principal ones are: the "Reading and Debating Club of the German Students", founded in 1848, with about 500 members; the "Germania", founded in 1892, with 600 members (both Liberal associations); the Catholic association, "Academia", founded in 1909, with over a hundred members. In the face of over twenty student corps which have colours of their own and favour duelling, the three Catholic corps with about a hundred active members have a difficult position; yet they continually increase in number. In aid of the students there is a German students' home with a hundred rooms and a students' commons. The Bohemian Karl-Ferdinand University in the winter semester of 1909-10 included 4319 students; of these 131 were theological students belonging both to the secular and regular clergy; 1962 law students; 687 medical; 1539 philosophical; 256 students were women. The professors were divided as follows: theological faculty, 8 regular professors, 2 docents; law, 12 regular, 7 assistant professors, 12 docents; medicine, 16 regular professors, 22 assistant, 24 docents; philosophy, 29 regular, 16 assistant, 35 docents, 11 lecturers. The annual budget amounts to 1,763,790 kronen (\$352,758) for regular expenditures, and 117,760 kronen for extraordinary expenditures, without including building expenses. The theological faculty is temporarily housed in a private residence. The "Academic Reading Society" (Akademický čtenářský spolek) is Liberal in religion, the "Svaz česko-slovanas-kého studentstva" is more radical still. In comparison with these the Catholic associations are comparatively weak. They are: "Družstvo Arnošta z Pardubie" (100 to 200 members), "Česka akademická Liga", and the Slavonic "Dan". In addition to the Hlaska house of studies for students, there is a Catholic home for students founded by Ernst von Pardubitz. The library common to both universities, and to which the public is also admitted, contains 375,630 volumes; among these are 3921 manuscripts, and 1523 early printed books. The expenses of the library for 1910 were 178,509 kronen (\$35,702).

Prato. See PISTOIA AND PRATO, DIOCESE OF.

Praxeas, an early anti-Montanist, is known to us only by Tertullian's book "Adversus Praxean". His name in the list of heresies appended to the "De Præscriptionibus" of that writer (an anonymous epitome of the lost "Syntagma" of Hippolytus) is a correction made by some ancient *diorthotes* for Noetus. Praxeas was an Asiatic, and was inflated with pride (says Tertullian) as a confessor of the Faith because he had been for a short time in prison. He was well received at Rome (c. 190-98) by the pope (Victor, or possibly Zephyrinus). The latter pope had decided to acknowledge the prophetic gifts of Montanus, Prisca, and Maximilla (if we may believe Tertullian). The intention had been sufficiently public to bring peace to the Churches of Asia and Phrygia—so much depended on the papal sanction; but Praxeas prevailed upon the pope to recall his letter. He came to Carthage before Tertullian had renounced the Catholic communion (c. 206-8). He taught Monarchian doctrine there, or at least doctrine which Tertullian regarded as Monarchian: "Patrem cruci fixit; Paraclitum fugavit"—"Having driven out the Paraclete [Montanus], he now crucified the Father". He was refuted, evidently by Tertullian himself, and gave an explanation or recantation in writing, which, when Tertullian wrote several years afterwards, was still in the hands of the authorities of the Carthaginian Church, the "carnal", as he affects to call them. When Tertullian wrote he himself was no longer in the Church; Monarchianism had sprung up again, but he does not mention its leaders at Rome, and directs his whole argument against his old enemy Praxeas. But the arguments which he refutes are doubtless those of Epigonus and Cleomenes. There is little reason for thinking that Praxeas was a heresiarch, and less for identifying him with Noetus, or one of his disciples. He was very likely merely an adversary of the Montanists who used some quasi-Monarchian expressions when at Carthage, but afterwards withdrew them when he saw they might be misunderstood. On the identification by Hageman of Praxeas with Callistus, see MONARCHIANS.

For bibliography see MONARCHIANS; also D'ALÈS, *La théologie de Tertullien* (Paris, 1908).

JOHN CHAPMAN.

Praxedes and Pudentiana, martyrs of an unknown era. The seventh-century itineraries to the graves of the Roman martyrs mention in the catacomb of Priscilla two female martyrs called Potentiana (Potenciana) and Praxedis (Praxidis). They occupied adjoining graves in this catacomb (De Rossi, "Roma sott.", I, 176-7). Of the various MSS. of the "Martyrologium Hieronymianum" only the Echternach Codex (Cod. Eptern.) gives the name of St. Praxedes on 21 July ("Martyrol. Hieronym.", ed. De Rossi-Duchesne, 94), but it looks like a later addition, and not as if it came from the fourth-century Roman Martyrology. St. Potentiana's name is found under 19 May in the Martyrology of Reichenau. Praxedes and Pudentiana were venerated as martyrs at Rome. Later legends connect them with the founder of the old title-church of Rome, "titulus Pudentis", called also the "ecclesia Pudentiana". Legend makes Pudens a pupil of St. Peter, and Praxedes and Potentiana, his daughters. Later Potentiana became customarily known as "Pudentiana", probably because the "ecclesia Pudentiana" was designated as "eccl. sanctæ Pudentianæ" and Pudentiana was identified with Potentiana. The two female figures offering their crowns to Christ in the mosaic of the apse in St.

Pudentiana are probably Potentiana and Praxedes. The veneration of these martyrs therefore was in the fourth century connected in a particular manner with the "Titulus Pudensis". About that time a new church, "titulus Praxedis", was built near Santa Maria Maggiore, and the veneration of St. Praxedes was now especially connected with it. When Paschal I (817-824) rebuilt the church in its present form he translated to it the bones of Sts. Praxedes, Potentiana, and other martyrs. St. Pudentiana's feast is observed on 19 May, St. Praxedes' on 21 July.

Quartalschrift*, XIX (1905), 169 sqq.; DE ROSSI, *Mosaici delle chiese di Roma* (Rome, 1899), plate X (Santa Pudenziana), plate XXV (Santa Prassede); MARUCCHI, *Basiliques et églises de Rome* (Rome, 1909), 323 sqq., 364 sqq.

J. P. KIRSCH.

Pray, GEORGE, abbot, canon, librarian of the University library of Buda, and important Hungarian historian, b. at Érsekújvár, 11 Sept., 1723; d. in Pesth, 23 Sept., 1801. His family came from the Tyrol. He studied in Pozsony, entered the Society of Jesus in 1745, spent two years in the Jesuit college (St. Ann's) in Vienna, and completed his higher studies at Nagy-Szombat. He taught at Nagy-Várad, Trencsén, Nagy-Szombat, and Pozsony. In 1754 he was ordained and continued teaching in Rozsnyó and in the *Theresianum* at Vienna, where he was professor of political science and, at the same time, tutor to the Princes of Salm. He was professor in Győr (1758), Nagy-Szombat (1759), and Buda (1760), where, among other subjects, he lectured on moral theology. After the suppression of the Jesuits (1773) he went to the Archdiocese of Gran, and Maria Theresa appointed him imperial historiographer, with a yearly income of 400 florins. When the University of Nagy-Szombat was transferred to Pesth (1777), Pray was given charge of the library; he resigned this position in 1780, but resumed it in 1784. During this year he surrendered his manuscripts and collection of documents to the university library for a life annuity of 400 florins. He became canon in Grosswardein (1790), and was sent by the chapter as its representative to the Hungarian Reichstag. Later he became Abbot of Tormowa. His literary activity embraced the history of Hungary, especially the earlier centuries, the history of the Catholic Church in Hungary, and editing the sources of Hungarian history. He was the first to draw attention to the oldest coherent text in the Hungarian language, "Oratio funebris", dating probably from 1199, which was called after him "The Pray-codex". Among his works may be mentioned: "Annales veteres Hunnorum, Avarorum et Hungarorum, 210 ad 997" (Vienna, 1761); "Annales regum Hungariæ, 997-1564" (5 vols., Vienna, 1763-70); "Vita S. Elisabethæ" (Vienna, 1770); "Specimen Hierarchiæ Hungariæ" (2 vols., Presburg, 1776-9).

SZINNYEI in *Magyar írók élete és munkái* (Life and works of Hungarian writers), XI, where the bibliography of his works and matter concerning him are collected.

A. ÁLDÁSY.

Prayer, APOSTLESHIP OF. See APOSTLESHIP OF PRAYER.

Prayer (Gr. *εὐχεσθαι*, Lat. *precari*, Fr. *prier*, to plead, to beg, to ask earnestly), an act of the virtue of religion which consists in asking proper gifts or graces from God. In a more general sense it is the application of the mind to Divine things, not merely to acquire a knowledge of them but to make use of such knowledge as a means of union with God. This may be done by acts of praise and thanksgiving, but petition is the principal act of prayer. The words used to express it in Scripture are: to call upon (Gen., iv, 26); to intercede (Job, xxii, 10); to meditate (Is., liii, 10); to consult (I Kings, xxviii, 6); to beseech (Ex., xxxii, 11); and, very commonly, to cry out to. The Fathers speak of it as the elevation of the mind

to God with a view to asking proper things from Him (St. John Damascene, "De fide", III, xxiv, in P. G., XCIV, 1090); communing and conversing with God (St. Gregory of Nyssa, "De oratione dom.", in P. G., XLIV, 1125); talking with God (St. John Chrysostom, "Hom. xxx in Gen.", n. 5, in P. G., LIII, 280). It is therefore the expression of our desires to God whether for ourselves or others. This expression is not intended to instruct or direct God what to do, but to appeal to His goodness for the things we need; and the appeal is necessary, not because He is ignorant of our needs or sentiments, but to give definite form to our desires, to concentrate our whole attention on what we have to recommend to Him, to help us appreciate our close personal relation with Him. The expression need not be external or vocal; internal or mental is sufficient.

By prayer we acknowledge God's power and goodness, our own neediness and dependence. It is therefore an act of the virtue of religion implying the deepest reverence for God and habituating us to look to Him for everything, not merely because the thing asked be good in itself, or advantageous to us, but chiefly because we wish it as a gift of God, and not otherwise, no matter how good or desirable it may seem to us. Prayer presupposes faith in God and hope in His goodness. By both, God, to whom we pray, moves us to prayer. Our knowledge of God by the light of natural reason also inspires us to look to Him for help, but such prayer lacks supernatural inspiration, and though it may avail to keep us from losing our natural knowledge of God and trust in Him, or, to some extent, from offending Him, it cannot positively dispose us to receive His graces.

Objects of Prayer.—Like every act that makes for salvation, grace is required not only to dispose us to pray, but also to aid us in determining what to pray for. In this "the spirit helpeth our infirmity. For we know not what we should pray for as we ought; but the Spirit himself asketh for us with unspeakable groanings" (Rom., viii, 26). For certain objects we are always sure we should pray, such as our salvation and the general means to it, resistance to temptation, practice of virtue, final perseverance; but constantly we need light and the guidance of the Spirit to know the special means that will most help us in any particular need. That there may be no possibility of misjudgment on our part in such an essential obligation, Christ has taught us what we should ask for in prayer and also in what order we should ask it. In response to the request of His disciples to teach them how to pray, He repeated the prayer commonly spoken of as the Lord's Prayer (q. v.), from which it appears that above all we are to pray that God may be glorified, and that for this purpose men may be worthy citizens of His kingdom, living in conformity with His will. Indeed, this conformity is implied in every prayer: we should ask for nothing unless it be strictly in accordance with Divine Providence in our regard. So much for the spiritual objects of our prayer. We are to ask also for temporal things, our daily bread, and all that it implies, health, strength, and other worldly or temporal goods, not material or corporal only, but mental and moral, every accomplishment that may be a means of serving God and our fellow-men. Finally, there are the evils which we should pray to escape, the penalty of our sins, the dangers of temptation, and every manner of physical or spiritual affliction, so far as these might impede us in God's service.

To whom may we pray.—Although God the Father is mentioned in this prayer as the one to whom we are to pray, it is not out of place to address our prayers to the other Divine persons. The special appeal to one does not exclude the others. More commonly the Father is addressed in the beginning of the prayers of the Church, though they close with

the invocation, "Through Our Lord Jesus Christ Thy Son who with Thee liveth and reigneth in the unity of the Holy Ghost, world without end". If the prayer be addressed to God the Son, the conclusion is: "Who livest and reignest with God the Father in the unity of the Holy Ghost, God, world without end"; or, "Who with Thee liveth and reigneth in the unity, etc.". Prayer may be addressed to Christ as Man, because He is a Divine Person, not however to His human nature as such, precisely because prayer must always be addressed to a person, never to something impersonal or in the abstract. An appeal to anything impersonal, as for instance to the Heart, the Wounds, the Cross of Christ, must be taken figuratively as intended for Christ Himself.

Who can pray.—As He has promised to intercede for us (John, xiv, 16), and is said to do so (Rom., viii, 34; Heb., vii, 25), we may ask His intercession, though this is not customary in public worship. He prays in virtue of His own merits; the saints intercede for us in virtue of His merits, not their own. Consequently when we pray to them, it is to ask for their intercession in our behalf, not to expect that they can bestow gifts on us of their own power, or obtain them in virtue of their own merit. Even the souls in purgatory, according to the common opinion of theologians, pray to God to move the faithful to offer prayers, sacrifices, and expiatory works for them. They also pray for themselves and for souls still on earth. The fact that Christ knows the future, or that the saints may know many future things, does not prevent them from praying. As they foresee the future, so also they foresee how its happenings may be influenced by their prayers, and they at least by prayer do all in their power to bring about what is best, though those for whom they pray may not dispose themselves for the blessings thus invoked. The just can pray, and sinners also. The opinion of Quesnel that the prayer of the sinner adds to his sin was condemned by Clement XI (Denzinger, 10 ed., n. 1409). Though there is no supernatural merit in the sinner's prayer, it may be heard, and indeed he is obliged to make it just as before he sinned. No matter how hardened he may become in sin, he needs and is bound to pray to be delivered from it and from the temptations which beset him. His prayer could offend God only if it were hypocritical, or presumptuous, as if he should ask God to suffer him to continue in his evil course. It goes without saying that in hell prayer is impossible; neither devils nor lost souls can pray, or be the object of prayer.

For whom we may pray.—For the blessed prayers may be offered not with the hope of increasing their beatitude, but that their glory may be better esteemed and their deeds imitated. In praying for one another we assume that God will bestow His favours in consideration of those who pray. In virtue of the solidarity of the Church, that is, of the close relations of the faithful as members of the mystical Body of Christ, any one may benefit by the good deeds, and especially by the prayers of the others as if participating in them. This is the ground of St. Paul's desire that supplications, prayers, intercessions, and thanksgivings be made for all men (Tim., ii, 1), for all, without exception, in high or low station, for the just, for sinners, for infidels; for the dead as well as for the living; for enemies as well as for friends. (See COMMUNION OF SAINTS.)

Effects of Prayer.—In hearing our prayer God does not change His will or action in our regard, but simply puts into effect what He had eternally decreed in view of our prayer. This He may do directly without the intervention of any secondary cause as when He imparts to us some supernatural gift, such as actual grace, or indirectly, when He bestows some natural gift. In this latter case He directs by His Providence the natural causes which contribute to the

effect desired, whether they be moral or free agents, such as men; or some moral and others not, but physical and not free; or, again, when none of them is free. Finally, by miraculous intervention, and without employing any of these causes, He can produce the effect prayed for.

The use or habit of prayer redounds to our advantage in many ways. Besides obtaining the gifts and graces we need, the very process elevates our mind and heart to a knowledge and love of Divine things, greater confidence in God, and other precious sentiments. Indeed, so numerous and so helpful are these effects of prayer that they compensate us, even when the special object of our prayer is not granted. Often they are of far greater benefit than what we ask for. Nothing that we might obtain in answer to our prayer could exceed in value the familiar converse with God in which prayer consists. In addition to these effects of prayer, we may (*de congruo*) merit by its restoration to grace, if we are in sin; new inspirations of grace, increase of sanctifying grace, and satisfy for the temporal punishment due to sin. Signal as all these benefits are, they are only incidental to the proper effect of prayer due to its impetratory power based on the infallible promise of God, "Ask, and it shall be given you; seek, and you shall find: knock, and it shall be opened to you" (Matt., vii, 7); "Therefore I say unto you, all things whatsoever you ask when ye pray, believe that you shall receive" (Mark, xi, 24—see also Luke, xi, 11; John, xvi, 24, as well as innumerable assurances to this effect in the Old Testament).

Conditions of Prayer.—Absolute though Christ's assurances in regard to prayer would seem to be, they do not exclude certain conditions on which the efficacy of prayer depends. In the first place, its object must be worthy of God and good for the one who prays, spiritually or temporally. This condition is always implied in the prayer of one who is resigned to God's will, ready to accept any spiritual favour God may be pleased to grant, and desirous of temporal ones only in so far as they may help to serve God. Next, faith is needed, not only the general belief that God is capable of answering prayer or that it is a powerful means of obtaining His favour, but also the implicit trust in God's fidelity to His promise to hear a prayer in some particular instance. This trust implies a special act of faith and hope that if our request be for our good, God will grant it, or something else equivalent or better, which in His Wisdom He deems best for us. To be efficacious prayer should be humble. To ask as if one had a binding claim on God's goodness, or title of whatever colour to obtain some favour, would not be prayer but demand. The parable of the Pharisee and the Publican illustrates this very clearly, and there are innumerable testimonies in Scripture to the power of humility in prayer. "A contrite and humbled heart, O God, thou wilt not despise" (Ps. l, 19). "The prayer of him that humbleth himself shall pierce the clouds" (Eccl., xxxv, 21). Without sacrifice of humility we may and should try to be sure that our conscience is good, and that there is no defect in our conduct inconsistent with prayer; indeed, we may even appeal to our merits so far as they recommend us to God, provided always that the principal motives of one's confidence are God's goodness and the merits of Christ. Sincerity is another necessary quality of prayer. It would be idle to ask favour without doing all that may be in our power to obtain it; to beg for it without really wishing for it; or, at the same time that one prays, to do anything inconsistent with the prayer. Earnestness or fervour is another such quality, precluding all lukewarm or half-hearted petitions. To be resigned to God's will in prayer does not imply that one should be indifferent in the sense that one

does not care whether one be heard or not, or should as lief not receive as receive; on the contrary, true resignation to God's will is possible only after we have desired and earnestly expressed our desire in prayer for such things as seem needful to do God's will. This earnestness is the element which makes the persevering prayer so well described in such parables as the Friend at Midnight (Luke, xi, 5-8), or, the Widow and the Unjust Judge (Luke, xviii, 2-5), and which ultimately obtains the precious gift of perseverance in grace.

Attention in Prayer.—Finally, attention is of the very essence of prayer. As an expression of sentiment emanating from our intellectual faculties prayer requires their application, i. e. attention. As soon as this attention ceases, prayer ceases. To begin praying and allow the mind to be wholly diverted or distracted to some other occupation or thought necessarily terminates the prayer, which is resumed only when the mind is withdrawn from the object of distraction. To admit distraction is wrong when one is obliged to apply oneself to prayer: when there is no such obligation, one is at liberty to pass from the subject of prayer, provided it be done without irreverence, to any other proper subject. This is all very simple when applied to mental prayer; but does vocal prayer require the same attention as mental,—in other words, when praying vocally must one attend to the meaning of words, and if one should cease to do so, would one by that very fact cease to pray? Vocal prayer differs from mental precisely in this that mental prayer is not possible without attention to the thoughts that are conceived and expressed whether internally or externally. Neither is it possible to pray without attending to thought and words when we attempt to express our sentiments in our own words; whereas all that is needed for vocal prayer proper is the repetition of certain words, usually a set form with the intention of using them in prayer. So long as this intention lasts, i. e. so long as nothing is done to terminate it or wholly inconsistent with it, so long as one continues to repeat the form of prayer, with proper reverence in disposition and outward manner, with only this general purpose of praying according to the prescribed form, so long one continues to pray and no thought or external act can be considered a distraction unless it terminate our intention, or by levity or irreverence be wholly inconsistent with the prayer. Thus one may pray in the crowded streets where it is impossible to avoid sights and sounds and consequent imaginations and thoughts.

Provided one repeats the words of the prayer and avoids wilful distractions of mind to things in no way pertaining to prayer, one may through mental infirmity or inadvertence admit numerous thoughts not connected with the subject of the prayer, without irreverence. It is true, this amount of attention does not enable one to derive from prayer the full spiritual advantage it should bring; nay, to be satisfied with it as a rule would result in admitting distractions quite freely and wrongfully. For this reason it is advisable not only to keep the mind bent on praying but also to think of the purport of the prayer, and as far as possible to think of the meaning of some at least of the sentiments or expressions of the prayer. As a means of cultivating the habit, it is recommended, notably in the spiritual exercises of St. Ignatius, often to recite certain familiar prayers, the Lord's Prayer, the Angelical Salutation, the Creed, the Confiteor, slowly enough to admit the interval of a breath between the principal words or sentences, so as to have time to think of their meaning, and to feel in one's heart the appropriate emotions. Another practice strongly recommended by the same author is to take each sentence of these prayers as a subject of reflection, not delaying too long on any one of them un-

less one finds in it some suggestion or helpful thought or sentiment, but then stopping to reflect as long as one finds proper food for thought or emotion, and, when one has dwelt sufficiently on any passage, finishing the prayer without further deliberate reflection (see DISTRACTION).

Necessity of Prayer.—Prayer is necessary for salvation. It is a distinct precept of Christ in the Gospels (Matt., vi, 9; vii, 7; Luke, xi, 9; John, xvi, 26; Col., iv, 2; Rom., xii, 12; I Pet., iv, 7). The precept imposes on us only what is really necessary as a means of salvation. Without prayer we cannot resist temptation, nor obtain God's grace, nor grow and persevere in it. This necessity is incumbent on all according to their different states in life, especially on those who by virtue of their office, of priesthood, for instance, or other special religious obligations, should in a special manner pray for their own welfare and for others. The obligation to pray is incumbent on us at all times. "And he spoke also a parable, to them that we ought always to pray, and not to faint" (Luke, xviii, 1); but it is especially pressing when we are in great need of prayer, when without it we cannot overcome some obstacle or perform some obligation; when, to fulfil various obligations of charity, we should pray for others; and when it is specially implied in some obligation imposed by the Church, such as attendance at Mass, and the observance of Sundays and feast-days. This is true of vocal prayer, and as regards mental prayer, or meditation, this, too, is necessary so far as we may need to apply our mind to the study of Divine things in order to acquire a knowledge of the truths necessary for salvation.

The obligation to pray is incumbent on us at all times, not that prayer should be our sole occupation, as the Euchites, or Messalians (q. v.), and similar heretical sects professed to believe. The texts of Scripture bidding us to pray without ceasing mean that we must pray whenever it is necessary, as it so frequently is necessary; that we must continue to pray until we shall have obtained what we need. Some writers speak of a virtuous life as an uninterrupted prayer, and appeal to the adage "to toil is to pray" (*laborare est orare*). This does not mean that virtue or labour replaces the duty of prayer, since it is not possible either to practise virtue or to labour properly without frequent use of prayer. The Wyclifites and Waldenses, according to Suarez, advocated what they called vital prayer, consisting in good works, to the exclusion even of all vocal prayer except the Our Father. For this reason Suarez does not approve of the expression, though St. Francis de Sales uses it to mean prayer reinforced by work, or rather work which is inspired by prayer. The practice of the Church, devoutly followed by the faithful, is to begin and end the day with prayer; and though morning and evening prayer is not of strict obligation, the practice of it so well satisfies our sense of the need of prayer that neglect of it, especially for a long time, is regarded as more or less sinful, according to the cause of the neglect, which is commonly some form of sloth.

Vocal Prayer.—Prayer may be classified as vocal or mental, private or public. In vocal prayer some outward action, usually verbal expression, accompanies the internal act implied in every form of prayer. This external action not only helps to keep us attentive to the prayer, but it also adds to its intensity. Examples of it occur in the prayer of the Israelites in captivity (Ex., ii, 23); again after their idolatry among the Chanaanites (Judges, iii, 9); the Lord's Prayer (Matt., vi, 9); Christ's own prayer after resuscitating Lazarus (John, xi, 41); and the testimonies in Heb., v, 7, and xii, 15, and frequently we are recommended to use hymns, canticles, and other vocal forms of prayer. It has been common in the Church

from the beginning; nor has it ever been denied, except by the Wyclifites and the Quietists. The former objected to it as unnecessary, as God does not need our words to know what goes on in our souls, and prayer being a spiritual act need be performed by the soul alone without the body. The latter regarded all external action in prayer as an untoward disturbance or interference with the passivity of the soul required, in their opinion, to pray properly. It is obvious that prayer must be the action of the entire man, body as well as soul; that God who created both is pleased with the service of both, and that when the two act in unison they help instead of interfering with one another's activities. The Wyclifites objected not only to all external expression of prayer generally, but to vocal prayer in its proper sense, viz. prayer expressed in set form of words, excepting only the Our Father. The use of a variety of such forms is sanctioned by the prayer over the first-fruits (Deut., xxvi, 13). If it be right to use one form, that of the Our Father, why not others also? The Litany, Collective and Eucharistic prayers of the early Church were surely set forms, and the familiar daily prayers, the Our Father, Hail Mary, Apostles' Creed, Confiteor, Acts of Faith, Hope, and Charity, all attest the usage of the Church in this respect and the preference of the faithful for such approved forms to others of their own composition.

Postures in Prayer.—Postures in prayer are also an evidence of the tendency in human nature to express inward sentiment by outward sign. Not only among Jews and Christians, but among pagan peoples also, certain postures were considered appropriate in prayer, as, for instance, standing with arms raised among the Romans. The Orante (see ORANS) indicates the postures favoured by the early Christians, standing with hands extended, as Christ on the Cross, according to Tertullian; or with hands raised towards heaven, with bowed heads, or, for the faithful, with eyes raised towards heaven, and, for catechumens, with eyes bent on the earth; prostration, kneeling, genuflexion (q. v.), and such gestures as striking the breast are all outward signs of the reverence proper for prayer, whether in public or private.

Mental Prayer.—Meditation is a form of mental prayer consisting in the application of the various faculties of the soul, memory, imagination, intellect, and will, to the consideration of some mystery, principle, truth, or fact, with a view to exciting proper spiritual emotions and resolving on some act or course of action regarded as God's will and as a means of union with Him. In some degree or other it has always been practised by God-fearing souls. There is abundant evidence of this in the Old Testament, as, for instance, in Ps. xxxviii, 4; lxii, 7; lxxvi, 13; cxviii throughout; Eccles., xiv, 22; Is., xxvi, 9; lvii, 1; Jer., xii, 11. In the New Testament Christ gave frequent examples of it, and St. Paul often refers to it, as in Eph., vi, 18; Col., iv, 2; I Tim., iv, 15; I Cor., xiv, 15. It has always been practised in the Church. Among others who have recommended it to the faithful are Chrysostom in his two books on prayer, as also in his "Hom. xxx in Gen." and "Hom. vi. in Isaiam"; Cassian in "Conference ix"; St. Jerome in "Epistola 22 ad Eustochium"; St. Basil in his "Homily on St. Julitta, M.", and "In regula breviori", 301; St. Cyprian, "In expositione orationis dominicalis"; St. Ambrose, "De sacramentis", VI, iii; St. Augustine, "Epist. 121 ad Probam", cc. v, vi, vii; Boetius, "De spiritu et anima", xxxii; St. Leo, "Sermo viii de jejuniis"; St. Bernard, "De consecratione", I, vii; St. Thomas, II-II, Q. lxxxiii, a. 2.

The writings of the Fathers themselves and of the great theologians are in large measure the fruit of devout meditation as well as of study of the mys-

teries of religion. There is, however, no trace of methodical meditation before the fifteenth century. Prior to that time, even in monasteries, no regulation seems to have existed for the choice or arrangement of subject, the order, method, and time of the consideration. From the beginning, before the middle of the twelfth century, the Carthusians had times set apart for mental prayer, as appears from Guigo's "Consuetudinary", but no further regulation. About the beginning of the sixteenth century one of the Brothers of the Common Life, Jean Mombaer of Brussels, issued a series of subjects or points for meditation. The monastic rules generally prescribed times for common prayer, usually the recitation of the Office, leaving it to the individual to ponder as he might on one or other of the texts. Early in the sixteenth century the Dominican chapter of Milan prescribed mental prayer for half an hour morning and evening. Among the Franciscans there is record of methodical mental prayer about the middle of that century. Among the Carmelites there was no regulation for it until Saint Theresa introduced it for two hours daily. Although Saint Ignatius reduced meditation to such a definite method in his spiritual exercises, it was not made part of his rule until thirty years after the formation of the Society. His method and that of St. Sulpice have helped to spread the habit of meditating beyond the cloister among the faithful everywhere.

Methods of Meditation.—In the method of St. Ignatius the subject of the meditation is chosen beforehand, usually the previous evening. It may be any truth or fact whatever concerning God or the human soul, God's existence, His attributes, such as justice, mercy, love, wisdom, His law, providence, revelation, creation and its purpose, sin and its penalties, death, judgment, hell, redemption, etc. The precise aspect of the subject should be determined very definitely, otherwise its consideration will be general or superficial and of no practical benefit. As far as possible its application to one's spiritual needs should be foreseen, and to work up interest in it, as one retires and rises, one should recall it to mind so as to make it a sleeping and a waking thought. When ready for meditation, a few moments should be given to recollecting what we are about to do so as to begin with quiet of mind and deeply impressed with the sacredness of prayer. A brief act of adoration of God naturally follows, with a petition that our intention to honour Him in prayer may be sincere and persevering, and that every faculty and act, interior and exterior, may contribute to His service and praise. The subject of the meditation is then recalled to mind, and in order to fix the attention, the imagination is here employed to construct some scene appropriate to the subject, e. g. the Garden of Paradise, if the meditation be on Creation, or the Fall of Man; the Valley of Jehosaphat, for the Last Judgment; or, for Hell, the bottomless and boundless pit of fire. This is called the composition of place, and even when the subject of meditation has no apparent material associations, the imagination can always devise some scene or sensible image that will help to fix or recall one's attention and appreciate the spiritual matter under consideration. Thus, when considering sin, especially carnal sin, as enslaving the soul, the Book of Wisdom, ix, 15, suggests the similarity of the body to the prison house of the soul: "The corruptible body is a load upon the soul, and the earthly habitation presseth down the mind that museth upon many things."

Quite often this initial step, or prelude as it is called, might occupy one profitably the entire time set apart for meditation; but ordinarily it should be made in a few minutes. A brief petition follows for the special grace one hopes to obtain and then the meditation proper begins. The memory recalls the subject as definitely as possible, one point at a time, repeating

it over if necessary, always as a matter of intimate personal interest, and with a strong act of faith until the intellect naturally apprehends the truth or the import of the fact under consideration, and begins to conceive it as a matter for careful consideration, reasoning about it and studying what it implies for one's welfare. Gradually an intense interest is aroused in these reflections, until, with faith quickening the natural intelligence, one begins to perceive applications of the truth or fact to one's condition and needs and to feel the advantage or necessity of acting upon the conclusions drawn from one's reflections. This is the important moment of meditation. The conviction that we need or should do something in accordance with our consideration begets in us desires or resolutions which we long to accomplish. If we are serious we shall admit of no self-deception either as to the propriety or possibility of such resolutions on our part. No matter what it may cost us to be consistent, we shall adopt them, and the more we appreciate their difficulty and our own weakness or incapacity, the more we shall try to value the motives which prompt us to adopt them, and above all the more we shall pray for grace to be able to carry them out.

If we are in earnest we shall not be satisfied with a superficial process. In the light of the truth we are meditating, our past experience will come to mind and confront us perhaps with memory of failure in previous attempts similar to those we are considering now, or at least with a keen sense of the difficulty to be apprehended, making us more solicitous about the motives animating us and humble in petitioning God's grace. These petitions, as well as all the various emotions that arise from our reflections, find expression in terms of prayer to God which are called colloquies, or conversations with Him. They may occur at any point in the process, whenever our thoughts inspire us to call upon God for our needs, or even for light to perceive and appreciate them and to know the means of obtaining them. This general process is subject to variations according to the character of the matter under consideration. The number of preludes and colloquies may vary, and the time spent in reasoning may be greater or less according to our familiarity with the subject. There is nothing mechanical in the process; indeed, if analysed, it is clearly the natural operation of each faculty and of all in concert. Roothaan, who has prepared the best summary of it, recommends a remote preparation for it, so as to know whether we are properly disposed to enter into meditation, and, after each exercise, a brief review of each part of it in detail to see how far we may have succeeded. It is also strongly advised to select as a means of recalling the leading thought or motive or affection some brief memorandum, preferably couched in the words of some text of Scripture, the "Imitation of Christ", the Fathers of the Church, or of some accredited writer on spiritual things. Meditation made regularly according to this method tends to create an atmosphere or spirit of prayer.

The method in vogue among the Sulpicians and followed by the students in their seminaries is not substantially different from this. According to Chenart, companion of Olier and for a long time director of the Seminary of St. Sulpice, the meditation should consist of three parts: the preparation, the prayer proper, and the conclusion. By way of preparation we should begin with acts of adoration of Almighty God, of self-humiliation, and with fervent petition to be directed by the Holy Spirit in our prayer to know how to make it well and obtain its fruits. The prayer proper consists of considerations and the spiritual emotions or affections that result from such considerations. Whatever the subject of the meditation may be, it should be considered as it

may have been exemplified in the life of Christ, in itself, and in its practical importance for ourselves. The simpler these considerations are the better. A long or intricate course of reasoning is not at all desirable. When some reasoning is needed, it should be simple and always in the light of faith. Speculation, subtlety, curiosity are all out of place. Plain, practical reflections, always with an eye to self-examination, in order to see how well or ill our conduct conforms to the conclusions we derive from such reflections, are by all means to be sought. The affections are the main object of the meditation. These are to have charity as their aim and norm. They should be few, if possible, one only of such simplicity and intensity that it can inspire the soul to act on the conclusion derived from the consideration and resolve to do something definite in the service of God. To seek too many affections only distracts or dissipates the attention of the mind and weakens the resolution of the will. If it be difficult to limit the emotions to one, it is not well to make much effort to do so, but better to devote our energies to deriving the best fruit we can from such as arise naturally and with ease from our mental reflections. As a means of keeping in mind during the day the uppermost thought or motive of the meditation we are advised to cull a spiritual nosegay, as it is quaintly called, with which to refresh the memory from time to time.

Meditation carefully followed forms habits of recalling and reasoning rapidly and with some ease about Divine things in such a manner as to excite pious affections, which become very ardent and which attach us very strongly to God's will. When prayer is made up chiefly of such affections, it is called by Alvarez de Paz, and other writers since his time, affective prayer, to denote that instead of having to labour mentally to admit or grasp a truth, we have grown so familiar with it that almost the mere recollection of it fills us with sentiments of faith, hope, charity; moves us to practise more generously one or other of the moral virtues; inspires us to make some act of self-sacrifice or to attempt some work for the glory of God. When these affections become more simple, that is, less numerous, less varied, and less interrupted or impeded by reasoning or mental attempts to find expression either for considerations or affections, they constitute what is called the prayer of simplicity by Bossuet and those who follow his terminology, of simple attention to one dominant thought or Divine object without reasoning on it, but simply letting it recur at intervals to renew or strengthen the sentiments which keep the soul united to God.

These degrees of prayer are denoted by various terms by writers on spiritual subjects, the prayer of the heart, active recollection, and by the paradoxical phrases, active repose, active quietude, active silence, as opposed to similar passive states; St. Francis de Sales called it the prayer of simple committal to God, not in the sense of doing nothing or of remaining inert in His sight, but doing all we can to control our own restless and aberrant faculties so as to keep them disposed for His action. By whatever name these degrees of prayer may be called, it is important not to confuse them with any of the modes of Quietism (see GUYON, MOLINOS, QUIETISM), as also not to exaggerate their importance, as if they were absolutely different from vocal prayers and meditation, since they are only degrees of ordinary prayer. With more than usual attention to the sentiment of a set form of prayer meditation begins; the practice of meditation develops a habit of centring our affections on Divine things; as this habit is cultivated, distractions are more easily avoided, even such as arise from our own varied and complex thoughts or emotions, until God or any truth or fact relating to Him becomes the simple object of our undisturbed attention, and this atten-

tion is held steadfast by the firm and ardent affection it excites. St. Ignatius and other masters in the art of prayer have provided suggestions for passing from meditation proper to these further degrees of prayer. In the "Spiritual Exercises" the repetition of previous meditations consists in affective prayer, and the exercises of the second week, the contemplations of the life of Christ, are virtually the same as the prayer of simplicity, which is in its last analysis the same as the ordinary practice of contemplation. Other modes of prayer are described under CONTEMPLATION; QUIET, PRAYER OF.

The classification of private and public prayer is made to denote distinction between the prayer of the individual, whether in or out of the presence of others, for his or for others' needs, and all prayer offered officially or liturgically whether in public or in secret, as when a priest recites the Divine Office outside of choir. All the liturgical prayers of the Church are public, as are all the prayers which one in sacred orders offers in his ministerial capacity. These public prayers are usually offered in places set apart for this purpose, in churches or chapels, just as in the Old Law they were offered in the Temple and in the synagogue. Special times are appointed for them: the hours for the various parts of the daily Office, days of rogation or of vigil, seasons of Advent and Lent; and occasions of special need, affliction, thanksgiving, jubilee, on the part of all, or of large numbers of the faithful. (See UNION OF PRAYER.)

JOHN J. WYNNE.

Prayer-Books.—By "prayer-books" usage generally understands a collection of forms of prayer intended for private devotion, and in so far distinct from the "service books" which contain the liturgical formularies used in public worship. In the Church of England, of course, the official liturgy is entitled "The Book of Common Prayer" or more compendiously the "Prayer Book", but this is an exception. Of prayer-books in the sense defined, the early Christian centuries have left us no specimen, neither can we be certain that any such existed. The work sometimes known as "Bishop Serapion's Prayer-book" (Eng. tr. by J. Wordsworth, 1899) and compiled probably by an Egyptian bishop of that name in the fourth century should rather be described as a Pontifical or Euchologium than as a prayer-book, and was certainly not intended for private devotion. On the other hand we do find traces of isolated compositions, sometimes in prose, sometimes in a metrical form which entitles them perhaps to be regarded rather as hymns, which in all probability were not

meant to be used in church, and there is nothing in the nature of things which could render it improbable that individuals may have copied these and other more liturgical prayers into a volume as an aid to piety. Thus one or two prayers or hymns of the third or fourth century have been recovered from buried papyri (see Wessely, "Les plus anciens Monuments du Christianisme", Paris, 1906, pp. 195 and 205). An ostrakon from a Coptic monastery at Dehli-Bahri preserves in Greek what amounts practically to a sixth-century equivalent of the Hail Mary, though this may be liturgical (see Crum, "Coptic Ostraca", 1902, p. 3), while two long prayers formerly attributed to St. Cyprian, but probably of the fifth century, are especially worthy of remark on account of the light they throw upon certain early developments of Christian art (see K. Michel, "Gebete und Bild in frühchristlicher Zeit", 1902, pp. 3-7). But on the whole the Christians in the first centuries probably found that the Psalms sufficed for the needs of private as well as public devotion (cf. Cassian, "De cenob. inst.", II, v, P. L., XLIX, 34; Eusebius, "In Psalm." in P. G., XXIII, 647), and the fact is significant that a large proportion of the surviving books of piety belonging to the early Middle Ages which were copied for private use are simply psalters, to which devotional supplements of various kinds, for example the litanies, the Gloria, Credo, Athanasian Creed etc., were added with increasing frequency.

Some few of these psalter prayer-books have been happily preserved to us, probably on account of their illuminations, ornamentation, or binding, while the plainer copies belonging to less exalted owners have entirely perished. The psalter of the Emperor Lothair (c. 845) is one of the earliest and most famous of these, but there is also a similar manuscript which belonged to Charles the Bald now preserved at Paris and two very fine psalters of St. Gall, one of them known as the "psalterium aureum", the work of the famous scribe Sindram and belonging to the beginning of the tenth century. Similar books of devotion are to be found in English libraries. The ancient psalter in the British Museum (Cotton M.S. Vespas., A. 1), formerly supposed to be one of the books brought by St. Augustine from Rome but really written in England about 700, is probably to be accounted liturgical. It is not a manual for private devotion, although in the eleventh century a number of non-liturgical prayers were added to it. On the other hand, the volume in the same collection, known as King Athelstan's psalter (ninth century), seems to have been intended for a prayer-book, being small in size and supplemented with a number of prayers in a later but tenth-century script. And here be it said that down to the time of the invention of printing, the Psalter, or at least a volume containing psalms and portions of the Office with a supplement of miscellaneous prayers, remained the type of the devotional manuals most favoured by the laity. After King Alfred, at the age of twelve or thirteen (861), as Asser tells us, had learned to read, "he carried about with him everywhere, as we ourselves have often seen, the daily Office (*cursum diurnum*), that is, the celebrations of the hours (*celebrationes horarum*), and next certain psalms and a number of prayers, all collected into one book which he kept as an inseparable companion in his bosom to help him to pray amid all the contingencies of life". Similarly we read in the life of St. Wenceslaus (tenth century) of the dog-eared prayer-book (*codicellum manuale frequentia rugosum*) which he carried about with him while he continuously recited the Psalms and other prayers. These descriptions seem to apply accurately enough to a number of devotional manuals still surviving in manuscript, though often enough the whole Psalter was transcribed and not merely select

portions of the Office. Many of those thus preserved must have been intended for the use of great personages and, like the famous "Utrecht Psalter", for example, in the ninth century, or the psalter of Archbishop Egbert of Trier (d. 993), were elaborately illustrated, and, as in the last case at least, very considerably enlarged by devotional additions. At least five psalters of this kind are still in existence, which seem to have belonged to St. Louis of France, more than one of them being clearly of English workmanship, which in the twelfth and thirteenth centuries was very famous. One of these, now preserved at Leyden, was used by the saint in his boyhood as an elementary reading-book, a fact which brings us very near the origin of the English name "primer". Moreover, to pass from the complete book of psalms to a collection of offices, of which the principal was the Little Office of Our Lady, was the most natural of transitions, and we thus arrive at the manual which is universally recognized as being the great prayer-book of the laity during the close of the Middle Ages (see PRIMER, THE).

The psalter type, however, was not the only form of manual of private devotions which existed in the Carolingian period. Several collections of miscellaneous prayers, often with extracts from the Gospels and more especially the Passion according to the four Evangelists, still survive from the eighth and ninth centuries. The codex known as "the Book of Cerne", written apparently for Bishop Ædeluulf of Lichfield (818-30) and now preserved in the University Library, Cambridge, is one of the most famous of these, and it has recently been rendered accessible, with valuable notes by Mr. Edmund Bishop, in the edition of Dom Kuypers (Cambridge, 1902). The traces of Celtic influences and, as Mr. Bishop points out, of "Spanish symptoms", are very marked in this book, but it is difficult not to admit that such a prayer as the "Lorica" (breastplate), which, while resembling that attributed to St. Patrick, is different from it and ascribed to a certain Loding, partakes in some respects of the nature of an incantation. There are also in the "Book of Cerne" and some similar collections forms of general accusation for confession, embracing almost every imaginable crime, which were probably intended to help the penitent, much as a modern examination of conscience might do. Closely resembling the "Book of Cerne" is the eighth-century Book of Nunnaminster (MS. Harl. 2965). This also contains the Passion according to the four Evangelists and a miscellaneous collection of non-liturgical prayers (many of them connected with the Passion of Christ), and also the "Lorica" of Loding. Irish and Gallican characteristics are much in evidence, in spite of the book coming from Winchester. This is still more the case with Harl. MS. 7053, a fragmentary "book of private devotions written by an Irish lady probably a nun", and with MS. Reg. 2, A. XX., compiled probably at Lindisfarne in the eighth century. In all of them, despite much genuine piety, there is a pronounced tendency to fall occasionally to the level of magical incantations and spells. Even on the Continent these collections of prayers for private use were apt to wear an Irish colouring, as, for example, may be observed in the tenth-century "Libellus Precum" of Fleury (printed by Martène, "De antiq. ecc. ritibus", III, 234), though prayers extracted from the Fathers, e. g. St. Augustine and St. Ephræm, predominated. Alcuin in his "De Psalmorum Usu" and "Officia per Ferias" (P. L., CI, 465-612) also made similar collections. His arrangement of such devotions according to days of the week was especially noteworthy, since it was conspicuously revived by Simon Verepæus and other prayer-book compilers of the sixth century.

The affection for the Psalms, even when dissociated

from any form of Office, was always a conspicuous feature in the early devotional books of the laity; see, for example, the "Liber Oratorum" of Charles the Bald (ninth century, edited at Ingolstadt, 1583), in which, after the example of Alcuin, selections of the Psalms are made for various spiritual needs, e. g. "Psalmi pro tribulatione et tentatione carnis", "Pro gratiarum actione", etc. When, however, some few centuries later, it had become the custom in most of the monastic orders to supplement the Divine Office with various "cursus" of the Blessed Virgin, of All Saints, of the Holy Cross, etc., these excrescences upon the official prayer of the Church acquired great popularity with the laity also, and in the long run it seems to have been felt that the psalms included in these little offices, with the Gradual and Penitential Psalms, sufficed for the needs of the ordinary layman. Hence the "Book of Hours", or "Primer" (q. v.), as it was called in England, gradually replaced the Psalter in popular use. At the same time an immense variety of prayers came to be added to the Office of Our Lady, which formed the kernel of these "Horæ", so that hardly any two manuscript copies of the fourteenth and fifteenth centuries are identical in their contents. In the case of books written for the devotion of royal and noble personages, the most exquisite artistic skill was often lavished upon the illuminations and miniatures with which they were adorned. Be it noted also that in course of time a certain traditional order of subjects established itself in the full-page miniatures which commonly preceded each of the Little Hours, the Penitential Psalms, the Office for the Dead, and the other elements of which these Books of Hours were made up, but to give details would be impossible here. A brief description of some of the most famous of these artistic treasures, e. g. the "Horæ" of Bona of Luxemburg (1327) and that of Catherine of Cleves, wife of Duke Arnold of Gelders, is given by Father Beissel in the "Stimmen aus Maria-Laach" (Aug., 1909) and a more general account by Dr. M. R. James in his catalogue of the MSS. of the Fitzwilliam Museum (especially pp. xxv-xxxviii).

Upon the introduction of printing an immense stimulus was given to the production of manuals of popular devotion. Apart from a relatively quite small and unimportant class of booklets (the "Fifteen O's" in English, "printed by command of Princess Elizabeth, Queen of England", at Caxton's press in 1490, may be cited in illustration), the books issued from 1475 to about 1530, though the names differed, varied hardly at all in type. In France and England the "Horæ" held undisputed sway. As explained in the article PRIMER, certain elements were constant, and the supplementary matter exhibited a constant tendency to increase in bulk and we may add also in extravagance. In Germany the book known as the "Hortulus Animæ" (the little garden of the soul), which seems first to have appeared in 1498, enjoyed most popularity. But though the "Horæ" and the "Hortulus" were apt to differ somewhat in arrangement, their contents in substance were identical, and, more particularly after the "Hortulus" was brought out at Lyons in 1504, the various publishers of the one book made no scruple about appropriating any feature in the other which took their fancy. Both in the "Horæ" and the "Hortulus" we find, at any rate in the later copies, almost without exception, after the Calendar, the Office of the Blessed Virgin, extracts from the four Gospels (either the beginnings or the narratives of the Passion), the Penitential Psalms, the Litany of the Saints, a long series of prayers to the Holy Trinity and the Divine Persons, to Our Lady and to different saints, mostly with an antiphon, versicle, and respond taken from liturgical books, also prayers for the principal feasts borrowed from the Missal, and particularly the Office for the

Dead and prayers for the dying. Both the "Horæ" and the "Hortulus" appeared in innumerable editions. Even as early as the period 1487 to 1498 more than sixty-five editions of the different "Horæ" are known to have been printed in France alone. For the adornment of these volumes, which were often printed upon vellum, the best art of the wood engraver was called in requisition. The editions of the "Horæ" by Du Pré, Vêrard, Pigouchet, and Geoffroy Tory, especially those produced between 1488 and 1502, may rank among the most beautiful specimens of the printing press in the first hundred years of its existence, while the German cuts of the engravers Schäufelein and Springinklee have also a charm of their own. It was also a common practice to employ hand illumination to add further lustre to many of the copies printed upon vellum. In regard to the contents, the devotional extravagance of the age and the competition between publisher and publisher to push their wares and attract purchasers led to many regrettable abuses. Spurious indulgences and fantastic promises of all kinds abound, and even prayers which in themselves are full of piety and absolutely unobjectionable—for example the prayers in honour of the Passion previously referred to, which were attributed to St. Bridget and were known in England as the "Fifteen O's"—are not exempt from these disfigurements. A deplorable example of such extravagance is presented by a Sarum "Horæ" of Thielman Kerver printed at Paris in 1510, in which we find such assertions as the following: "Alexander the VI pope of Rome hath granted to all them that say this prayer devoutly in the worship of St. Anne and Our Lady and her Son Jesus V thousand years of pardon for deadly sins and XX years for venial sins totiens quotiens", or again, "This prayer our Lady showed to a devout person, saying that this golden prayer is the most sweetest and acceptabest to me, and in her appearing she had this salutation and prayer written with letters of gold on her breast" (Hoskins, "Horæ", 124-5). Again, for a certain prayer to be said before a picture of Christ crucified, Pope Gregory III (!) is declared to have granted an indulgence of so many days as there were wounds in our Saviour's sacred Body. In another supposed grant of Boniface VIII an indulgence of eighty thousand years is mentioned. In the case of other devotions again the pious reader is assured that if he practise them he shall not die without confession, that Our Lady and her Divine Son will come to warn him before his death, etc. Of course it must be remembered that, practically speaking, no censorship existed in the early years of the sixteenth century. The Congregation of the Index did not come into existence until after the Council of Trent. Hence the booksellers in pre-Tridentine days were free to publish almost any extravagance which might help to sell their wares. After Trent things in this respect were very different.

Besides the "Horæ" and the "Hortuli" a few collections of private prayers, generally connected with some special subject, also saw the light before Reformation times. There were books on the art of how to die well, books on the Rosary copiously interspersed with meditations and prayers (of these the volumes of the Dominican Castillo, with a picture for each of the one hundred and fifty Hail Marys, is perhaps the best known), books on various forms of devotion to the Passion, for example, the seven Bloodsheddings and the seven Falls—spiritual pilgrimages which eventually took a more permanent shape in the exercise of the Stations of the Cross. A more important work, issued about 1498, was the collection of prayers called "Paradisus Animæ". In England there is evidence that the devotion long dear to the English Catholics' forefathers in the days of persecution under the name of "The Jesus Psalter" was

printed and sold separately as early as 1520, though no copy is now known to survive. The author of this most touching prayer is believed to have been Richard Whitford, the Brigittine monk who loved to call himself "the Wretch of Sion". He has also left a spiritual little volume compiled for the use of communicants, and has been sometimes named as the true author of "The Fruyte of Redemeyon", a collection of prayers which professes to have been composed by "Simon the Anker [Anchoret] of London Wall". But this last work is a dull performance and quite unworthy of Whitford. In all probability there must have been many more of these devotional books than our libraries have preserved traces of, for such works when they are not protected by the abundance or beauty of their illustrations (as was the case with many of the "Horæ") are apt to disappear completely without leaving any trace. The preface of an early "Reforming" English prayer-book (Certaine Prayers and godly meditacyons, 1538), while speaking contemptuously of this devotional literature, implies that even in England it was large and varied. "These bokes, (though they abounded in every place with infinite errors and taught prayers made with wicked folysshnesse both to God and also to his sayntes) yet by cause they were garnysed with glorious tytles and with redde letters, promisinge moche grace and pardon (though it were but vanyte) have sore deceyved the unlearned multitude. One is called the Garden of the Soule, another the Paradyse of the Soule, and by cause I will be short, loke thou thy sylfen whate dyvers and tryfeling names be gyven vnto them."

We are not concerned here with the prayer-books of the Reformers, but it may be worth while to notice that, just as in Germany the Lutherans produced a modified version of the "Hortulus Animæ", so in England it was the first care of Henry VIII and his vicar-general, Thomas Cromwell, after the breach with Rome, to bring out a new set of primers adapted to the new condition of things. Indeed even in 1532 Sir Thomas More in his "Confutacion of Tynedale's Answer" could write of the devotional works produced by heretics: "And lest we should lack prayers, we have the Primer and the Ploughman's Prayer and a book of other small devotions and then the whole Psalter too". These, however, we cannot identify. Better known were the emended Primers of Marshall and Hilsey (1534 and 1538), followed in 1545 by "The King's Primer", which Henry VIII supervised himself. Of course the great bulk of this material was entirely Catholic and imitated in arrangement that of the "Horæ". Other Primers appeared under Edward VI in 1551 (in this the Hail Mary was for the first time omitted) and 1553 (which last, omitting all references to the Hours, is simply a book of private prayers for each day of the week beginning with Sunday), but under Elizabeth in 1559 the arrangement of the Hours was restored and even the Office for the Dead or "Dirige" (see Clay, "Private Prayers", Parker Society). But the transformations of these forms of private devotional books are very intricate, and they were alternately adapted to suit Catholic and Protestant taste. For example, the book called the "Pomander of Prayer", which was printed towards the close of Henry VIII's reign, with a strong Protestant colouring, appeared again under Mary in a form in which it could well be used by Catholics. One point may be noted as of some importance, and it is: that down to the breach with Rome Latin predominated, even in those books published for the use of the laity. The Pater, Ave, and Creed, and the Psalms were commonly said by the people in Latin and no printed edition of the Office of the Blessed Virgin, or in other words no entirely English Primer, is known to have been issued before 1534. But the books of the

last fifteen years of Henry's reign accustomed the people to pray in English, and under Mary we have printed Catholic Primers both in Latin and English, and in English alone. It may probably be said that from this time forth the uneducated laity, even though Catholics, prayed almost exclusively in English.

Although a similar change in the direction of the vernacular, due in large measure to the same cause, i. e. the influence of the Reformers, was taking place in Germany, France, and the Netherlands, still the most widely known and popular prayer-books introduced in the sixteenth century made their appearance first in Latin. The reforms initiated by the Council of Trent took practical effect in the Bull of St. Pius V, 11 March, 1571, which enjoined a rigorous censorship of the "Horæ" and "Hortuli" containing the Office of the Blessed Virgin, forbade the extravagant accretions and spurious indulgences often found in these books, prescribed a uniform text for the Office itself and forbade it to be printed in the vernacular. We may suppose that this action, while occasioning the publication of revised and corrected editions (though these do not seem to have been numerous), also occasioned or at least marked a certain revulsion of feeling against the type of devotional manual thus condemned. In any case we note the appearance at this same period of a number of new prayer-books, which seem in several cases to have been designed to serve as manuals for the sodalities of the Blessed Virgin which were now springing up in Germany and elsewhere as one of the first fruits of the Counter-Reformation and the educational activity of the Society of Jesus. With this new type of prayer-book must be connected in the first place the name of Blessed Peter Canisius. His activity in this matter cannot be discussed in detail (cf. "Zeitschrift f. kat. Theol.", 1890, XIV, pp. 727 sq.), but we may note that to his widely popular, short Catechism a collection of prayers was appended, that he produced in 1556 his "Lectiones et preces ecclesiasticæ" for the use of students, and in 1587 his "Manuale Catholicorum". Other books of prayers specially intended for the use of sodalists were published by Fathers Saily and Veron, S.J., and they have since been often reprinted and imitated. A similar purpose seems to have been dominant in the mind of Simon Verepæus, a priest of Mechlin, who in 1565 brought out a little work entitled "Precationum piarum Enchiridion" founded in part upon materials left by Cornelius Liadanus. Verepæus's "Enchiridion" was frequently reprinted and several editions appeared in German. Of other foreign works it will be sufficient to mention here two famous prayer-books of German origin both belonging to the seventeenth century and both appearing in the vernacular before they were published in Latin editions. The earlier of these was the "Paradisus Animæ" compiled by Merlo Horstius, a parish priest of Cologne, the first (German) edition of which appeared in 1644. The later was the still more famous collection of Father William Nakatenus, S.J., known as the "Cœleste Palmetum". In the case of both of these works their popularity seems to have been largely due to the very wide range of devotions which they included, adapted to every occurrence of life and including many litanies, little offices, and pious instructions. In France during the seventeenth century we may note the introduction of the "Paroissien", a book which contained a large proportion of liturgical matter connected with Mass and Vespers for the Sundays and feasts, as also the Epistles and Gospels, and often a great deal of musical notation, but not excluding private devotions, methods of hearing Mass, preparation for Confession and Communion etc. The popularity of this work (though its contents have varied a good deal at different

periods and in different localities) has lasted on down to modern times.

For the use of English Catholics during the days of persecution two forms of prayer-book long held an unchallenged supremacy. The first of these was simply a revision of the old pre-Reformation Primer. An important edition of this, the first since Queen Mary's time, was issued by that energetic scholar Richard Verstegan at Antwerp in 1599 "for the more utility", as he said, "of such of the English nation and others using our language as understand not the Latin tongue". With this object the Office of the Blessed Virgin was printed both in Latin and English and the book contained a selection of hymns rather rudely translated into English verse probably by Verstegan himself. In other respects the main features of the old Primer reappear. We have the Office for the Dead, Offices of the Holy Cross and of the Holy Ghost, the Litanies of the Saints, Seven Penitential Psalms etc., but the extravagant prayers of the early editions were eliminated and devotions of a more practical kind, e. g. for Confession and Communion etc., substituted in their place. A considerable number of editions appeared subsequently and the book was in favour down to the close of the eighteenth century. Another noteworthy revision of the Primer took place in King James II's reign and later in 1706 the rude renderings of the hymns were replaced by a version perhaps executed by John Dryden. The other prayer-book was the "Manual of devout Prayers and Exercises, collected and translated out of divers authors", which seems to have been printed for the first time in 1583. If we may accept the conclusions of Mr. Joseph Gillow (*The Ushaw Magazine*, 1910) this book also was translated by Verstegan and then printed by Flinton at Father Persons' press at Rouen. The original work upon which it was based was, Mr. Gillow maintains, the prayer-book of Verepæus, from which it borrowed its arrangement according to the seven days of the week. This compilation became very popular. Already in 1584 we find it mentioned among a list of Catholic books seized at Hoxton, and it seems to have been reprinted with certain modifications in 1595, 1596, 1599, and 1604. The history of the subsequent impressions has been minutely traced by Mr. Gillow, who claims to have identified seventy-two different editions, but whose list is nevertheless not entirely exhaustive. An important revision of the work appeared under Jesuit auspices in 1652 (St. Omer's) and another published by command of His Majesty, James II, in 1686. In 1729 it came out in London in two parts, and in 1744 an edition was printed which professed to have been corrected and enlarged by Bishop Challoner, but the changes made were relatively slight. It appeared also in 1811 and 1819 and for the last time in 1847. The attraction of the book appears to have lain in the variety of its contents, and in the course of years it departed a good deal from the type of a collection of extracts from the Fathers and other devout writers, which was its leading characteristic in the sixteenth century.

Still more famous than the "Manual of Prayers" is the work compiled by Bishop Challoner in 1740 under the title of "The Garden of the Soul". The purpose aimed at in this new work is indicated in its subheading "a Manual of Spiritual Exercises and Instructions for Christians who, living in the World, aspire to devotion", and although, as Dr. Burton notices (*Life of Challoner*, I, 127), the book "after 170 years has been edited out of all recognition", its popularity was originally acquired while it still remained "a brief guide to the spiritual life, containing not prayers only, but information, instructions, and much practical advice". The seventh edition of "The Garden of the Soul", which appeared in 1757, was "corrected and enlarged by the Author"

and this is the final shape in which he left it; innumerable modifications to which it has since been subjected have been made entirely according to the caprice of the different publishers. Both before and after the issue of "The Garden of the Soul", a large number of other Catholic manuals of devotion have enjoyed more or less popularity. In 1617 and 1618 we have "A new Manual of Old Christian Catholic Meditations and Prayers" and "A Manual of Prayers used by the Fathers of the Primitive Church", both compiled by Richard Broughton, a divine of Douai. The "Devotions in the Ancient Way of Offices", which was drawn up by John Austin before 1670, had the compliment paid it of being imitated and practically pirated by Anglicans. The "Libellus Precum" was a work produced by the English Jesuits in the eighteenth century for the use of the sodalists in their colleges and has continued in use down to the present day. Of the crowd of works bearing such titles as the "Key of Heaven", "The Path to Paradise", the "Golden Manual", the "Path to Heaven" etc., some of them reproducing names already in use in the seventeenth century, it would be impossible to speak in detail. As regards the censorship of prayer-books, something has already been said of the *Motu Proprio* of St. Pius V (11 March, 1571). The most important legislation since then is that of the Constitution "Officiorum et Munerum", 25 Jan., 1897 (see CENSORSHIP OF BOOKS). Paragraph 20 of this document in very concise terms enacts that no one is to publish "libros vel libellos precum" (prayer-books or booklets) as well as works of devotion or religious instruction etc., even though they may seem calculated to foster piety, "without the permission of lawful authority", a somewhat vague phrase which is generally interpreted to mean without the imprimatur of the ordinary: "otherwise", adds the decree, "such a book must be held to be forbidden". Special restrictions have also been imposed in the same Constitution (§ 19) upon the publication of new litanies without the revision and approbation of the ordinary. Moreover, it has since been decided that even then litanies which have only an episcopal approval of this kind cannot be used for public devotions in churches (see Hilgers, "Der Index der verbotenen Bücher", Freiburg, 1904; Vermeersch, "De prohibitione et censura librorum", 4th ed., Tournai, 1906).

BEISSEL in *Stimmen aus Maria-Laach* LXXVII (July to October, 1909); BURTON, *Life of Bishop Challoner*, I (London, 1907), 130 sq.; GILLOW in *The Tablet* (27 Dec., 1884; 10 Jan., 1885); IDEM in *The Ushaw Magazine* (1910); LINGARD in *The Catholic Miscellany* (1830); KUYPERS AND BISHOP in *The Book of Cerne* (Cambridge, 1902).

HERBERT THURSTON.

Prayer of Christ, FEAST OF THE, occurs on the Tuesday after Septuagesima (double major). Its object is to commemorate the prolonged prayer which Christ offered in Gethsemane in our behalf in preparation for His Sacred Passion. The Office insists on the great importance of prayer. The feast is placed at the beginning of Lent to remind us that the penitential season is above all a time of prayer. The Office probably was composed by Bishop Struzziere of Todi, at the suggestion of St. Paul of the Cross (d. 1775), and, together with the other six offices by which the mysteries of Christ's Passion are celebrated (see PASSION OF CHRIST, FEAST OF THE), was approved by Pius VI. The hymns were composed by Fatati (Schulte, "Hymnen des röm. Brev."). Outside of the Congregation of St. Paul this feast was adopted later than any of the other feasts of the Passion. It is not found in the *proprium* of Salerno (1793) nor in that of Livorno (1809). Other dioceses took it up only after the city of Rome had adopted it (1831). It has not yet been inserted in the Baltimore Ordo.

Prayers for the Dead. See DEAD, PRAYERS FOR THE; PURGATORY.

Preacher (CONCIONATOR). See ECCLESIASTES.

Preacher Apostolic, a dignitary of the pontifical household. As a regular function, under special regulations, this office was established by Paul IV, in 1555, and formed a part of the great scheme of reforms which that pope was anxious to carry out. The innovation was somewhat unpopular among the prelates, as the preacher Apostolic had to expound wholesome truths before the papal Court, and remind them of their respective duties. Before 1555 several members of the regular clergy, especially of the Franciscans, had preached in presence of the Roman Court. In the period following, among those who filled the office of preacher Apostolic were Alonso Salmerón, companion of Saint Ignatius, Francis Toletó, S.J., who held the position during seven pontificates, Anselmus Marzatti, Francis Cassini, and Bonaventure Barberini, Minor Capuchins; Toletó, Marzatti, and Cassini were elevated to the cardinalate. By the Brief of 2 March, 1753, directed to Father Michael Angelo Franceschi, then preacher Apostolic, Benedict XIV conferred the said dignity *in perpetuum* upon the Capuchin Order, because of "the example of Christian piety and religious perfection, the splendour of doctrine and the Apostolic zeal" to be found in their institute. Two of the preachers Apostolic during the past century deserve special mention: Lewis Micara of Frascati, who became Cardinal-Vicar of Rome, and Lewis of Trent, chosen to deliver the discourse at the first session of the Vatican Council. At present the office is held by Father Luke of Padua, the former titular, Father Pacific of Sejano, having been elected Minister General of the order.

The preacher is chosen by the pontiff, though generally presented by the predecessor, or by the superior general of the Capuchins. He is notified by a Rescript of the Cardinal of the Apostolic Palace; and becomes *ipso facto* a Palatine prelate and a member of the papal household, enjoying all the privileges attached to his title. The sermons are delivered in Advent on the Feasts of St. Andrew, St. Nicholas, St. Lucy, and St. Thomas; and on Fridays in Lent, except in Holy Week, when the Passion Sermon is preached on Tuesday.

The papal Court meets in the throne-room in the Vatican; the pulpit occupies the place of the throne. Beside it is placed the *bussola*, a perforated wooden partition, covered with silver hangings, behind which is the seat of the pontiff. On the appointed day, the preacher with his "socius" is taken to the Vatican in a pontifical carriage, and enters the throne-room; when notified by the master of ceremonies, he draws near the *bussola*, takes off his mantle, asks the pope's blessing, and ascends the pulpit. The sermon begins with an "Ave Maria", recited aloud and answered by the audience. The pontiff is assisted by his majordomo and the master of the camera. The cardinals occupy the front seats: behind them are the bishops, prelates, and general heads of the Mendicant Orders. Nobody else is admitted without a special permission of the pope. At the close of the sermon, the preacher returns to the pontiff, kisses his feet, takes leave of him, and is driven back to his convent.

F. CANDIDE.

Preachers, ORDER OF.—As the Order of the Friars Preachers is the principal part of the entire Order of St. Dominic, we shall include under this title the two other parts of the order: the Dominican Sisters (Second Order) and the Brothers of Penitence of St. Dominic (Third Order). First, we shall study the legislation of the three divisions of the order,

and the nature of each. Secondly, we shall give an historical survey of the three branches of the order.

I. LEGISLATION AND NATURE.—In its formation and development, the Dominican legislation as a whole is closely bound up with historical facts relative to the origin and progress of the order. Hence some reference to these is necessary, the more so as this matter has not been sufficiently studied. For each of the three groups, constituting the ensemble of the Order of St. Dominic, we shall examine: A. Formation of the Legislative Texts; B. Nature of the Order, resulting from legislation.

A. *Formation of the Legislative Texts.*—In regard to their legislation the first two orders are closely connected, and must be treated together. The preaching of St. Dominic and his first companions in Languedoc led up to the pontifical letters of Innocent III, 17 Nov., 1205 (Potthast, "Reg., Pont., Rom.", 2912). They created for the first time in the Church of the Middle Ages the type of apostolic preachers, patterned upon the teaching of the Gospel. In the same year, Dominic founded the Monastery of Prouille, in the Diocese of Toulouse, for the women whom he had converted from heresy, and he made this establishment the centre of union of his missions and of his apostolic works (Balme-Lelaidier, "Cartulaire ou Histoire Diplomatique de St. Dominic", Paris, 1893, I, 130 sq.; Guiraud, "Cart. de Notre Dame de Prouille," Paris, 1907, I, CCCXX sq.). St. Dominic gave to the new monastery the Rule of St. Augustine, and also the special Institutions which regulated the life of the Sisters, and of the Brothers who lived near them, for the spiritual and temporal administration of the community. The Institutions are edited in Balme, "Cart." II, 425; "Bull. Ord. Præd.", VII, 410; Duellius, "Misc.", bk. I (Augsburg, 1723), 169; "Urkundenbuch der Stadt," I (Fribourg, Leipzig, 1883), 605. On 17 Dec., 1219, Honorius III, with a view to a general reform among the religious of the Eternal City, granted the monastery of the Sisters of St. Sixtus of Rome to St. Dominic, and the Institutions of Prouille were given to that monastery under the title of Institutions of the Sisters of St. Sixtus of Rome. With this designation they were granted subsequently to other monasteries and congregations of religious. It is also under this form that we possess the primitive Institutions of Prouille, in the editions already mentioned. St. Dominic and his companions, having received from Innocent III authorization to choose a rule, with a view to the approbation of their order, adopted in 1216, that of St. Augustine, and added thereto the "Consuetudines", which regulated the ascetic and canonical life of the religious. These were borrowed in great part from the Constitutions of Prémontré, but with some essential features, adapted to the purposes of the new Preachers, who also renounced private possession of property, but retained the revenues. The "Consuetudines" formed the first part (*prima distinctio*) of the primitive Constitutions of the order (Quétif-Echard, "Scriptores Ord. Præd.", I, 12-13; Denifle, "Archiv. für Literatur und Kirchengeschichte", I, 194; Balme, "Cart.", II, 18). The order was solemnly approved, 22 Dec., 1216. A first letter, in the style of those granted for the foundation of regular canons, gave the order canonical existence; a second determined the special vocation of the Order of Preachers as vowed to teaching and defending the truths of faith. "Nos attendentes fratres Ordinis tui futuros pugiles fidei et vera mundi lumina confirmamus Ordinem tuum" (Balme, "Cart." II, 71-88; Potthast, 5402-5403). (Expecting the brethren of your order to be the champions of the Faith and true lights of the world, we confirm your order.)

On 15 Aug., 1217, St. Dominic sent out his companions from Prouille. They went through France,

Spain, and Italy, and established as principal centres, Toulouse, Paris, Madrid, Rome, and Bologna. Dominic, by constant journeyings, kept watch over these new establishments, and went to Rome to confer with the Sovereign Pontiff (Balme, "Cart." II, 131; "Annales Ord. Præd.", Rome, 1756, p. 411; Guiraud, "St. Dominic", Paris, 1899, p. 95). In May, 1220, St. Dominic held at Bologna the first general chapter of the order. This assembly drew up the Constitutions, which are complementary to the "Consuetudines" of 1216 and form the second part (*secunda distinctio*). They regulated the organization and life of the order, and are the essential and original basis of the Dominican legislation. In this chapter, the Preachers also gave up certain elements of the canonical life; they relinquished all possessions and revenues, and adopted the practice of strict poverty; they rejected the title of abbey for the convents, and substituted the rochet of canons for the monastic scapular. The regime of annual general chapters was established as the regulative power of the order, and the source of legislative authority. ("Script. Ord. Præd.", I, 20; Denifle, "Archiv.", I, 212; Balme, "Cart.", III, 575). Now that the legislation of the Friars Preachers was fully established, the Rule of the Sisters of St. Sixtus was found to be very incomplete. The order, however, supplied what was wanting by compiling a few years after, the *Statuta*, which borrowed from the Constitutions of the Friars, whatever might be useful in a monastery of Sisters. We owe the preservation of these *Statuta*, as well as the Rule of St. Sixtus, to the fact that this legislation was applied in 1232 to the Penitent Sisters of St. Mary Magdalen in Germany, who observed it without further modification. The *Statuta* are edited in Duellius, "Misc.", bk. I, 182. After the legislative work of the general chapters had been added to the Constitution of 1216-20, without changing the general ordinance of the primitive text, the necessity was felt, a quarter of a century later, of giving a more logical distribution to the legislation in its entirety. The great canonist, Raymond of Penaforte, on becoming master general of the order, devoted himself to this work. The general chapters, from 1239 to 1241, accepted the new text, and gave it the force of law. In this form it has remained to the present time as the official text, with some modification, however, in the way of suppressions and especially of additions due to later enactments of the general chapters. It was edited in Denifle, "Archiv.", V, 553; "Acta Capitulum Generalium", I (Rome, 1898), II, 13, 18, in "Monum. Ord. Præd. Hist.", bk. III.

The reorganization of the Constitutions of the Preachers called for a corresponding reform in the legislation of the Sisters. In his letter of 27 Aug., 1257, Alexander IV ordered Humbert of Romans, the fifth master general, to unify the Constitutions of the Sisters. Humbert remodelled them on the Constitutions of the Brothers, and put them into effect at the General Chapter of Valenciennes, 1259. The Sisters were henceforth characterized as *Sorores Ordinis Prædicatorum*. The Constitutions are edited in "Analecta, Ord. Præd." (Rome, 1897), 338; Finke, "Ungedruckte Dominicanerbriefe des 13 Jahrhunderts" (Paderborn, 1891), p. 53; "Litteræ Encyclicæ magistrorum generalium" (Rome, 1900), in "Mon. Ord. Præd. Hist.", V, p. 513. To this legislation, the provincials of Germany, who had a large number of religious convents under their care, added certain *admonitiones* by way of completing and definitely settling the Constitutions of the Sisters. They seem to be the work of Herman of Minden, Provincial of Teutonia (1286-90). He drew up at first a concise admonition (Denifle, "Archiv.", II, 549); then other series of admonitions, more important, which have not been edited (Rome,

Archives of the Order, Cod. Ruten, 130-139). The legislation of the Friars Preachers is the firmest and most complete among the systems of law by which institutions of this sort were ruled in the thirteenth century. Hauck is correct in saying: "We do not deceive ourselves in considering the organization of the Dominican Order as the most perfect of all the monastic organizations produced by the Middle Ages" ("Kirchengeschichte Deutschlands", part IV, Leipzig, 1902, p. 390). It is not then surprising that the majority of the religious orders of the thirteenth century should have followed quite closely the Dominican legislation, which exerted an influence even upon institutions very dissimilar in aim and nature. The Church considered it the typical rule for new foundations. Alexander IV thought of making the legislation of the Order of Preachers into a special rule known as that of St. Dominic, and for that purpose commissioned the Dominican cardinal, Hugh of St. Cher (3 Feb., 1255), but the project encountered many obstacles, and nothing came of it. (Potthast, n. 1566; Humberti de Romanis, "Opera de vita regulari", ed., Berthier, I, Rome, 1888, p. 43).

B. *Nature of the Order of Preachers.* (1) Its Object.—The canonical title of "Order of Preachers", given to the work of St. Dominic by the Church, is in itself significant, but it indicates only the dominant feature. The Constitutions are more explicit: "Our order was instituted principally for preaching and for the salvation of souls." The end or aim of the order then is the salvation of souls, especially by means of preaching. For the attainment of this purpose, the order must labour with the utmost zeal—"Our main efforts should be put forth, earnestly and ardently, in doing good to the souls of our fellow-men."

(2) Its Organization.—The aim of the order and the conditions of its environment determined the form of its organization. The first organic group is the convent, which may not be founded with less than twelve religious. At first only large convents were allowed and these were located in important cities (Mon. Ger. Hist.: SS. XXXII, 233, 236), hence the saying:

Bernardus valles, montes Benedictus amabat,
Oppida Franciscus, celebres Dominicus urbes.

(Bernard loved the valleys, Benedict the mountains, Francis the towns, Dominic the populous cities).

The foundation and the existence of the convent required a prior as governor, and a doctor as teacher. The Constitution prescribes the dimensions of the church and the convent buildings, and these should be quite plain. But in the course of the thirteenth century the order erected large edifices, real works of art. The convent possesses nothing and lives on alms. Outside of the choral office (the Preachers at first had the title of *canonici*) their time is wholly employed in study. The doctor gives lectures in theology, at which all the religious, even the prior, must be present, and which are open to secular clerics. The religious vow themselves to preaching, both within and without the convent walls. The "general preachers" have the most extended powers. At the beginning of the order, the convent was called *prædicatio*, or *sancta prædicatio*. The convents divided up the territory in which they were established, and sent out on preaching tours religious who remained for a longer or shorter time in the principal places of their respective districts. The Preachers did not take the vow of stability, but could be sent from one locality to another. Each convent received novices, these, according to the Constitutions, must be at least eighteen years of age, but this rule was not strictly observed. The Preachers were the first among religious orders to suppress manual labour, the necessary work of the interior of the house

being relegated to lay brothers called *conversi*, whose number was limited according to the needs of each convent. The prior was elected by the religious, and the doctor was appointed by the provincial chapter. The chapter, when it saw fit, relieved them from office.

The grouping of a certain number of convents forms the province, which is administered by a provincial prior, elected by the prior and two delegates from each convent. He is confirmed by the general chapter, or by the master general, who can also remove him when it is found expedient. He enjoys in his province the same authority as the master general in the order; he confirms the election of conventual priors, visits the province, sees to it that the Constitutions and the ordinances are observed and presides at the provincial chapters. The provincial chapter, which is held annually, discusses the interests of the province. It is composed of a provincial prior, priors from the convents, a delegate from each convent, and the general preachers. The capitulants (members of the chapter), choose from among themselves, four counsellors or assistants, who, with the provincial, regulate the affairs brought before the chapter. The chapter appoints those who are to visit annually each part of the province. The provinces taken together constitute the order, which has at its head a master general, elected by the provincial priors and by two delegates from each province. For a long time his position was for life; Pius VII (1804), reduced it to six years, and Pius IX (1862) fixed it at twelve years. At first the master general had no permanent residence; since the end of the fourteenth century, he has lived usually at Rome. He visits the order, holds it to the observance of the laws, and corrects abuses. In 1509, he was granted two associates (*socii*); in 1752, four; in 1910, five. The general chapter is the supreme authority within the order. From 1370, it was held every two years; from 1553, every three years; from 1625, every six years. In the eighteenth and at the beginning of the nineteenth century, chapters were rarely held. At present they take place every three years. From 1228, for two years in succession, the general chapter was composed of definitors or delegates from the provinces, each province sending one delegate; the following year it was held by the provincial priors. The chapter promulgates new constitutions, but to become law they must be accepted by three constitutive chapters. The chapter deals with all the general concerns of the order, whether administrative or disciplinary. It corrects the master general, and in certain cases can depose him. From 1220 to 1244, the chapters were held alternately at Bologna and Paris; subsequently, they passed round to all the principal cities of Europe. The generalissimo chapter acknowledged by the Constitution and composed of two definitors from each province, also of provincials, i. e. equivalent to three consecutive general chapters, was held only in 1228 and 1236. The characteristic feature of government is the elective system which prevails throughout the order. "Such was the simple mechanism which imparted to the Order of Friars Preachers a powerful and regular movement, and secured them for a long time a real preponderance in Church and in State" (Delisle, "Notes et extraits des mss. de la Bibl. Nat.", Paris, xxvii, 1899, 2nd part, p. 312. See the editions of the Constitutions mentioned above: "Const. Ord. Fr. Præd.", Paris, 1888; "Acta Capit. Gen. Ord. Fr. Præd.", ed., Reichert, Rome, 1898, sq. 9 vols.; Lo Cicero, Const., "Declar. et Ord. Capit. Gen. O. P.", Rome, 1892; Humberti de Romanis, "Opera de vita regulari", ed. Berthier, Rome, 1888; Reichert, "Feier und Geschäftsbildung der provincialkapitel des Dominikanerordens im 13 Jahrhundert" in "Römische Quart.", 1903, p. 101).

(3) Forms of its Activity.—The forms of life or activity of the Order of Preachers are many, but they are all duly subordinated. The order assimilated the ancient forms of the religious life, the monastic and the canonical, but it made them subservient to the clerical and the apostolic life which are its peculiar and essential aims. The Preachers adopted from the monastic life the three traditional vows of obedience, chastity, and poverty; to them they added the ascetic element known as monastic observances; perpetual abstinence, fasting from 14 Sept. until Easter and on all the Fridays throughout the year, the exclusive use of wool for clothing and for the bed, a hard bed, and a common dormitory, silence almost perpetual in their houses, public acknowledgment of faults in the chapter, a graded list of penitential practices, etc. The Preachers, however, did not take these observances directly from the monastic orders but from the regular canons, especially the reformed canons, who had already adopted monastic rules. The Preachers received from the regular canons the choral Office for morning and evening, but chanted quickly. They added, on certain days, the Office of the Holy Virgin, and once a week the Office of the Dead. The habit of the Preachers, as of the regular canons, is a white tunic and a black cloak. The rochet, distinctive of the regular canons, was abandoned by the Preachers at the General Chapter of 1220, and replaced by the scapular. At the same time they gave up various canonical customs, which they had retained up to that period. They suppressed in their order the title of abbot for the head of the convent, and rejected all property, revenues, the carrying of money on their travels, and the use of horses. The title even of canon which they had borne from the beginning tended to disappear about the middle of the thirteenth century, and the General Chapters of 1240–1251 substituted the word *clericus* for *canonicus* in the article of the Constitutions relating to the admission of novices; nevertheless, the designation, “canon” still occurs in some parts of the Constitutions. The Preachers, in fact, are primarily and essentially clerics. The pontifical letter of foundation said: “These are to be the champions of the Faith and the true lights of the world.” This could apply only to clerics. The Preachers consequently made study their chief occupation, which was the essential means, with preaching and teaching as the end. The apostolic character of the order was the complement of its clerical character. The Friars had to vow themselves to the salvation of souls through the ministry of preaching and confession, under the conditions set down by the Gospel and by the example of the Apostles: ardent zeal, absolute poverty, and sanctity of life.

The ideal Dominican life was rich in the multiplicity and choice of its elements, and was thoroughly unified by its well-considered principles and enactments; but it was none the less complex, and its full realization was difficult. The monastic-canonical element tended to dull and paralyze the intense activity demanded by a clerical-apostolic life. The legislators warded off the difficulty by a system of dispensations, quite peculiar to the order. At the head of the Constitutions the principle of dispensation appears jointly with the very definition of the order's purpose, and is placed before the text of the laws to show that it controls and tempers their application. “The superior in each convent shall have authority to grant dispensations whenever he may deem it expedient, especially in regard to what may hinder study, or preaching, or the profit of souls, since our order was originally established for the work of preaching and the salvation of souls”, etc. The system of dispensation thus broadly understood, while it favoured the most active element of the order, displaced, but did not wholly eliminate, the

difficulty. It created a sort of dualism in the interior life, and permitted an arbitrariness that might easily disquiet the conscience of the religious and of the superiors. The order warded off this new difficulty by declaring in the generalissimo chapter of 1236, that the Constitutions did not oblige under pain of sin, but under pain of doing penance (*Acta Cap. Gen. I, 8.*) This measure, however, was not heartily welcomed by everyone in the order (Humbert de Romanis, *Op.*, II, 46), nevertheless it stood.

This dualism produced on one side, remarkable apostles and doctors, on the other, stern ascetics and great mystics. At all events the interior troubles of the order grew out of the difficulty of maintaining the nice equilibrium which the first legislators established, and which was preserved to a remarkable degree during the first century of the order's existence. The logic of things and historical circumstances frequently disturbed this equilibrium. The learned and active members tended to exempt themselves from monastic observance, or to moderate its strictness; the ascetic members insisted on the monastic life, and in pursuance of their aim, suppressed at different times the practice of dispensation, sanctioned as it was by the letter and the spirit of the Constitutions [*“Const. Ord. Præd.”*, *passim*; Denifle, “*Die Const. des Predigerordens*”, in *“Archiv. f. Litt. u. Kirchengesch.”*, I, 165; Mandonnet, “*Les Chanoines-Prêcheurs de Bologne d'après Jacques de Vitry*” in *“Archives de la société d'histoire du canton de Fribourg”*, bk. VIII, 15; Lacordaire, “*Mémoire pour la restauration des Frères Prêcheurs dans la Chrétienté*”, Paris, 1852; P. Jacob, “*Memoires sur la canonicité de l'institut de St. Dominic*”, Béziers, 1750, tr. into Italian under the title; “*Difesa del canonicato dei FF. Predicatori*”, Venice, 1758; Laberthoni, “*Exposé de l'état, du régime, de la législation et des obligations des Frères Prêcheurs*”, Versailles, 1767 (new ed., 1872)].

(4) Nature of the Order of the Dominican Sisters.—We have indicated above the various steps by which the legislation of the Dominican Sisters was brought into conformity with the Constitutions of Humbert of Romans (1259). The primitive type of religious established at Prouille in 1205 by St. Dominic was not affected by successive legislation. The Dominican Sisters are strictly cloistered in their monasteries; they take the three religious vows, recite the canonical Hours in choir and engage in manual labor. The *eruditio litterarum* inscribed in the Institutions of St. Sixtus disappeared from the Constitutions drawn up by Humbert of Romans. The ascetic life of the Sisters is the same as that of the Friars. Each house is governed by a prioress, elected canonically, and assisted by a sub-prioress, a mistress of novices, and various other officers. The monasteries have the right to hold property in common; they must be provided with an income sufficient for the existence of the community; they are independent and are under the jurisdiction of the provincial prior, the master general, and of the general chapter. A subsequent paragraph will deal with the various phases of the question as to the relation existing between the Sisters and the Order of Preachers. Whilst the Institutions of St. Sixtus provided a group of brothers, priests, and lay servants for the spiritual and temporal administration of the monastery, the Constitutions of Humbert of Romans were silent on these points. (See the legislative texts relating to the Sisters mentioned above.)

(5) The Third Order.—St. Dominic did not write a rule for the Tertiaries, for reasons which are given further on in the historical sketch of the Third Order. However, a large body of the laity, vowed to piety, grouped themselves about the rising Order of Preachers, and constituted, to all intents and purposes, a Third Order. In view of this fact and of some cir-

circumstances to be noted later on, the seventh master general of the order, Munio de Zamora, wrote (1285) a rule for the Brothers and Sisters of Penitence of St. Dominic. The privilege granted the new fraternity, 28 Jan., 1286, by Honorius IV, gave it a canonical existence (Potthast, 22358). The rule of Munio was not entirely original; some points being borrowed from the Rule of the Brothers of Penitence, whose origin dates back to St. Francis of Assisi; but it was distinctive on all essential points. It is in a sense more thoroughly ecclesiastical; the Brothers and Sisters are grouped in different fraternities; their government is immediately subject to ecclesiastical authority; and the various fraternities do not form a collective whole, with legislative chapters, as was the case among the Brothers of Penitence of St. Francis. The Dominican fraternities are local and without any bond of union other than that of the Preaching Brothers who govern them. Some characteristics of these fraternities may be gathered from the Rule of Munio de Zamora. The Brothers and Sisters, as true children of St. Dominic, should be, above all things, truly zealous for the Catholic Faith. Their habit is a white tunic, with black cloak and hood, and a leathern girdle. After making profession, they cannot return to the world, but may enter other authorized religious orders. They recite a certain number of Paters and Aves, for the canonical Hours; receive communion at least four times a year, and must show great respect to the ecclesiastical hierarchy. They fast during Advent, Lent, and on all the Fridays during the year, and eat meat only three days in the week, Sunday, Tuesday, and Thursday. They are allowed to carry arms only in defence of the Christian Faith. They visit sick members of the community, give them assistance if necessary, attend the burial of Brothers or Sisters and aid them with their prayers. The head or spiritual director is a priest of the Order of Preachers, whom the Tertiaries select and propose to the master general or to the provincial; he may act on their petition or appoint some other religious. The director and the older members of the fraternity choose the prior or prioress, from among the Brothers and Sisters, and their office continues until they are relieved. The Brothers and the Sisters have, on different days, a monthly reunion in the church of the Preachers, when they attend Mass, listen to an instruction, and to an explanation of the rule. The prior and the director can grant dispensations; the rule, like the Constitutions of the Preachers, does not oblige under pain of sin.

The text of the Rule of the Brothers of the Penitence of St. Dominic is in "*Regula S. Augustini et Constitutiones FF. Ord. Praed.*" (Rome, 1690), 2nd pt., p. 39; Federici, "*Istoria dei cavalieri Gaudent*" (Venice, 1787), bk. II, cod. diplomat., p. 28; Mandonnet, "*Les règles et le gouvernement de l'Ordo de Pœnitentia au XIII^e siècle*" (Paris, 1902); Mortier, "*Histoire des Maîtres Généraux des Frères Prêcheurs*", II (Paris, 1903), 220.

II. HISTORY OF THE ORDER.—A. *The Friars Preachers*.—Their history may be divided into three periods: (1) The Middle Ages (from their foundation to the beginning of the sixteenth century); (2) The Modern Period up to the French Revolution; (3) The Contemporaneous Period. In each of these periods we shall examine the work of the order in its various departments.

(1) *The Middle Ages*.—The thirteenth century is the classic age of the order, the witness to its brilliant development and intense activity. This last is manifested especially in the work of teaching. By preaching it reached all classes of Christian society, fought heresy, schism, paganism, by word and book, and by its missions to the north of Europe, to Africa, and Asia, passed beyond the frontiers of Christendom.

Its schools spread throughout the entire Church; its doctors wrote monumental works in all branches of knowledge, and two among them, Albertus Magnus, and especially Thomas Aquinas, founded a school of philosophy and theology which was to rule the ages to come in the life of the Church. An enormous number of its members held offices in Church and State—as popes, cardinals, bishops, legates, inquisitors, confessors of princes, ambassadors, and *paciarî* (enforcers of the peace decreed by popes or councils). The Order of Preachers, which should have remained a select body, developed beyond bounds and absorbed some elements unfitted to its form of life. A period of relaxation ensued during the fourteenth century owing to the general decline of Christian society. The weakening of doctrinal activity favoured the development here and there of the ascetic and contemplative life and there sprang up, especially in Germany and Italy, an intense and exuberant mysticism with which the names of Master Eckhart, Suso, Tauler, St. Catherine of Siena are associated. This movement was the prelude to the reforms undertaken, at the end of the century, by Raymond of Capua, and continued in the following century. It assumed remarkable proportions in the congregations of Lombardy and of Holland, and in the reforms of Savonarola at Florence. At the same time the order found itself face to face with the Renaissance. It struggled against pagan tendencies in Humanism, in Italy through Dominici and Savonarola, in Germany through the theologians of Cologne; but it also furnished Humanism with such advanced writers as Francis Colonna (Poliphile) and Matthew Brandello. Its members, in great numbers, took part in the artistic activity of the age, the most prominent being Fra Angelico and Fra Bartolomeo.

(a) Development and Statistics.—When St. Dominic, in 1216, asked for the official recognition of his order, the first Preachers numbered only sixteen. At the general Chapter of Bologna, 1221, the year of St. Dominic's death, the order already counted some sixty establishments, and was divided into eight provinces: Spain, Provence, France, Lombardy, Rome, Teutonia, England, and Hungary. The Chapter of 1228 added four new provinces: the Holy Land, Greece, Poland, and Dacia (Denmark and Scandinavia). Sicily was separated from Rome (1294), Aragon from Spain (1301). In 1303 Lombardy was divided into Upper and Lower Lombardy; Provence into Toulouse and Provence; Saxony was separated from Teutonia, and Bohemia from Poland, thus forming eighteen provinces. The order, which in 1277 counted 404 convents of Brothers, in 1303 numbered nearly 600. The development of the order reached its height during the Middle Ages; new houses were established during the fourteenth and fifteenth centuries, but in relatively small numbers. As to the number of religious only approximate statements can be given. In 1256, according to the concession of suffrages granted by Humbert of Romans to St. Louis, the order numbered about 5000 priests; the clerks and lay brothers could not have been less than 2000. Thus towards the middle of the thirteenth century, it must have had about 7000 members (de Laborde, "*Layette du trésor des chartes*", Paris, 1875, III, 304). According to Sebastien de Olmeda, the Preachers, as shown by the census taken under Benedict XII, were close on to 12,000 in 1337. (Fontana, "*Monumenta Dominicana*", Rome, 1674, pp. 207-8). This number was not surpassed at the close of the Middle Ages; the Great Plague of 1348, and the general state of Europe preventing a notable increase. The reform movement begun in 1390 by Raymond of Capua established the principle of a twofold arrangement in the order. For a long time, it is true, the reformed convents were not separated from their respective provinces; but with the founda-

tion of the congregation of Lombardy, in 1459, a new order of things began. The congregations were more or less self-governing, and, according as they developed, overlapped several provinces and even several nations. There were established successively the congregations of Portugal (1460), Holland (1464), Aragon, and Spain (1468), St. Mark in Florence (1493), France (1497), the Gallican (1514). About the same time some new provinces were also established: Scotland (1481), Ireland (1484), Bétique or Andalusia (1514), Lower Germany (1515). (Quétif-Echard, "Script. Ord. Praed.", I, p. 1-15; "Anal. Ord. Praed.", 1893, *passim*; Mortier, "Hist. des Maîtres Généraux", I-V, *passim*).

(b) Administration.—The Preachers possessed a number of able administrators among their masters general during the Middle Ages, especially in the thirteenth century. St. Dominic, the creator of the institution (1206-1221), showed a keen intelligence of the needs of the age. He executed his plans with sureness of insight, firmness of resolution, and tenacity of purpose. Jordan of Saxony (1222-1237) sensitive, eloquent, and endowed with rare powers of persuasion, attracted numerous and valuable recruits. St. Raymond of Penafort (1238-1240), the greatest canonist of the age, ruled the order only long enough to reorganize its legislation. John the Teuton (1241-1252), bishop and linguist, who was associated with the greatest personalities of his time, pushed the order forward along the line of development outlined by its founder. Humbert of Romans (1254-1263), a genius of the practical sort, a broad-minded and moderate man, raised the order to the height of its glory, and wrote manifold works, setting forth what, in his eyes, the Preachers and Christian society ought to be. John of Vercelli (1264-1283), an energetic and prudent man, during his long government maintained the order in all its vigour. The successors of these illustrious masters did their utmost in the discharge of their duty, and in meeting the situations which the state of the Church and of society from the close of the thirteenth century rendered more and more difficult. Some of them did no more than hold their high office, while others had not the genius of the masters general of the golden age [Balme-Lelaidier, "Cart. de St. Dominic"; Guiraud, "St. Dominic" (Paris, 1899); Mothon, "Vie du B. Jourdain de Saxe" (Paris, 1885); Reichert, "Das Itinerar des zweiten Dominikaner-generalis Jordanis von Sachsen" in "Festschrift des Deutschen Campo Santo in Rom" (Freiburg, 1897), 153; Mothon, "Vita del B. Giovanini da Vercelli" (Vercelli, 1903); Mortier, "Histoire des Maîtres Généraux", I-V]. The general chapters which wielded supreme power were the great regulators of the Dominican life during the Middle Ages. They are usually remarkable for their spirit of decision, and the firmness with which they ruled. They appeared even imbued with a severe character which, taking no account of persons, bore witness to the importance they attached to the maintenance of discipline. (See the Acta Cap. Gen. already referred to.)

(c) Modification of the Statute.—We have already spoken of the chief exception to be taken to the Constitution of the order, the difficulty of maintaining an even balance between the monastic and canonical observances and the clerical and apostolical life. The primitive régime of poverty, which left the convents without an assured income, created also a permanent difficulty. Time and the modifications of the state of Christian society exposed these weak points. Already the General Chapters of 1240-1242 forbade the changing of the general statutes of the order, a measure which would indicate at least a hidden tendency towards modification (Acta, I, p. 14-20). Some change seems to have been contemplated also by the Holy See when Alexander IV,

4 February, 1255, ordered the Dominican cardinal, Hugh of Saint Cher, to recast the entire legislation of the Preachers into a rule which should be called the Rule of St. Dominic (Potthast, 156-69). Nothing came of the project, and the question was broached again about 1270 (Humberti de Romanis, "Opera", I, p. 43). It was during the pontificate of Benedict XII, (1334-1342), who undertook a general reform of the religious orders, that the Preachers were on the point of undergoing serious modifications in the secondary elements of their primitive statute. Benedict, desiring to give the order greater efficiency, sought to impose a régime of property-holding as necessary to its security, and to reduce the number of its members (12,000) by eliminating the unfit etc.; in a word, to lead the order back to its primitive concept of a select apostolic and teaching body. The order, ruled at that time by Hugh de Vansseman (1333-41), resisted with all its strength (1337-40). This was a mistake (Mortier, op. cit., III, 115). As the situation grew worse, the order was obliged to petition Sixtus IV for the right to hold property, and this was granted 1 June, 1475. Thence forward the convents could acquire property, and perpetual rentals (Mortier, IV, p. 495). This was one of the causes which quickened the vitality of the order in the sixteenth century.

The reform projects of Benedict XII having failed, the master general, Raymond of Capua (1390), sought to restore the monastic observances which had fallen into decline. He ordered the establishment in each province of a convent of strict observance, hoping that as such houses became more numerous, the reform would eventually permeate the entire province. This was not usually the case. These houses of the observance formed a confederation among themselves under the jurisdiction of a special vicar. However, they did not cease to belong to their original province in certain respects, and this naturally gave rise to numerous conflicts of government. During the fifteenth century, several groups made up congregations, more or less autonomous; these we have named above in giving the statistics of the order. The scheme of reform proposed by Raymond and adopted by nearly all who subsequently took up with his ideas, insisted on the observance of the Constitutions *ad unguem*, as Raymond, without further explanation, expressed it. By this, his followers, and, perhaps Raymond himself, understood the suppression of the rule of dispensation which governed the entire Dominican legislation. "In suppressing the power to grant and the right to accept dispensation, the reformers inverted the economy of the order, setting the part above the whole, and the means above the end". (Lacordaire, "Mémoire pour la restauration des Frères Prêcheurs dans la chrétienté", new ed., Dijon, 1852, p. 18). The different reforms which originated within the order up to the nineteenth century, began usually with principles of asceticism, which exceeded the letter and the spirit of the original constitutions. This initial exaggeration was, under pressure of circumstances, toned down, and the reforms which endured, like that of the congregation of Lombardy, turned out to be the most effectual. Generally speaking, the reformed communities slackened the intense devotion to study prescribed by the Constitutions; they did not produce the great doctors of the order, and their literary activity was directed preferably to moral theology, history, subjects of piety, and asceticism. They gave to the fifteenth century many holy men (Thomae Antonii Senesis, "Historia disciplinae regularis instaurata in Cœnobiiis Venetis Ord. Praed." in Fl. Cornelius, "Ecclesiae Venetae", VII, 1749, p. 167; Bl. Raymond of Capua, "Opuscula et Litterae", Rome, 1899; Meyer, "Buch der Reformacio Predigerordens" in "Quellen und

Forschungen zur Geschichte des Dominikanerordens in Deutschland", II, III, Leipzig, 1908-9; Mortier, "Hist. des Maîtres Généraux", III, IV).

(d) Preaching and Teaching.—Independently of their official title of Order of Preachers, the Roman Church especially delegated the Preachers to the office of preaching. It is in fact the only order of the Middle Ages which the popes declared to be specially charged with this office (Bull. Ord. Præd., VIII, p. 768). Conformably to its mission, the order displayed an enormous activity. The "Vitæ Fratrum" (1260) (Lives of the Brothers) informs us that many of the brothers refused food until they had first announced the Word of God (op. cit., p. 150). In his circular letter (1260), the Master General Humbert of Romans, in view of what had been accomplished by his religious, could well make the statement: "We teach the people, we teach the prelates, we teach the wise and the unwise, religious and seculars, clerics and laymen, nobles and peasants, lowly and great." (Monum. Ord. Præd. Historia, V, p. 53). Rightly, too, it has been said: "Science on one hand, numbers on the other, placed them [the Preachers] ahead of their competitors in the thirteenth century" (Lecoy de la Marche, "La chaire française au Moyen Age", Paris, 1886, p. 31). The order maintained this supremacy during the entire Middle Ages (L. Pfeiffer, "Zur Geschichte des Predigtwesens in Strassburg", Strassburg, 1907, p. 26; F. Jostes, "Zur Geschichte der Mittelalterlichen Predigt in Westfalen", Münster, 1885, p. 10). During the thirteenth century, the Preachers in addition to their regular apostolate, worked especially to lead back to the Church heretics and renegade Catholics. An eyewitness of their labours (1233) reckons the number of their converts in Lombardy at more than 100,000 ("Annales Ord. Præd.", Rome, 1756, col. 128). This movement grew rapidly, and the witnesses could scarcely believe their eyes, as Humbert of Romans (1255) informs us (Opera, II, p. 493). At the beginning of the fourteenth century, a celebrated pulpit orator, Giordano da Rivalto, declared that, owing to the activity of the order, heresy had almost entirely disappeared from the Church ("Prediche del Beato Fra Giordano da Rivalto", Florence, 1831, I, p. 239).

The Friars Preachers were especially authorized by the Roman Church to preach crusades, against the Saracens in favour of the Holy Land, against Livonia and Prussia, and against Frederick II, and his successors (Bull. O. P., XIII, p. 637). This preaching assumed such importance that Humbert of Romans composed for the purpose a treatise entitled, "Tractatus de prædicatione contra Saracenos infideles et paganos" (Tract on the preaching of the Cross against the Saracens, infidels and pagans). This still exists in its first edition in the Paris Bibliothèque Mazarine, incunabula, no. 259; Lecoy de la Marche, "La prédication de la Croisade au XIII^e siècle" in "Rev. des questions historiques", 1890, p. 5). In certain provinces, particularly in Germany and Italy, the Dominican preaching took on a peculiar quality, due to the influence of the spiritual direction which the religious of these provinces gave to the numerous convents of women confided to their care. It was a mystical preaching; the specimens which have survived are in the vernacular, and are marked by simplicity and strength (Denifle, "Über die Anfänge der Predigtweise der deutschen Mystiker" in "Archiv. f. Litt. u. Kirchengesch.", II, p. 641; Pfeiffer, "Deutsche Mystiker des vierzehnten Jahrhunderts", Leipzig, 1845; Wackernagel, "Altdeutsche Predigten und Gebete aus Handschriften", Basle, 1876). Among these preachers may be mentioned: St. Dominic, the founder and model of preachers (d. 1221); Jordan of Saxony (d. 1237) (Lives of the Brothers, pts. II, III); Giovanni di Vincenza, whose

popular eloquence stirred Northern Italy during the year 1233—called the Age of the Alleluia (Sitter, "Johann von Vincenza und die Italiensche Friedensbewegung", Freiburg, 1891); Giordano da Rivalto, the foremost pulpit orator in Tuscany at the beginning of the fourteenth century [d. 1311 (Galletti, "Fra Giordano da Pisa", Turin, 1899)]; Johann Eckhart of Hochheim (d. 1327), the celebrated theorist of the mystical life (Pfeiffer, "Deutsche Mystiker", II, 1857; Buttner, "Meister Eckharts Schriften und Predigten", Leipzig, 1903); Henri Suso (d. 1366), the poetical lover of Divine wisdom (Bihlmeyer, "Heinrich Seuse Deutsche Schriften", Stuttgart, 1907); Johann Tauler (d. 1361), the eloquent moralist ("Johanns Taulers Predigten", ed. T. Harnberger, Frankfurt, 1864); Venturino da Bergamo (d. 1345), the fiery popular agitator (Clementi, "Un Santo Patriota, Il B. Venturino da Bergamo", Rome, 1909); Jacopo Passavanti (d. 1357), the noted author of the "Mirror of Penitence" (Carmini di Pierro, "Contributo alla Biografia di Fra Jacopo Passavanti" in "Giornale storico della letteratura italiana", XLVII, 1906, p. 1); Giovanni Dominici (d. 1419), the beloved orator of the Florentines (Galletti, "Una Raccolta di Prediche volgari del Cardinale Giovanni Dominici" in "Miscellanea di studi critici pubblicati in onore di G. Mazzoni", Florence, 1907, I); Alain de la Roche (d. 1475), the Apostle of the Rosary (Script. Ord. Præd., I, p. 849); Savonarola (d. 1498), one of the most powerful orators of all times (Luotto, "Il vero Savonarola", Florence, p. 68).

(e) Academic Organization.—The first order instituted by the Church with an academic mission was the Preachers. The decree of the Fourth Lateran Council (1215) requiring the appointment of a master of theology for each cathedral school had not been effectual. The Roman Church and St. Dominic met the needs of the situation by creating a religious order vowed to the teaching of the sacred sciences. To attain their purpose, the Preachers from 1220 laid down as a fundamental principle, that no convent of their order could be founded without a doctor (Const., Dist. II, cog. I). From their first foundation, the bishops, likewise, welcomed them with expressions like those of the Bishop of Metz (22 April, 1221): "Cohabitatio ipsorum non tantum laicis in prædicationibus, sed et clericis in sacris lectionibus esset plurimum profutura, exemplo Domini Papæ, qui eis Romæ domum contulit, et multorum archiepiscoporum ac episcoporum" etc. (Annales Ord. Præd., I, append., col. 71). (Association with them would be of great value not only to laymen by their preaching, but also to the clergy by their lectures on sacred science, as it was to the Lord Pope who gave them their house at Rome, and to many archbishops and bishops.) This is the reason why the second master general, Jordan of Saxony, defined the vocation of the order: "honeste vivere, discere et docere", i. e. upright living, learning and teaching (Vitæ Fratrum, p. 138); and one of his successors, John the Teuton, declared that he was "ex ordine Prædicatorum, quorum proprium esset docendi munus" (Annales, p. 644). (Of the Order of Preachers, whose proper function was to teach.) In pursuit of this aim the Preachers established a very complete and thoroughly organized scholastic system, which has caused a writer of our own times to say that "Dominic was the first minister of public instruction in modern Europe" (Larousse, "Grand Dictionnaire Universel du XIX^e Siècle", s. v. Dominic).

The general basis of teaching was the conventual school. It was attended by the religious of the convent, and by clerics from the outside; the teaching was public. The school was directed by a doctor, called later, though not in all cases, lector. His principal subject was the text of Holy Scripture, which he interpreted, and in connexion with which

he treated theological questions. The "Sentences" of Peter Lombard, the "History" of Peter Comestor, the "Sum" of cases of conscience, were also, but secondarily, used as texts. In the large convents, which were not called *studia generalia*, but were in the language of the times *studia solemnia*, the teaching staff was more complete. There was a second master or sub-lector, or a bachelor, whose duty it was to lecture on the Bible and the "Sentences". This organization somewhat resembled that of the *studia generalia*. The head master held public disputations every fortnight. Each convent possessed a *magister studentium*, charged with the superintendence of the students, and usually an assistant teacher. These masters were appointed by the provincial chapters, and the visitors were obliged to report each year to the chapter on the condition of academic work. Above the conventual schools were the *studia generalia*. The first *studium generale* which the order possessed was that of the Convent of St. Jacques at Paris. In 1229 they obtained a chair incorporated with the university and another in 1231. Thus the Preachers were the first religious order that took part in teaching at the University of Paris, and the only one possessing two schools. In the thirteenth century the order did not recognize any mastership of theology other than that received at Paris. Usually the masters did not teach for any length of time. After receiving their degrees, they were assigned to different schools of the order throughout the world. The schools of St. Jacques at Paris were the principal scholastic centres of the Preachers during the Middle Ages.

In 1248 the development of the order led to the erection of four new *studia generalia*—at Oxford, Cologne, Montpellier, and Bologna. When at the end of the thirteenth and the beginning of the fourteenth century several provinces of the order were divided, other *studia* were established at Naples, Florence, Genoa, Toulouse, Barcelona, and Salamanca. The *studium generale* was conducted by a master or regent, and two bachelors who taught under his direction. The master taught the text of the Holy Scriptures with commentaries. The works of Albert the Great and St. Thomas Aquinas show us the nature of these lessons. Every fifteen days the master held a debate upon a theme chosen by himself. To this class of exercises belong the "Quæstiones Disputatæ" of St. Thomas, while his "Quæstiones Quodlibeticæ" represent extraordinary disputations which took place twice a year during Advent and Lent, and whose subject was proposed by the auditors. One of the bachelors read and commented the Book of Sentences. The commentaries of Albert and Thomas Aquinas on the Lombard are the fruit of their two-year baccalaureate course as *sententiarii*. The *biblicus* lectured on the Scriptures for one year before becoming a *sententiarius*. He did not commentate, but read and interpreted the glosses which preceding ages had added to the Scriptures for a better understanding of the text. The professors of the *studia generalia* were appointed by the general chapters, or by the master general, delegated for that purpose. Those who were to teach at Paris were taken indiscriminately from the different provinces of the order.

The conventual schools taught only the sacred sciences, i. e. Holy Scripture and theology. At the beginning of the thirteenth century neither priests nor religious studied or taught the profane sciences. As it could not set itself against this general status, the order provided in its constitutions, that the master general, or the general chapter, might allow certain religious to take up the study of the liberal arts. Thus, at first, the study of the arts, i. e. of philosophy, was entirely individual. As numerous masters of arts entered the order during the early years, es-

pecially at Paris and Bologna, it was easy to make a stand against this private teaching. However, the development of the order and the rapid intellectual progress of the thirteenth century soon caused the organization—for the use of religious only—of regular schools for the study of the liberal arts. Towards the middle of the century the provinces established in one or more of their convents the study of logic; and about 1260 the *studia naturalium*, i. e. courses in natural science. The General Chapter of 1315 commanded the masters of the students to lecture on the moral sciences to all the religious of their convents; i. e. on the ethics, politics, and economics of Aristotle. From the beginning of the fourteenth century we find also some religious who gave special courses in philosophy to secular students. In the fifteenth century the Preachers occupied in several universities chairs of philosophy, especially of metaphysics. Coming in contact as it did with barbaric peoples—principally with the Greeks and Arabs—the order was compelled from the outset to take up the study of foreign languages. The Chapter Generalissimo of 1236 ordered that in all convents and in all the provinces the religious should learn the languages of the neighbouring countries. The following year Brother Phillippe, Provincial of the Holy Land, wrote to Gregory IX that his religious had preached to the people in the different languages of the Orient, especially in Arabic, the most popular tongue, and that the study of languages had been added to their conventual course. The province of Greece furnished several Hellenists whose works we shall mention later. The province of Spain, whose population was a mixture of Jews and Arabs, opened special schools for the study of languages. About the middle of the thirteenth century it also established a *studium arabicum* at Tunis; in 1259 one at Barcelona; between 1265 and 1270 one at Murcia; in 1281 one at Valencia. The same province also established some schools for the study of Hebrew at Barcelona in 1281, and at Jativa in 1291. Finally, the General Chapter of 1310 commanded the master general to establish, in several provinces, schools for the study of Hebrew, Greek, and Arabic, to which each province of the order should send at least one student. In view of this fact a Protestant historian, Molinier, in writing of the Friars Preachers, remarks: "They were not content with professing in their convents all the divisions of science, as it was then understood; they added an entire order of studies which no other Christian schools of the time seem to have taught, and in which they had no other rivals than the rabbis of Languedoc and Spain" ("Guillem Bernard de Gaillac et l'enseignement chez les Dominicains", Paris, 1884, p. 30).

This scholastic activity extended to other fields, particularly to the universities which were established throughout Europe from the beginning of the thirteenth century; the Preachers took a prominent part in university life. Those universities, like Paris, Toulouse etc., which from the beginning had chairs of theology, incorporated the Dominican conventual school which was patterned on the schools of the *studia generalia*. When a university was established in a city—as was usually the case—after the foundation of a Dominican convent, which always possessed a chair of theology, the pontifical letters granting the establishment of the university made no mention whatever of a faculty of theology. The latter was considered as already existing by reason of the Dominican school and others of the mendicant orders, who followed the example of the Preachers. For a time the Dominican theological schools were simply in juxtaposition to the universities, which had no faculty of theology. When these universities petitioned the Holy See for a faculty of theology, and their petition was granted, they usually incorporated

the Dominican school, which thus became a part of the theological faculty. This transformation began towards the close of the fourteenth and lasted until the first years of the sixteenth century. Once established, this state of things lasted until the Reformation in the countries which became Protestant, and until the French Revolution and its spread in the Latin countries.

The archbishops, who according to the decree of the Fourth Lateran Council (1215) were to establish in each metropolitan church a master of theology, considered themselves dispensed from this obligation by reason of the creation of Dominican schools open to the secular clergy. However, when they thought it their duty to apply the decree of the council, or when later they were obliged by the Roman Church to do so, they frequently called in a Dominican master to fill the chair of their metropolitan school. Thus the metropolitan school of Lyons was intrusted to the Preachers, from their establishment in that city until the beginning of the sixteenth century (Forest, "L'école cathédrale de Lyon", Paris-Lyons, 1885, pp. 238, 368; Beyssac, "Les Prieurs de Notre Dame de Confort", Lyons, 1909; "Chart. Univ. Paris", III, p. 28). The same arrangement, though not so permanent, was made at Toulouse, Bordeaux, Tortosa, Valencia, Urgel, Milan etc. The popes, who believed themselves morally obligated to set an example regarding the execution of the scholastic decree of the Lateran Council, usually contented themselves during the thirteenth century with the establishment of schools at Rome by the Dominicans and other religious orders. The Dominican masters who taught at Rome or in other cities where the sovereign pontiffs took up their residence, were known as *lectores curiæ*. However, when the popes, once settled at Avignon, began to require from the archbishops the execution of the decree of Lateran, they instituted a theological school in their own papal palace; the initiative was taken by Clement V (1305-1314). At the request of the Dominican, Cardinal Nicolas Alberti de Prato (d. 1321), this work was permanently intrusted to a Preacher, bearing the name of *Magister Sacri Palatii*. The first to hold the position was Pierre Godin, who later became cardinal (1312). The office of Master of the Sacred Palace, whose functions were successively increased, remains to the present day the special privilege of the Order of Preachers (Catalani, "De Magistro Sacri Palatii Apostolici", Rome, p. 175).

Finally, when towards the middle of the thirteenth century the old monastic orders began to take up the scholastic and doctrinal movement, the Cistercians, in particular, applied to the Preachers for masters of theology in their abbeys ("Chart. Univ. Paris", I, p. 184). During the last portion of the Middle Ages, the Dominicans furnished, at intervals, professors to the different orders, not themselves consecrated to study (Denifle, "Quellen zur Gelehrten-geschichte des Predigerordens im 13. und 14. Jahrhundert" in "Archiv.", II, p. 165; Mandonnet, "Les Chanoines Prêcheurs de Bologne", Fribourg, 1903; Douais, "Essai sur l'organisation des études dans l'Ordre des Frères-Prêcheurs", Paris, 1884; Mandonnet, "De l'incorporation des Dominicains dans l'ancienne Université de Paris" in "Revue Thomiste", IV, 1896, p. 139; Denifle, "Die Universitäten des Mittelalters", Berlin, 1885; I, *passim*; Denifle-Chatelain, "Chart. Univ., Paris", 1889, *passim*; Bernard, "Les Dominicains dans l'Université de Paris", Paris, 183; Mandonnet, "Siger de Brabant et l'averroïsme Latin au XIII^e siècle", Louvain, 1911, I, p. 30-95). The legislation regarding studies occurs here and there in the constitutions, and principally in the "Acta Capitularium Generalium", Rome, 1898, sq. and Douais, "Acta Capitulum Provincialium" (Toulouse, 1894).

The teaching activity of the order and its scholastic organization placed the Preachers in the forefront of the intellectual life of the Middle Ages. They were the pioneers in all directions as one may see from a subsequent paragraph relative to their literary productions. We speak only of the school of philosophy and of theology created by them in the thirteenth century which has been the most influential in the history of the Church. At the beginning of the thirteenth century philosophical teaching was confined practically to the logic of Aristotle and theology, and was under the influence of St. Augustine; hence the name Augustinism generally given to the theological doctrines of that age. The first Dominican doctors, who came from the universities into the order, or who taught in the universities, adhered for a long time to the Augustinian doctrine. Among the most celebrated were Roland of Cremona, Hugh of Saint Cher, Richard Fitzacre, Moneta of Cremona, Peter of Tarentaise, and Robert of Kilwardby. It was the introduction into the Latin world of the great works of Aristotle, and their assimilation, through the action of Albertus Magnus, that opened up in the Order of Preachers a new line of philosophical and theological investigation. The work begun by Albertus Magnus (1240-1250) was carried to completion by his disciple, Thomas Aquinas (q. v.), whose teaching activity occupied the last twenty years of his life (1245-1274). The system of theology and philosophy constructed by Aquinas is the most complete, the most original, and the most profound, which Christian thought has elaborated, and the master who designed it surpasses all his contemporaries and his successors in the grandeur of his creative genius. The Thomist School developed rapidly both within the order and without. The fourteenth and fifteenth centuries witnessed the struggles of the Thomist School on various points of doctrine. The Council of Vienne (1311) declared in favour of the Thomistic teaching, according to which there is but one form in the human composition, and condemned as heretical any one who should deny that "the rational or intellective soul is per se and essentially the form of the human body". This is also the teaching of the Fifth Lateran Council (1515). See Zigliara, "De Mente Concilii Vienne", Rome, 1878, pp. 88-89.

The discussions between the Preachers and the Friars on the poverty of Christ and the Apostles was also settled by John XXII in the Thomistic sense [(12 Nov., 1323), Ehrle, "Archiv. f. Litt. u. Kirchengesch.", III, p. 517; Tocco, "La Questione della povertà nel Secolo XIV", Naples, 1910]. The question regarding the Divinity of the Blood of Christ separated from His Body during His Passion, raised for the first time in 1351, at Barcelona, and taken up again in Italy in 1463, was the subject of a formal debate before Pius II. The Dominican opinion prevailed; although the pope refused a sentence properly so called (Mortier, "Hist. des Maîtres Généraux", III, p. 287, IV, p. 413; G. degli Agostini, "Notizie storico-critiche intorno la vita e le opere degli scrittori Viniziani", Venice, 1752, I, p. 401). During the fourteenth and fifteenth centuries the Thomist School had to make a stand against Nominalism, of which a Preacher had been one of the protagonists. The repeated sentences of the universities and of princes slowly combated this doctrine (De Wulf, "Histoire de la philosophie médiévale", Louvain-Paris, 1905, p. 453).

The Averroism against which Albert the Great, and especially Aquinas had fought so energetically did not disappear entirely with the condemnation of Paris (1277), but survived under a more or less attenuated form. At the beginning of the sixteenth century the debates were renewed, and the Preachers found themselves actively engaged therein in Italy

where the Averroist doctrine had reappeared. The General of the Dominicans, Thomas de Vio (Cajetan), had published his commentaries on the "De Anima" of Aristotle (Florence, 1509), in which, abandoning the position of St. Thomas, he contended that Aristotle had not taught the individual immortality of the soul, but affirming at the same time that this doctrine was philosophically erroneous. The Council of Lateran, by its Decree, 19 Dec., 1513, not only condemned the Averroistic teaching, but exacted still further that professors of philosophy should answer the opposing arguments advanced by philosophers—a measure which Cajetan did not approve (Mansi, "Councils", I, 32, col. 842). Pietro Pomponazzi, having published at Bologna (1516) his treatise on the immortality of the soul in the Averroistic sense, while making an open profession of faith in the Christian doctrine, raised numerous polemics, and was held as a suspect. Chrysostom Javelli, regent of theology at the Convent of St. Dominic, in agreement with the ecclesiastical authority, and at the request of Pomponazzi, sought to extricate him from this difficulty by drawing up a short theological exposé of the question which was to be added in the future to the work of Pomponazzi. But this discussion did not cease all at once. Several Dominicans entered the lists. Girolamo de Fornariis subjected to examination the polemic of Pomponazzi with Augustin Nifi (Bologna, 1519); Bartolommeo de Spina attacked Cajetan on one article, and Pomponazzi in two others (Venice, 1519); Isidore of Isolani also wrote on the immortality of the soul (Milan, 1520); Lucas Bettini took up the same theme, and Pico della Mirandola published his treatise (Bologna, 1523); finally Chrysostom Javelli himself, in 1523, composed a treatise on immortality in which he refuted the point of view of Cajetan and of Pomponazzi (Chrysostomi Javelli, "Opera", Venice, 1577, I-III, p. 52). Cajetan, becoming cardinal, not only held his position regarding the idea of Aristotle, but further declared that the immortality of the soul was an article of faith, for which philosophy could offer only probable reasons ("In Ecclesiasten", 1534, cap. iv; Fiorentino, "Pietro Pomponazzi", Florence, 1868).

(f) Literary and Scientific Productions.—During the Middle Ages the order had an enormous literary output, its activity extending to all spheres. The works of its writers are epoch-making in the various branches of human knowledge.

(i) Works on the Bible.—The study and teaching of the Bible were foremost among the occupations of the Preachers, and their studies included everything pertaining to it. They first undertook correctories (*correctoria*) of the Vulgate text (1230-36), under the direction of Hugh of Saint Cher, professor at the University of Paris. The collation with the Hebrew text was accomplished under the sub-prior of St-Jacques, Theobald of Sexania, a converted Jew. Two other correctories were made prior to 1267, the first called the correctory of Sens. Again under the direction of Hugh of Saint Cher the Preachers made the first concordances of the Bible which were called the Concordances of St-Jacques or Great Concordances because of their development. The English Dominicans of Oxford, apparently under the direction of John of Darlington, made more simplified concordances in the third quarter of the thirteenth century. At the beginning of the fourteenth century a German Dominican, Conrad of Halberstadt, simplified the English concordances still more; and John Fojkowich of Ragusa, at the time of the Council of Basle, caused the insertion in the concordances of elements which had not hitherto been incorporated in them. The Dominicans, moreover, composed numerous commentaries on the books of the Bible. That of Hugh of Saint Cher was the first complete commentary on the Scriptures (last ed., Venice, 1754,

8 vols. in fol.). The commentaries of Bl. Albertus Magnus and especially those of St. Thomas Aquinas are still famous. With St. Thomas the interpretation of the text is more direct, simply literal, and theological. These great Scriptural commentaries represent theological teaching in the *studia generalia*. The *lectura* on the text of Scripture, also composed to a large extent by Dominicans, represent Scriptural teaching in the other *studia* of theology. St. Thomas undertook an "Expositio continua" of the four Gospels now called the "Catena aurea", composed of extracts from the Fathers with a view to its use by clerics. At the beginning of the fourteenth century Nicholas of Trevet did the same for all the books of the Bible. The Preachers were also engaged in translating the Bible into the vernacular. In all probability they were the translators of the French Parisian Bible during the first half of the thirteenth century, and in the fourteenth century they took a very active share in the translation of the celebrated Bible of King John. The name of a Catalan Dominican, Romeu of Sabrugera, is attached to the first translation of the Scriptures into Catalan. The names of Preachers are also connected with the Valencian and Castilian translations, and still more with the Italian (F. L. Mannoci, "Intorno a un volgarizzamento della Bibbia attribuita al B. Jacopo da Voragine" in "Giornale storico e letterario della Liguria", V, 1904, p. 96). The first pre-Lutheran German translation of the Bible, except the Psalms, is due to John Rellach, shortly after the middle of the fifteenth century. Finally the Bible was translated from Latin into Armenian about 1330 by B. Bartolommeo Parvi of Bologna, missionary and bishop in Armenia. These works enabled Vercellone to write: "To the Dominican Order belongs the glory of having first renewed in the Church the illustrious example of Origen and St. Augustine by the ardent cultivation of sacred criticism" (P. Mandonnet, "Travaux des Dominicains sur les Saintes Ecritures" in "Dict. de la Bible", II, col. 1463; Saul, "Das Bibelstudium im Predigerorden" in "Der Katholik", 82 Jahrg, 3 f., XXVII, 1902, a repetition of the foregoing article).

(ii) Philosophical works.—The most celebrated philosophical works of the thirteenth century were those of Albertus Magnus and St. Thomas Aquinas. The former compiled on the model of Aristotle a vast scientific encyclopedia which exercised great influence on the last centuries of the Middle Ages ("Alberti Magni Opera", Lyons, 1651, 20 vols. in fol.; Paris, 1890, 38 vols. in 40; Mandonnet, "Siger de Brabant", I, 37, n. 3). Thomas Aquinas, apart from special treatises and numerous philosophical sections in his other works, commented in whole or in part thirteen of Aristotle's treatises, these being the most important of the Stagyrice's works (Mandonnet, "Des écrits authentiques de St. Thomas d'Aquin", 2nd ed., p. 104, Opera, Paris, 1889, XXII-XVI). Robert of Kilwardby (d. 1279), a holder of the old Augustinian direction, produced numerous philosophical writings. His "De ortu et divisione philosophiæ" is regarded as "the most important introduction to Philosophy of the Middle Ages" (Baur, "Dominicus Gundissalinus De divisione philosophiæ", Münster, 1903, 368). At the end of the thirteenth and the beginning of the fourteenth century, Dietrich of Vriberg left an important philosophical and scientific work (Krebs, "Meister Dietrich, sein Leben, seine Werke, seine Wissenschaft", Münster, 1906). At the end of the thirteenth and the beginning of the fourteenth century the Dominicans composed numerous philosophical treatises, many of them bearing on the special points whereon the Thomistic School was attacked by its adversaries ("Archiv f. Litt. und Kirchengesch.", II, 226 sqq.).

(iii) Theological works.—In importance and number theological works occupy the foreground in the literary activity of the order. Most of the theologians composed commentaries on the "Sentences" of Peter Lombard, which was the classical text in theological schools. Besides the "Sentences" the usual work of bachelors in the Universities included *Disputationes* and *Quodlibeta*, which were always the writings of masters. The theological *summæ* set forth the theological matter according to a more complete and well-ordered plan than that of Peter Lombard and especially with solid philosophical principles in which the books of the "Sentences" were wanting. Manuals of theology and more especially manuals, or *summæ*, on penance for the use of confessors were composed in great numbers. The oldest Dominican commentaries on the "Sentences" are those of Roland of Cremona, Hugh of Saint Cher, Richard Fitzacre, Robert of Kilwardby, and Albertus Magnus. The series begins with the year 1230 if not earlier and the last are prior to the middle of the thirteenth century (Mandonnet, "Siger de Brabant", I, 53). The "Summa" of St. Thomas (1265-75) is still the masterpiece of theology. The monumental work of Albertus Magnus is unfinished. The "Summa de bono" of Ulrich of Strasburg (d. 1277), a disciple of Albert, is still unedited, but is of paramount interest to the historian of the thought of the thirteenth century (Grabmann, "Studien ueber Ulrich von Strassburg" in "Zeitschrift für Kathol. Theol.", XXIX, 1905, 82). The theological summa of St. Antoninus is highly esteemed by moralists and economists (Ilgner, "Die Volkswirtschaftlichen Anschauungen Antonins von Florenz", Paderborn, 1904). The "Compendium theologicæ veritatis" of Hugh Ripelin of Strasburg (d. 1268) is the most widespread and famous manual of the Middle Ages (Mandonnet, "Des écrits authentiques de St. Thomas", Fribourg, 1910, p. 86). The chief manual of confessors is that of Paul of Hungary composed for the Brothers of St. Nicholas of Bologna (1220-21) and edited without mention of the author in the "Bibliotheca Casinensis" (IV, 1880, 191) and with false assignment of authorship by R. Duellius, "Miscellan. Lib." (Augsburg, 1723, 59). The "Summa de Pœnitentia" of Raymond of Pennafort, composed in 1235, was a classic during the Middle Ages and was one of the works of which the MSS. were most multiplied. The "Summa Confessorum" of John of Freiburg (d. 1314) is, according to F. von Schulte, the most perfect product of this class of literature. The Pisan Bartolommeo of San Concordio has left us a "Summa Casuum" composed in 1338, in which the matter is arranged in alphabetical order. It was very successful in the thirteenth and fourteenth centuries. The manuals for confessors of John Nieder (d. 1438), St. Antoninus, Archbishop of Florence (d. 1459), and Girolamo Savonarola (d. 1498) were much esteemed in their time (Quétif-Echard, "Script. Ord. Præd.", I, *passim*; Hurter, "Nomenclator literarius; ætas media", Innsbruck, 1906, *passim*; F. von Schulte, "Gesch. der Quellen und Literatur des canonischen Rechts", Stuttgart, II, 1877, p. 410 sqq.; Dietterle, "Die Summæ confessorum . . . von ihren Anfängen an bis zu Silvester Prierias" in "Zeitschrift für Kirchengesch.", XXIV, 1903; XXVIII, 1907).

(iv) Apologetic works.—The Preachers, born amid the Albigensian heresy and founded especially for the defence of the Faith, bent their literary efforts to reach all classes of dissenters from the Catholic Church. They produced by far the most powerful works in the sphere of apologetics. The "Summa contra Catharos et Valdenses" (Rome, 1743) of Moneta of Cremona, in course of composition in 1244, is the most complete and solid work produced in the Middle Ages against the Cathari and Waldenses. The "Summa contra Gentiles" of St. Thomas Aquinas

is one of that master's strongest creations. It is the defence of the Christian Faith against Arabian philosophy. Raymond Marti in his "Pugio fidei", in course of composition in 1278 (Paris, 1642; 1651; Leipzig, 1687), measures arms with Judaism. This work, to a large extent based on Rabbinic literature, is the most important medieval monument of Orientalism (Neubauer, "Jewish Controversy and the Pugio Fidei" in "The Expositor", 1888, p. 81 sqq.; Loeb, "La controverse religieuse entre les chrétiens et les Juifs au moyen-âge en France et en Espagne" in "Revue de l'histoire des religions", XVIII, 136). The Florentine, Ricceldo di Monte Croce, a missionary in the East (d. 1320), composed his "Propugnaculum Fidei" against the doctrine of the Koran. It is a rare medieval Latin work based directly on Arabian literature. Demetrius Cydonius translated the "Propugnaculum" into Greek in the fourteenth century and Luther translated it into German in the sixteenth (Mandonnet, "Fra Ricceldo di Monte Croce, pèlerin en Terre Sainte et missionnaire en Orient" in "Revue Biblique", I, 1893, 44; Grabmann, "Die Missionsidee bei den Dominikanertheologen des 13. Jahrhunderts" in "Zeitschrift für Missionswissenschaft", I, 1911, 137).

(v) Educational literature.—Besides manuals of theology the Dominicans furnished a considerable literary output with a view to meeting the various needs of all social classes and which may be called educational or practical literature. They composed treatises on preaching, models or materials for sermons, and collections of discourses. Among the oldest of these are the "Distinctiones" and the "Dictionarius pauperum" of Nicholas of Biard (d. 1261), the "Tractatus de diversis materiis prædicabilibus" of Stephen of Bourbon (d. 1261), the "De eruditione prædicatorum" of Humbert of Romans (d. 1277), the "Distinctiones" of Nicholas of Goran (d. 1295), and of Maurice of England [d. circa 1300; (Quétif-Echard, "Script. Ord. Præd.", II, 968; 970; Lecoy de la Marche, "La chaire française au moyen-âge", Paris, 1886; Crane, "The exempla or illustrative stories from the 'Sermones vulgares' of Jacques de Vitry", London, 1890)]. The Preachers led the way in the composition of comprehensive collections of the lives of the saints or legends, writings at once for the use and edification of the faithful. Bartholomew of Trent compiled his "Liber epilogorum in Gesta Sanctorum" in 1240. After the middle of the thirteenth century Roderick of Cerrate composed a collection of "Vitæ Sanctorum" (Madrid, University Library, cod. 146). The "Abbreviatio in gestis et miraculis sanctorum", composed in 1243 according to the "Speculum historiale" of Vincent of Beauvais, is the work of Jean de Mailly. The "Legenda Sanctorum" of Jacopo de Voragine (Vorzage) called also the "Golden Legend", written about 1260, is universally known. "The success of the book," writes the Bollandist, A. Poncelet, "was prodigious; it far exceeded that of all similar compilations." It was besides translated into all the vernaculars of Europe. The "Speculum Sanctorale" of Bernard Guidonis is a work of a much more scholarly character. The first three parts were finished in 1324 and the fourth in 1329. About the same time Peter Calo (d. 1348) undertook under the title of "Legenda sanctorum" an "immense compilation" which aimed at being more complete than its predecessors (A. Poncelet, "Le légendier de Pierre Calo" in "Analecta Bollandiana", XXIX, 1910, 5-116).

Catechetical literature was also early taken in hand. In 1256-7 Raymond Marti composed his "Explanatio symboli ad institutionem fidelium" ("Revue des Bibliothèques", VI, 1846, 32; March, "La 'Explanatio Symboli', obra inedita de Ramon Marti, autor del 'Pugio Fidei'", in "Anuari des Institut d'Estudis Catalans", 1908, and Barcelona,

1910). Thomas Aquinas wrote four small treatises which represent the contents of a catechism as it was in the Middle Ages: "De articulis fidei et Ecclesiae Sacramentis"; "Expositio symboli Apostolorum"; "De decem præceptis et lege amoris"; "Expositio orationis dominicæ". Several of these writings have been collected and called the catechism of St. Thomas. (Portmann-Kunz, "Katechismus des hl. Thomas von Aquin", Lucerne, 1900.) In 1277 Laurent d'Orléans composed at the request of Philip the Bold, whose confessor he was, a real catechism in the vernacular known as the "Somme le Roi" (Mandonnet, "Laurent d'Orléans l'auteur de la Somme le Roi" in "Revue des langues romanes", 1911; "Dict. de théol. cath.", II, 1900). At the beginning of the fourteenth century Bernard Guidonis composed an abridgment of Christian doctrine which he revised later when he had become Bishop of Lodève (1324-31) into a sort of catechism for the use of his priests in the instruction of the faithful ("Notices et extraits de la Bib. Nat.", XXVII, Paris, 1879, 2nd part, p. 362; C. Douais, "Un nouvel écrit de Bernard Gui. Le synodal de Lodève," Paris, 1944, p. vii). The "Discipulus" of John Hérolt was much esteemed in its day (Paulus, "Johann Hérolt und seine Lehre. Ein Beitrag zur Gesch. des religiösen Volksunterrichts am Ausgang des Mittelalters" in "Zeitsch. für kath. Theol.", XXVI, 1902, 417).

The order also produced pedagogical works. William of Tournai composed a treatise "De Modo docendi pueros" (Paris, Bib. Nat. lat. 16435) which the General Chapter of 1264 recommended, as well as one on preaching and confession for school children. ("Act. Cap. Gen." I, 125; "Script. Ord. Præd.", I, 345). Vincent of Beauvais wrote especially for the education of princes. He first composed his "De eruditione filiorum regaliū" (Basle, 1481), then the "De eruditione principum", published with the works of St. Thomas, to whom as well as to Guillaume Perrault it has been incorrectly ascribed; finally (c. 1260) the "Tractatus de morali principis institutione", which is a general treatise and is still unedited ("Script. Ord. Præd.", I, 239; R. Friedrich, "Vincentius von Beauvais als Pädagog nach seiner Schrift De eruditione filiorum regaliū", Leipzig, 1883). Early in the fifteenth century (1405) John Dominici composed his famous "Lucula noctis", in which he deals with the study of pagan authors in the education of Christian youth. This is a most important work, written against the dangers of Humanism ("B. Johannis Dominici Cardinalis S. Sixti Lucula Noctis", ed. R. Coulon, Paris, 1908). Dominici is also the author of a much esteemed work on the government of the family ("Regola del governo di cura familiare dal Beato Giovanni Dominici", ed. D. Salve, Florence, 1860). St. Antoninus composed a "Regola a ben vivere" (ed. Palermo, Florence, 1858). Works on the government of countries were also produced by members of the order; among them are the treatises of St. Thomas "De rege et regno", addressed to the King of Cyprus (finished by Bartolommeo of Lucca), and the "De regimine subditorum", composed for the Countess of Flanders. At the request of the Florentine Government Girolamo Savonarola drew up (1493) his "Trattati circa il reggimento e governo della città di Firenze" (ed. Audin de Rians, Florence, 1847) in which he shows great political insight.

(vi) Canon law.—St. Raymond of Pennafort was chosen by Gregory IX to compile the Decretals (1230-34); to his credit also belong opinions and other works on canon law. Martin of Toppau, Bishop of Gnesen, composed (1278) a "Tabula decreti" commonly called "Margarita Martiniana", which received wide circulation. Martin of Fano, professor of canon law at Arezzo and Modena and podestà of Genoa in 1260-2, prior to entering the

order, wrote valuable canonical works. Nicholas of Ennezat at the beginning of the fourteenth century composed tables on various parts of canon law. During the pontificate of Gregory XII John Dominici wrote copious memoranda in defence of the rights of the legitimate pope, the two most important being still unedited (Vienna, Hof-bibliothek, lat. 5102, fol. 1-24). About the middle of the fifteenth century John of Torquemada wrote extensive works on the Decretals of Gratian which were very influential in defence of the pontifical rights. Important works on inquisitorial law also emanated from the order, the first directories for trial of heresy being composed by Dominicans. The oldest is the opinion of St. Raymond of Pennafort [1235 (ed. in Bzovius, "Annal. eccles." ad ann. 1235; "Monum. Ord. Præd. Hist.", IV, fasc. II, 41; "Le Moyen Age", 2nd series III, 305)]. The same canonist wrote (1242) a directory for the inquisitions of Aragon (C. Douais, "L'Inquisition", Paris, I, 1906, p. 275). About 1244 another directory was composed by the inquisitors of Provence ("Nouvelle revue historique du droit français et étranger", Paris, 1883, 670; E. Vacandard, "L'Inquisition", Paris, 1907, p. 314). But the two classical works of the Middle Ages on inquisitorial law are that of Bernard Guidonis composed in 1321 under the title of "Directorium Inquisitionis hereticæ pravitatis" (ed. C. Douais, Paris, 1886) and the "Directorium Inquisitionum" of Nicholas Eymerich [(1399) "Archiv für Literatur- und Kirchengeschichte"; Grahit, "El inquisidor F. Nicholas Eymerich", Girona, 1878; Schulte, "Die Gesch. der Quellen und Literatur des Canonischen Rechts", II, *passim*].

(vii) Historical Writings.—The activity of the Preachers in the domain of history was considerable during the Middle Ages. Some of their chief works incline to be real general histories which assured them great success in their day. The "Speculum Historiale" of Vincent of Beauvais (d. circa 1264) is chiefly, like the other parts of the work, of the nature of a documentary compilation, but he has preserved for us sources which we could never otherwise reach (E. Boutarie, "Examen des sources du Speculum historiale de Vincent de Beauvais", Paris, 1863). Martin the Pole, called Martin of Toppau (d. 1279), in the third quarter of the thirteenth century composed his chronicles of the popes and emperors which were widely circulated and had many continuators ("Mon. Germ. Hist.: Script.", XXII). The anonymous chronicles of Colmar in the second half of the thirteenth century have left us valuable historical materials which constitute a sort of history of contemporary civilization (Mon. Germ. Hist.: Script., XVII). The chronicle of Jacopo da Voragine, Archbishop of Genoa (d. 1298) is much esteemed ("Rer. Ital. Script."; Mannucci, "La Cronaca di Jacopo da Voragine", Genoa, 1904). Ptolemy of Lucca and Bernard Guidonis are the two great ecclesiastical historians of the early fourteenth century. The "Historia ecclesiastica nova" of the former and the "Flores cronicorum seu cathalogus pontificum romanorum" of the latter contain valuable historical information.

But the historical activity of Bernard Guidonis far exceeded that of Ptolemy and his contemporaries; he is the author of twenty historical publications, several of which, such as his historical compilation on the Order of Preachers, are very important in value and extent. Bernard Guidonis is the first medieval historian who had a wide sense of historical documentation ("Rer. Ital. Script.", XI; K. Krüger, "Des Ptolemäus Lucensis Leben und Werke", Göttingen, 1874; D. König, "Ptolemäus von Lucca und die Flores Croniconum des B. Guidonis", Würzburg, 1875; Idem, "Tolomeo von Lucca", Harburg, 1878; Delisle, "Notice sur les

manuscripts de Bernard Gui" in "Notices et manuscrits de la Bib. Nat.", XVII, pt. II, 169-455; Douais, "Un nouveau manuscrit de Bernard Gui et de ses chroniques des papes d'Avignon" in "Mém. soc. Archéol. Midi", XIV, 1889, p. 417, Paris, 1889; Arbellot, "Etude biographique et bibliographique sur Bernard Guidonis", Paris-Limoges, 1896). The fourteenth century beheld a galaxy of Dominican historians, the chief of whom were: Francesco Pipini of Bologna (d. 1320), the Latin translator of Marco Polo and the author of a "Chronicon" which began with the history of the Franks (L. Manzoni, "Di frate Francesco Pipini da Bologna, storico, geografo, viaggiatore del sec. XIV", Bologna, 1896); Nicholas of Butrinto (1313), author of the "Relatio de Henrici VII imperatoris itinere italico" (ed. Heyck, Innsbruck, 1888); Nicholas Trevet, compiler of the "Annales sex regum Angliæ" (ed. T. Hog, London, 1845); Jacopo of Acqui and his "Chronicon imaginis mundi" [(1330); Monumenta historice patriæ, script., III, Turin, 1848]; Galvano Fiamma (d. circa 1340) composed various works on the history of Milan (Ferrari, "Le cronache di Galvano Fiamma e le fonti della Galvagnana" in "Bulletino dell' Istituto Storico Italiano", Rome, 1891); John of Colonna (c. 1336) is the author of a "De viris illustribus" and a "Mare Historiarum" (Mandonnet, "Des écrits authentiques de St. Thomas d'Aquin", Fribourg, 2nd ed., 1910, p. 97). In the second half of the fourteenth century Conrad of Halberstadt wrote a "Chronographia summorum Pontificum et Imperatorum romanorum" (Menck, "Die Chronographia Konrads von Halberstadt" etc. in "Forsch. deutsch. Gesch.", XX, 1880, 279); Henry of Hervordia (d. 1370) wrote a "Liber de rebus memorabilibus" (ed. Potthast, Göttingen, 1859); Stefanardo de Vicomercato is the author of the rhythmical poem "De gestis in civitate Mediolani" (in "Script. Rer. Ital.", IX; G. Calligaris, "Alcune osservazioni sopra un passo del poema 'De gestis in civitate Mediolani' di Stefanardo" in "Misc. Ceriani", Milan, 1910). At the end of the fifteenth century Hermann of Lerbeke composed a "Chronicon comitum Schauenburgensium" and a "Chronicon episcoporum Mindensium" (Eckmann, "Hermann von Lerbeke mit besonderer Berücksichtigung seines Lebens und der Abfassungszeit seiner Schriften" (Hamm, 1879); Hermann Korner left an important "Chronica novella" (ed. J. Schwalm, Göttingen, 1895; cf. Waitz, "Ueber Hermann Korner und die Lübecker Chronikon", Göttingen, 1851). The "Chronicon" or "Summa Historialis" of St. Antoninus, Archbishop of Florence, composed about the middle of the fifteenth century is a useful compilation with original data for the author's own times (Schaube, "Die Quellen der Weltchronik des heil. Antonin, Erzbischofs von Florenz" Hirschberg, 1880). Felix Fabri (Schmid, d. 1502) left valuable historical works; his "Evagatorium in Terræ Sanctæ, Arabiæ et Ægypti peregrinationem" (ed., Hassler, Stuttgart, 1843) is the most instructive and important work of this kind during the fourteenth century. He is also the author of a "Descriptio Sueviæ" ("Quellen zur Schweizer Gesch.", Basle, 1884) and a "Tractatus de civitate Ulmensi" (Litterarischesverein in Stuttgart, no. 186, Tübingen, 1889, ed. G. Veesenmeyer; cf., under the names of these writers, Quétif-Echard, "Script. Ord. Præd."; Chevalier, "Répertoire . . . du moyen-âge; Bio-Bibl.", Paris, 1907; Potthast, "Bib. Hist. Medii Ævi", Berlin, 1896; Hurter, "Nomenclator Lit.", II, 1906).

(viii) Miscellaneous works.—Being unable to devote a section to each of the different spheres wherein the Preachers exercised their activity, we shall mention here some works which obtained considerable influence or are particularly worthy of attention. The "Specula" ("Naturale", "doctrinale", "historiale";

the "Speculum morale" is apocryphal) of Vincent of Beauvais constitute the largest encyclopedia of the Middle Ages and furnished materials for many subsequent writers (Vogel, "Literär-historischen Notizen über den mittelalterlichen Gelehrten Vincenz von Beauvais", Freiburg, 1843; Bourgeat, "Études sur Vincent de Beauvais", Paris, 1856). The work of Humbert of Romans, "De tractandis in concilio generali", composed in 1273 at the request of Gregory X, and which served as a programme to the General Council of Lyons in 1274, contains the most remarkable views on the condition of Christian society and the reforms to be undertaken (Mortier, "Hist. des Maîtres généraux de l'ordre des Frères Prêcheurs", I, 88). The treatise is edited in full only in Brown, "Appendix ad fasc. rerum expectandarum et fugendarum" (London, 1690, p. 185). Burchard of Mount Sion with his "Descriptio Terræ Sanctæ" written about 1283, became the classic geographer of Palestine during the Middle Ages (J. C. M. Laurent, "Peregrinatores medii ævi quatuor", Leipzig, 1873). William of Moerbeke, who died as Archbishop of Corinth about 1286, was the revisor of translations of Aristotle from the Greek and the translator of portions not hitherto translated. To him are also due translations of numerous philosophical and scientific works of ancient Greek authors (Mandonnet, "Siger de Brabant", I, 40). The "Catholicon" of the Genoese John Balbus, completed in 1285, is a vast treatise on the Latin tongue, accompanied by an etymological vocabulary. It is the first work on profane sciences ever printed. It is also famous because in the Mainz edition (1460) John Gutenberg first made use of movable type ("Incunabula xylographica et typographica", 1455-1500, Joseph Baer, Frankfurt, 1900, p. 11). The "Philobiblion" edited under the name of Richard of Bury, but composed by Robert Holcot (d. 1349), is the first medieval treatise on the love of books (ed. Cocheris, Paris, 1856; tr. Thomas, London, 1888). John of Tambach (d. 1372), first professor of theology at the newly-founded University of Prague (1347), is the author of a valuable work, the "Consolatio Theologiæ" (Denifle, "Magister Johann von Dambach" in "Archiv für Litt. u. Kirchengesch." III, 640). Towards the end of the fifteenth century Frederico Frezzi, who died as Bishop of Foligno (1416), composed in Italian a poem in the spirit of the "Divina Commedia" and entitled "Il Quadriregio" (Foligno, 1725); (cf. Canetti, "Il Quadriregio", Venice, 1889; Filippini, "Le edizioni del Quadriregio" in "Bibliofilia", VIII, Florence, 1907). The Florentine Thomas Sardi (d. 1517) wrote a long and valued poem, "L'anima peregrina", the composition of which dates from the end of the fifteenth century (Romagnoli, "Frate Tommaso Sardi e il suo poema inedito dell' anima peregrina" in "Il propugnatore", XVIII, 1885, pt. II, 289).

(ix) Liturgy.—Towards the middle of the thirteenth century the Dominicans had definitely established the liturgy which they still retain. The final correction (1256) was the work of Humbert of Romans. It was divided into fourteen sections or volumes. The prototype of this monumental work is preserved at Rome in the general archives of the order ("Script. Ord. Præd." I, 143; "Zeitschr. f. Kathol. Theol.", VII, 10). A portable copy for the use of the master general, a beautiful specimen of thirteenth-century book-making, is preserved in the British Museum, no. 23,935 (J. W. Legg, "Tracts on the Mass", Bradshaw Society, 1904; Barge, "Le Chant liturgique dans l'Ordre de Saint-Dominique" in "L'Année Dominicaine", Paris, 1908, 27; Gagin, "Un manuscrit liturgique des Frères Prêcheurs antérieur aux règlements d'Humbert de Romans" in "Revue des Bibliothèques", 1899, p. 163; Idem, "Dominicains et Teutoniques, conflit d'attribution du 'Liber

Choralis", no. 182 du catalogue 120 de M. Ludwig Rosenthal" in "Revue des Bibliothèques", 1908). Jerome of Moravia, about 1250, composed a "Tractatus de Musica" (Paris, Bib. Nat. lat. 16,663), the most important theoretical work of the thirteenth century on liturgical chant, some fragments of which were placed as preface to the Dominican liturgy of Humbert of Romans. It was edited by Coussemaker in his "Scriptores de musica mediæ ævi", I (Paris, 1864). (Cf. Kornmüller "Die alten Musiktheoretiker XX. Hieronymus von Mähren" in "Kirchenmusikalisches Jahrbuch", IV, 1889, 14.) The Preachers also left numerous liturgical compositions, among the most renowned being the Office of the Blessed Sacrament by St. Thomas Aquinas, one of the masterpieces of Catholic liturgy (Mandonnet, "Des écrits authentiques de S. Thomas d'Aquin", 2nd ed. p. 127). Armand du Prat (d. 1306) is the author of the beautiful Office of St. Louis, King of France. His work, selected by the Court of Philip the Bold, came into universal use in France ("Script. Ord. Præd." I, 499; "Notices et extraits des manuscrits de la Bib. Nat.", XXVII, 11th pt., 369, n. 6). The "Dies Iræ" has been attributed to Cardinal Latino Malabranca who was in his time a famous composer of ecclesiastical chants and offices ("Scritti vari di Filologia", Rome, 1901, p. 488).

(x) Humanistic works.—The order felt more than is commonly thought the influence of Humanism, and furnished it with noteworthy contributions. This influence was continued during the following period in the sixteenth century and reacted on its Biblical and theological compositions. Leonardo Giustiniani, Archbishop of Mytilene, in 1449, composed against the celebrated Poggio a treatise "De vera nobilitate", edited with Poggio's "De nobilitate" (Avellino, 1657). The Sicilian Thomas Schifaldo wrote commentaries on Perseus about 1461 and on Horace in 1476. He is the author of a "De viris illustribus Ordinis Prædicatorum", written in humanistic style, and of the Office of St. Catherine of Siena, usually but incorrectly ascribed to Pius II (Cozzuli, "Tommaso Schifaldo umanista siciliano del sec. XV", Palermo, 1897, in "Documenti per servire alla storia di Sicilia", VI). The Venetian Francesco Colonna is the author of the celebrated work "The Dream of Poliphilus" ("Poliphili Hypnerotomachia, ubi humana omnia non nisi somnium esse docet", Aldus, Venice, 1499; cf. Popelin, "Le songe de Poliphile ou hypnerotomachia de Frère Francesco Colonna", Paris, 1880). Colonna's work aims to condense in the form of a romance all the knowledge of antiquity. It gives evidence of its author's profound classical learning and impassioned love for Græco-Roman culture. The work, which is accompanied by the most perfect illustrations of the time, has been called "the most beautiful book of the Renaissance" (Ilg, "Ueber den kunsthistorisches werth der Hypnerotomachia Poliphili", Vienna, 1872; Ephrusi, "Etudes sur le songe de Poliphile" in "Bulletin de Bibliophile", 1887; Paris, 1888; Dorez, "Des origines et de la diffusion du songe de Poliphile" in "Revue des Bibliothèques", VI, 1896, 239; Gnoli, "Il sogno di Polifilo" in "Bibliofila", 1900, 190; Fabrini, "Indagini sul Polifilo" in "Giorn. Storico della letteratura Italiana", XXXV, 1900, I; Poppelreuter, "Der anonyme Meister des Polifilo" in "Zur Kunstgesch. des Auslandes", XX, Strassburg, 1904; Molmenti, "Alcuni documenti concernenti l'autore della (Hypnerotomachia Poliphili)" in "Archivio storico italiano", Ser. V, XXXVIII (906, 291). Tommaso Radini Todeschi (Radinus Todischus) composed under the title "Callipsychia" (Milan, 1511) an allegorical romance in the manner of Apuleius and inspired by the "Dream of Poliphilus". The Dalmatian, John Polycarpus Severitanus of Sebenico, commentated the eight parts of the dis-

course of Donatus and the Ethics of Seneca the Younger (Perugia, 1517; Milan, 1520; Venice, 1522) and composed "Gramatices historicae, methodicae et exegeticae" (Perugia, 1518). The Bolognese Leandro Alberti (d. 1550) was an elegant Latinist and his "De viris illustribus ordinis prædicatorum" (Bologna, 1517), written in the humanistic manner, is a beautiful specimen of Bolognese publishing ("Script. Ord. Præd.", II, 137; Campori, "Sei lettere inedite di Fra Leandro Alberti" in "Atti e memorie della Deput. di Storia patria per le prov. Modenesi e Parmensi", I, 1864, p. 413). Finally Matteo Bandello (d. 1555), who was called the "Dominican Boccaccio", is regarded as the first novelist of the Italian Cinquecento and his work shows what an evil influence the Renaissance could exert on churchmen (Masi "Matteo Bandello o vita italiana in un noveliere del cinquecento", Bologna, 1900).

(g) The Preachers and Art.—The Preachers hold an important place in the history of art. They contributed in many ways to the artistic life of the Middle Ages and the Renaissance. Their churches and convents offered an extraordinary field of activity to contemporary artists, while a large number of the Preachers themselves did important work in the various spheres of art. Finally by their teaching and religious activity they often exercised a profound influence on the direction and inspiration of art. Primarily established under a regime of evangelical poverty, the order took severe measures to avoid in its churches all that might suggest luxury and wealth. Until the middle of the thirteenth century its constitutions and general chapters energetically legislated against anything tending to suppress the evidence of poverty ("Archiv. f. Litt.-und Kirchengesch.", I, 225; "Acta Cap. Gen.", I, *passim*). But the order's intense activity, its establishment in large cities and familiar contact with the whole general movement of civilization triumphed over this state of things. As early as 1250, churches and convents appeared called *opus sumptuosum* (Finke, "Die Freiburger Dominikaner und der Münsterbau", Freiburg, 1901, p. 47; Potthast, *op. cit.*, 22,426). They were, however, encouraged by ecclesiastical authority and the order eventually relinquished its early uncompromising attitude. Nevertheless ascetic and morose minds were scandalized by what they called royal edifices (Matthew Paris, "Hist. maj.", ad. ann. 1243; d'Achéry, "Spicilegium", Paris, 1723, II, 634; Cocheris, "Philobiblion", Paris, 1856, p. 227). The second half of the thirteenth century saw the beginning of a series of monuments, many of which are still famous in history and art. "The Dominicans," says Cesare Cantù, "soon had in the chief towns of Italy magnificent monasteries and superb temples, veritable wonders of art. Among others may be mentioned: the Church of Santa Maria Novella, at Florence; Santa Maria Sopra Minerva, at Rome; St. John and St. Paul, at Venice; St. Nicholas, at Treviso; St. Dominic, at Naples, at Perugia, at Prato, and at Bologna, with the splendid tomb of the founder, St. Catherine, at Pisa; St. Eustorgius and Sta Maria delle Grazie, at Milan, and several others remarkable for a rich simplicity and of which the architects were mostly monks" ("Les Hérétiques de l'Italie", Paris, 1869, I, 165; Berthier, "L'église de Sainte Sabine à Rome", Rome, 1910; Mullooly, "St. Clement, Pope and Martyr, and his Basilica in Rome", Rome, 1873; Nolan, "The Basilica of St. Clement in Rome", Rome, 1910; Brown, "The Dominican Church of Santa Maria Novella at Florence, An historical, architectural and artistic study", Edinburgh, 1902; Berthier, "L'église de la Minerve à Rome", Rome, 1910; Marchese, "San Marco convento dei Padri Predicatori in Firenze", Florence, 1853; Malaguzzi, "La chiesa e il convento di S. Domenico a Bologna

secondo nuove ricerche" in "Repertorium für Kunstwissenschaft", XX, 1897, 174; Caffi, "Della chiesa di Sant' Eustorgio in Milano", Milan, 1841; Valle, "S. Domenico Maggiore di Napoli", Naples, 1854; Milanese, "Le Chiesa monumentale di S. Nicolò in Treviso", Treviso, 1889; Mortier, "Notre Dame de la Guercia", Paris, 1904; Ital. tr. Ferretti, Florence, 1904; Orlandini, "Descrizione storica della chiesa di S. Domenico di Perugia", Perugia, 1798; Biebrach, "Die holzgedeckten Franziskaner und Dominikanerkirchen in Umbrien und Toskana", Berlin, 1908).

France followed in Italy's footsteps. Here mention must be made of the Jacobins of Toulouse (Carrière, "Les Jacobins de Toulouse", 2nd ed., Toulouse, s. d.); St. Jacques de Paris (Millin, "Antiquités nationales", Paris, 1790, III, 1); St. Maximin in Provence (Rostan, "Notice sur l'église de Saint-Maximin", Brignoles, 1859); Notre-Dame-de-Confort at Lyons (Cormier, "L'ancien couvent des Dominicains de Lyon", Lyons, 1898). A comprehensive account of the architectural work of the Dominicans in France may be found in the magnificent publication of Rohault de Fleury, "Gallia Dominicana, Les couvents de Saint-Dominique en France au moyen-âge" (Paris, 1903, 2 vols. in 4°). Spain was also covered with remarkable monuments: St. Catherine of Barcelona and St. Thomas of Madrid were destroyed by fire; S. Esteban at Salamanca, S. Pablo and S. Gregorio at Valladolid, Santo Tomas at Avila, San Pablo at Seville and at Cordova. S. Cruz at Granada, Santo Domingo at Valencia and Saragossa (Martinez-Vigil, "La orden de Predicadores", Barcelona, 1886). Portugal also had beautiful buildings. The church and convent of Batalha are perhaps the most splendid ever dwelt in by the order (Murphy, "Plans, elevations, sections and views of the Church of Batalha", London, 1795; de Condeixa, "O mosteiro de Batalha em Portugal", Paris, 1892; Vascoucellos, "Batalha. Convento de Santa Maria da Victoria", Porto, 1905). Germany had beautiful churches and convents, usually remarkable for their simplicity and the purity of their lines (Scherer, "Kirchen und Kloster der Franziskaner und Dominikaner in Thüringen", Jena, 1910; Schneider, "Die Kirchen der Dominikaner und Karmeliten" in "Mittelalterliche Ordensbauten in Mainz", Mainz, 1879; "Zur Wiederherstellung der Dominikanerkirche in Augsburg" in "Augsburger Postzeitung", 12 Nov., 1909; "Das Dominikanerkloster in Eisenach", Eisenach, 1857; Ingold, "Notice sur l'église et le couvent des Dominicains de Colmar", Colmar, 1894; Burckhardt-Riggenbach, "Die Dominikaner Klosterkirche in Basel", Basle, 1855; Stammeler, "Die ehemalige Predigerkirche in Bern und ihre Wandmalereien" in "Berner Kunstdenkmäler", III, Bern, 1908).

Whatever may be said to the contrary the Dominicans as well as other mendicant orders created a special architectural art. They made use of art as they found it in the course of their history and adapted it to their needs. They adopted Gothic art and assisted in its diffusion, but they accepted the art of the Renaissance when it had supplanted the ancient forms. Their churches varied in dimensions and richness, according to the exigencies of the place. They built a number of churches with double naves and a larger number with open roofs. The distinct characteristic of their churches resulted from their sumptuary legislation which excluded decorated architectural work, save in the choir. Hence the predominance of single lines in their buildings. This exclusivism, which often went as far as the suppression of capitals on the columns, gives great lightness and elegance to the naves of their churches. While we lack direct information concerning most of the architects of these monuments, there is no doubt that

many of the men who supervised the construction of its churches and convents were members of the order and they even assisted in works of art outside of the order. Thus we know that Brother Diemar built the Dominican church of Ratisbon (1273-77) (Sighart, "Gesch. d. bildenden Künste im Kgn. Bayern", Munich, 1862). Brother Volmar exercised his activity in Alsace about the same time and especially at Colmar (Ingold, op. cit.). Brother Humbert was the architect of the church and convent of Bonn, as well as of the stone bridge across the Aar, in the Middle Ages the most beautiful in the city (Howald, "Das Dominikaner-Kloster in Bern von 1269-1400", Bern, 1857). In Italy architects of the order are known to fame, especially at Florence, where they erected the church and cloisters of S. Maria Novella, which epitomize the whole history of Florentine art (Davidsohn, "Forschungen zur Gesch. von Florenz", Berlin, 1898, 466; Marchese, "Memorie dei più insigni pittori, scultori e architetti domenicani", Bologna, 1878, I). At first the order endeavoured to banish sculpture from its churches, but eventually accepted it and set the example by the construction of the beautiful tomb of St. Dominic at Bologna, and of St. Peter of Verona at the Church of St. Eustorgius at Milan. A Dominican, William of Pisa, worked on the former (Berthier, "Le tombeau de St. Dominique", Paris, 1895; Beltrani, "La cappella di S. Pietro Martire presso la Basilica di Sant Eustorgio in Milano" in "Archivio storico dell' arte", V, 1892). Brother Paschal of Rome executed interesting sculptural works, e. g. his sphinx of Viterbo, signed and dated (1286), and the paschal candlestick of Sta. Maria in Cosmedin, Rome ("Römische Quartalschrift", 1893, 29).

There were many miniaturists and painters among the Preachers. As early as the thirteenth century Hugh Ripelin of Strasburg (d. 1268) was renowned as a painter (Mon. Germ. Hist.: SS., XVII, 233). But the lengthy list is dominated by two masters who overshadow the others, Fra Angelico and Fra Bartolommeo. The work of Fra Giovanni Angelico da Fiesole (d. 1455) is regarded as the highest embodiment of Christian inspiration in art (Marchese, "Memorie", I, 245; Tumiat, "Frate Angelico", Florence, 1897; Supino, "Beato Angelico", Florence, 1898; Langton Douglas, "Fra Angelico", London, 1900; Wurm, "Meister und Schülerarbeit in Fra Angelicos Werk", Strasburg, 1907; Cochin, "Le Bienheureux Fra Giovanni Angelico da Fiesole", Paris, 1906; Schottmüller, "Fra Angelico da Fiesole", Stuttgart and Leipzig, 1911 (Fr. ed., Paris, 1911). Fra Bartolommeo belongs to the golden age of the Italian Renaissance. He is one of the great masters of drawing. His art is scholarly, noble, and simple and imbued with a tranquil and restrained piety (Marchese, "Memorie", II, 1; Franz, "Fra Bartolommeo della Porta", Ratisbon, 1879; Gruyer, "Fra Bartolommeo della Porta et Mariotto Albertinelli", Paris-London, s. d.; Knapp, "Fra Bartolommeo della Porta und die Schule von San Marco", Halle, 1903). The order also produced remarkable painters on glass: James of Ulm (d. 1491), who worked chiefly at Bologna and William of Marcillat (d. 1529), who in the opinion of his first biographer was perhaps the greatest painter on glass who ever lived (Marchese, "Memorie", II; Mancini, "Guglielmo de Marcillat francese insuperato pittore sul vetro", Florence, 1909). As early as the fourteenth century Dominican churches and convents began to be covered with mural decorations. Some of these edifices became famous sanctuaries of art, such as S. Maria Novella and S. Marco of Florence. But the phenomenon was general at the end of the fifteenth century, and thus the order received some of the works of the greatest artists, ■ for instance the "Last Supper" of

Leonardo da Vinci (1497-98) in the refectory of S. Maria delle Grazie at Milan (Bossi, "Del cenacolo di Leonardo da Vinci", Milan, 1910; Sant' Ambrogio, "Note epigrafiche ed artistiche intorno alla sala del Cenacolo ed al tempio di Santa Maria delle Grazie in Milano" in "Archivio Storico Lombardo", 1892).

The Preachers exercised a marked influence on painting. The order infused its apostolic zeal and theological learning into the objects of art under its control, thus creating what may be called theological painting. The decoration of the Campo Santo of Pisa, Orcagna's frescoes in the Strozzi chapel and the Spanish chapel at S. Maria Novella, Florence, have long been famous (Michel, "Hist. de l'art depuis les premiers temps chrétiens jusqu'à nos jours", Paris, II, 1908; Hettner, "Die Dominikaner in der Kunstgesch. des 14. und 15. Jahrhunderts" in "Italienische Studien zur Gesch. der Renaissance", Brunswick, 1879, 99; "Renaissance und Dominikaner Kunst" in "Hist.-polit. Blätter", LXXXVIII, 1884; Perate, "Un Triomphe de la Mort de Pietro Lorenzetti", Paris, 1902; Bacciocchi, "Il chiostro verde e la cappella degli Spagnuoli", Florence; Endres, "Die Verherrlichung des Dominikanerordens in der Spanischen Kapelle an S. Maria Novella zu Florenz" in "Zeitschr. f. Christliche Kunst", 1909, p. 323). To the same causes were due the numerous triumphs of St. Thomas Aquinas (Hettner, op. cit.; Berthier, "Le triomphe de Saint Thomas dans la chapelle des Espagnols à Florence", Fribourg, 1897; Ucelli, "Dell' iconografia di s. Tommaso d'Aquino", Naples, 1867). The influence of Savonarola on the artists and the art of his time was profound (Gruyer, "Les illustrations des écrits de Jérôme Savonarole et les paroles de Savonarole sur l'art", Paris, 1879; Lafenestre, "Saint François d'Assise et Savonarole inspireurs de l'art Italien", Paris, 1911). The Dominicans also frequently furnished libretti, i. e. dogmatic or symbolic themes for works of art. They also opened up an important source of information to art with their *sanctoriaux* and their popularizing writings. Artistic works such as the dances of death and sybils allied with the prophets are greatly indebted to them (Neale, "L'art religieux du XIII^e siècle", Paris, 1910; Idem, "L'art religieux de la fin du moyen-âge en France", Paris, 1910). Even the mystical life of the order, in its way, exercised an influence on contemporary art (Peltzer, "Deutsche Mystik und deutsche Kunst", Strassburg, 1899; Hintze, "Der Einfluss des mystiken auf die ältere Kölner Malerschule", Breslau, 1901). Its saints and its confraternities, especially that of the Rosary, inspired many artists (Neuwborn, "Die Verherrlichung des hl. Dominicus in der Kunst", 1906).

(h) The Preachers and the Roman Church.—The Order of Preachers is the work of the Roman Church. She found in St. Dominic an instrument of the first rank. But it was she who inspired the establishment of the order, who loaded it with privileges, directed its general activity, and protected it against its adversaries. From Honorius III (1216) to the death of Honorius IV (1287) the papacy was most favourable to the Preachers. Innocent IV's change of attitude at the end of his pontificate (10 May, 1254), caused by the recriminations of the clergy and perhaps also by the adhesion of Arnold of Trier to Frederick II's projects of anti-ecclesiastical reform, was speedily repaired by Alexander IV [22 Dec., 1254; ("Chart. Univ. Paris", I, 263, 276; Winckelmann, "Fratris Arnoldi Ord. Præd. De correctione Ecclesie Epistola", 1863; "Script. Ord. Præd.", II, 821 b)]. But as a general thing during the fourteenth and fifteenth centuries the popes remained much attached to the order, displaying great confidence in it, as is made manifest by the "Bullarium" of the Preachers. No other religious order, it would seem, ever received eulogies from the papacy like those addressed to it

by Alexander IV, 23 May, 1257 (Potthast, op. cit., 16,847). The order co-operated with the Church in every way, the popes finding in its ranks assistants who were both competent and devoted. Beyond doubt through its own activity, its preaching and in instruction, it was already a powerful agent of the papacy; nevertheless the popes requested of it a universal co-operation. Matthew Paris states in 1250: "The Friars Preachers, impelled by obedience, are the fiscal agents, the nuncios and even the legates of the pope. They are the faithful collectors of the pontifical money by their preaching and their crusades and when they have finished they begin again. They assist the infirm, the dying, and those who make their wills. Diligent negotiators, armed with powers of every kind, they turn all to the profit of the pope" (Matthew Paris, "Hist. Angl.", III, 317, in "Rer. Brit. Med. Æv. Script."). But the commissions of the Church to the Preachers far exceeded those enumerated by Matthew Paris, and among the weightiest must be mentioned the visitation of monasteries and dioceses, the administration of a large number of convents of nuns and the inquisitorial office. The order attempted to withdraw from its multifarious occupations, which distracted it from its chief end. Gregory IX partially yielded to their demands (25 Oct., 1239; cf. Potthast, op. cit., 10,804), but the order never succeeded in wholly winning its cause (Fontana, "Sacrum Theatrum Dominicanum", pt. II, De S. R. Ecclesie Officialibus, Rome, 1666; "Bull. Ord. Præd.", I-II, *passim*; Potthast, "Regest. Pont. Rom.", Papal Register of the XIII cent. in "Bib. des Ecoles Françaises d'Athènes et de Rome").

The Dominicans gave to the Church many noted personages: among them during the Middle Ages were two popes, Innocent V (1276) and Benedict XI (1303-4; (Mothon, "Vie du B. Innocent V", Rome, 1896; Fietta, "Nicolò Boccasino di Trevigi e il suo tempo", Padua, 1875; Funk, "Papst Benedikt XI", Münster, 1891; Grandjean, "Benoît XI avant son pontificat" (1240-1303) in "Mélanges archiv.-Hist. de l'école française de Rome", VIII, 219; Idem, "Recherches sur l'administration financière du pape Benoît XI", loc. cit., III, 1883, 47; Idem, "La date de la mort de Benoît XI", loc. cit., XIV, 1894, 241; Idem, "Registre de Benoît XI", Paris, 1885)]. There were twenty-eight Dominican cardinals during the first three centuries of the order's existence. Some of them were noted for exceptional services to the papacy. The earliest of them, Hugh of Saint Cher, had the delicate mission of persuading Germany to accept William of Holland after the deposition of Frederick II (Sassen, "Hugh von St. Cher em Seine Tätigkeit als Kardinal, 1244-1263", Bonn, 1908). Cardinal Latino Malabranca is famous for his legations and his pacification of Florence (1280; Davidsohn, "Gesch. von Florenz", II, Berlin, 1908, p. 152; Idem, "Forsch. zur Gesch. von Florenz", IV, 1908, p. 226). Nicholas Albertini of Prato (1305-21) also undertook the pacification of Florence (1304; Bandini, "Vita del Cardinale Nicolò da Prato", Leghorn, 1757; Fineschi, "Supplemento alla vita del Cardinale Nicolò da Prato", Lucca, 1758; Perrens, "Hist. de Florence", Paris, III, 1877, 87). Cardinal Giovanni Dominici (1408-19) was the staunchest defender of the legitimate pope, Gregory XII, at the end of the Great Schism; and in the name of his master resigned the papacy at the Council of Constance (Rossler, "Cardinal Johannes Dominici, O.Pr., 1357-1419", Freiburg, 1893; Mandonnet, "Beiträge zur. Gesch. des Cardinals Giovanni Dominici" in "Hist. Jahrbuch.", 1900; Hollerbach, "Die Gregorianische Partei, Sigismund und das Konstanzer Konzil" in "Römische Quartalschrift", XXIII-XXIV, 1909-10). Cardinal John de Torquemada (Turrecremata, 1439-68), an eminent theologian, was one of the strong-

est defenders of the pontifical rights at the time of the Council of Basle (Lederer, "Johann von Torquemada, sein Leben und seine Schriften", Freiburg, 1879; Hefele, "Conciliengesch.", VIII).

Many important officials were furnished to the Church: Masters of the Sacred Palace (Catalamus, "De magistro sacri palatii apostolici", Rome, 1751); pontifical penitentiaries (Fontana, "Sacr. Theatr. Dominic", 470; 631; "Bull. O. P.", VIII, 765, Penitentiarii; Goller, "Die päpstliche Penitentiarii von ihrem Ursprung bis zu ihrer Umgestaltung unter Pius VII", Rome, 1907-11); and especially pontifical inquisitors. The defence of the Faith and the repression of heresy is essentially an apostolic and pontifical work. The Preachers also furnished many delegate judges holding their powers either from the bishops or from the pope, but the order as such had no mission properly so called, and the legislation for the repression of heresy was in particular absolutely foreign to it. The extreme dangers run by the Church at the beginning of the thirteenth century, owing to the progress of the Albigensians and Cathari, impelled the papacy to labour for their repression. It first urged the bishops to act, and the establishment of synodal witnesses was destined to make their mission more effective, but the insufficiency of this arrangement induced Gregory IX to advise the bishops to make use of the Preachers and finally, doubtless owing to the lack of zeal displayed by many bishops, to create inquisitorial judges by pontifical delegation. The Preachers were not chosen *de jure*, but *de facto* and successively in the various provinces of the order. The pope usually charged the Dominican provincials with the nomination of inquisitorial officers whose jurisdiction ordinarily coincided with the territory of the Dominican province. In their office the inquisitors were removed from the authority of their order and dependent only on the Holy See. The first pontifical inquisitors were invariably chosen from the Order of Preachers, the reason being the scarcity of educated and zealous clerics. The Preachers, being vowed to study and preaching, were alone prepared for a ministry, which required both learning and courage. The order received this, like many other pontifical commissions, only with regret. The master general, Humbert of Romans, declared that the friars should flee all odious offices and especially the Inquisition (Opera, ed. Berthier, II, 36).

The same solicitude to remove the order from the odium of the inquisitorial office impelled the provincial chapter of Cahors (1244) to forbid that anything should accrue to the friars from the administration of the Inquisition, that the order might not be slandered. The provincial chapter of Bordeaux (1257) even forbade the religious to eat with the inquisitors in places where the order had a convent (Douais, "Les Frères Prêcheurs en Gascogne", Paris-Auch, 1885, p. 64). In countries where heresy was powerful, for instance in the south of France and the north of Italy, the order had much to endure, pillage, temporary expulsion, and assassination of the inquisitors. After the putting to death of the inquisitors at Avignonet (28 May, 1242) and the assassination of St. Peter of Verona (29 April, 1242) ("Vitæ fratrum", ed. Reichart, 231; Perein, "Monumenta Conventus Tolosani", Toulouse, 1693, II, 198; Acta SS., 29 April) the order, whose administration had much to suffer from this war against heresy, immediately requested to be relieved of the inquisitorial office. Innocent IV refused (10 April, 1243; Potthast, 11,083), and the following year the bishops of the south of France petitioned the pope that he would retain the Preachers in the Inquisition ("Hist. gén. du Languedoc", III, ed. in folio, proof CCLIX, Vol. CCCXLVI). Nevertheless the Holy See understood the desire of the Preachers; several provinces of Christendom ceased to be administered

by them and were confided to the Friars Minor, viz., the Pontifical States, Apulia, Tuscany, the March of Trevisa and Slavonia, and finally Provence (Potthast, 11,993, 15,330, 15,409, 15,410, 18,895, 20,169; Tanon, "Hist. des tribunaux de l'inquisition en France" Paris, 1893; Idem, "Documents pour servir à l'hist. de l'Inquisition dans le Languedoc", Paris, 1900; Vacandard, "L'Inquisition", Paris, 1907; Lea, "Hist. of the Inquisition in the Middle Ages", New York-London, 1888, French tr., Paris, 1900; Frédéricq, "Corpus documentorum Inquisitionis hæreticæ pravitatis Neerlandicæ", Ghent, 1900; Amabile, "Il santo officio della Inquizione in Napoli", Citta di Castello, 1892; Canzons, "Hist. de l'Inquisition en France", Paris, 1909; Jordan, "La responsabilité de l'Eglise dans la répression de l'hérésie au moyen-âge" in "Annales de Philosophie chrét.", CLIV, 1907, p. 225). The suppression of heresy which had been especially active in certain more affected parts of Christendom, diminished notably in the second half of the thirteenth century. The particular conditions prevailing in Spain brought about the re-establishment of the Inquisition with new duties for the inquisitor general. These were exercised from 1483 to 1498 by Thomas of Torquemada, who reorganized the whole scheme of suppression, and by Diego de Deza from 1498 to 1507. These were the first and last Dominican inquisitors general in Spain (Lea, "Hist. of the Inquisition of Spain", New York, 1906; Cotarelo y Valledor, "Fray Diego de Deza", Madrid, 1905).

(i) The Friars Preachers and the Secular Clergy.—The Preachers, who had been constituted from the beginning as an order of clerics vowed to ecclesiastical duties with a view to supplementing the insufficiency of the secular clergy, were universally accepted by the episcopate, which was unable to provide for the pastoral care of the faithful and the instruction of clerics. It was usually the bishops who summoned the Preachers to their dioceses. The conflicts which broke out here and there during the thirteenth century were not generally due to the bishops but to the parochial clergy who considered themselves injured in their temporal rights because of the devotion and generosity of the faithful towards the order. As a general thing compromises were reached between the convents and the parishes in which they were situated and peaceful results followed. The two great contests between the order and the secular clergy broke out in France during the thirteenth century. The first took place at the University of Paris, led by William of Saint-Amour (1252-59), and was complicated by a scholastic question. The episcopate had no share in this, and the church supported with all its strength the rights and privileges of the order, which emerged victorious (Mandonnet, "Siger de Brabant", I, 70, 90; Perrod, "Etude sur la vie et les œuvres de Guillaume de Saint-Amour" in "Mémoires de la société d'émulation de Jura", Lons-le-Saunier, 1902, p. 61; Seppelt, "Der Kampf der Bettelorden an der Universität Paris in der Mitte des 13. Jahrhunderts" in "Kirchengeschichtliche Abhandlungen", Breslau, III, 1905; VII, 1909). The strife broke out anew in the north of France after the privilege of Martin IV, "Ad fructus uberes" (13 Dec., 1281), and lasted until the Council of Paris in 1290. It was to a large extent conducted by Guillaume de Flavacourt, Bishop of Amiens, but in this instance also the two great mendicant orders triumphed over their adversaries, thanks to the energetic assistance of two cardinal legates (Denifle-Chatelain, "Chart. Univ. Paris", I, *passim*; Finke, "Das Pariser National Konzil 1290" in "Römische Quartalschrift", 1895, p. 171; Paulus, "Welt und Ordensclerus beim Ausgange des XIII. Jahrhunderts in Kampf um die Pfarr-Rechte", Essen-Ruhr, 1900).

The order gave many of its members to the episcopate, but endeavoured to prevent this. Sts. Dominic and Francis seem to have disapproved of the accession of their religious to ecclesiastical dignities ("Speculum perfectionis", ed. Sabatier, Paris, 1898, p. 75; Thomas of Celano, "Legenda secunda S. Francisci", III, lxxxvi). Jordanus of Saxony, the immediate successor of St. Dominic, forbade all acceptance of election or postulation to the episcopate, under pain of excommunication, without special permission of the pope, the general chapter, and the master general ("Acta Cap. Gen.", ed. Reichert, 4). During his administration he resisted with all his strength and declared that he would rather see a friar buried than raised to the episcopate ("Vitæ Fratrum", ed. Reichert, 141, 143, 209). Everyone knows the eloquent letter which Humbert of Romans wrote to Albertus Magnus to dissuade him from accepting the nomination to the See of Ratisbon (1260; Peter of Prussia, "Vita B. Alberti Magni", Antwerp, 1621, p. 253). But all this opposition could not prevent the nomination of a great many to high ecclesiastical dignities. The worth of many religious made them so prominent that it was impossible that they should not be suggested for the episcopate. Princes and nobles who had sons or kinsmen in the order often laboured for this result with interested motives, but the Holy See especially saw in the accession of Dominicans to the episcopate the means of infusing it with new blood. From the accession of Gregory IX the appointment of Dominicans to dioceses and archdioceses became an ordinary thing. Hence until the end of the fifteenth century about fifteen hundred Preachers were either appointed or translated to dioceses or archdioceses, among them men remarkable for their learning, their competent administration, their zeal for souls, and the holiness of their lives. (Eubel, "Hierarchia catholica", I-II; "Bull. Ord. Præd.", I-IV; "Script. Ord. Præd.", I, p. xxi; Cavalieri, "Galleria de' sommi Pontefici, Patriarchi, Arcivescovi, e Vescovi dell'ordine de' Predicatori", Benevento, 1696; Vigna, "I vescovi domenicani Liguri ovvero in Liguria", Genoa, 1887.)

(j) The Preachers and Civil Society.—During the Middle Ages the Preachers influenced princes and communities. Princes found them to be prudent advisers, expert ambassadors, and enlightened confessors. The French monarchy was much attached to them. As early as 1226 Jordanus of Saxony was able to write, in speaking of Blanche of Castile: "The queen tenderly loves the friars and she has spoken with me personally and familiarly about her affairs" (Bayonne, "Lettres du B. Jourdain de Saxe", Paris-Lyons, 1865, p. 66). No prince was more devoted to the order than St. Louis, nor did any grant it more favours. The French monarchy sought most of its confessors during the Middle Ages from the Order of Preachers (Chapotin, "A travers l'histoire dominicaine: 'Les princes français du Moyen Age et l'ordre de Saint Dominique'", Paris, 1903, p. 207; Idem, "Etudes historiques sur la province dominicaine de France", Paris, 1890, p. 128). It was the entrance of Humbert II, Dauphin of Vienna, into the order, which gained Dauphiny for France (Guifrey, "Hist. de la réunion du Dauphiné à la France", Paris, 1878). The Dukes of Burgundy also sought their confessors from the order (Chapotin, op. cit., 190). The kings of England did likewise and frequently employed its members in their service (Palmer, "The Kings' Confessors" in "The Antiquary", London, 1890, p. 114; Tarett, "Friars Confessors of the English Kings" in "The Home Counties Magazine", XII, 1910, p. 100). Several German emperors were much attached to the order, nevertheless the Preachers did not hesitate to enter into conflict with Frederick II and Louis of Bavaria

when these princes broke with the Church (Opladen, "Die Stellung der deutschen Könige zu den Orden im dreizehnten Jahrhundert", Bonn, 1908; Paulus, "Thomas von Strassburg und Rudolph von Sachsen. Ihre Stellung zum Interdikt" in "Hist. Jahrbuch.", XIII, 1892, 1; "Neues Archiv. der Gesellschaft für ältere deutsche Geschichtskunde", XXX, 1905, 447). The kings of Castile and Spain invariably chose their confessors from among the Preachers ("Catalogo de los religiosos dominicos qui han servido a los Señores de Castilla, de Aragon, y de Andalucía, en el empleo de sus Confessores de Estado", Madrid, 1700). The kings of Portugal likewise sought their directors from the same source (de Sousa, "Historia de S. Domingos particular de Reino, e conquistas de Portugal", Lisbon, 1767; Grégoire, "Hist. des confesseurs des empereurs, des rois et d'autres princes", Paris, 1824).

The first to be established in the centres of cities, the Dominicans exercised a profound influence on municipal life, especially in Italy. A witness at the canonization of St. Dominic in 1233 expresses the matter when he says that nearly all the cities of Lombardy and the Marches placed their affairs and their statutes in the hands of the Preachers, that they might arrange and alter them to their taste and as seemed to them fitting. The same was true of the extirpation of wars, the restoration of peace, restitution for usury, hearing of confessions and a multitude of benefits which would be too long to enumerate ("Annales Ord. Præd.", Rome, 1756, append., col. 128). About this time the celebrated John of Vicenza exercised powerful influence in the north of Italy and was himself podestà of Verona (Sutter, "Johann von Vicenza und die italienische Friedensbewegung im Jahre 1233", Freiburg, 1891; Ital. tr., Vicenza, 1900; Vitali, "I Domenicani nella vita italiana del secolo XIII", Milan, 1902; Hefele, "Die Bettelorden und das religiöse Volksleben Ober- und Mittelitaliens im XIII. Jahrhundert", Leipzig-Berlin, 1910). An idea of the penetration of the order into all social classes may be formed from the declaration of Pierre Dubois in 1300 that the Preachers and the Minors knew better than anyone else the condition of the world and of all social classes ("De recuperatione Terre Sancte", ed. Langlois, Paris, 1891, pp. 51, 74, 84). The part played by Catherine of Siena in the pacification of the towns of Central Italy and the return of the papacy from Avignon to Rome is well known. "She was the greatest figure of the second half of the fourteenth century, an Italian, not only a saint, a mystic, a miracle-worker, but a statesman, and a great statesman, who solved for the welfare of Italy and all Christendom the most difficult and tragic question of her time" (Gebhart, "Une sainte homme d'état, Ste Catherine de Sienne" in "Revue Hebdomadaire", 16 March, 1907, 257). It was the Dominican Bishop of Geneva, Adémar de la Roche, who granted that town its liberties and franchise in 1387 (Mallet, "Libertés, franchises, immunités, us et coutumes de la ville de Genève promulgués par l'évêque Adémar Fabri le 23 Mai, 1387" in "Mémoires et documents de la société d'histoire et d'archéologie de Genève", Geneva, II, 1843, p. 270). Finally reference must be made to the profound influence exercised by Girolamo Savonarola (1498) on the political life of Florence during the last years of the fifteenth century (Vilari, "La Storia di Girolamo Savonarola e dei suoi tempi", Florence, 1887; Luotto, "Il vero Savonarola", Florence, 1897).

(k) The Preachers and the Faithful.—During the thirteenth century the faithful were almost without pastoral care and preaching. The coming of the Preachers was an innovation which won over the people eager for religious instruction. What a chronicler relates of Thuringia was the case almost everywhere: "Before the arrival of the Friars

Preachers the word of God was rare and precious and very rarely preached to the people. The Friars Preachers preached alone in every section of Thuringia and in the town of Erfurt and no one hindered them" (Koch, "Graf Elger von Holmstein", Gotha, 1865, pp. 70, 72). About 1267 the Bishop of Amiens, Guillaume de Flavacourt, in the war against heresy already mentioned, declared that the people refused to hear the word of God from any save the Preachers and Minors (Bibl. de Grenoble, MS. 639, fol. 119). The Preachers exercised a special influence over the piously inclined of both sexes among the masses, so numerous in the Middle Ages, and they induced to penance and continence ■ great many people living in the world, who were commonly called Beguins, and who lived either alone or in more or less populous communities. Despite the order's attraction for this devout, half-lay, half-religious world, the Preachers refused to take it under their jurisdiction in order not to hamper their chief activity nor distort their ecclesiastical ideal by too close contact with lay piety. The General Chapters of 1228 and 1229 forbade the religious to give the habit to any woman or to receive her profession, or to give spiritual direction to any community of women not strictly subject to some authority other than that of the order ("Archiv. f. Litt. a Kirchengesch.", I, 27; Bayonne, "Lettres du B. Jourdain de Saxe", 110). But the force of circumstances prevailed, and, despite everything, these clients furnished the chief elements of the Penitential Order of St. Dominic, who received their own rule in 1285, and of whom more has been said above (Mosheim, "De Beghardis et Beguiniabus", Leipzig, 1720; Le Grand, "Les Béguines de Paris", 1893; Nimal, "Les Béguinages", Nivelles, 1908). The Order especially encouraged congregations of the Blessed Virgin and the saints, which developed greatly, especially in Italy. Many of them had their headquarters in convents of the Preachers, who administered them spiritually. After the Penitential movement of 1260 confraternities were formed commonly called *Disciplinati*, *Battuti*, etc. Many of them originated in Dominican churches (there is no general historical work on this subject). In 1274, during the Council of Lyons, Gregory X confided to the Dominicans the preaching of the Holy Name of Jesus, whence arose confraternities of that name (Bull. Ord. Præd., VIII, 524). Finally the second half of the fifteenth century saw the rapid development of confraternities of the Holy Rosary under the influence of the Preachers ("Acta Sanctae Sedis nec non magistrorum et capitulorum generalium sacri ordinis Prædicatorum pro Societate SS. Rosarii", Lyons, 1890). With the object of developing the piety of the faithful the Preachers allowed them to be buried in the habit of the order (Cantimpratani, "De bono universali apum", lib. II, viii, n. 8). From the time of Jordanus of Saxony they issued letters of participation in the spiritual goods of the order. The same general established at Paris the custom of the evening sermon (*collatio*) for the students of the University, in order to turn them aside from dissipation, which custom passed to all the other universities ("Vita fratrum", ed. Reichert, 327).

(1) The Preachers and the Foreign Missions.—During the Middle Ages the Order of Preachers exercised considerable activity within the boundaries of Christendom and far beyond. The evangelization of heathen countries was confided to the nearest Dominican provinces. At the beginning of the fourteenth century the missions of Asia became a special group, the congregation of Friars Pilgrims for Christ. Some of the remote provinces, especially those of Greece and the Holy Land, were recruited from volunteers throughout the order. Besides the work of evangelization the religious frequently assumed the mission of ambassador or agent to schismatic or

pagan princes, and Friars Preachers frequently occupied sees in *partibus infidelium*. A number of them, faithful to the order's doctrinal vocation, composed works of all kinds to assist their apostolate, to defend the Christian Faith, to inform the Roman Church or Latin princes concerning the condition of the East, and to indicate measures to be taken against the dangers threatening Christianity. Finally they frequently shed their blood in these inhospitable and unfruitful countries. The province of Spain laboured for the conversion of the Arabs of the Peninsula, and in 1256 Humbert of Romans described the satisfactory results (H. de Romanis, "Opera", ed. Berthier, II, 502). In 1225 the first Spanish Dominicans evangelized Morocco and the head of the mission, Brother Dominic, was consecrated in that year first Bishop of Morocco (Analecta Ord. Præd., III, 374 sqq.). Some years later they were already established at Tunis ["Mon. Ord. Præd.: Hist.", IV (Barmusidiana), fasc. II, 29]. In 1256 and the ensuing years Alexander IV, at the instance of St. Raymond of Pennafort, gave a vigorous impulse to this mission (Potthast, 16,438; 17,187; 17,929).

In the north of Europe the province of England or that of Dacia carried its establishments as far as Greenland (Telié, "L'évangélisation de l'Amérique avant Christophe Colomb" in "Compte rendu du congrès scient. intern. des Catholiques", 1891, sect. hist., 1721). As early as 1233 the province of Germany promoted the crusade against the Prussians and the heretical Stedingers, and brought them to the Faith (Schomberg, "Die Dominikaner im Erzbistum Bremen", Brunswick, 1910, 14; "Bull. Ord. Præd.", I, 61; H. de Romanis, "Opera", II, 502). The province of Poland, founded by St. Hyacinth (1221), extended its apostolate by means of this saint as far as Kieff and Dantzic. In 1246 Brother Alexis resided at the Court of the Duke of Russia, and in 1258 the Preachers evangelized the Ruthenians (Abraham, "Powstanie organizacji Kościoła łacińskiego na Rusi", Lemberg, 1904; Rainaldi, "Annal. eccl.", ad ann. 1246, n. 30; Potthast, 17,186; Baracz, "Rys dziejów Zakonu Kaznodziejskiego w Polsce", Lemberg, 1861; Comtesse de Flavigny, "Saint Hyacinthe et ses compagnons", Paris, 1899). The province of Hungary, founded in 1221 by Bl. Paul of Hungary, evangelized the Cumans and the people of the Balkans. As early as 1235-37 Brother Richard and his companions set out in quest of Greater Hungary—the Hungarian pagans still dwelling on the Volga ("Vita Fratrum", ed. Reichert, 305; "De inventa Hungaria Magna tempore Gregorii IX", ed. Endlicher, in "Rerum Hungaricarum Monumenta", 248; Ferrarius, "De rebus Hungaricæ Provinciæ S. Ord. Præd.", Vienna, 1637).

The province of Greece, founded in 1223, occupied those territories of the empire of the East which had been conquered by the Latins, its chief centre of activity being Constantinople. Here also the Preachers laboured for the return of the schismatics to ecclesiastical unity ("Script. Ord. Præd.", I, pp. i, xii, 102, 136, 156, 911; Potthast, 3198; "Vita fratrum", 1218). The province of the Holy Land, established in 1228, occupied all the Latin conquest of the Holy Land besides Nicosia and Tripoli. Its houses on the Continent were destroyed one after the other with the defeat of the Christians, and at the beginning of the fourteenth century the province was reduced to the three convents on the Island of Cyprus ("Script. Ord. Præd.", I, pp. i, xii; Balme, "La Province dominicaine de Terre-Sainte de 1277 à 1280" in "Archives de l'Orient Latin"; Idem, "Les franciscains et les dominicains à Jérusalem au treizième et au quatorzième siècle", 1890, p. 324). The province of the Holy Land was the starting point for the evangelization of Asia during the thirteenth century. As early as 1237 the provincial, Philip,

reported to Gregory IX extraordinary results obtained by the religious; the evangelization reached Jacobites and Nestorians, Maronites and Saracens (*Script. Ord. Præd.*, I, 104). About the same time the Friars established themselves in Armenia and in Georgia (*"Bull. Ord. Præd."*, I, 108, *"Script. O. P."*, I, 122; H. de Romanis, *"Opera"*, II, 502; Vinc. Bellovacensis, *"Speculum historiale"*, l. b. XXI, 42; Tamarati, *"L'Eglise Géorgienne des origines jusqu'à nos jours"*, Rome, 1910, 430).

The missions of Asia continued to develop throughout the thirteenth century and part of the fourteenth and missionaries went as far as Bagdad and India (Mandonnet, *"Fra Ricoldo de Monte Croce"* in *"Revue bib."*, I, 1893; Balme, *"Jourdain Cathala de Sévérac, Evêque de Coulain"* (Quilon), Lyons, 1886]. In 1312 the master general, Béranger de Landore, organized the missions of Asia into a special congregation of "Friars Pilgrims", with Franco of Perugia as vicar general. As a base of evangelization they had the convent of Pera (Constantinople), Capha, Trebizond, and Negropont. Thence they branched out into Armenia and Persia. In 1318 John XXII appointed Franco of Perugia Archbishop of Sultanieh, with six other Dominicans as suffragans. During the first half of the fourteenth century the Preachers occupied many sees in the East. When the missions of Persia were destroyed in 1349, the Preachers possessed fifteen monasteries there, and the United Brethren (see below) eleven monasteries. In 1358 the Congregation of Pilgrims still had two convents and eight residences. This movement brought about the foundation, in 1330, of the United Brethren of St. Gregory the Illuminator. It was the work of Bl. Bartolommeo Petit of Bologna, Bishop of Maragha, assisted by John of Kerni. It was formed by Armenian religious who adopted the Constitution of the Dominicans and were incorporated with the order after 1356. Thirty years after their foundation the United Brethren had in Armenia alone 50 monasteries with 700 religious. This province still existed in the eighteenth century [Eubel, *"Die während des 14. Jahrhunderts im Missionsgebiet der Dominikaner und Franziskaner errichteten Bistümer"* in *"Festschrift des deutschen Campo Santo in Rom"*, Freiburg i. Br., 1897, 170; Heyd, *"Die Kolonien der römischen Kirche, welche die Dominikaner und Franziskaner im 13. und 14. Jahrhundert in dem von der Tataren beherrschten Ländern Asiens und Europas gegründet haben"* in *"Zeitschrift für die historische Theologie"*, 1858; Tournebize, *"Hist. politique et religieuse de l'Arménie"*, Paris, s. d. (1910), 320; André-Marie, *"Missions dominicaines dans l'Extrême Orient"*, Lyons and Paris, 1865; Mortier, *"Hist. des maîtres généraux de l'ordre des Frères Prêcheurs"*, I, IV].

(m) The Preachers and Sanctity.—It is characteristic of Dominican sanctity that its saints attained holiness in the apostolate, in the pursuit or promotion of learning, administration, foreign missions, the papacy, the cardinalate, and the episcopate. Until the end of the fifteenth century the order in its three branches gave to the Church nine canonized saints and at least seventy-three blessed. Of the first order (the Preachers) are St. Dominic, St. Peter of Verona, martyr, St. Thomas Aquinas, St. Raymond of Pennafort, St. Vincent Ferrer, St. Antoninus of Florence. Among the Dominican saints in general there is a predominance of the intellectual over the emotional qualities; their mystical life is more subjective than objective; and asceticism plays a strong part in their holiness. Meditation on the sufferings of Christ and His love was common among them. Mystic states, with the phenomena which accompany them, were ordinary, especially in convents of women in German countries. Many received the stigmata in various forms. St. Thomas Aquinas and Meister

Eckhart were, from different standpoints, the greatest medieval theorists concerning the mystical state (Giffre de Rechac, *"Les vies et actions mémorables des saints canonisés de l'ordre des Frères Prêcheurs et de plusieurs bienheureux et illustres personnages du même ordre"*, Paris, 1647; Marchese, *"Sagro diario domenicano"*, Naples, 1668, 6 vols. in fol.; Manoel de Lima, *"Agiologio dominico"*, Lisbon, 1709–54, 4 vols. in fol.; *"Année dominicaine"*, Lyons, 1883–1909, 12 vols. in 4; Imbert-Gourbeyre, *"La Stigmatisation"*, Clermont-Ferrand, 1894; Thomas de Vallgormera, *"Mystica theologia D. Thomæ"*, Barcelona, 1662; Turin, 1911, re-ed. Berthier).

(2) *Modern Period.*—The modern period consists of the three centuries between the religious revolution at the beginning of the sixteenth century (Protestantism) and the French Revolution with its consequences. The Order of Preachers, like the Church itself, felt the shock of these destructive revolutions, but its vitality enabled it to withstand them successfully. At the beginning of the sixteenth century the order was on the way to a genuine renaissance when the Revolutionary upheavals occurred. The progress of heresy cost it six or seven provinces and several hundreds of convents, but the discovery of the New World opened up a fresh field of activity. Its gains in America and those which arose as a consequence of the Portuguese conquests in Africa and the Indies far exceeded the losses of the order in Europe, and the seventeenth century saw its highest numerical development. The sixteenth century was a great doctrinal century, and the movement lasted beyond the middle of the eighteenth. In modern times the order lost much of its influence on the political powers, which had universally fallen into absolutism and had little sympathy for the democratic constitution of the Preachers. The Bourbon Courts of the seventeenth and eighteenth centuries were particularly unfavourable to them until the suppression of the Society of Jesus. In the eighteenth century there were numerous attempts at reform which created, especially in France, geographical confusion in the administration. During the eighteenth century the tyrannical spirit of the European Powers and, still more, the spirit of the age lessened the number of recruits and the fervour of religious life. The French Revolution ruined the order in France, and the crises which more or less rapidly followed considerably lessened or wholly destroyed numerous provinces.

(a) *Geographical Distribution and Statistics.*—The modern period saw a great change in the geographical distribution of provinces and the number of religious in the order. The establishment of Protestantism in Anglo-Saxon countries brought about, during the sixteenth century, the total or partial disappearance of certain provinces. The provinces of Saxony, Dacia, England, and Scotland completely disappeared; that of Teutonia was mutilated; that of Ireland sought refuge in various houses on the Continent. The discovery and evangelization of America opened up vast territories, where the first Dominican missionaries established themselves as early as 1510. The first province, with San Domingo and the neighbouring islands for its territory, was erected, under the name of the Holy Cross, in 1530. Others followed quickly—among them St. James of Mexico (1532), St. John Baptist of Peru (1539), St. Vincent of Chiapa (1551), St. Antoninus of New Granada (1551), St. Catherine of Quito (1580), St. Lawrence of Chile (1592). In Europe the order developed constantly from the middle of the sixteenth century till the middle of the eighteenth. New provinces or congregations were formed. Under the government of Serafino Cavalli (1571–78) the order had thirty-one provinces and five congregations. In 1720 it had forty-nine provinces and four congregations. At the former date there were about

900 convents; at the latter, 1200. During Cavalli's time the order had 14,000 religious, and in 1720 more than 20,000. It seems to have reached its greatest numerical development during the seventeenth century. Mention is made of 30,000 and 40,000 Dominicans; perhaps these figures include nuns; it does not seem probable that the number of Preachers alone ever exceeded 25,000. The secularization in Austria-Hungary under Joseph II began the work of partial suppression of convents, which was continued in France by the Committee of Regulars (1770) until the Convention (1793) finally destroyed all religious life in that country. The Napoleonic conquest overthrew many provinces and houses in Europe. Most of them were eventually restored; but the Revolution destroyed partially or wholly the provinces of Portugal (1834), Spain (1834), and Italy (1870). The political troubles brought about by the revolt of Latin America from the mother-country at the beginning of the nineteenth century partially or wholly destroyed several provinces of the New World (*Script. Ord. Præd.*, II, p. I; *Analecta Ord. Præd.*, I sqq.; *Dominicanus orbis descriptus*; Mortier, *Hist. des maîtres généraux*, V sqq.; Chapotin, *Le dernier prieur du dernier couvent*, Paris, 1893; Rais, *Historia de la provincia de Aragón, orden de Predicadores, desde le año 1803 hasta el de 1818*, Saragossa, 1819; 1824).

(b) Administration of the Order.—During the modern period the Preachers remained faithful to the spirit of their organization. Some modifications were necessitated by the general condition of the Church and civil society. Especially noteworthy was the attempt, in 1569, of St. Pius V, the Dominican pope, to restrict the choice of superiors by inferiors and to constitute a sort of administrative aristocracy (*Acta Cap. Gener.*, V, 94). The frequent intervention of popes in the government of the order and the pretensions of civil powers, as well as its great development, diminished the frequency of general chapters; the rapid succession of masters general caused many chapters to be convened during the seventeenth century; in the eighteenth century chapters again became rare. The effective administration passed into the hands of the general assisted by pontifical decrees. During these three centuries the order had many heads who were remarkable for their energy and administrative ability, among them Thomas de Vio (1508–18), Garcia de Loaysa (1518–24), Vincent Giustiniani (1558–70), Nicolo Ridolfi (1629–44), Giovanni Battista de' Marini (1650–69), Antonin Cloche (1686–1720), Antonin Brémond (1748–55), John Thomas de Boxadors (Mortier, *Hist. des maîtres généraux*, V sq.; *Acta cap. gen.*, IV sq.; *Chronicon magistrorum generalium*; *Regula S. Augustini et Constitutiones Ord. Præd.*, Rome, 1695; Paichelli, *Vita del Rmo P. F. Giov. Battista de' Marini*, Rome, 1670; Messin, *Vita del Rmo P. F. Antonino Cloche*, Benevento, 1721; *Vita Antonini Bremondii* in *Annales Ord. Præd.*, Rome, 1756, I, p. LIX).

(c) Scholastic Organization.—The scholastic organization of the Dominicans during this modern period tended to concentration of studies. The conventual school required by the Constitutions disappeared, at least in its essentials, and in each province or congregation the studies were grouped in particular convents. The *studia generalia* multiplied, as well as convents incorporated with universities. The General Chapter of 1551 designates 27 convents in university towns where, and where only, the religious might take the degree of Master in Theology. Through the generosity of Dominicans in high ecclesiastical offices large colleges for higher education were also established for the benefit of certain provinces. Among the most famous of these were the College of St. Gregory at Valladolid, founded

in 1488 by Alonzo of Burgos, adviser and confessor of the kings of Castile (*Bull. O. P.*, IV, 38); that of St. Thomas at Seville, established in 1515 by Archbishop Diego de Deza (*Historia del colegio mayor de Ste Tomás de Sevilla*, Seville, 1890). The Preachers also established universities in their chief provinces in America—San Domingo (1538), Santa Fé de Bogotá (1612), Quito (1681), Havana (1721)—and even in the Philippines, where the University of Manila (1645) is still flourishing and in their hands. During the sixteenth and following centuries the schedule of studies was more than once revised, and the matter extended to meet the needs of the times. Oriental studies especially received a vigorous impulse under the generalship of Antonin Brémond (Fabricy, *Des titres primitifs de la Révélation*, Rome, 1772, II, 132; *Acta. Cap. Gen.*, IV–VII; *Bull. O. P.*, *passim*; V. de la Fuente, *La enseñanza Tomística en España*, Madrid, 1874; Contarini, *Notizie storiche circa gli pubblici professori nello studio di Padova scelti dall'ordine di San Domenico*, Venice, 1769).

(d) Doctrinal Activity.—The doctrinal activity of the Preachers continued during the modern period. The order, closely connected with the events of the Reformation in German countries, faced the revolutionary movement as best it could, and by preaching and writing deserved what Dr. Paulus has said of it: "It may well be said that in the difficult conflict through which the Catholic Church had to pass in Germany in the sixteenth century no other religious order furnished in the literary sphere so many champions, or so well equipped, as the Order of St. Dominic" (*Die deutschen Dominikaner in Kämpfe gegen Luther, 1518–1563*, Freiburg i. Br., 1903). The order was conspicuous by the number and influence of the Dominican bishops and theologians who took part in the Council of Trent. To a certain extent Thomistic doctrine predominated in the discussions and decisions of the council, so that Clement VII, in 1593, could say, when he desired the Jesuits to follow St. Thomas, that the council approved and accepted his works (Astrain, *Historia de la Compañia de Jesús en la asistencia de España*, III, Madrid, 1909, 580). The *Catechismus ad Parochos*, the composition of which had been ordered by the council, and which was published at the command of Pius V (1566), is the work of Dominican theologians (Reginaldus, *De catechismi romani auctoritate dissertatio*, Naples, 1765). The Spanish Dominican School of the sixteenth century, inaugurated by Francisco de Vitoria (d. 1540), produced a series of eminent theologians: Melchior Cano (1560), the celebrated author of *De locis theologis*; Domingo Soto (1500); Bartolomé de Medina (1580); Domingo Bañez. This line of theologians was continued by Tomás de Lemos (1629); Diego Alvarez (1635); Juan de S. Tomás (1644); [*Script. O. P.*, II, s. vv.; P. Getino, *Historia de un convento* (St. Stephen of Salamanca), Vergara, 1904; Ehrle, *Die Vatikanischen Handschriften der Salamanticenser Theologen des sechszehnten Jahrhunderts* in *Der Katholik*, 64–65, 1884–85; L. G. Getino, *El maestro Fr. Francisco de Vitoria* in *La Ciencia tomista*, Madrid, I, 1910, 1; Caballero, *Vida del Illmo. dr. D. Fray Melchor Cano*, Madrid, 1871; Alvarez, *Santa Teresa y el P. Bañez*, Madrid, 1882].

Italy furnished a contingent of Dominican theologians of note, of whom Thomas de Vio Cajetan (d. 1534) was incontestably the most famous (Cossio, *Il cardinale Gaetano e la riforma*, Cividale, 1902). Francesco Silvestro di Ferrara (d. 1528) left a valuable commentary on the *Summa contra Gentiles* (*Script. O. P.*, II, 59). Chrysostom Javelli, a dissenter from the Thomistic School, left very remarkable writings on the moral and political sciences

(op. cit., 104). Catharinus (1553) is a famous polemicist, but an unreliable theologian (Schweizer, "Ambrosius Catharinus Pol'tus, 1484-1553, ein Theologe des Reformations-zeitalters", Münster, 1910). France likewise produced excellent theologians—Jean Nicolai (d. 1673); Vincent de Contenson (d. 1674); Antoine Reginald (d. 1676); Jean-Baptiste Gonet (d. 1081); Antoine Gondin (d. 1695); Antonin Manoulié (d. 1706); Noël Alexandre (Natalis Alexander) (d. 1724); Hyacinthe de Graveson (d. 1733); Hyacinthe Serry (d. 1738) ("Script. O. P.", II; Hurter, "Nomenclator", IV; H. Serry, "Opera omnia", I, Lyons, 1770, p. 5). From the sixteenth century to the eighteenth the Thomistic School upheld by the authority of Dominican general chapters and theologians, the official adhesion of new religious orders and various theological faculties, but above all by the Holy See, enjoyed an increasing and undisputed authority.

The disputes concerning moral theology which disturbed the Church during the seventeenth and eighteenth centuries, originated in the theory of probability advanced by the Spanish Dominican Bartolomé de Medina in 1577. Several theologians of the order adopted, at the beginning of the seventeenth century, the theory of moral probability; but in consideration of the abuses which resulted from these doctrines, the General Chapter of 1656 condemned them, and after that time there were no more Probabilists among the Dominicans. The condemnations of Alexander VII (1665, 1667), the famous Decree of Innocent XI, and various acts of the Roman Church combined to make the Preachers resolute opponents of Probabilism. The publication of Concina's "Storia del probabilismo" in 1743 renewed the controversy. He displayed enormous activity, and his friend and disciple, Giovanni Vicenzo Patuzzi (d. 1769), defended him in a series of vigorous writings. St. Alphonsus Liguori felt the consequences of these disputes, and, in consideration of the position taken by the Holy See, greatly modified his theoretical system of probability and expressed his desire to adhere to the doctrine of St. Thomas Aquinas (Mandonnet, "Le décret d'Innocent XI contre le probabilisme", in "Revue Thomiste" 1901-03; Ter Haar, "Das Decret des Papstes Innocenz XI über den Probabilismus", Paderborn, 1904; Concina, "Della storia del Probabilismo e del Rigorismo", Lucca, 1743; Mondius, "Studio storico-critico sul sistema morale di S. Alfonso M. de Liguori", Monza, 1911; Döllinger-Reusch, "Gesch. der Moralstreitigkeiten", Nordlingen, 1889).

(e) Scientific productions.—The literary activity of the Preachers of the sixteenth and eighteenth centuries was not confined to the theological movement noticed above, but shared in the general movement of erudition in the sacred sciences. Among the most noteworthy productions were the works of Pagnini (d. 1541) on the Hebrew text of Scripture; his lexicons and grammars were famous in their day, and exercised a lasting influence (Script. O. P., II, 114); Sixtus of Siena (d. 1569), a converted Jew, created the science of introduction to the Sacred Books with his "Bibliotheca Sancta" (Venice, 1566; op. cit., 206); Jacques Goar, liturgist and Orientalist, published the "Euchologium sive rituale Græcorum" (Paris, 1647), a work which, according to Renaudot, was unsurpassed by anything in its time (Hurter, "Nomenclat. litt.", III, 1211). François Combefis (d. 1679) issued editions of the Greek Fathers and writers (op. cit., IV, 161). Michel le Quien, Orientalist, produced a monumental work in his "Oriens Christianus". Vansleb (d. 1679) was twice sent by Colbert to the Orient, whence he brought a large number of MSS. for the Bibliothèque du Roi (Pougeois, "Vansleb", Paris, 1869). Thomas Maminachi (d. 1792) left a large unfinished work, "Origines et Antiquitates Christianæ" (Rome, 1753-57).

In the historical field mention must be made of Bartholomew de Las Casas (d. 1566) who left a valuable "Historia de las Indias" (Madrid, 1875). Noël Alexandre (d. 1724) left an ecclesiastical history which was long held in esteem [Paris, 1676-89; (Dict. de Théol. Cath., I, 769)]. Joseph Augustin Orsi (d. 1761) wrote an "Historia ecclesiastica" which was continued by his confrère Filippo Angelo Bechetti (d. 1814). The last edition (Rome, 1838) numbers 50 volumes (Kirchenlex., IX, 1087). Nicolas Coeffeteau was, according to Vaugelas, one of the two greatest masters of the French language at the beginning of the eighteenth century (Urbain, "Nicolas Coeffeteau, dominicain, évêque de Marseille, un des fondateurs de la prose française, 1574-1623", Paris, 1840). Thomas Campanella (d. 1639) won renown by his numerous writings on philosophy and sociology as well as by the boldness of his ideas and his eventful life (Dict. de théol. cath., II, 1443). Jacques Barelrier (d. 1673) left one of the foremost botanical works of his time, which was edited by A. de Jussieu, "Icones plantarum per Galliam, Hispaniam et Italiam observatarum ad vivum exhibitatarum" [Paris, 1714; (Script. O. P., II, 645)].

(f) The Preachers and Christian Society.—During the modern period the order performed countless services for the Church. Their importance may be gathered from the fact that during this period it gave to the Church two popes, St. Pius V (1566-72) and Benedict XIII (1724-30), forty cardinals, and more than a thousand bishops and archbishops. From the foundation of the Roman Congregations in the sixteenth century a special place was reserved for the Preachers; thus the titulars of the Commissariat of the Holy Office and the secretary of the Index were always chosen from this order. The title of Consultor of the Holy Office also belonged by right to the master general and the Master of the Sacred Palace (Gams, "Series episcoporum ecclesiæ catholicæ", Ratisbon, 1873; Falloux, "Histoire de Saint Pie V", Paris, 1858; Borgia, "Benedicti XIII vita", Rome, 1741; Catalano, "De secretario Indicis", Rome, 1751). The influence of the Preachers on the political powers of Europe was unequally exercised during this period: they remained confessors of the kings of Spain until 1700; in France their credit decreased, especially under Louis XIV, from whom they had much to suffer ("Catalogo de los religiosos dominicanos confesores de Estado, 1700"; Chapotin, "La guerre de succession de Poissy, 1660-1707", Paris, 1892).

(g) The Preachers and the Missions.—The missions of the Preachers reached their greatest development during the modern period. They were fostered, on the one hand, by the Portuguese conquests in Africa and the East Indies and, on the other, by the Spanish conquests in America and Western Asia. As early as the end of the fifteenth century Portuguese Dominicans reached the West Coast of Africa and, accompanying the explorers, rounded the Cape of Good Hope to settle on the coast of East Africa. They founded temporary or permanent missions in the Portuguese African settlements and went in succession to the Indies, Ceylon, Siam, and Malacca. They made Goa the centre of these missions which in 1548 were erected into a special mission of the Holy Cross, which had to suffer from the British conquest, but continued to flourish till the beginning of the nineteenth century. The order gave a great many bishops to these regions [João dos Santos, "Ethiopia orientalis", Evora, 1609; re-edited Lisbon, 1891; Cacegas-de Sousa, "Historia de S. Domingo partidor do reino e conquistas de Portugal", Lisbon, 1767 (Vol. IV by Lucas de Santa Catharina); André Marie, "Missions dominicaines dans l'extrême Orient", Lyons-Paris, 1865]. The discovery of America soon brought Dominican evangelization in

the footsteps of the *conquistadores*; one of them, Diego de Deza, was the constant defender of Christopher Columbus, who declared (letter of 21 Dec., 1504) that it was to him the Sovereigns of Spain owed the possession of the Indies (Mandonnet, "Les dominicains et la découverte de l'Amérique", Paris, 1893). The first missionaries reached the New World in 1510, and preaching was quickly extended throughout the conquered countries, where they organized the various provinces already mentioned and found in Bartolomé de las Casas, who took the habit of the order, their most powerful assistant in the defence of the Indians.

St. Louis Bertrand (d. 1581) was the great apostle of New Granada, and St. Rose of Lima (d. 1617) the first flower of sanctity in the New World (Remesal, "Historia de la provincia de S. Vicente de Chiapa y Guatemala", Madrid, 1619; Davila Padilla, "Historia de la fundacion y discurso de la provincia de Santiago de Mexico", Madrid, 1592; Brussels, 1625; Franco, "Segunda parte de la historia de la provincia de Santiago de Mexico", 1645, Mexico; re-ed. Mexico, 1900; Melendez, "Tesoros verdaderos de la Indias en la historia de la gran provincia de S. Juan Bautista del Peru", Rome, 1681; Alonso de Zamora, "Historia de la provincia de San Antonio del nuevo reyno de Granada", Barcelona, 1701; Helps, "Life of las Casas, the Apostle of the Indies", London, 1883; Gutierrez, "Fray Bartolomé de las Casas sus tiempos y su apostolado", Madrid, 1878; Fabie, "Vida y escritos de Fray Bartolomé de las Casas", Madrid, 1879; Wilberforce, "Life of Louis Bertrand", Fr. tr. Folghera, Paris, 1904; Masson, "Sainte Rose, tertiaire dominicaine, patronne du Nouveau Monde", Lyons, 1898). Dominican evangelization went from America to the Philippines (1586) and thence to China (1590), where Gaspar of the Holy Cross, of the Portuguese Congregation of the Indies, had already begun to work in 1559. The Preachers established themselves in Japan (1601), in Tonking (1676), and in the Island of Formosa. This flourishing mission passed through persecutions, and the Church has raised its numerous martyrs to her altars [Ferrando-Fonseca, "Historia de los PP. Dominicos a las islas Filipinas, y en sus misiones de Japón, China, Tungkin y Formosa", Madrid, 1870; Navarrete, "Tratados historicos, politicos, ethicos y religiosos de la monarquia de China", Madrid, 1676-1679, tr., London, 1704; Gentili, "Memorie di un missionario domenicano nella Cina", 1887; Orfanel, "Historia ecclesiastica de los sucesos de la christianidad de Japón desde 1602 que entró en el la orden de Predicadores, hasta el año de 1620", Madrid, 1633; Guglielmotti, "Memorie delle missioni cattoliche nel regno del Tunchino", Rome, 1844; Arias, "El beato Sanz y companeros martires", Manila, 1893; "I martiri annamiti e chinesi (1798-1856)", Rome, 1900; Clementi, "Gli otto martiri tonchinesi dell' ordine di S. Domenico", Rome, 1906]. In 1635 the French Dominicans began the evangelization of the French Antilles, Guadeloupe, Martinique etc., which lasted until the end of the eighteenth century (Du Tertre, "Hist. générale des Antilles", Paris, 1667-71; Labat, "Nouveau voyage aux isles de l'Amérique", Paris, 1742). In 1750 the Mission of Mesopotamia and Kurdistan was founded by the Italian religious; it passed to the Province of France (Paris) in 1856 (Goormachtigh, "Hist. de la mission dominicaine en Mésopotamie et Kurdistan", in "Analecta O. P.", III, 271).

(h) Dominican Saints and Blessed.—From the beginning of the sixteenth century members of the Order of St. Dominic eminent for sanctity were the subjects of twenty-one canonizations or beatifications. Some of the beatifications included a more or less large number at one time: such were the Annamite martyrs, who formed a group of twenty-six *beati*

canonized 21 May, 1900, by Leo XIII, and the martyrs of Tonking, who numbered eight, the last of whom died in 1861, and who were canonized by Pius X, 28 Nov., 1905. Five saints were canonized during this period; St. John of Gorkum (d. 1572), martyr; St. Pius V (d. 1572), the last pope canonized; St. Louis Bertrand (d. 1581), missionary in the New World; St. Catherine de' Ricci (d. 1589), of the second order, and St. Rose of Lima (d. 1617), tertiary, the first American saint. (See general bibliography of saints in section Middle Ages above.)

(3) *Contemporaneous Period*.—The contemporaneous period of the history of the Preachers begins with the different restorations of provinces undertaken after the revolutions which had destroyed the order in several countries of the Old World and the New. This period begins more or less early in the nineteenth century, and it cannot be traced down to the present day without naming religious who are still living and whose activity embodies the present life of the order. The revolutions not having totally destroyed certain of the provinces, nor decimated them, simultaneously, the Preachers were able to take up the laborious work of restoration in countries where the civil legislation did not present insurmountable obstacles. During this critical period the number of Preachers seems never to have sunk below 3500. The statistics for 1876 give 3748 religious, but 500 of these had been expelled from their convents and were engaged in parochial work. The statistics for 1910 give a total of very nearly 4472 religious both nominally and actually engaged in the proper activities of the order. They are distributed in 28 provinces and 5 congregations, and possess nearly 400 convents or secondary establishments.

In the revival movement France held a foremost place, owing to the reputation and convincing power of the immortal orator, Henri-Dominique Lacordaire (1802-61). He took the habit of a Friar Preacher at Rome (1839), and the province of France was canonically erected in 1850. From this province were detached the province of Lyons, called Occitania (1862), that of Toulouse (1869), and that of Canada (1909). The French restoration likewise furnished many labourers to other provinces, to assist in their organization and progress. From it came the master general who remained longest at the head of the administration during the nineteenth century, Père Vincent Jandel (1850-72). Here should be mentioned the province of St. Joseph in the United States. Founded in 1805 by Father Dominic Fenwick, afterwards first Bishop of Cincinnati, Ohio (1821-32), this province has developed slowly, but now ranks among the most flourishing and active provinces of the order. In 1910 it numbered 17 convents or secondary houses. In 1905 it established a large house of studies at Washington.

The province of France (Paris) has produced a large number of preachers, several of whom became renowned. The conferences of Notre-Dame-de-Paris were inaugurated by Père Lacordaire. The Dominicans of the province of France furnished most of the orators: Lacordaire (1835-36, 1843-51), Jacques Monsabré (1869-70, 1872-90), Joseph Ollivier (1871, 1897), Thomas Etourneau (1898-1902). Since 1903 the pulpit of Notre Dame has again been occupied by a Dominican. Père Henri Didon (d. 1900) was one of the most esteemed orators of his time. The province of France displays greater intellectual and scientific activity than ever, the chief centre being the house of studies at present situated at Kain, near Tournai, Belgium, where are published "L'Année Dominicaine" (founded 1859), "La Revue des Sciences Philosophiques et Théologiques" (1907), and "La Revue de la Jeunesse" (1909).

The province of the Philippines, the most populous in the order, is recruited from Spain, where it has

several preparatory houses. In the Philippines it has charge of the University of Manila, recognized by the Government of the United States, two colleges, and six establishments; in China it administers the missions of North and South Fo-Kien; in the Japanese Empire, those of Formosa and Shikoku, besides establishments at New Orleans, at Caracas (Venezuela), and at Rome. The province of Spain has seventeen establishments in the Peninsula and the Canaries, as well as the missions of Urubamba (Peru). Since 1910 it has published at Madrid an important review, "*La Ciencia Tomista*". The province of Holland has a score of establishments, and the missions of Curaçao and Porto Rico. Other provinces also have their missions. That of Piedmont has establishments at Constantinople and Smyrna; that of Toulouse, in Brazil; that of Lyons, in Cuba; that of Ireland, in Australia and Trinidad; that of Belgium, in the Belgian Congo, and so on.

Doctrinal development has had an important place in the restoration of the Preachers. Several institutions besides those already mentioned have played important parts. Such is the Biblical school at Jerusalem, open to the religious of the order and to secular clerics, and which publishes the "*Revue Biblique*", so highly esteemed in the learned world. The faculty of theology of the University of Freiburg, confided to the care of the Dominicans in 1890, is flourishing and has about 250 students. The Collegium Angelicum, established at Rome (1911) by Hyacinth Conner (master general since 1902), is open to regulars and seculars for the study of the sacred sciences. To the reviews mentioned above must be added the "*Revue Thomiste*", founded by Père Thomas Coconnier (d. 1908), and the "*Analecta Ordinis Prædicatorum*" (1893). Among the numerous writers of the order in this period are: Cardinals Thomas Zigliara (d. 1893) and Zephirin González (d. 1894), two esteemed philosophers; Father Alberto Guillelmotti (d. 1893), historian of the Pontifical Navy, and Father Heinrich Denifle, one of the most famous writers on medieval history (d. 1905).

In 1910 the order had twenty archbishops or bishops, one of whom, Andreas Frühwirth, formerly master general (1892-1902), is Apostolic nuncio at Munich (Sanvito, "*Catalogus omnium provinciarum sacri ordinis prædicatorum*", Rome, 1910; "*Analecta O. P.*", Rome, 1893—; "*L'Année Dominicaine*", Paris, 1859—). In the last two publications will be found historical and bibliographical information concerning the history of the Preachers during the contemporaneous period.

B. The Second Order. Dominican Sisters.—The circumstances under which St. Dominic established the first convent of nuns at Prouille (1206) and the legislation given the second order have been related above. As early as 1228 the question arose as to whether the Order of Preachers would accept the government of convents for women. The order itself was strongly in favour of avoiding this ministry and struggled long to maintain its freedom. But the sisters found, even among the Preachers, such advocates as the master general, Jordanus of Saxony (d. 1236), and especially the Dominican cardinal, Hugh of St. Cher (d. 1263), who promised them that they would eventually be victorious (1267). The incorporation of monasteries with the order continued through the latter part of the thirteenth and during the next century. In 1288 the papal legate, Giovanni Boccanazzi, simultaneously placed all the Penitent Sisters of St. Mary Magdalen in Germany under the government of the provincial of the Preachers, but this step was not final. The convents of sisters incorporated with the order were especially numerous in the province of Germany. The statistics for 1277 show 58 monasteries already incorporated, 40 of which were in the single province

of Teutonia. The statistics for 1303 give 149 convents of Dominican nuns, and these figures increased during the succeeding centuries. Nevertheless, a certain number of monasteries passed under the jurisdiction of bishops. In the list of convents drawn up during the generalship of Serafino Cavalli (1571-78) there are only 168 monasteries. But the convents of nuns are not indicated for most provinces, and the number should really be much higher. The Council of Trent placed all the convents of nuns under the jurisdiction of bishops, but the Preachers frequently provided these houses with chaplains or almoners. The statistics for 1770 give 180 monasteries, but they are incomplete. The revolutions, which affected the ecclesiastical situation in most Catholic countries from the end of the eighteenth century, brought about the suppression of a great many monasteries; several, however, survived these disturbances, and others were re-established. In the list for 1895 there are more than 150 monasteries, including some of the Third Order, which are cloistered like the Second Order. These monasteries are most numerous in Spain. In Germany the convents of nuns in the thirteenth and fourteenth centuries witnessed the development of an intense mystical life, and several of these houses have preserved accounts of the life of the sisters, usually in the vernacular.

The Dominican sisters, instructed and directed by an order of preachers and teachers, were remarkable not only for spiritual but also for intellectual culture. In the course of seven centuries various nuns have left literary and artistic works which bear witness to the culture of some of these monasteries ("*Script. O. P.*", I, pp. i-xv; II, pp. i-xix, 830; "*Bull. O. P.*", *passim*; Mortier, "*Hist. des maîtres généraux*", *passim*; Danzas, "*Études sur les temps primitifs de l'ordre de St. Dominique*", IV, Poitiers-Paris (1877); "*Analecta O. P.*", *passim*; Greith, "*Die deutsche Mystik im Prediger Orden*", Freiburg i. Br., 1861; de Villermont, "*Un groupe mystique allemand*", Brussels, 1907).

C. The Third Order.—Neither St. Dominic nor the early Preachers wished to have under their jurisdiction—and consequently under their responsibility—either religious or lay associations. We have seen their efforts to be relieved of the government of nuns who, nevertheless, were following the rule of the order. But numerous laymen, and especially lay women, who were leading in the world a life of penance or observing continence, felt the doctrinal influence of the order and grouped themselves about its convents. In 1285 the need of more firmly uniting these lay elements and the idea of bringing under the direction of the Preachers a portion of the Order of Penance led the seventh master general, Muñón de Zamora, at the instance of Honorius IV, to draw up the rule known as that of the Penance of St. Dominic. Inspired by that of the Brothers of Penance, this rule had a more ecclesiastical character and firmly subordinated the conduct of the brothers to the authority of the Preachers. Honorius IV confirmed the foundation by the collation of a privilege (28 Jan., 1286). The former master general of the Friars Minor, Jerome d'Ascoli, having become pope in 1288 under the name of Nicholas IV, regarded the action of his predecessor and of the master general of the Friars Preachers as a kind of defiance of the Friars Minor who considered themselves the natural protectors of the Brothers of Penance, and by his letters of 17 August, 1289, he sought to prevent the desertion of the Brothers of Penance. Muñón de Zamora discharged his office of master general as it had been confided to him by Martin IV. The Order of Preachers protested with all its might against what it regarded as an injustice.

These events retarded the development of the Dominican Third Order, a portion of the Preachers

remaining unfavourable to the institution. Nevertheless, the Third Order continued to exist; one of its fraternities, that of Siena, was especially flourishing, a list of its members from 1311 being extant. The sisters numbered 100 in 1352, among them she who was to become St. Catherine of Siena. They numbered 92 in 1378. The reforming movement of Raymund of Capua, confessor and historian of St. Catherine, aimed at the spread of the Third Order; in this Thomas Caffarini of Siena was especially active. The Dominican Third Order received new approbation from Boniface IX, 18 January, 1401, and on 27 April of the following year the pope published its rule in a Bull, whereupon its development received a fresh impetus. It never became very widespread, the Preachers having sought quality rather than number of tertiaries. St. Catherine of Siena, canonized in 1461, is the patroness of the Third Order, and, following the example of her who has been called the Joan of Arc of the papacy, the Dominican tertiaries have always manifested special devotion to the Roman Church. Also in imitation of their patroness, who wrote splendid mystical works, they endeavoured to acquire a special knowledge of their religion, as befits Christians incorporated with a great doctrinal order. The Third Order has given several blessed to the Church, besides St. Catherine of Siena and St. Rose of Lima. For several centuries there have been regular convents and congregations belonging to the Third Order. The nineteenth century witnessed the establishment of a large number of regular congregations of tertiaries devoted to works of charity or education. In 1895 there were about 55 congregations, with about 800 establishments and 20,000 members. In the United States there are flourishing convents at Sinsinawa (Wisconsin), Jersey City, Traverse (Michigan), Columbus (Ohio), Albany (New York), and San Francisco (California).

In 1852 Père Lacordaire founded in France a congregation of priests for the education of youth called the Third Teaching Order of St. Dominic. It is now regarded as a special province of the Order of Preachers, and had flourishing and select colleges in France at Oullins (1853), Sorèze (1854), Arcueil (1863), Arcachon (1875), Paris (Ecole Lacordaire, 1890). These houses have ceased to be directed by Dominicans since the persecution of 1903. The teaching Dominicans now have the Collège Lacordaire at Buenos Aires, Champittet at Lausanne (Switzerland), and San Sebastian (Spain). During the Paris Commune four martyrs of the teaching order died in company with a priest of the First Order, 25 May, 1871. One of them, Père Louis-Raphael Captier, was an eminent educator (Mandonnet, "*Les règles et le gouvernement de l'Ordo de Pœnitentia au XIII^e siècle*" in "*Opusculs de critique historique*", IV, Paris, 1902; Federici, "*Istoria de' Cavalieri Gaudenti*", Venice, 1787).

P. MANDONNET.

Preaching. See HOMILETICS.

Preadamites, the supposed inhabitants of the earth prior to Adam. Strictly speaking, the expression ought to be limited to denote men who had perished before the creation of Adam; but commonly even Coadamites are called Preadamites, provided they spring from a stock older than Adam. The question whether we can admit the existence of Preadamites in the strict sense of the word, i. e. the existence of a human race (or human races) extinct before the time of Adam or before the Divine action described in Gen., i, 2 sqq., is as little connected with the truth of our revealed dogmas as the question whether one or more of the stars are inhabited by rational beings resembling man. Palmieri

("De Creatione", Prato, 1910, p. 281, thes. xxx) does not place any theological censure on the opinion maintaining the past existence of such Preadamites, and Fabre d'Envieu ("*Les Origines de la terre et de l'homme*", Paris, 1873, lib. XI, prop. 1) defends the theory as probable. But the case is quite different with regard to the view upholding the existence of Preadamites taken in the common acceptance of the term. It maintains that the men existing before Adam continued to coexist with Adam and his progeny, thus destroying the unity of the human race. Palmieri (loc. cit.) brands it as heretical, and Father Pesch ("*De Deo creante et elevante*", Freiburg, 1909, n. 154) endorses this censure; Esser (Kirchenlex., s. v. Präadamiten) considers it as only theologically certain that there were no Coadamites who were not the progeny of Adam and Eve. According to the nature of the arguments advanced in favour of the heretical Preadamite theory, we may divide it into scientific and Scriptural Preadamism.

I. SCIENTIFIC PREADAMISM.—There are no scientific arguments which prove directly that the progeny of a Preadamite race coexisted with the descendants of Adam. The direct conclusion from scientific premises is either the great antiquity of the human race or its multiplicity. In either case, or even in the combination of both, the existence of Preadamites depends on a new non-scientific premise, which is at best only an assumption. From the great number of men, from their racial varieties, from the difference of languages, we cannot even infer that all men cannot spring from a common stock, while the ancient national traditions of the Oriental nations, and the palæontological finds do not even show that the human race existed before our Biblical times; much less do these premises furnish any solid basis for the Preadamite theory. (For the unity of the human race and its antiquity see RACE, HUMAN.)

II. SCRIPTURAL PREADAMISM.—Pesch (loc. cit.) considers it doubtful whether Origen adhered to the Preadamite theory, but leaves no room for doubt as to Julian the Apostate. But these opinions are only a matter of historical interest. In 1555, however, Isaac de La Peyrère, a Calvinist of a noble family of Bordeaux and a follower of the Prince of Condé, published in close succession two works: "*Præadamitæ, seu Exercitationes super versibus 12, 13, et 14 ep. Pauli ad Romanos*", and "*Systema theologicum ex Præadamitarum hypothesi. Pars prima*". He maintained that Adam is not the father of the whole human race, but only of the Chosen People. The Jews spring from Adam and Eve, while the Gentiles are the descendants of ancestors created before Adam. The creation of these latter took place on the sixth day, and is related in Gen., i, 26 sqq., while Adam was formed after the rest on the seventh day as narrated in Gen., ii, 7. Adam and his progeny were to live and develop in Paradise, but they were to observe the law of Paradise. The sin of Adam was more grievous than the sins of the Gentiles: for he sinned against the law, while the Gentiles sinned only against nature. This distinction the writer bases on St. Paul's Epistle to the Romans, v, 12-14: "Until the law [given to Adam]", so La Peyrère explains the passage, "sin [committed by the Gentiles] was in the world; but sin [of the Gentiles] was not imputed, when the law was not [given to Adam]". Again, those "who have not sinned after the similitude of the transgression of Adam" are the Preadamite Gentiles. La Peyrère confirmed his hypothesis by an appeal to other Scriptural passages: Cain's fear of being killed (Gen., iv, 14), his flight, his marriage, his building of a city (Gen., iv, 15, 16), are pointed out as so many indications of the existence of other men than Adam and Eve. The author also claims that ancient Jewish and Mohammedan tradition favours his Preadamite theory.

But La Peyrère's proofs are not solid. (1) Scripture itself points out that the creation of man in Gen., i, 26 sqq., is identical with that mentioned in Gen., ii, 7, for according to Gen., ii, 5, "there was not a man to till the earth"; according to Gen., ii, 20, "for Adam there was not found a helper like himself"; according to iii, 20, "Adam called the name of his wife Eve: because she was the mother of all the living". Scripture, therefore, knows of no men created before Adam. (2) The appeal to the incidents in the history of Cain loses its force, if we remember that they happened about 130 years after Adam had been driven from Paradise: at that time, the progeny of Adam must have amounted to several thousand souls, so that Cain's fear and flight and his building of a primitive city are easily explained. (3) The difficulty arising from Cain's marriage was satisfactorily explained by St. Augustine ("De civit. dei", XV, xvi; cf. Epiphanius, "Hær.", xxxix, 6), who points out that necessity compelled the immediate offspring of Adam and Eve to marry even their sisters. (4) The context renders La Peyrère's explanation of Rom., v, 12-14, impossible. If the law mentioned in the passage refers to the law given to Adam in Paradise, and not to the Mosaic Law, the phrase "but death reigned from Adam unto Moses" is meaningless, and the whole force of the Apostle's argument is destroyed. (5) Finally, La Peyrère's appeal to the traditions of the Kabbalists, Chaldeans etc., has been investigated and found wanting by R. Simon ("Lettres choisies", II, Amsterdam, 1730, ii, xxvii). It is, therefore, not astonishing that La Peyrère's Preadamism proved to be a nine days' wonder and did not survive its author. The theory was strongly opposed from the beginning by such scholars as Maresius, Hoornbeek, and Voetius on the part of the Reformed Church, and by the Lutheran theologians Calovius, Quenstedt, and Hollazius. The author himself renounced his error, and became a Catholic, and a member of the Oratory. In more recent times a political or social Preadamism has been introduced by Dominic M'Causland ("Adam and the Adamite, or the Harmony of Scripture and Ethnology", London, 1864) and Reginald Stuart Poole ("The Genesis of the Earth and of Man", London, 1860), who follow the ethnological views of such authorities as Morton, Nott, Gliddon, and Agassiz. They maintain that Adam is the progenitor of the Caucasian race, while the other races descend from Preadamite ancestry, having either a common or various parentage. The pro-slavery sentiment prevalent in certain parts of America indirectly supported such Preadamite theories. But their truth must be judged in the light of what has been said about scientific and Scriptural Preadamism.

NATALIS ALEXANDER, *Hist. eccles.*, I, (Bingen, 1785), 103 sqq., diss. iii, *De Adam et Eva*. As to Scriptural Preadamism, see the various dogmatic treatises on Creation (PESCH, PALMIERI, PERRONE etc.), where they treat of the unity of the human race. For scientific Preadamism see GLA, *Repertorium der kathol. theol. Literatur*, I, i (Paderborn, 1895), 218 sqq.; for Preadamism in the strict sense: REUSCH, *Bibel u. Natur* (4th ed., Bonn, 1876), 437; RAUCH, *Einheit des Menschengeschlechtes* (Augsburg, 1873); HETTINGER, *Apologie*, II, i (4th ed., Freiburg, 1872), 221-304; WINCHELL, *Preadamites, or a Demonstration of Existence of Men before Adam* (Chicago, 1880).

A. J. MAAS.

Prebend, the right of a member of a chapter to his share in the revenues of the cathedral; also the share to which he is entitled; in general, any portion of the cathedral revenues set aside for the support of the clergy attached to it (semi-prebends) even for those who are not members of the chapter. They are regarded as benefices (q. v.) and governed by the same laws. (See CHAPTER.)

Precaria (*Preces*, prayers) is a contract granting to a petitioner the use and usufruct of a revenue-bearing ecclesiastical property for a specified time, or dur-

ing the life of the grantee, and principally for services rendered the Church. This contract (tit. XIV, lib. III of the Decretals) is based on the "precarius" of the Roman Law (*De precario*, XLIII, xxvi); it differed from it inasmuch as the "precarius" could have for its object either moveable or fixed goods and was revocable at the pleasure of the proprietor. Both contracts left to the owner the proprietorship of the goods. This contract, beside depriving the Church of its revenues, threatened the extinction of her proprietary rights, especially when she was compelled to grant the precaria, at royal request, or rather order (*precaria verbo regis*). The Council of Meaux (825) prescribed for this reason the renewal of these concessions every five years. It ceased at the death of the grantee, or at the expiration of the allotted period, after which it could be revoked at the desire of the grantor.

See FRANKS; LAICIZATION; PROPERTY, ECCLESIASTICAL; also the canonists on *De Precario*, lib. III, tit. xiv.

A. BOUDINHON.

Precedence (Lat. *præcedere*, to go before another) signifies the right to enjoy a prerogative of honour before other persons; e. g. to have the most distinguished place in a procession, a ceremony, or an assembly, to have the right to express an opinion, cast a vote, or append a signature before others, to perform the most honourable offices. Questions of precedence sometimes give rise to controversies. In both civil and ecclesiastical legislation they are regulated by laws and rules. In canon law the general rule is that precedence is determined by rank in the hierarchy both of jurisdiction and of order. Where rank is equal it is determined by priority of foundation: *Qui prior est tempore, potior est jure* (Regula juris 54, in VI^o). With regard to colleges (*collegia*), precedence is determined by the quality of the person to whom the college is attached. The order of precedence is regulated as follows: the pope always takes first rank, after him come cardinals, patriarchs, archbishops, exempt bishops, suffragan bishops, titular bishops, and prelates *nullius*. In these categories priority of ordination and promotion determines precedence, among bishops or archbishops the date of their first promotion to the episcopal or archiepiscopal dignity. Custom or privilege may derogate from this rule. A Decree of Propaganda (15 Aug., 1858) grants to the Archbishop of Baltimore the right of precedence in the United States (*Collectio Lacensis*, III, 572). In their own diocese bishops have precedence before strange bishops and archbishops, but not before their own metropolitan. Metropolitan chapters have precedence before cathedral chapters, and the latter before collegiate chapters. The secular clergy according to the importance of their office or the date of their ordination precede the regular clergy. Canons regular take the first place among the regular clergy, then come clerics regular, the monastic orders, and the mendicant orders. Among the mendicants the Dominicans take first place outside of processions; in processions, the acquired right of precedence or that appertaining to priority of establishment in a town must be respected. This last rule applies also to confraternities, but in processions of the Blessed Sacrament the Confraternity of the Blessed Sacrament has precedence. The Third Orders have precedence of confraternities. Questions of precedence at funerals have given rise to numerous decisions of the Congregation of Rites (see "Decreta S. S. Rituum Congregationis", Rome, 1901, V, Index generalis, V^o *Præcedentia*). The provisory solution of questions of precedence in processions arising between regulars belongs to the diocesan bishop. The Congregation of Rites decides concerning those with regard to liturgical ceremonies; the Congregatio Cærimonialis regulates the precedence of the papal court.

A. VAN HOVE.

Precentor (L. *Præcentor*, from *præ*, before—*cantor*, singer), a word describing sometimes an ecclesiastical dignitary, sometimes an administrative or ceremonial officer. Anciently, the precentor had various duties: he was the first or leading chanter, who on Sundays and greater feasts intoned certain antiphons, psalms, hymns, responsories etc.; gave the pitch or tone to the bishop and dean at Mass (the succentor performing a similar office to the canons and clerks); recruited and taught the choir, directed its rehearsals and supervised its official functions; interpreted the rubrics and explained the ceremonies, ordered in a general way the Divine Office and sometimes composed desired hymns, sequences, and lessons of saints. He was variously styled *capiscol* (*caput scholæ*, head of the choir-school), *prior scholæ*, *magister scholæ*, and *primicerius* (a word of widely different implications). Victor of St. Hugo tells us that in the care of the *primicerius* were placed the acolytes, exorcists, lectors, and psalmists (chanters). In the Middle Ages the principal dignitaries of cathedrals, collegiate chapters, and monastic orders, imitated the example of St. Gregory the Great in acting as directors of chant-schools. The *schola* was always in attendance when the bishop officiated in his cathedral, and to the precentor was assigned a place near the bishop and high in dignity. His office was obviously one demanding much learning and executive ability, and his dignity corresponded with his duties.

In the cathedrals of England, France, Spain, and Germany, he ranked sometimes next to the dean, sometimes next to the archdeacon. In some instances his sphere of activity was much broader, including the duty of installing deans, canons, and other dignitaries; and in some monasteries, the duties of librarian and registrar. But from the fourteenth century his title and dignity were largely handed over to incumbents whose musical knowledge did not fit them for the duties to which the name of precentor owed its origin; the dignities remained, but the duties became obscured. "In France, some chapters retain traces of the dignity of Precentor, and one may see sometimes an archdeacon, sometimes a titular or honorary canon, carrying the baton cantoral, the insignia of his office" (Migne, "Dict. de Droit Canon", s. v. Chantre). This "baton cantoral" is a silver or white staff. "In the dioceses of Aix, Carcassonne, Coutances, Dijon, Metz, Orléans, the dignity of Precentor is still the highest in the chapter. . . . Some chapters have sub-chanters, those of Arras being among the honorary resident canons" (Migne, "Dict. de Jurisprudence", s. v. Grand Chantre, where also the quoted statutes of the Bishop of Dijon may serve to illustrate the modern idea of the office of precentor: "The Précenteur or Grand Chantre is the head of the choir and . . . brings the antiphon to the bishop when officiating pontifically. Sacristans, chanters, choir-boys, and employés of the Cathedral are placed under his surveillance. He will also preserve order and silence in the sacristy"). In the Anglican Church the precentor directs the choir, his stall in the cathedral corresponding with that of the dean.

CURVEN, *Studies in Worship Music* (London, 1888), 141-8, 170-2, gives interesting details of the duties of precentor in the Scotch Presbyterian Churches; for *Præcentrix*, *Præcentorissa*, etc., see DU CANGE, *Glossarium*, s. v. *Præcentor*; VENABLES in *Dict. Christ. Antiq.*, s. v.

H. T. HENRY.

Precept (Lat. *præceptum* from *præcipere*, to command), CANONICAL, in its common acceptation, is opposed to counsel, inasmuch as the former imposes an obligation, while the latter is a persuasion. In

ecclesiastical jurisprudence, the word precept is used:

(1) In opposition to law.—A law is always binding, even after the death of the legislator, until it is revoked; a precept is obligatory only during the lifetime or office of the precipient. A law directly affects the territory of the legislator, and thence passes to the subjects dwelling in it; a precept directly affects the persons of the inferiors and is independent of locality. Finally, a law is promulgated for a whole community, present and future, while a precept is directed to individuals and ceases with them. (2) As a term in extrajudicial processes.—When a grave fault has been committed by a cleric, it is the duty of the bishop, after making an informal inquiry into the matter, to give the delinquent two successive monitions or warnings. If he does not thereupon amend, the bishop proceeds to the issuance of a canonical precept, as directed by the Decree "Cum Magnopere" (1884). The precept, under pain of nullity, must be in writing, state plainly what is to be done or avoided by the delinquent, and mention the specific punishment to be inflicted if the precept go unheeded. The accused is then cited before the chancellor of the episcopal court, and the latter, in presence of the vicar-general or two witnesses, ecclesiastical or lay, must serve the precept upon him. An official record of this fact is then to be drawn up and signed by all concerned, including the delinquent if he so wishes. The witnesses may be bound by oath to observe secrecy as to the proceedings. If the accused contumaciously refuses to appear, the precept may be served upon him by a trustworthy person or sent by registered mail. If even these measures are not possible, the precept may be posted publicly as an intimation to the delinquent. If he fails to amend after receiving the precept, a formal trial may then be instituted.

SMITH, *Elements of Ecclesiastical Law*, III (New York, 1888); FERRARIS, *Bibliotheca Canonica*, V (Rome, 1889), s. v. *Lex*, art. 1; BAART, *Legal Formulary* (New York, 1898).

WILLIAM H. W. FANNING.

Precepts of the Church. See COMMANDMENTS OF THE CHURCH.

Precious Blood, the blood of our Divine Saviour. Jesus, at the Last Supper, ascribes to it the same life-giving power that belongs to His flesh (see EUCHARIST). The Apostles, St. Peter (I Peter, i, 2, 19), St. John (I John, i, 7; Apoc. i, 5 etc.), and above all St. Paul (Rom., iii, 25; Eph., i, 7; Hebr., ix, x) regard it as synonymous with Jesus's Passion and Death, the source of redemption. The Precious Blood is therefore a part of the Sacred Humanity and hypostatically united to the Second Person of the Blessed Trinity. In the fifteenth century some theologians, with a view of determining whether the blood shed by the Saviour during His Passion remained united to the Word or not, raised the point as to whether the Precious Blood is an essential part or only a concomitant of the Sacred Humanity. If an essential part, they argued, it could never be detached from the Word; if a concomitant only, it could. The Dominicans held the first view, and the Franciscans the second. Pius II, in whose presence the debate took place, rendered no doctrinal decision on the point at issue. However, chiefly since the Council of Trent (Sess. XIII, c. 3) called the body and blood of Jesus "*partes Christi Domini*", the trend of theological thought has been in favour of the Dominican teaching. Suarez and de Lugo look askance at the Franciscans' view, and Faber writes: "It is not merely a concomitant of the flesh, an inseparable accident of the body. The blood itself, as blood, was assumed directly by the Second Person of the Blessed Trinity" (Precious Blood, i). The blood shed during the triduum of the Passion was therefore reunited to the body of Christ at the Resurrection, with the possible exception of a few par-

ticles which instantly lost their union to the Word and became holy relics to be venerated but not adored. Some such particles may have adhered and yet adhere to the instruments of the Passion, e. g. nails, scourging pillar, *Scala Sancta*. Several places like Saintes, Bruges, Mantua etc. claim, on the strength of ancient traditions, to possess relics of the Precious Blood, but it is often difficult to tell whether the traditions are correct. Viewed as a part of the Sacred Humanity hypostatically united to the Word, the Precious Blood deserves latreutical worship or adoration. It may also, like the Heart or the Wounds from which it flowed, be singled out for special honour, in a way that special honour was rendered it from the beginning by St. Paul and the Fathers who so eloquently praised its redeeming virtue and rested on it the Christian spirit of self-sacrifice. As Faber remarks, the lives of the saints are replete with devotion to the Precious Blood. In due course of time the Church gave shape and sanction to the devotion by approving societies like the Missionaries of the Precious Blood; enriching confraternities like that of St. Nicholas in Carcere, in Rome, and that of the London Oratory; attaching indulgences to prayers and scapulars in honour of the Precious Blood; and establishing commemorative feasts of the Precious Blood, Friday after the fourth Sunday in Lent and, since Pius IX, the first Sunday of July.

BENEDICT XIV, *De servorum Dei Beatificatione*, II, 30; IV, ii, 10, *de Festis*, I, 8 (Rome, 1747); FABER, *The Precious Blood* (Baltimore, s. d.); HUNTER, *Outlines of Dogm. Theol.* (New York, 1896); ION, *Die Reliquien des Kostb. Blutes* (Luxemburg, 1880); BEHRINGER, *Die Ablässe* (12th ed., Paderborn, 1900).

J. F. SOLLIER.

FEAST OF THE MOST PRECIOUS BLOOD.—For many dioceses there are two days to which the Office of the Precious Blood has been assigned, the office being in both cases the same. The reason is this: the office was at first granted to the Fathers of the Most Precious Blood only. Later, as one of the offices of the Fridays of Lent, it was assigned to the Friday after the fourth Sunday in Lent. In many dioceses these offices were adopted also by the fourth Provincial Council of Baltimore (1840). When Pius IX went into exile at Gaeta (1849) he had as his companion the saintly Don Giovanni Merlini, third superior general of the Fathers of the Most Precious Blood. Arrived at Gaeta, Merlini suggested that His Holiness make a vow to extend the feast of the Precious Blood to the entire Church, if he would again obtain possession of the papal dominions. The pope took the matter under consideration, but a few days later sent his domestic prelate Jos. Stella to Merlini with the message: "The pope does not deem it expedient to bind himself by a vow; instead His Holiness is pleased to extend the feast immediately to all Christendom". This was 30 June, 1849, the day the French conquered Rome and the republicans capitulated. The thirtieth of June had been a Saturday before the first Sunday of July, wherefore the pope decreed (10 August, 1849) that henceforth every first Sunday of July should be dedicated to the Most Precious Blood.

ULRICH F. MUELLER.

Precious Blood, ARCHCONFRATERNITY OF THE MOST.—Confraternities which made it their special object to venerate the Blood of Christ first arose in Spain. In the life of the Carmelite lay brother, Francis of the Infant Jesus (d. 1601), mention is made of such a confraternity as existing in Valencia. A few years later they must have been quite numerous, for it is said of the Carmelite Anna of St. Augustine (d. 1624), that "she received with hospitality those who went about collecting alms for the confraternities of the Precious Blood erected in many places".

Ravenna, Italy, possessed one at a very early date. Another was erected in Rome under Gregory XIII and confirmed by Sixtus V, but merged later on with the Gonfalonour. The archconfraternity as it now exists owes its origin to Mgr Albertini, then priest at San Nicola in Carcere, Rome, where since 1708 devotions in honour of the Precious Blood had been held. Deeply moved by the temporal and spiritual misery caused by the French Revolution, he united, 8 December, 1808, into a society such as were willing to meditate frequently on the Passion and to offer up to the Divine Father the Blood of His Son, in expiation of their sins, for the conversion of sinners, for the great wants of the Church, and the souls in purgatory. He composed for them the "Chaplet of the Precious Blood" which they were to recite during his daily Mass. The confraternity was canonically erected by Pius VII through his cardinal vicar, 27 February, 1809, raised to the rank of an archconfraternity, 26 September, 1815, and enriched with numerous indulgences. Pius IX increased the privileges, 19 January, 1850, and 30 September, 1852. In England it was erected in the church of St. Wilfrid, Staffordshire, 1847, but was transferred to the church of the London Oratory (12 August, 1850). Previous to this it had been introduced into America by the Passionists, and canonically erected in the numerous houses and parishes founded by them after their arrival (1844). As a rule, they enroll such as desire it at the end of their missions.

ULRICH F. MUELLER.

Precious Blood, CONGREGATION OF THE MOST, an association of secular priests living in community, whose principal aim is to give missions and retreats. The members take no vows but are held together by the bond of charity only and by a promise "not to leave the community without permission of the lawful superior". The congregation was founded at the desire of Pius VII after his return from exile by Blessed Gaspare del Bufalo. Distressed at the spiritual condition of Rome, the pope determined that missions should be held throughout the Papal States and selected del Bufalo and a few other zealous priests to undertake the task (1814), assigning to them the convent of San Felice at Giano, where a foundation was made 15 Aug., 1815. New houses were opened, and in 1820 six missions were established in the Campagna for the conversion of the banditti. The growth of the society was checked at the election of Leo XII (1823), who, misinformed as to the work of the congregation and its founder, was unfavourable. He objected to the proposed name, "Congregation of the Most Precious Blood", as a novelty; but the society was finally cleared of all accusations and P. Betti justified the name from Scripture and the Fathers. Blessed Gaspare was succeeded by Don Biagio Valentini, a member of the society since 1817. His successor, the Ven. Giovanni Merlini (the process of whose beatification has been begun in Rome), was a native of Spoleto and a friend of Pius IX, whose exile at Gaeta he shared. Through the influence of the pope, several new houses were opened in Italy, and one each in Alsace and Bavaria. The mother-house was established in the convent of the Crociferi, Maria in Trivio. Merlini died 13 January, 1873, and was succeeded by Don Enrico Rizzoli. Under his rule the Italian Government (1860, 1866, 1870) confiscated, among others, Maria in Trivio, since when the fathers who are in charge of this church have to rent a few rooms in their own house. In the convent garden a Methodist church was erected, but owing to the scanty attendance it was soon closed and is now used as a theatre. The Government confiscated the revenues of the seminary at Albano and suppressed

altogether twenty-five houses. The Kulturkampf closed the houses in Alsace and Bavaria. Rizzoli was succeeded by Mgr Caporali, in 1890 consecrated Archbishop of Otranto; Mgr Salvatore Palmieri, to whom the Government refused the exequatur when he was named Archbishop of Rossano, but later acquiesced in his preconization as Archbishop of Brindisi (1893); Aloysius Biaschelli; the present general is Very Rev. Hyacinthe Petroni.

The congregation was introduced into America (1844) at the request of Bishop Purcell of Cincinnati, by Rev. Francis de S. Brunner (q. v.). It conducts a college (Collegeville, Ind.) and parishes in Ohio (Dioceses of Cincinnati, Cleveland, Toledo), Indiana (Diocese of Fort Wayne), Missouri (Diocese of St. Joseph and Kansas City), Illinois (Archdiocese of Chicago), Nebraska (Diocese of Lincoln). The chief work of the order is the giving of missions and assisting the secular parish clergy on occasions such as tridua, Forty Hours devotions, retreats etc. The novitiate is at Burkettsville, Ohio.

In America candidates pass through a year of probation, after which they are admitted either as brothers, and then take the promise of fidelity, or as students, to follow a six years' course in classical studies. Such of the students as receive the degree A.B. enter the seminary, and after the first year of philosophy give the promise of fidelity. After five years more of study, they are ordained, and a year later become eligible to full membership. If the ballot is favourable, they are admitted and invested with the missionary's insignia (a large ebony crucifix with brass figure and brass chain, worn over the heart). In Europe the method of adopting members is somewhat different, since there none are admitted before they are at least students of philosophy; often priests join the congregation.

The present statistics for the congregation are: *Italy*, 3 provinces, 15 houses, the principal ones being at Rome (Santa Maria in Trivio), Albano, and San Paolo; *Spain*, 1 province, 2 houses; *North America*, 1 province with a seminary at Carthage, Ohio, seat of the provincial; a college at Collegeville, Ind., with 300 students; novitiate at Burkettsville, Ohio; parishes and missions: Ohio, 19; Indiana, 4; Missouri, 6; Nebraska, 2. The house at Shellenberg (Liechtenstein) belongs to the American province. There are in the American province 110 priests, 20 seminarians, 75 collegians, 70 lay-brothers, 35 novices, 17 convents, and 44 missions and stations.

PRECIOUS BLOOD, KNIGHTS OF THE.—At Mantua in 1608 a knight-order of the Precious Blood, which received the approval of Paul V, was founded by Vincente del Gonzaga, Duke of Mantua. Its aim was to protect the sacred relic of the Precious Blood. The members wore on a golden ribbon a remonstrance, representing two angels holding up a vase containing three drops of blood. The Dukes of Mantua were grandmasters, until Emperor Joseph I declared the dukedom abolished; the order was then dissolved. The sacred relic is said to have disappeared since 1848.

There is no bibliography for the European provinces; for America: BRUNNER, *Wo sind sie, welche in die Klöster nach Amerika ausgewandert sind?* (Tübingen, 1856); *Leben und Wirken des P. F. S. Brunner*, II (Carthage, 1882). As to the lives of some of the early members in Italy, *Brevi Cenni sulla vita e le virtù di alcuni Membri della Congregazione del Prezioso Sangue* (1880); on the activity of the American priests, *Nuntius Aula*, I-X.

ULRICH F. MUELLER.

Precious Blood, CONGREGATIONS OF THE.—I. **BERNADINES OF THE PRECIOUS BLOOD**, a congregation of nuns, no longer in existence, founded by Mother Ballou with the assistance of St. Francis de Sales, as an offshoot of the reformed Cistercianesses.

II. **DAUGHTERS OF THE PRECIOUS BLOOD**, were founded by Maria Seraphina Spieghermans at Sittard, Holland, 1862, and approved by a Decree of Leo XIII, 12 July, 1890. Their main object is the education of

girls, and the care of the sick. They wear a red girdle, and on a red ribbon a cross with the initials F. P. S. (Filia Pretiosi Sanguinis—daughter of the Precious Blood). Leo XIII appointed Cardinal Mazzella as their cardinal protector. The mother-house is in Koningbosch, Diocese of Roermond. They assist especially the Missionary Fathers of the Holy Ghost in German East Africa. As yet they have made no foundation in the United States.

ULRICH F. MUELLER.

III. **SISTERS ADORERS OF THE PRECIOUS BLOOD**, a congregation of nuns established, 14 September, 1861, by Right Rev. Joseph La Rocque, then Bishop of St. Hyacinthe (Prov. Quebec, Canada), with the co-operation of Mgr. J. S. Raymond, then superior of the seminary of St. Hyacinthe. The foundress, Mère Catherine-Aurélien du Précieux Sang, commonly called Mère Caouette or Mother Catherine, died, 6 July, 1905, at the mother-house in St. Hyacinthe, of which she was then superioress. The object of the institution is two-fold: the glorification of the Precious Blood, and the salvation of souls. "To adore, to repair, to suffer", is the watch-word given to the sisters by the foundress. She was joined by Sister Euphrasie de Joseph, her cousin, Sister Sophie de l'Incarnation, niece of Monsignor Raymond, and Sister Elizabeth de l'Immaculée Conception, a convert. The constitutions of the institute were approved by Leo XIII, 20 October, 1896. The order is contemplative, and the sisters maintain perpetual adoration of the Blessed Sacrament. The Office is recited daily: on Thursday, the Office of the Blessed Sacrament, which is also chanted when the Blessed Sacrament is exposed; every first Sunday of the month, and during the Forty-Hours devotion, which by a special privilege of Pius IX is held four times yearly. On Saturday the Office of the Blessed Virgin is said, and on all other days that of the Precious Blood. Matins and Lauds are recited at midnight. The institute is governed by the mother superior, aided by her councillors, and in certain cases by the chapter of the community. The councillors and the mother superior are elected for a term of five years. Houses are independent of one another in government, recruiting, and training their members. The novitiate lasts two years. The choir and lay sisters make perpetual vows; the *tourières* (outsisters) pronounce their vows for a year only, being allowed to renew them afterwards on the Feast of the Precious Blood. The choir sisters dress in white, with a red scapular and cincture on which are painted in white the instruments of the Passion; for Communion, and before the Blessed Sacrament when exposed, they wear a white mantle. Hence their popular name, "the white nuns". The lay sisters have the same costume, but the dress is black. The costume of the *tourières* is all black, as their functions call them out of the cloister. The institute subsists on alms and on the work of some of the sisters, who make everything requisite for the service of the altar, and other pious articles. The institute also directs the Confraternity and the Guard of Honour of the Precious Blood, and spiritual retreats for ladies.

From the mother-house at St. Hyacinthe have sprung many branches: Toronto (Ontario, Canada), 1867; Montreal (Quebec, Canada), 1874; Ottawa (Canada), 1887; Three Rivers (Quebec, Canada), 1889; Brooklyn (New York), 1890; Portland (Oregon), 1891; Sherbrooke (Quebec, Canada), 1895; Nicolet (Quebec, Canada), 1896; Manchester (N. H.), 1898; Havana (Cuba), 1902; Levis (Quebec, Canada), 1906; and Joliette (Quebec, Canada), 1907.

SISTER AIMÉE DE MARIE.

IV. **SISTERS OF THE PRECIOUS BLOOD**, a congregation of nuns founded at Gurtweil, Baden. In 1857 Rev. Herman Kessler, the pastor, who had long desired

to establish a home for destitute children and a normal school for the training of religious teachers, asked for six members of the community of the Sisters of the Precious Blood from Ottmarsheim, Alsace. They responded and began their work with twelve poor children under the direction of Father Kessler. Under the auspices of Archbishop von Vicari of Freiburg, a novitiate and normal school were established; the latter was affiliated with the educational department of Karlsruhe. Other schools and academies were opened. In 1869 Bishop Junker of Alton, Ill., asked for sisters for his diocese. In 1870 a number of sisters sailed for Belle Prairie (now Piopolis) in the Diocese of Alton. Meantime Bishop Baltes succeeded Bishop Junker; he entrusted to them several parochial schools and promised further assistance on condition that the community should establish itself permanently in his diocese subject to his authority. Mother Augustine, superior of the mother-house at Gurtweil, apprehended a premature separation from Gurtweil, and was also opposed to limiting the sisters' activity to one diocese only. She went to St. Louis where through the efforts of Father Muehlsiepen, Vicar-General of St. Louis, the Sisters of the Precious Blood were received into the Archdiocese of St. Louis (1872) and obtained charge of a number of schools in Missouri and Nebraska. In 1873 the Kulturkampf had reached its climax and the entire community was expelled; some went to Rome, others settled in Bosnia, Hungary, while the greater number joined their sisters in America. A mother-house was established in O'Fallon, St. Charles County, Mo., completed in 1875. News arrived that Mother Clementine, mistress of novices, with a few professed sisters and the entire novitiate had resolved to follow the dictates of Bishop Baltes and establish a mother-house in his diocese. Consequently a new novitiate was begun in O'Fallon. The novitiate of Mother Clementine's branch was established at Ruma in 1876. They conduct schools in the Archdiocese of St. Louis, the Dioceses of Alton, Belleville, Oklahoma, St. Joseph, and Wichita. They number (1911): professed sisters, 230; novices, 20; candidates, 30; schools, 51; orphans, 150; pupils, 49,430. The O'Fallon community was incorporated (1878) under the laws of the State of Missouri with the right of succession, under the legal title of St. Mary's Institute of O'Fallon, Mo. The sisters conduct schools in the Archdiocese of St. Louis, and in the Dioceses of Alton, Kansas City, Lincoln, and Omaha. They number (1911): professed sisters, 179; novices, 17; candidates, 11; academy, 1; schools, 20; pupils, 2943.

ULRICH F. MUELLER.

V. SISTERS OF THE PRECIOUS BLOOD, founded in the canton of Grisons, Switzerland, in 1833, by Maria Anna Brunner, and her son Rev. Francis de Sales Brunner (q. v.). They were inspired to the undertaking by a visit to Rome, during which they were much impressed by the devotion to the Most Precious Blood as practised by the congregation of Blessed Gaspare del Bufalo. The rule was founded on that of St. Benedict and approved by the Bishop of Chur, the object of the community being the adoration of the Most Precious Blood and the education of youth, including the care of orphans and homeless or destitute girls. The sisters became affiliated with the Society of Priests of the Precious Blood, of which Father Brunner was a member, and on his being sent to America to establish his congregation there he enabled the sisters also to make a foundation, first at St. Alphonsus, near Norwalk, and permanently at New Riegel, Ohio. In 1886 Archbishop Elder found it advisable to revise the rule drawn up by Father Brunner in order to adapt it to altered conditions, and this revision, besides extending the time of adoration through the day as well as the night, increased the teaching force of the community, who were thus enabled to take charge of a

larger number of parochial schools. In this year, also, the sisters were separated from the society of priests, with which it had hitherto been affiliated, and made a separate congregation with a superior general under the jurisdiction of the Archbishop of Cincinnati. The present mother-house is at Maria Stein, Ohio. They conduct schools in the Archdiocese of Cincinnati, and in the Dioceses of Cleveland, Ft. Wayne, Kansas City, Nashville, St. Joseph, and Tucson. The statistics for 1911 are: professed sisters, 592; novices, 48; postulants, 26; pupils, 6954.

HEIMBUCHER, *Die Orden u. Kongregationen der kath. Kirche*, III (Paderborn, 1908), 399, 476.

SISTER MARY VICTORIA.

Precipiano, HUMBERT-GUILLAUME DE, Count, b. at Besançon, 1626; d. at Brussels, 7 June, 1711. Having studied the classics at Constance, philosophy in his native town, and theology in the Jesuit college, Louvain, he graduated as Licentiate in Law and Doctor of Theology at the University of Dôle. He was named successively canon, archdeacon, and dean of the metropolitan chapter of Besançon; commendatory Abbot of Bellevaux in Burgundy; and was then appointed ecclesiastical councillor at the Court of Dôle by Philip IV of Spain, La Franche-Comté being a Spanish dependency. In 1667 Philip sent him to the imperial Diet of Ratisbon as plenipotentiary for Burgundy. After 1672 he resided at Madrid as chief councillor for the affairs of the Netherlands and Burgundy. Ten years later he was raised to the See of Bruges, and consecrated on 21 March, 1683. For seven years he laboured zealously to maintain the purity of the Faith and the rights of the Church, and to check the spread of Jansenism. In 1690 he was offered the Archbishopric of Mechlin, which he accepted only upon the express order of the pope. At Mechlin his life was a constant struggle against the doctrines which were being actively disseminated by the French refugees, Arnauld, Quesnel, and others (see JANSENIUS and JANSENISM). In union with his suffragans, the archbishop began by insisting on the oath formulated by Alexander VII as a necessary condition for admission to Holy orders, benefices, and ecclesiastical positions. Three episcopal assemblies held under his presidency at Brussels in 1691, 1692, and 1697, confirmed this regulation. The second (1692) moreover, to prevent all subterfuges regarding the distinction of law and fact, had made certain additions to the formulary. Through Dr. Hennebel, the Jansenists lodged a protest at Rome, and succeeded in having their claim upheld by Innocent XII. The pope ordered the adoption of the precise words of the Alexandrine oath, as being quite sufficient since it condemned the five propositions "in the obvious sense which the words of the propositions express, and which our predecessors condemned". Thereupon, men of bad faith declared that the Constitution of Alexander VII and the obligations it imposed had been changed, and that it was no longer necessary to reject the propositions "in sensu auctoris". The bishops communicated with Rome to obtain a more drastic and efficacious remedy; and the pope, now better informed, authorized them to proceed, not only in virtue of their own authority but also as delegates of the Holy See, against all who by word or writing opposed the well-known decisions of the sovereign authority. The archbishop at once censured and prohibited seventy-one defamatory pamphlets of Jansenistic origin; but, as the propaganda in favour of the "Augustinus" continued and moral suasion proved entirely ineffectual, he sought the intervention of the secular power. Quesnel, Gerberon, and Brigode, the distributor of their writings, were arrested at Brussels, by order of Philip V, and confined to the archiepiscopal palace (1703). Quesnel escaped to Holland, but his vast correspondence was

seized and judicial proceedings against him begun. All the documents connected therewith were published under the title "*Causa Quesnelliana*" (Brussels, 1705). They form one of the most valuable sources of the authentic history of Jansenism. In 1705, the Archbishop of Mechlin was one of the first to publish in his diocese the Bull "*Vineam Domini Sabbaoth*", in which Clement XI condemned the theory of respectful silence (see JANSENIUS AND JANSENISM), and his action elicited the congratulations of the sovereign pontiff. At Mechlin as at Bruges, Precipiano had to fight in defence of the right of asylum attached to certain places or religious houses, and at Mechlin his efforts were at first completely thwarted by the civil power. As a last resort he was forced to excommunicate the procurator-general and the members of the *Grand Conseil*; the magistrates replied by imposing on him an enormous fine, and the heavy penalty of "*aquæ et ignis interdictio*". Through the personal intervention of Philip V, who esteemed the prelate highly, the quarrel was ended without encroachment on the rights of the Church, or dishonour to their doughty champion.

DE RAM, *Synodicum Belgicum*, I (Mechlin, 1828); DE SCHREVEL *Biogr. nat. de Belgique*, XVIII (Brussels, 1905); CLAESSENS, *Hist. des archevêques de Malines* (Louvain, 1881); PROOST, *Hist. du droit d'asile en Belgique* (Ghent, 1870).

J. FORGET.

Preconization (Lat. *præconizare*, to publish, from *præco*, herald, public crier). This word means: (1) in its strict juridical sense the ratification in a public consistory of the choice made by a third person of a titular of a consistorial benefice, for example a bishopric. The pope approves the election or postulation of the titular made by a chapter, or ratifies the presentation of a candidate made by the civil power. This preconization is preceded by an informative process, which according to the present discipline is raised by the Consistorial Congregation for the countries not under Congregation of Propaganda, but the information is furnished by the Secretary of State if the question at hand refers to sees situated outside of Italy; (2) some authors define preconization as the report made in the above-mentioned informative process by the cardinals at the consistory (Bargilliat, "*Prælectiones juris canonici*", I, Paris, 1907, 467); (3) again, preconization is considered the announcement to the pope that in an approaching consistory a cardinal will propose in the name of the head of a State the candidate whom the latter himself has designated for a see (André, "*Cours de droit canon*", s. v. *Præconization*, V, Paris, 1860, 340); (4) finally, preconization is also the act by which the pope ratifies, in a consistory, a nomination of a bishop which has been made previously by a decree of the Consistorial Congregation. According to a Decree of the Congregation of Rites, 8 June, 1910 ("*Acta Apostolicæ Sedis*", 1910, 586) the date of the anniversary of the election of a bishop is no longer that of his preconization in the consistory, but that of the decree or letter by which he is appointed.

A. VAN HOVE.

Precursor, THE. See JOHN THE BAPTIST, SAINT.

Predella. See ALTAR, sub-title, ALTAR-STEPS.

Predestinarianism is a heresy not unfrequently met with in the course of the centuries which reduces the eternal salvation of the elect as well as the eternal damnation of the reprobate to one cause alone, namely to the sovereign will of God, and thereby excludes the free co-operation of man as a secondary factor in bringing about a happy or unhappy future in the life to come.

I. CHARACTER AND ORIGIN.—The essence of this heretical predestinarianism may be expressed in these

two fundamental propositions which bear to each other the relation of cause and effect: (a) the absolute will of God as the sole cause of the salvation or damnation of the individual, without regard to his merits or demerits; (b) as to the elect, it denies the freedom of the will under the influence of efficacious grace while it puts the reprobate under the necessity of committing sin in consequence of the absence of grace. The system in its general outlines may thus be described: the question why some are saved while others are damned can only be answered by assuming an eternal, absolute, and unchangeable decree of God. The salvation of the elect and the damnation of the reprobate are simply the effect of an unconditional Divine decree. But if those who are predestined for eternal life are to attain this end with metaphysical necessity, and it is only such a necessity that can guarantee the actual accomplishment of the Divine will, God must give them during their lifetime efficacious graces of such a nature that the possibility of free resistance is systematically excluded, while, on the other hand, the will, under the influence of grace, is borne along without reluctance to do what is right and is forced to persevere in a course of righteousness to the hour of death. But from all eternity God has also made a decree not less absolute whereby he has positively predestined the non-elect to eternal torments. God can accomplish this design only by denying to the reprobate irresistibly efficacious graces and impelling their will to sin continually, thereby leading them slowly but surely to eternal damnation. As it is owing to the will of God alone that heaven is to be filled with saints, without any regard to their merits, so also it is owing to that same will of God that hell is to be filled with the reprobate, without any regard to their foreseen sins and demerits and with such only as God has eternally, positively, and absolutely destined for this sad lot. In any case sin is the most efficacious means of infallibly bringing to hell, with some appearance of justice, those who are positively destined for reprobation. In its further development Predestinarianism admits of a harsher and of a milder form according as its adherents by insisting exclusively on the salvific will of God push positive reprobation into the background or endeavour to hide under a pious phraseology what is most offensive in their doctrine, i. e. God's supposed relation towards sin. And yet this element forms the keystone of the whole system. For the all-important question is: Can God the all just absolutely and positively predestine anyone to hell? Can the all holy incite and force anyone to sin with the intention of consigning him to eternal damnation? The denial of the universality of the salvific will of God and the restriction of the merits of Christ's passion to the elect are only natural consequences of the fundamental principles of this heresy.

The history of dogma shows that the origin of heretical Predestinarianism must be traced back to the misunderstanding and misinterpretation of St. Augustine's views relating to eternal election and reprobation. But it was only after the death of this great doctor of the Church (430) that this heresy sprang up in the Church of the West, whilst that of the East was preserved in a remarkable manner from these extravagances. Beginning from the anonymous author of the second part of the so-called "*Prædestinatus*" (see below) up to Calvin, we find that all the adherents of this heresy have taken refuge behind the stout shield of Augustinism. The question therefore to be answered at present is this: Did St. Augustine teach this heresy? We do not wish to gainsay that St. Augustine in the last years of his life fell a victim to an increased rigorism which may find its psychological explanation in the fact that he was called to be the champion of Chris-

tian grace against the errors of Pelagianism and Semi-pelagianism. Still the point at issue is whether he, in order to establish the predestination of the just, gave up his former position and took refuge in the so-called "irresistible grace" (*gratia irresistibilis*) which in the just and in those who persevere destroys free will. Not only Protestant historians of dogma (as Harnack) but also a few Catholic scholars (Rottmanner, Kolb) even up to the present time have thought that they found in his works evident indications of such a strange view. But among most of the modern students of St. Augustine the conviction is constantly gaining ground that the African Doctor at no time of his life, not even shortly before his death, embraced this dangerous view of grace which Jansenism claims to have inherited from him. Even the Protestant writer E. F. K. Müller emphasizes the fact that St. Augustine, with regard to the liberty of the will in all conditions of life, "never renounced his repudiation of Manichæism, a step which had caused him so severe a struggle" (Realencyk. für prot. Theologie, Leipzig, 1904, XV, 590).

The only ambiguous passage containing the expressions "unavoidable and invincible" (De corrept. et gratia XII, xxxviii: *indeclinabiliter et insuperabiliter*) does not refer, as is clear from the context, to Divine grace but to the weak will which by means of grace is made invulnerable against all temptations, even to the point of being unconquerable, without, however, thereby losing its native freedom. Other difficult passages must likewise be explained in view of the general fundamental principles of the saint's teaching and especially of the context and the logical connexion of his thoughts (cf. J. Mausbach, "Die Ethik des hl. Augustinus", II, 25 sq.; Freiburg, 1909). Hence St. Augustine, when towards the end of his life he wrote his "Retractations", did not take back anything in this matter, nor had he any reason for doing so. But as to God's relation to sin, nothing was further from the thoughts of the great doctor than the idea that the Most Holy could in any way or for any purpose force the human will to commit sin. It is true that God foresees sin, but He does not will it; for He must of necessity hate it. St. Augustine draws a sharp distinction between *præscire* and *prædestinare*, and to him the infallible foreknowledge of sin is by no means synonymous with a necessitating predestination to sin. Thus he says of the fall of Adam (De corrept. et gratia, 12, 37), "*Deo quidem præsciente, quid esset Adam facturus injuste; præsciente tamen, non ad hoc cogente*" (cf. Mausbach, *ibid.* 208 sq.). The question whether and in how far St. Augustine assumed, in connexion with the absolute predestination of the elect, what was later on known as the negative reprobation of the damned, is quite distinct from our present question and has nothing to do with heretical Predestinarianism.

II. THE WORK "PRÆDESTINATUS".—That the Pelagians after their condemnation by the Church had a great interest in exaggerating to their ultimate heretical consequences those ideas of St. Augustine which may easily be misunderstood, that thereby they might under the mask of orthodoxy be enabled to combat more effectually not only the ultra-Augustinian but also the whole Catholic doctrine on grace, is clearly proved by a work written by an anonymous author of the fifth century. This work, edited by Sirmond for the first time in 1643 in Paris under the title of "Prædestinatus" (P. L., LIII, 579 sq.), is divided into three parts. The first part contains a catalogue of ninety heresies (from Simon Magus to the *Hæresis Prædestinatorum*) and is nothing less than a barefaced plagiarism from St. Augustine's work "De Hæresibus" and original only in those passages where the writer touches on personal experiences and Roman local traditions (cf. A. Faure, "Die Widerlegung der Häretiker im I. Buch des Prædestinatus",

Leipzig, 1903). The second part is according to the assertion of the author of the work a treatise circulated (though falsely) under the name of St. Augustine which fell into his hands; this treatise, under the form of a violent polemic against the Pelagians, puts forward ultra-Augustinian views on predestination and thus affords a welcome opportunity to a Pelagian to attack both the one-sided exaggerations of the pseudo-Augustine and the Catholic doctrine on grace of the true St. Augustine. As a matter of fact this favourable opportunity is seized upon by the author in the third and last part, where he reveals his real purpose. Adhering closely to the text of the second part he subtly endeavours to refute not only Predestinarianism but also (and this is the main point), St. Augustine's doctrine on grace, although for the sake of appearances and to protect himself from attack, Pelagianism is nominally condemned in four anathemata (P. L., LIII, 665). All the older literature concerning this inferior compilation may now be considered as superseded by the recent scholarly work of Schubert, "Der sog. Prædestinatus, ein Beitrag zur Geschichte des Pelagianismus" (Leipzig, 1903). We need not, however, entirely accede to the opinion of Schubert that the whole pseudo-Augustine produced in the second part is nothing but a clumsy forgery of the anonymous Pelagian author himself, who put up a straw man in order the more easily to overthrow him. But there can be no doubt as to the meaning, the spirit, and purpose of this manoeuvre. We have to do with a skilful defence of Pelagianism against the doctrine on grace as taught by St. Augustine. And the authorship points rather to Rome than to southern Gaul (perhaps Arnobius the Younger). This work, written probably about A.D. 440, emanated from the group of Pelagians closely associated with Julian of Eclanum. It is not impossible that a friend of Julian living in Rome conceived the hope of making the pope more favourable to Pelagianism by means of this work.

III. LUCIDUS AND GOTTSCHALK.—Toward the middle of the fifth century heretical Predestinarianism in its harshest form was defended by Lucidus, a priest of Gaul, about whose life in all other respects history is silent. According to his view God positively and absolutely predestined some to eternal death and others to eternal life, in such a manner that the latter have not to do anything to secure their eternal salvation, since Divine grace of itself carries them on to their destiny. As the non-elect are destined for hell, Christ did not die for them. When Faustus, Bishop of Riez, ordered Lucidus to retract, he abandoned his scandalous propositions and even notified the Provincial Synod of Arles (c. 473) of his submission (cf. Mansi, "Concil. Collect.", VII, 1010). It seems that within half a century the Predestinarian heresy had completely died out in Gaul, since the Second Synod of Orange (529), although it solemnly condemns this heresy, still speaks only hypothetically of its adherents; "*si sunt, qui tantum malum credere velint*" (cf. Denzinger, "Enchirid.", tenth ed., Freiburg, 1908, n. 200). The controversy was not renewed till the ninth century when Gottschalk of Orbais, appealing to St. Augustine, aroused a long and animated dispute on predestination, which affected the whole Frankish Empire. Rabanus Maurus (about 840) wrote a refutation of Gottschalk's teaching and clearly summed it up in the following proposition (P. L., CXII, 1530 sqq.): As the elect, predestined by the Divine foreknowledge and absolute decree, are saved of necessity, so in the same way the eternally reprobate become the victims of predestination to hell.

Through the efforts of Hincmar, Archbishop of Reims, the Synod of Quierzy (849) compelled Gottschalk, whose enforced stay in the Order of St. Bene-

diet had cost him dearly, to burn his writings with his own hand, and silenced him by imprisoning him for life in the monastery of Hautvilliers near Reims. At the present time, however, scholars, because of two extant professions of faith (P. L., CXXI, 347 sq.), are inclined to free the eccentric and obscure Gottschalk from the charge of heresy, and to interpret in an orthodox sense his ambiguous teaching on "double predestination" (*gemina prædestinatio*). It was an unhappy thought of Hincmar to ask the pantheistic John Scotus Eriugena to write a refutation of Gottschalk, as this only served to sharpen the controversy. To the great sorrow of Charles the Bald the whole western part of the Frankish Empire resounded with the disputes of bishops, theologians, and even of some synods. The Canons of the Provincial Synod of Valence (855) may be taken as an expression of the then prevailing views on this subject; they emphasize the fact that God has merely foreseen from eternity and not foreordained the sins of the reprobate, although it remains true that in consequence of their foreseen demerits he has decreed from eternity the eternal punishment of hell (cf. Denzinger, loc. cit., nn. 320-25). It was essentially on this basis that the bishops of fourteen ecclesiastical provinces finally came to an agreement and made peace in the Synod of Tousy held in 860 (cf. Schrörs, "Hinkmar von Reims", 66 sq., Freiburg, 1884). The teaching of the Middle Ages is generally characterized on the one hand by the repudiation of positive reprobation for hell and of predestination for sin, on the other by the assertion of Divine predestination of the elect for heaven and the co-operation of free will; this teaching was only for a short time obscured by Thomas Bradwardine, and the so-called precursors of the Reformation (Wyclif, Hus, Jerome of Prague, John Wesel).

IV. THE REFORMATION. — Heretical Predestinarianism received a new and vigorous impulse at the outbreak of the Reformation. Luther having denied the freedom of the will in sinful man as also freedom in the use of grace, logically placed the eternal destiny of the individual solely and entirely in the hands of God, who without any regard to merit or demerit metes out heaven or hell just as He pleases. Zwingli endeavoured to obviate the grave consequences that this principle necessarily produces in the moral order by the vain excuse that "just as God incited the robber to commit murder, so also He forces the judge to impose the penalty of death on the murderer" (De provid. Dei, in "Opera", ed. Schuler, IV, 113). Melancthon taught expressly that the treason of Judas was just as much the work of God as was the vocation of St. Paul (cf. Trident., Sess. VI, can. vi, in Denzinger, n. 816). Calvin is the most logical advocate of Predestinarianism pure and simple. Absolute and positive predestination of the elect for eternal life, as well as of the reprobate for hell and for sin, is one of the chief elements of his whole doctrinal system and is closely connected with the all-pervading thought of "the glory of God". Strongly religious by nature and with an instinct for systematizing, but also with a harsh unyielding character, Calvin was the first to weave the scattered threads which he thought he had found in St. Paul, St. Augustine, Wyclif, Luther, and Bucer, into a strong network which enveloped his entire system of practical and theoretical Christianity. Thus he became in fact the systematizer of the dread doctrine of predestination. Although Calvin does not deny that man had free will in paradise, still he traces back the fall of Adam to an absolute and positive decree of God (Instit., I, 15, 8; III, 23, 8).

Original sin completely destroyed the freedom of will in fallen man; nevertheless, it is not the motive of the *decretum horribile*, as he himself calls the decree or reprobation. Calvin is an uncompromising

Supralapsarian. God for His own glorification, and without any regard to original sin, has created some as "vessels of mercy", others as "vessels of wrath". Those created for hell He has also predestined for sin, and whatever faith and righteousness they may exhibit are at most only apparent, since all graces and means of salvation are efficacious only in those predestined for heaven. The Jansenistic doctrine on redemption and grace in its principal features is not essentially different from Calvinism. The unbearable harshness and cruelty of this system led to a reaction among the better-minded Calvinists, who dreaded setting the "glory of God" above his sanctity. Even on so strictly Calvinistic a soil as Holland, *Infralapsarianism*, i. e. the connexion of reprobation with original sin, gained ground. England also refused to adhere to the strictly Calvinistic Lambeth Articles (1595), although in later years their essential features were embodied in the famous Westminster Confession of 1647, which was so strenuously defended by the English Puritans. On the other hand the Presbyterian Church in the United States has endeavoured to mitigate the undeniable harshness of Calvinism in its revision of its Confession in May, 1903, in which it also emphasizes the universality of the Divine love and even does not deny the salvation of children who die in infancy.

J. POHLE.

Predestination (Lat. *præ, destinare*), taken in its widest meaning, is every Divine decree by which God, owing to His infallible prescience of the future, has appointed and ordained from eternity all events occurring in time, especially those which directly proceed from, or at least are influenced by, man's free will. It includes all historical facts, as for instance the appearance of Napoleon or the foundation of the United States, and particularly the turning-points in the history of supernatural salvation, as the mission of Moses and the Prophets, or the election of Mary to the Divine Motherhood. Taken in this general sense, predestination clearly coincides with Divine Providence and with the government of the world, which do not fall within the scope of this article (see PROVIDENCE, DIVINE).

I. NOTION OF PREDESTINATION.—Theology restricts the term to those Divine decrees which have reference to the supernatural end of rational beings, especially of man. Considering that not all men reach their supernatural end in heaven, but that many are eternally lost through their own fault, there must exist a twofold predestination: (a) one to heaven for all those who die in the state of grace; (b) one to the pains of hell for all those who depart in sin or under God's displeasure. However, according to present usage, to which we shall adhere in the course of the article, it is better to call the latter decree the Divine "reprobation", so that the term predestination is reserved for the Divine decree of the happiness of the elect.

A. The notion of predestination comprises two essential elements: God's infallible foreknowledge (*præscientia*), and His immutable decree (*decretum*) of eternal happiness. The theologian who, following in the footsteps of the Pelagians, would limit the Divine activity to the eternal foreknowledge and exclude the Divine will, would at once fall into Deism (q. v.), which asserts that God, having created all things,

leaves man and the universe to their fate and refrains from all active interference. Though the purely natural gifts of God, as descent from pious parents, good education, and the providential guidance of man's external career, may also be called effects of predestination, still, strictly speaking, the term implies only those blessings which lie in the supernatural sphere, as sanctifying grace, all actual graces, and among them in particular those which carry with them final perseverance and a happy death. Since in reality only those reach heaven who die in the state of justification or sanctifying grace, all these and only these are numbered among the predestined, strictly so called. From this it follows that we must reckon among them also all children who die in baptismal grace, as well as those adults who, after a life stained with sin, are converted on their death-beds. The same is true of the numerous predestined who, though outside the pale of the true Church of Christ, yet depart from this life in the state of grace, as catechumens, Protestants in good faith, schismatics, Jews, Mahomedans, and pagans. Those fortunate Catholics who at the close of a long life are still clothed in their baptismal innocence, or who after many relapses into mortal sin persevere till the end, are not indeed predestined more firmly, but are more signally favoured than the last-named categories of persons.

But even when man's supernatural end alone is taken into consideration, the term predestination is not always used by theologians in an unequivocal sense. This need not astonish us, seeing that predestination may comprise wholly diverse things. If taken in its adequate meaning (*prædestinatio adæquata* or *completa*), then predestination refers to both grace and glory as a whole, including not only the election to glory as the end, but also the election to grace as the means, the vocation to the faith, justification, and final perseverance, with which a happy death is inseparably connected. This is the meaning of St. Augustine's words (*De dono persever.*, xxxv): "*Prædestinatio nihil est aliud quam præscientia et præparatio beneficiorum, quibus certissime liberantur [i. e. salvantur], quicumque liberantur*" (Predestination is nothing else than the foreknowledge and foreordaining of those gracious gifts which make certain the salvation of all who are saved). But the two concepts of grace and glory may be separated and each of them be made the object of a special predestination. The result is the so-called inadequate predestination (*prædestinatio inadæquata* or *incompleta*), either to grace alone or to glory alone. Like St. Paul, Augustine, too, speaks of an election to grace apart from the celestial glory (loc. cit., xix): "*Prædestinatio est gratiæ præparatio, gratia vero jam ipsa donatio.*" It is evident, however, that this (inadequate) predestination does not exclude the possibility that one chosen to grace, faith, and justification goes nevertheless to hell. Hence we may disregard it, since it is at bottom simply another term for the universality of God's salvific will and of the distribution of grace among all men (see GRACE). Similarly eternal election to glory alone, that is, without regard to the preceding merits through grace, must be designated as (inadequate) predestination. Though the possibility of the latter is at once clear to the reflecting mind, yet its actuality is strongly contested by the majority of theologians, as we shall see further on (under sect. III). From these explanations it is plain that the real dogma of eternal election is exclusively concerned with adequate predestination, which embraces both grace and glory and the essence of which St. Thomas (I, Q. xxiii, a. 2) defines as: "*Præparatio gratiæ in præsentī et gloriæ in futuro*" (the foreordination of grace in the present and of glory in the future).

In order to emphasize how mysterious and unapproachable is Divine election, the Council of Trent calls predestination a "hidden mystery". That predestination is indeed a sublime mystery appears not

only from the fact that the depths of the eternal counsel cannot be fathomed, it is even externally visible in the inequality of the Divine choice. The unequal standard by which baptismal grace is distributed among infants and efficacious graces among adults is hidden from our view by an impenetrable veil. Could we gain a glimpse at the reasons of this inequality, we should at once hold the key to the solution of the mystery itself. Why is it that this child is baptized, but not the child of the neighbour? Why is it that Peter the Apostle rose again after his fall and persevered till his death, while Judas Iscariot, his fellow-Apostle, hanged himself and thus frustrated his salvation? Though correct, the answer that Judas went to perdition of his own free will, while Peter faithfully co-operated with the grace of conversion offered him, does not clear up the enigma. For the question recurs: Why did not God give to Judas the same efficacious, infallibly successful grace of conversion as to St. Peter, whose blasphemous denial of the Lord was a sin no less grievous than that of the traitor Judas? To all these and similar questions the only reasonable reply is the word of St. Augustine (loc. cit., 21): "*Inscrutabilia sunt judicia Dei*" (the judgments of God are inscrutable).

B. The counterpart of the predestination of the good is the reprobation of the wicked, or the eternal decree of God to cast all men into hell of whom He foresaw that they would die in the state of sin as his enemies. This plan of Divine reprobation may be conceived either as absolute and unconditional or as hypothetical and conditional, according as we consider it as dependent on, or independent of, the infallible foreknowledge of sin, the real reason of reprobation. If we understand eternal condemnation to be an absolute, unconditional decree of God, its theological possibility is affirmed or denied according as the question whether it involves a positive, or only a negative, reprobation is answered in the affirmative or in the negative. The conceptual difference between the two kinds of reprobation lies in this, that negative reprobation merely implies the absolute will not to grant the bliss of heaven, while positive reprobation means the absolute will to condemn to hell. In other words, those who are reprobated merely negatively are numbered among the non-predestined from all eternity; those who are reprobated positively are directly predestined to hell from all eternity and have been created for this very purpose. It was Calvin who elaborated the repulsive doctrine that an absolute Divine decree from all eternity positively predestined part of mankind to hell and, in order to obtain this end effectually, also to sin. The Catholic advocates of an unconditional reprobation evade the charge of heresy only by imposing a twofold restriction on their hypothesis: (a) that the punishment of hell can, in time, be inflicted only on account of sin, and from all eternity can be decreed only on account of foreseen malice, while sin itself is not to be regarded as the sheer effect of the absolute Divine will, but only as the result of God's permission; (b) that the eternal plan of God can never intend a positive reprobation to hell, but only a negative reprobation, that is to say, an exclusion from heaven. These restrictions are evidently demanded by the formulation of the concept itself, since the attributes of Divine sanctity and justice must be kept inviolate (see GOD). Consequently, if we consider that God's sanctity will never allow Him to will sin positively even though He foresees it in His permissive decree with infallible certainty, and that His justice can foreordain, and in time actually inflict, hell as a punishment only by reason of the sin foreseen, we understand the definition of eternal reprobation given by Peter Lombard (I. Sent., dist. 40): "*Est præscientia iniquitatis quorundam et præparatio damnationis eorundem*" (it is the foreknowledge of the wickedness of some men and the

foreordaining of their damnation). Cf. Scheeben, "Mysterien des Christentums" (2nd ed., Freiburg, 1898), 98-103.

II. THE CATHOLIC DOGMA.—Reserving the theological controversies for the next section, we deal here only with those articles of faith relating to predestination and reprobation, the denial of which would involve heresy.

A. *The Predestination of the Elect*.—He who would place the reason of predestination either in man alone or in God alone would inevitably be led into heretical conclusions about eternal election. In the one case the error concerns the last end, in the other the means to that end. Let it be noted that we do not speak of the "cause" of predestination, which would be either the efficient cause (God), or the instrumental cause (grace), or the final cause (God's honour), or the primary meritorious cause, but of the reason or motive which induced God from all eternity to elect certain definite individuals to grace and glory. The principal question then is: Does the natural merit of man exert perhaps some influence on the Divine election to grace and glory? If we recall the dogma of the absolute gratuity of Christian grace, our answer must be outright negative (see GRACE). To the further question whether Divine predestination does not at least take into account the supernatural good works, the Church answers with the doctrine that heaven is not given to the elect by a purely arbitrary act of God's will, but that it is also the reward of the personal merits of the justified (see MERIT). Those who, like the Pelagians, seek the reason for predestination only in man's naturally good works, evidently misjudge the nature of the Christian heaven, which is an absolutely supernatural destiny. As Pelagianism puts the whole economy of salvation on a purely natural basis, so it regards predestination in particular not as a special grace, much less as the supreme grace, but only as a reward for natural merit.

The Semipelagians, too, depreciated the gratuity and the strictly supernatural character of eternal happiness by ascribing at least the beginning of faith (*initium fidei*) and final perseverance (*donum perseverantiæ*) to the exertion of man's natural powers, and not to the initiative of preventing grace. This is one class of heresies which, slighting God and His grace, makes all salvation depend on man alone. But no less grave are the errors into which a second group falls by making God alone responsible for everything, and abolishing the free co-operation of the will in obtaining eternal happiness. This is done by the advocates of heretical Predestinarianism (q. v.), embodied in its purest form in Calvinism and Jansenism. Those who seek the reason of predestination solely in the absolute Will of God are logically forced to admit an irresistibly efficacious grace (*gratia irresistibilis*), to deny the freedom of the will when influenced by grace and wholly to reject supernatural merits (as a secondary reason for eternal happiness). And since in this system eternal damnation, too, finds its only explanation in the Divine will, it further follows that concupiscence acts on the sinful will with an irresistible force, that there the will is not really free to sin, and that demerits cannot be the cause of eternal damnation.

Between these two extremes the Catholic dogma of predestination keeps the golden mean, because it regards eternal happiness primarily as the work of God and His grace, but secondarily as the fruit and reward of the meritorious actions of the predestined. The process of predestination consists of the following five steps: (a) the first grace of vocation, especially faith as the beginning, foundation, and root of justification; (b) a number of additional, actual graces for the successful accomplishment of justification; (c) justification itself as the beginning of the state of grace and love; (d) final perseverance or at least the grace of a

happy death; (e) lastly, the admission to eternal bliss. If it is a truth of Revelation that there are many who, following this path, seek and find their eternal salvation with infallible certainty, then the existence of Divine predestination is proved (cf. Matt., xxv, 34; Apoc., xx, 15). St. Paul says quite explicitly (Rom., viii, 28 sq.): "we know that to them that love God, all things work together unto good, to such as, according to his purpose, are called to be saints. For whom he foreknew, he also predestinated to be made conformable to the image of his Son; that he might be the first born amongst many brethren. And whom he predestinated, them he also called. And whom he called, them he also justified. And whom he justified, them he also glorified." (Cf. Eph., i, 4-11.) Besides the eternal "foreknowledge" and foreordaining, the Apostle here mentions the various steps of predestination: "vocation", "justification", and "glorification". This belief has been faithfully preserved by Tradition through all the centuries, especially since the time of Augustine.

There are three other qualities of predestination which must be noticed, because they are important and interesting from the theological standpoint: its immutability, the definiteness of the number of the predestined, and its subjective uncertainty.

(1) The first quality, the immutability of the Divine decree, is based both on the infallible foreknowledge of God that certain, quite determined individuals will leave this life in the state of grace, and on the immutable will of God to give precisely to these men and to no others eternal happiness as a reward for their supernatural merits. Consequently, the whole future membership of heaven, down to its minutest details, with all the different measures of grace and the various degrees of happiness, has been irrevocably fixed from all eternity. Nor could it be otherwise. For if it were possible that a predestined individual should after all be cast into hell or that one not predestined should in the end reach heaven, then God would have been mistaken in his foreknowledge of future events; He would no longer be omniscient. Hence the Good Shepherd says of his sheep (John, x, 28): "And I give them life everlasting; and they shall not perish forever, and no man shall pluck them out of my hand." But we must beware of conceiving the immutability of predestination either as fatalistic in the sense of the Mahommedan *kismet* or as a convenient pretext for idle resignation to inexorable fate. God's infallible foreknowledge cannot force upon man unavoidable coercion, for the simple reason that it is at bottom nothing else than the eternal vision of the future historical actuality. God foresees the free activity of a man precisely as that individual is willing to shape it. Whatever may promote the work of our salvation, whether our own prayers and good works, or the prayers of others in our behalf, is *eo ipso* included in the infallible foreknowledge of God and consequently in the scope of predestination (cf. St. Thomas, I, Q. xxiii, a. 8). It is in such practical considerations that the ascetical maxim (falsely ascribed to St. Augustine) originated: "Si non es prædestinatus, fac ut prædestineris" (if you are not predestined, so act that you may be predestined). Strict theology, it is true, cannot approve this bold saying, except in so far as the original decree of predestination is conceived as at first a hypothetical decree, which is afterwards changed to an absolute and irrevocable decree by the prayers, good works, and perseverance of him who is predestined, according to the words of the Apostle (II Pet., i, 10): "Wherefore, brethren, labour the more, that by good works you may make sure your calling and election."

God's unerring foreknowledge and foreordaining is designated in the Bible by the beautiful figure of the "Book of Life" (*liber vitæ*, τὸ βιβλίον τῆς ζωῆς). This book of life is a list which contains the names of

all the elect and admits neither additions nor erasures. From the Old Testament (cf. Ex., xxxii, 32; Ps. lxxviii, 29) this symbol was taken over into the New by Christ and His Apostle Paul (cf. Luke, x, 20; Heb., xii, 23), and enlarged upon by the Evangelist John in his Apocalypse [cf. Apoc., xxi, 27: "There shall not enter into it anything defiled . . . but they that are written in the book of life of the Lamb" (cf. Apoc., xiii, 8; xx, 15)]. The correct explanation of this symbolic book is given by St. Augustine (*De civ. Dei*, XX, xiii): "*Præscientia Dei, quæ non potest falli, liber vitæ est*" (the foreknowledge of God, which cannot err, is the book of life). However, as intimated by the Bible, there exists a second, more voluminous book, in which are entered not only the names of the elect, but also the names of all the faithful on earth. Such a metaphorical book is supposed wherever the possibility is hinted at that a name, though entered, might again be stricken out [cf. Apoc., iii, 5: "and I will not blot out his name out of the book of life" (cf. Ex., xxxii, 33)]. The name will be mercilessly cancelled when a Christian sinks into infidelity or godlessness and dies in his sin. Finally there is a third class of books, wherein the wicked deeds and the crimes of individual sinners are written, and by which the reprobate will be judged on the last day to be cast into hell (cf. Apoc., xx, 12): "and the books were opened; . . . and the dead were judged by those things which were written in the books, according to their works". It was this grand symbolism of Divine omniscience and justice that inspired the soul-stirring verse of the *Dies iræ*, according to which we shall all be judged out of a book: "*Liber scriptus proferetur: in quo totum continetur*". Regarding the book of life, cf. St. Thomas, I, Q. xxiv, a. 1-3, and Heinrich-Gutberlet, "*Dogmat. Theologie*", VIII (Mainz, 1897), § 453.

(2) The second quality of predestination, the definiteness of the number of the elect, follows naturally from the first. For if the eternal counsel of God regarding the predestined is unchangeable, then the number of the predestined must likewise be unchangeable and definite, subject neither to additions nor to cancellations. Anything indefinite in the number would *eo ipso* imply a lack of certitude in God's knowledge and would destroy His omniscience. Furthermore, the very nature of omniscience demands that not only the abstract number of the elect, but also the individuals with their names and their entire career on earth, should be present before the Divine mind from all eternity. Naturally, human curiosity is eager for definite information about the absolute as well as the relative number of the elect. How high should the absolute number be estimated? But it would be idle and useless to undertake calculations and to guess at so and so many millions or billions of predestined. St. Thomas (I, Q. xxiii, a. 7) mentions the opinion of some theologians that as many men will be saved as there are fallen angels, while others held that the number of predestined will equal the number of the faithful angels.

Lastly, there were optimists who, combining these two opinions into a third, made the total of men saved equal to the unnumbered myriads of created spirits. But even granted that the principle of our calculation is correct, no mathematician would be able to figure out the absolute number on a basis so vague, since the number of angels and demons is an unknown quantity to us. Hence, "the best answer", rightly remarks St. Thomas, "is to say: God alone knows the number of his elect". By relative number is meant the numerical relation between the predestined and the reprobate. Will the majority of the human race be saved or will they be damned? Will one-half be damned, the other half saved? In this question the opinion of the rigorists is opposed to the milder view of the optimists. Pointing to several texts of the Bible (Matt., vii, 14;

xxii, 14) and to sayings of great spiritual doctors, the rigorists defend as probable the thesis that not only most Christians but also most Catholics are doomed to eternal damnation. Almost repulsive in its tone is Massillon's sermon on the small number of the elect. Yet even St. Thomas (loc. cit., a. 7) asserted: "*Pauciores sunt qui salvantur*" (only the smaller number of men are saved). And a few years ago, when the Jesuit P. Castelein ("*Le rigorisme, le nombre des élus et la doctrine du salut*", 2nd ed., Brussels, 1899) impugned this theory with weighty arguments, he was sharply opposed by the Redemptorist P. Godts ("*De paucitate salvandorum quid docuerunt sancti*", 3rd ed., Brussels, 1899). That the number of the elect cannot be so very small is evident from the Apocalypse (vii, 9). When one hears the rigorists, one is tempted to repeat Dieringer's bitter remark: "Can it be that the Church actually exists in order to people hell?" The truth is that neither the one nor the other can be proved from Scripture or Tradition (cf. Heinrich-Gutberlet, "*Dogmat. Theologie*", Mainz, 1897, VIII, 363 sq.). But supplementing these two sources by arguments drawn from reason we may safely defend as probable the opinion that the majority of Christians, especially of Catholics, will be saved. If we add to this relative number the overwhelming majority of non-Christians (Jews, Mahomedans, heathens), then Gener ("*Theol. dogmat. scholast.*", Rome, 1767, II, 242 sq.) is probably right when he assumes the salvation of half of the human race, lest "it should be said to the shame and offence of the Divine majesty and clemency that the [future] Kingdom of Satan is larger than the Kingdom of Christ" (cf. W. Schneider, "*Das andere Leben*", 9th ed., Paderborn, 1908, 476 sq.).

(3) The third quality of predestination, its subjective uncertainty, is intimately connected with its objective immutability. We know not whether we are reckoned among the predestined or not. All we can say is: God alone knows it. When the Reformers, confounding predestination with the absolute certainty of salvation, demanded of the Christian an unshaken faith in his own predestination if he wished to be saved, the Council of Trent opposed to this presumptuous belief the canon (Sess. VI, can. xv): "*S. q. d., hominem renatum et justificatum teneri ex fide ad credendum, se certo esse in numero prædinatorum, anathema sit*" (if any one shall say that the regenerated and justified man is bound as a matter of faith to believe that he is surely of the number of the predestined, let him be anathema). In truth, such a presumption is not only irrational, but also unscriptural (cf. I Cor., iv, 4; ix, 27; x, 12; Phil., ii, 12). Only a private revelation, such as was vouchsafed to the penitent thief on the cross, could give us the certainty of faith: hence the Tridentine Council insists (loc. cit., cap. xii): "*Nam nisi ex speciali revelatione sciri non potest, quos Deus sibi elegerit*" (for apart from a special revelation, it cannot be known whom God has chosen). However, the Church condemns only that blasphemous presumption which boasts of a faithlike certainty in matters of predestination. To say that there exist probable signs of predestination which exclude all excessive anxiety is not against her teaching. The following are some of the criteria set down by the theologians: purity of heart, pleasure in prayer, patience in suffering, frequent reception of the sacraments, love of Christ and His Church, devotion to the Mother of God, etc.

B. *The Reprobation of the Damned.*—An unconditional and positive predestination of the reprobate not only to hell, but also to sin, was taught especially by Calvin (*Instit.*, III, c. xxi, xxiii, xxiv). His followers in Holland split into two sects, the Supralapsarians and the Infralapsarians (q. v.), the latter of whom regarded original sin as the motive of positive condemnation, while the former (with Calvin) disregarded this factor and derived the Divine decree of reprobation

tion from God's inscrutable will alone. Infralapsarianism was also held by Jansenius (*De gratia Christi*, I. X, c. ii, xi sq.), who taught that God had preordained from the *massa damnata* of mankind one part to eternal bliss, the other to eternal pain, decreeing at the same time to deny to those positively damned the necessary graces by which they might be converted and keep the commandments; for this reason, he said, Christ died only for the predestined (cf. Denzinger, "Enchiridion", n. 1092-6). Against such blasphemous teachings the Second Synod of Orange in 529 and again the Council of Trent had pronounced the ecclesiastical anathema (cf. Denzinger, nn. 200, 827). This condemnation was perfectly justified, because the heresy of Predestinarianism, in direct opposition to the clearest texts of Scripture, denied the universality of God's salvific will as well as of redemption through Christ (cf. Wis., xi, 24 sq.; I Tim., ii, 1 sq.), nullified God's mercy towards the hardened sinner (Ezech., xxxiii, 11; Rom., ii, 4; II Pet., iii, 9), did away with the freedom of the will to do good or evil, and hence with the merit of good actions and the guilt of the bad, and finally destroyed the Divine attributes of wisdom, justice, veracity, goodness, and sanctity. The very spirit of the Bible should have sufficed to deter Calvin from a false explanation of Rom., ix, and his successor Beza from the exegetical maltreatment of I Pet., ii, 7-8. After weighing all the Biblical texts bearing on eternal reprobation, a modern Protestant exegete arrives at the conclusion: "There is no election to hell parallel to the election to grace: on the contrary, the judgment pronounced on the impenitent supposes human guilt. . . . It is only after Christ's salvation has been rejected that reprobation follows" ("Realencyk. für prot. Theol.", XV, 586, Leipzig, 1904). As regards the Fathers of the Church, there is only St. Augustine who might seem to cause difficulties in the proof from Tradition. As a matter of fact he has been claimed by both Calvin and Jansenius as favouring their view of the question. This is not the place to enter into an examination of his doctrine on reprobation; but that his works contain expressions which, to say the least, might be interpreted in the sense of a negative reprobation, cannot be doubted. Probably toning down the sharper words of the master, his "best pupil", St. Prosper, in his apology against Vincent of Lerin (*Resp. ad 12 obj. Vincent.*), thus explained the spirit of Augustine: "Voluntate exierunt, voluntate ceciderunt, et quia præsciti sunt casuri, non sunt prædestinati; essent autem prædestinati, si essent reversuri et in sanctitate remansuri, ac per hoc prædestinationi Dei multis est causa standi, nemini est causa labendi" (of their own will they went out; of their own will they fell, and because their fall was foreknown, they were not predestined; they would however be predestined if they were going to return and persevere in holiness; hence, God's predestination is for many the cause of perseverance, for none the cause of falling away). Regarding Tradition cf. Petavius, "De Deo", X, 7 sq.; Jacquin in "Revue de l'histoire ecclésiastique", 1904, 266 sq.; 1906, 269 sq.; 725 sq.

We may now briefly summarize the whole Catholic doctrine, which is in harmony with our reason as well as our moral sentiments. According to the doctrinal decisions of general and particular synods, God infallibly foresees and immutably preordains from eternity all future events (cf. Denzinger, n. 1784), all fatalistic necessity, however, being barred and human liberty remaining intact (Denz., n. 607). Consequently man is free whether he accepts grace and does good or whether he rejects it and does evil (Denz., n. 797). Just as it is God's true and sincere will that all men, no one excepted, shall obtain eternal happiness, so, too, Christ has died for all (Denz., n. 794), not only for the predestined (Denz., n. 1096), or for the faithful (Denz., n. 1294), though it is true that in reality not all avail themselves of the benefits of redemption (Denz., n. 795).

Though God preordained both eternal happiness and the good works of the elect (Denz., n. 322), yet, on the other hand, He predestined no one positively to hell, much less to sin (Denz., nn. 200, 816). Consequently, just as no one is saved against his will (Denz., n. 1363), so the reprobate perish solely on account of their wickedness (Denz., nn. 318, 321). God foresaw the everlasting pains of the impious from all eternity, and preordained this punishment on account of their sins (Denz., n. 322), though He does not fail therefore to hold out the grace of conversion to sinners (Denz., n. 807), or pass over those who are not predestined (Denz., n. 827). As long as the reprobate live on earth, they may be accounted true Christians and members of the Church, just as on the other hand the predestined may be outside the pale of Christianity and of the Church (Denz., nn. 628, 631). Without special revelation no one can know with certainty that he belongs to the number of the elect (Denz., nn. 805 sq., 825 sq.).

III. THEOLOGICAL CONTROVERSIES.—Owing to the infallible decisions laid down by the Church, every orthodox theory on predestination and reprobation must keep within the limits marked out by the following theses: (a) At least in the order of execution in time (*in ordine executionis*) the meritorious works of the predestined are the partial cause of their eternal happiness; (b) hell cannot even in the order of intention (*in ordine intentionis*) have been positively decreed to the damned, even though it is inflicted on them in time as the just punishment of their misdeeds; (c) there is absolutely no predestination to sin as a means to eternal damnation. Guided by these principles, we shall briefly sketch and examine three theories put forward by Catholic theologians.

A. *The Theory of Predestination ante prævisa merita.*—This theory, championed by all Thomists and a few Molinists (as Bellarmine, Suarez, Francis de Lugo), asserts that God, by an absolute decree and without regard to any future supernatural merits, predestined from all eternity certain men to the glory of heaven, and then, in consequence of this decree, decided to give them all the graces necessary for its accomplishment. In the order of time, however, the Divine decree is carried out in the reverse order, the predestined receiving first the graces preappointed to them, and lastly the glory of heaven as the reward of their good works. Two qualities, therefore, characterize this theory: first, the absoluteness of the eternal decree, and second, the reversing of the relation of grace and glory in the two different orders of eternal intention (*ordo intentionis*) and execution in time (*ordo executionis*). For while grace (and merit), in the order of eternal intention, is nothing else than the result or effect of glory absolutely decreed, yet, in the order of execution, it becomes the reason and partial cause of eternal happiness, as is required by the dogma of the meritoriousness of good works (see MERIT). Again, celestial glory is the thing willed first in the order of eternal intention and then is made the reason or motive for the graces offered, while in the order of execution it must be conceived as the result or effect of supernatural merits. This concession is important, since without it the theory would be intrinsically impossible and theologically untenable.

But what about the positive proof? The theory can find decisive evidence in Scripture only on the supposition that predestination to heavenly glory is unequivocally mentioned in the Bible as the Divine motive for the special graces granted to the elect. Now, although there are several texts (e. g. Matt., xxiv, 22 sq.; Acts, xiii, 48, and others) which might without straining be interpreted in this sense, yet these passages lose their imagined force in view of the fact that other explanations, of which there is no lack, are either possible or even more probable. The ninth chapter of the Epistle to the Romans in particular is

claimed by the advocates of absolute predestination as that "classical" passage wherein St. Paul seems to represent the eternal happiness of the elect not only as the work of God's purest mercy, but as an act of the most arbitrary will, so that grace, faith, justification must be regarded as sheer effects of an absolute, Divine decree (cf. Rom., ix, 18: "Therefore he hath mercy on whom he will; and whom he will, he hardeneth"). Now, it is rather daring to quote one of the most difficult and obscure passages of the Bible as a "classical text" and then to base on it an argument for bold speculation. To be more specific, it is impossible to draw the details of the picture in which the Apostle compares God to the potter who hath "power over the clay, of the same lump, to make one vessel unto honour, and another unto dishonour" (Rom., ix, 21), without falling into the Calvinistic blasphemy that God predestined some men to hell and sin just as positively as he pre-elected others to eternal life. It is not even admissible to read into the Apostle's thought a negative reprobation of certain men. For the primary intention of the Epistle to the Romans is to insist on the gratuity of the vocation to Christianity and to reject the Jewish presumption that the possession of the Mosaic Law and the carnal descent from Abraham gave to the Jews an essential preference over the heathens. But the Epistle has nothing to do with the speculative question whether or not the free vocation to grace must be considered as the necessary result of eternal predestination to celestial glory [cf. Franzelin, "De Deo uno", thes. lxxv (Rome, 1883)].

It is just as difficult to find in the writings of the Fathers a solid argument for an absolute predestination. The only one who might be cited with some semblance of truth is St. Augustine, who stands, however, almost alone among his predecessors and successors. Not even his most faithful pupils, Prosper and Fulgentius, followed their master in all his exaggerations. But a problem so deep and mysterious, which does not belong to the substance of Faith and which, to use the expression of Pope Celestine I (d. 432), is concerned with *profundiores difficilioresque partes incurrentium questionum* (cf. Denz., n. 142), cannot be decided on the sole authority of Augustine. Moreover, the true opinion of the African doctor is a matter of dispute even among the best authorities, so that all parties claim him for their conflicting views [cf. O. Rottmanner, "Der Augustinismus" (Munich, 1892); Pfälf, "Zur Prädestinationslehre des hl. Augustinus" in "Innsbrucker Zeitschrift für kath. Theologie", 1893, 483 sq.]. As to the unsuccessful attempt made by Gonet and Billuart to prove absolute predestination *ante præviam meritam* "by an argument from reason", see Pohle, "Dogmatik", II, 4th ed., Paderborn, 1909, 443 sq.

B. *The Theory of the Negative Reprobation of the Damned.*—What deters us most strongly from embracing the theory just discussed is not the fact that it cannot be dogmatically proved from Scripture or Tradition, but the logical necessity to which it binds us, of associating an absolute predestination to glory, with a reprobation just as absolute, even though it be but negative. The well-meant efforts of some theologians (e. g. Billot) to make a distinction between the two concepts, and so to escape the evil consequences of negative reprobation, cannot conceal from closer inspection the helplessness of such logical artifices. Hence the earlier partisans of absolute predestination never denied that their theory compelled them to assume for the wicked a parallel, negative reprobation—that is, to assume that, though not positively predestined to hell, yet they are absolutely predestined not to go to heaven (cf. above, I, B). While it was easy for the Thomists to bring this view into logical harmony with their *præmotio physica*, the few Molinists were put to straits to harmonize negative reprobation with their *scientia media*. In order to disguise the

harshness and cruelty of such a Divine decree, the theologians invented more or less palliative expressions, saying that negative reprobation is the absolute will of God to "pass over" a priori those not predestined, to "overlook" them, "not to elect" them, "by no means to admit" them into heaven. Only Gonet had the courage to call the thing by its right name: "exclusion from heaven" (*exclusio a gloria*).

In another respect, too, the adherents of negative reprobation do not agree among themselves, namely, as to what is the motive of Divine reprobation. The rigorists (as Alvarez, Estius, Sylvius) regard as the motive the sovereign will of God who, without taking into account possible sins and demerits, determined a priori to keep those not predestined out of heaven, though He did not create them for hell.

A second milder opinion (e. g. de Lemos, Gotti, Gonet), appealing to the Augustinian doctrine of the *massa damnata*, finds the ultimate reason for the exclusion from heaven in original sin, in which God could, without being unjust, leave as many as He saw fit. The third and mildest opinion (as Goudin, Graveson, Billuart) derives reprobation not from a direct exclusion from heaven, but from the omission of an "effectual election to heaven"; they represent God as having decreed *ante præviam meritam* to leave those not predestined in their sinful weakness, without denying them the necessary sufficient graces; thus they would perish infallibly (cf. "Innsbrucker Zeitschrift für kath. Theologie", 1879, 203 sq.).

Whatever view one may take regarding the internal probability of negative reprobation, it cannot be harmonized with the dogmatically certain universality and sincerity of God's salvific will. For the absolute predestination of the blessed is at the same time the absolute will of God "not to elect" a priori the rest of mankind (Suarez), or which comes to the same, "to exclude them from heaven" (Gonet), in other words, not to save them. While certain Thomists (as Bañez, Alvarez, Gonet) accept this conclusion so far as to degrade the "voluntas salvifica" to an ineffectual "velleitas", which conflicts with evident doctrines of revelation, Suarez labours in the sweat of his brow to safeguard the sincerity of God's salvific will, even towards those who are reprobated negatively. But in vain. How can that will to save be called serious and sincere which has decreed from all eternity the metaphysical impossibility of salvation? He who has been reprobated negatively, may exhaust all his efforts to attain salvation: it avails him nothing. Moreover, in order to realize infallibly his decree, God is compelled to frustrate the eternal welfare of all excluded a priori from heaven, and to take care that they die in their sins. Is this the language in which Holy Writ speaks to us? No; there we meet an anxious, loving father, who wills not "that any should perish, but that all should return to penance" (II Pet., iii, 9). Lessius rightly says that it would be indifferent to him whether he was numbered among those reprobated positively or negatively; for, in either case, his eternal damnation would be certain. The reason for this is that in the present economy exclusion from heaven means for adults practically the same thing as damnation. A middle state, a merely natural happiness, does not exist.

C. *The Theory of Predestination post præviam meritam.*—This theory, defended by the earlier Scholastics (Alexander of Hales, Albertus Magnus), as well as by the majority of the Molinists, and warmly recommended by St. Francis de Sales "as the truer and more attractive opinion", has this as its chief distinction, that it is free from the logical necessity of upholding negative reprobation. It differs from predestination *ante præviam meritam* in two points: first, it rejects the absolute decree and assumes a hypothetical predestination to glory; secondly, it does not reverse the succession of grace and glory in the two orders of

eternal intention and of execution in time, but makes glory depend on merit in eternity as well as in the order of time. This hypothetical decree reads as follows: Just as in time eternal happiness depends on merit as a condition, so I intended heaven from all eternity only for foreseen merit.—It is only by reason of the infallible foreknowledge of these merits that the hypothetical decree is changed into an absolute: These and no others shall be saved.

This view not only safeguards the universality and sincerity of God's salvific will, but coincides admirably with the teachings of St. Paul (cf. II Tim., iv, 8), who knows that there "is laid up" (*reposita est, ἀποκεῖται*) in heaven "a crown of justice", which "the just judge will render" (*reddet, ἀποδώσει*) to him on the day of judgment. Clearer still is the inference drawn from the sentence of the universal Judge (Matt., xxv, 34 sq.): "Come, ye blessed of my Father, possess you the kingdom prepared for you from the foundation of the world. For I was hungry, and you gave me to eat" etc. As the "possessing" of the Kingdom of Heaven in time is here linked to the works of mercy as a condition, so the "preparation" of the Kingdom of Heaven in eternity, that is, predestination to glory is conceived as dependent on the foreknowledge that good works will be performed. The same conclusion follows from the parallel sentence of condemnation (Matt., xxv, 41 sq.): "Depart from me, you cursed, into everlasting fire which was prepared for the devil and his angels. For I was hungry, and you gave me not to eat" etc. For it is evident that the "everlasting fire of hell" can only have been intended from all eternity for sin and demerit, that is, for neglect of Christian charity, in the same sense in which it is inflicted in time. Concluding *a pari*, we must say the same of eternal bliss. This explanation is splendidly confirmed by the Greek Fathers. Generally speaking, the Greeks are the chief authorities for conditional predestination dependent on foreseen merits. The Latins, too, are so unanimous on this question that St. Augustine is practically the only adversary in the Occident. St. Hilary (In Ps. lxiv, n. 5) expressly describes eternal election as proceeding from "the choice of merit" (*ex meriti delectu*), and St. Ambrose teaches in his paraphrase of Rom., viii, 29 (De fide, V, vi, 83): "Non enim ante prædestinavit quam præscivit, sed quorum merita præscivit, eorum præmia prædestinavit" (He did not predestine before He foreknew, but for those whose merits He foresaw, He predestined the reward). To conclude: no one can accuse us of boldness if we assert that the theory here presented has a firmer basis in Scripture and Tradition than the opposite opinion.

J. POHLE.

Preface (Lat. *Præfatio*), the first part of the Eucharistic prayers (Anaphora or Canon) in all rites, now separated from the rest by the singing of the "Sanctus".

I. HISTORY.—According to the idea of thanksgiving which, after the example of the Last Supper (Matt., xxvi, 27; Mark, xiv, 23; Luke, xxii, 17, 19; I Cor., xi,

24), forms a fundamental element of the Eucharistic service, all liturgies begin the Anaphora, the consecration-prayer, by thanking God for His benefits. Almost every account we have of the early liturgy mentions this (Didache ix, 2-3; x, 2-4; xiv, 1; Justin, "I Apol.", LXV, iii, 5; LXVII, v). Clement of Rome quotes a long example of such a thanksgiving-prayer (I Cor., ix-lxi). So prominent was this idea that it has supplied the usual name for the whole service (Eucharist, *εὐχαριστία*). The thanksgiving-prayer enumerated the benefits for which we thank God, beginning generally with the creation, continuing through the orders of nature and grace, mentioning much of Old Testament history, and so coming to the culminating benefit of Christ's Incarnation, His life and Passion, in which the story of the Last Supper brings us naturally to the words of institution. In most of the earliest liturgies this enumeration is of considerable length (e.g. Apost. Const., VIII; XII, iv-xxxix; Alexandria, see Brightman, *infra*, 125-33; Antioch, *ibid.*, 50-2). It is invariably preceded by an invitation to the people: "Lift up your hearts", and then: "Let us give thanks to the Lord", or some such formula. The people having answered: "It is right and just", the celebrant continues, taking up their word: "It is truly right and just first of all to praise [or to thank] thee"; and so the thanksgiving begins.

Such is the scheme everywhere. It is also universal that at some moment before the recital of the words of institution there should be a mention of the angels who, as Isaias said, praise God and say: "Holy, holy, holy" etc., and the celebrant stops to allow the people to take up the angels' words (so already Clem., "I Cor.", xxxiv, 6-7, and all liturgies). He then continues his thanksgiving-prayer. But the effect of this interruption is to cut off the part before it from the rest. In the Eastern rites the separation is less marked; the whole prayer is still counted as one thing—the Anaphora. In the West the Sanctus has cut the old Canon completely in two; the part before it, once counted part of the Canon (see CANON OF THE MASS), is now, since about the seventh century (Ord. Rom., I, 16), considered a separate prayer, the Preface. The dislocation of the rest of the Canon which no longer continues the note of thanksgiving, but has part of its Intercession (*Te igitur*) immediately after the Sanctus, and its silent recital, whereas the Preface is sung aloud, have still more accentuated this separation. Nevertheless, historically the Preface belongs to the Canon; it is the first part of the Eucharistic prayer, the only part that has kept clearly the idea of giving thanks. The name "Præfatio" (from *præfari*) means introduction, preface (in the usual sense) to the Canon. In the Leonine and Gelasian books this part of the Canon has no special title. It is recognized by its first words: "Vere dignum" (Leonine) or the initials "V. D." (Gelasian). In the Gregorian Sacramentary it is already considered a separate prayer and is headed "Præfatio". Walafrid Strabo calls it "præfatio actionis" ("actio" for Canon; "De eccl. rerum exord. et increm." in P. L., CXIV, 948). Sicardus of Cremona says it is "sequentis canonis prælocutio et preparatio" (Mitrale in P. L., CCXIII, 122). Durandus writes a whole chapter about the Preface (De div. off., IV, xxxiii). He explains its name as meaning that it "precedes the principal sacrifice".

The first Roman Prefaces extant are those in the Leonine Sacramentary. They already show the two characteristic qualities that distinguish the Roman Preface from the corresponding part of other rites, its shortness and changeableness. The old thanksgiving (before the Sanctus) contained a long enumeration of God's benefits, as in Clement of Rome and the Apostolic Constitutions. It is so still in the Eastern rites. At Rome, before the Leonine book was written, this

enumeration was ruthlessly curtailed. Nothing is left of it but a most general allusion: "always and everywhere to thank thee". But the mention of the angels which introduces the Sanctus had to remain. This, comparatively detailed, still gives the Roman Preface the character of a prayer chiefly about the angels and makes it all seem to lead up to the Sanctus, as the medieval commentators notice (e. g. Durandus, *ibid.*). The corresponding prayer in Apost. Const. (VIII) contains two references to the angels, one at the beginning where they occur as the first creatures (VIII, viii), the other at the end of the commemoration of Old Testament history (originally written in connexion with Isaias's place in it) where they introduce the Sanctus (XII, xxvii). It seems probable that at Rome with the omission of the historical allusions these two references were merged into one. The "Et ideo" then would refer to the omitted list of favours in the Old Testament (at present it has no special point). So we should have one more connexion between the Roman Rite and the Apost. Const. (see MASS, LITURGY OF).

The other special note of our Preface is its changeableness. Here, too, the East is immovable, the West changes with the calendar. The Preface was originally as much part of the variable Proper as the Collect. The Leonine book supplies Prefaces all through for the special Masses; it has 267. The Gelasian has 54; the Gregorian has 10 and more than 100 in its appendix. In these varied Prefaces allusions to the feast, the season, and so on, take the place of the old list of Divine favours.

The preface after the *ekphrasis* of the Secret (*Per omnia sæcula sæculorum*—here as always merely a warning) begins with a little dialogue of which the versicles or equivalent forms are found at this place in every liturgy. First "Dominus vobiscum" with its answer. The Eastern rites, too, have a blessing at this point. "Sursum corda" is one of the oldest known liturgical formulas (St. Cyprian quotes it and its answer, "De Orat. Dom.", xxxi, in "P. L.", IV, 539; Apost. Const.: "Ἀνω τὸν νοῦν"). It is an invitation to the people eminently suitable just before the Eucharistic prayer begins. Brightman (*infra*, 556) quotes as its source Lam., iii, 41. Equally old and universal is the people's answer: "Habemus [corda] ad Dominum", a Greek construction: "ἔχομεν πρὸς τὸν κύριον", meaning: "we have them [have placed them] before the Lord". Then follows the invitation to give thanks, which very early included the technical idea of "making the Eucharist": "Gratias agamus Domino Deo nostro". So with verbal variations in all rites. The Jewish form of grace before meals contains the same form: "Let us give thanks to Adonai our God" (in the Mishna, "Berachoth", 6). The people answer with an expression that again must come from the earliest age: "Dignum et iustum est". This, too, is universal (Apost. Const.: "Ἄξιον καὶ δίκαιον"). Its reduplication suggests a Hebrew parallelism. The celebrant takes up their word and begins the Preface always: "Vere dignum et iustum est" (Apost. Const.: "Ἄξιον ὡς ἀληθῶς καὶ δίκαιον"). The beginning of the Roman Preface is approached among the others most nearly by Alexandria. Our present common Preface represents the simplest type, with no allusions; all the old list of benefits is represented by the words "per Christum Dominum nostrum" only. This is the Preface given in the Canon of the Gelasian book (ed. Wilson, p. 234). Most of the others are formed by an intercalation after these words. But there are three types of Preface distinguished by their endings. The first and commonest introduces the angels thus: "per quem maiestatem tuam laudant angeli"; the second (e. g. for Christmas, Epiphany, Easter, Ascension, Apostles) begins that clause: "et ideo cum angelis"; the third and rarest (now only the Whit-Sunday Preface) has: "Quapropter . . . sed et supernæ virtutes". The Trinity Preface ("quam laudant angeli")

XII.—25

is a variant of the first form. All end with the word: "dicentes" (which in the first and second form refers to us, in the third form to the angels), and the people (choir) continue the sentence: "Sanctus, Sanctus, Sanctus", etc.

There are many prayers for other occasions (chiefly blessings and consecrations) formed on the model of the Preface, with the "Sursum corda" dialogue, beginning "Vere dignum" etc. From their form one would call them Prefaces, though not Eucharistic ones. Such are the ordination prayers, two at the consecration of a church, the blessing of the font, of palms (but this was once a Mass Preface), part of the *praconium paschale*. They are imitations of the Eucharistic Preface, apparently because its solemn form (perhaps its chant) made it seem suitable for other specially solemn occasions too. The Leonine, Gelasian, and Gregorian Sacramentaries have our ordination prayers, but not yet cast into this Preface form. But through the Middle Ages the Preface form was very popular, and a great number of blessings are composed in it. This is only one more case of the common medieval practice of modelling new prayers and services on others already well-known and popular (compare the hymns written in imitation of older ones, etc.).

II. THE PREFACE IN OTHER RITES.—The name "Præfatio" is peculiar to Rome and to Milan, which has borrowed it from Rome. In no other rite is there a special name; it is simply the opening clauses of the Anaphora. In the Syrian-Byzantine-Armenian group, though this part of the Eucharistic prayer is still longer than the Roman Preface and has kept some list of benefits for which we thank God, it is comparatively short. The Byzantine Liturgy of St. Basil has a fairly long form. As usual, there is a much shorter form in that of St. Chrysostom. The Armenian form is the shortest and mentions only the Incarnation. But in the Egyptian group of liturgies the whole Intercession prayer is included in what we should call the Preface, so that this part is very long. This is the most conspicuous characteristic of the Alexandrine type. The prayer begins in the usual way with a list of favours (creation of the world and of man, the Prophets, Christ). Then abruptly the Intercession begins ("And we pray and entreat thee . . ."); joined to it are the memory of the saints and the diptychs of the dead, and then, equally abruptly, the thanksgiving is resumed and introduces the Sanctus (Brightman, 125-132). It is clear that this represents a later amalgamation; the two quite different prayers are joined awkwardly, so that the seams are still obvious. In all Eastern rites the Preface, or rather what corresponds to it, is said silently after the first dialogue, ending with an *ekphrasis* to introduce the Sanctus (the Alexandrine Liturgy has another *ekphrasis* in its Intercession). This accounts for its being less important an element of the service than in the West.

The Gallican Rite had a great number of Prefaces for feasts and seasons. Even more than in the old Roman Liturgy this prayer was part of the Proper, like the Collects and Lessons. But it was not called a Preface. Its heading in the Gallican books was "Contestatio" or "Immolatio"; the Mozarabic title is "Inlatio". These names really apply to the whole Eucharistic prayer and correspond to our name Canon (Inlatio—Ἀναφορά). But as later parts had special names ("Vere Sanctus", "Post sanctus", "Post pridie", etc.), these general titles were eventually understood as meaning specially the part before the Sanctus. Now the Mozarabic "Inlatio" may be taken as equivalent to the Roman "Præfatio". The Ambrosian Rite has adopted the Roman name. Both Mozarabic and Ambrosian Rites keep the Gallican peculiarity of a vast number of Prefaces printed each as part of the Proper.

III. PRESENT USE.—The Roman Missal now contains eleven Prefaces. Ten are in the Gregorian Sacramentary, one (of the Blessed Virgin) was added

under Urban II (1088-99). The pope himself is reported to have composed this Preface and to have sung it first at the Synod of Guastalla in 1094. The Prefaces form a medium between the unchanging Ordinary and the variable Proper of the Mass. They vary so little that they are printed in the Ordinary, first with their solemn chants, then with the ferial chants, and lastly without notes for Low Mass. The appendix of the new (Vatican) Missal gives a third "more solemn" chant for each, merely a more ornate form of the solemn chant, to be used *ad libitum*. Otherwise the solemn chant is to be used for semi-doubles and all days above that, the simple chant for simples, ferias, and requiems. The Preface is chosen according to the usual rule for all proper parts of the Mass. If the feast has one, that is used; otherwise one takes that of the octave or season. All days that do not fall under one of these classes have the common Preface, except that Sundays that have no special Preface have that of the Holy Trinity (so the decree of Clement XIII, 3 Jan., 1759). Requiem Masses have the common Preface, as also votive Masses, unless these latter come under a category that has a proper one (e. g., of the Blessed Virgin, the Holy Ghost, etc.). Votive Masses of the Blessed Sacrament, like Corpus Christi, have the Christmas Preface. There are other extensions of use (the Preface of the Holy Cross for the Sacred Heart, etc.), all of which are noted in the Propers of the Missal and in the Calendar.

At High Mass after the last Secret the celebrant at the middle of the altar, resting his hands on it, sings: "Per omnia sæcula sæculorum" etc.; the choir answers each versicle. He lifts up the hands at "Sursum corda"; at "Gratias agamus" he joins them, and at "Deo nostro" looks up and then bows. At "Vere dignum" he lifts the hands again and so sings the Preface through. After "dicentes" he joins them and bowing says the Sanctus in a low voice, while the choir sings it. The deacon and subdeacon stand in line behind him all the time, bow with him at the words "Deo nostro", and come to either side to say the Sanctus with him. At Low Mass all is said, the server answering the dialogue at the beginning.

ADRIAN FORTESCUE.

Prefect Apostolic (Lat. *præfectus*, one put over or in charge of something). During the last few centuries it has been the practice of the Holy See to govern either through prefects Apostolic, or through vicars Apostolic (q. v.), many of the territories where no dioceses with resident bishops exist. These territories are called respectively prefectures Apostolic and vicariates Apostolic. This had been done by the Holy See when, owing to local circumstances, such as the character and customs of the people, the hostility of the civil powers and the like, it was doubtful whether an episcopal see could be permanently established. The establishing of a mere prefecture Apostolic in a place supposes that the Church has attained there only a small development. A fuller development leads to the foundation of a vicariate Apostolic, i. e., the intermediate stage between a prefecture and a diocese. A prefect Apostolic is of lower rank than a vicar; his powers are more limited, nor has he, as a rule, the episcopal character, as is ordinarily the case with a vicar Apostolic. The duties of a prefect Apostolic consist in directing the work of the mission entrusted to his care; his powers are in general those necessarily connected with the ordinary administration of such an office, as, for instance, the assigning of missionaries, the making of regulations

for the good management of the affairs of his mission, and the like. Moreover, he has extraordinary faculties for several cases reserved otherwise to the Apostolic See, such as, for instance, absolutions from censures, dispensations from matrimonial impediments. He has also the faculty of consecrating chalices, patens, and portable altars, and some prefects Apostolic have the power to administer Confirmation. The prefects Apostolic we have described so far have independent territories and are subject only to the Holy See. Sometimes, when a vicariate or a diocese extends over a very large territory, in which the Catholic population is unequally distributed, the Holy See places a portion of such territory in charge of a prefect Apostolic; in which case the faculties of the prefect are more limited, and in the exercise of his office he depends on the vicar Apostolic or the bishop, whose consent he needs for the exercise of many of his functions, and to whose supervision his administration is subject. With a view to still better protecting the authority of the local vicar Apostolic or bishop, it was proposed in the Vatican Council to abolish this second class of prefects Apostolic having jurisdiction over districts within the limits of a vicariate or diocese of the Latin Rite; but the existing order remained unchanged owing to the interruption of that Council. As to the same class of prefects Apostolic within the limits of territories subject to Oriental Churches, Leo XIII abolished them by a Decree of the Propaganda (12 Sept., 1896), and substituted superiors with special dependence on the delegates Apostolic (q. v.) of the respective places. There are (1911) 66 prefectures Apostolic: Europe, 5; Asia, 17; North America, 3; South America, 11; Africa, 23; Oceania, 7.

HECTOR PAPI.

Prelate, real, the incumbent of a prelature, i. e., of an ecclesiastical office with special and stable jurisdiction *in foro externo* and with special precedence over other ecclesiastical offices; or, honorary, with distinctions of this ecclesiastical dignity without the corresponding office. The original prelates are the bishops as possessors of jurisdiction over the members of the Church based on Divine institution. Apart from the bishops, the real prelates include: (1) those who have quasi-episcopal, independent jurisdiction over a special territory separated from the territory of a diocese (*prælatus nullius*, sc. *dioceseos*), as is the case with the abbots and provostships of monasteries (Monte Cassino, Einsiedeln, St. Maurice in the Canton of Wallis, etc.); (2) those who have offices in the administration of dioceses, and enjoy an independent and proper jurisdiction (e. g., the earlier archdeacons, the provosts and deans of cathedral and collegiate churches, in so far as these still exercise a regular, personal jurisdiction; (3) abbots and provosts of monasteries, even when they administer no territory with episcopal powers, but have merely the permanent, supreme distinction of the monastery; (4) titular bishops, both those who in the vicariates Apostolic and other territories have supreme ecclesiastical administration, and those who have simply received episcopal consecration without jurisdiction over a special district, such as certain officials in Rome, consecrating bishops, etc.; (5) the highest officials of the Roman offices, who, in addition to the cardinals, have a prominent share in the direction of the Roman Church, and thus have a special relation to the person of the pope. In consequence of the extent of the government of the

Church, prelates are especially numerous in Rome. The most important real prelates of the papal curia are: the three highest officials of the Camera Apostolica (vice-camerlengo, general auditor, and treasurer) and the Majordomo of the Vatican, who are called *prelati di fiocchetti*; the secretaries of the congregations of cardinals, the regent of the papal chancery, the regent of the Apostolic Penitentiary, and certain other high officials of the congregations of the Curia; the members of the College of Prothonotaries Apostolic *de numero participantium*, the auditors of the Rota, the clerics of the Apostolic Chamber, the referendaries of the *Signatura iustitiæ*. In the Constitution "Inter ceteras" of 11 June, 1659, Alexander VII laid down the conditions under which these real prelatures might be accepted. The dignity granted by the pope with mention of these conditions is called "*prælatura iustitiæ*"; when the conditions are not imposed in the granting of the dignity, the latter is called "*prælatura gratiæ*". To the real prelates belong, therefore, although no jurisdiction *in foro externo* is attached to their offices, all the highest palace officials, who perform a constant service in the retinue of the pope and in the offices created for that purpose. The appointment to these offices confers of itself the prelature. Such officials are the Papal Almoner, the Secretary of Latin Briefs and Briefs to the Princes, the substitute of the Cardinal Secretary of State, the four real Privy Chamberlains, the real Privy Chaplains of the Pope.

A second class of prelates are those on whom the title and rank of the prelature are conferred with the corresponding dress and privileges, but without the office or court service otherwise attached to it. These are: (1) the prothonotaries Apostolic other than the real ones (see PROTHONOTARY APOSTOLIC); (2) the papal domestic prelates (*Antistes urbanus*, *Prælatus urbanus*, *Prælatus domesticus*), who are appointed to this dignity by papal Brief. They have the right of wearing the garb of a prelate and of using in Solemn High Mass the special candle (*palmatoria*), but not the other episcopal insignia (*Motu Proprio* "Inter multiplices" of Pius X, 21 February, 1905, in "Acta S. Sedis", XXXVII, 491, sq.); (3) the supernumerary privy chamberlains (*Camerieri segreti sopra-numerarii*), honorary chamberlains and chaplains, who may on special occasions wear the same garb as the officiating chamberlains of the pope. All prelates have the title "Monsignore" and a special costume (purple) corresponding to their rank; the higher prelates enjoy in addition other special privileges.

J. P. KIRSCH.

Prémare, JOSEPH HENRI MARIE DE, missionary and sinologist, b. at Cherbourg, 17 July, 1666; d. at Macao, 17 Sept., 1736, entered the Society of Jesus 17 Sept., 1683, and departed for China in 1698. He laboured as missionary chiefly in the province Kwang-si. When the Christian faith was proscribed by Emperor Yong-tching, in January, 1724, Prémare was confined with his colleagues in Canton. A still more rigorous edict banished him to Macao. In his retirement he studied profoundly the language and literature of China, and in the opinion of sinologists he, of all the older missionaries, best succeeded in grasping their peculiarities and beauties. His principal work is entitled: "Notitia linguæ sinicæ"; in simple form it explains the rules and usage of the vulgar Chinese language (*siao shue*), and the style of the written, literary language (*wen tchang*).

The famous English sinologist, James Legge, calls it "an invaluable work, of which it could hardly be possible to speak in too high terms". Father de Prémare is one of the missionaries who furnished Father Jean-Baptiste du Halde with the material for his "Description de la Chine" (Paris, 1735). We owe him, in particular, the translation of the maxims taken from the Shu-King (Du Halde, II, 298); of eight odes of the Shi-King (II, 308); of the "Orphan of the House of Tchao", a Chinese tragedy (III, 341); the notes on the course of study, literary degrees and examinations of the Chinese (II, 251); etc. In "Lettres Edifiantes et Curieuses" we find many letters from Father Prémare. A much greater number of his writings are unedited, preserved, chiefly, at the National Library (Paris). Many undertake the defence of figurism, the name of a singular system of interpreting ancient Chinese books, the inventor of which was Father Joachim Bouvet. Following Bouvet, Prémare thought he discovered in the Chinese *King* (see CHINA) suggestions of Christian doctrines and allusions to the mysteries of Christianity. The written Chinese words and characters are to him but symbols that hide profound senses. The three or four missionaries who adopted these ideas of Bouvet were never authorized to publish them in book form. The most important work which Father de Prémare wrote in their defence has only recently appeared, translated from the Latin by M. Bonnetty, director of the "Annales de philosophie chrétienne", aided by Abbé Perny, formerly missionary to China. It is entitled: "Vestiges choisis des principaux dogmes de la religion chrétienne, extraits des anciens livres chinois" (Paris, 1878).

JOSEPH BRUCKER.

Premonstratensian Canons (CANONICI REGULARES PRÆMONSTRATENSES), founded in 1120 by St. Norbert at Prémontré, near Laon, France. At first they were not bound by any fixed rule, charity being the bond of their union, and the example of their founder their rule of life. After a while Norbert unfolded his mind to his disciples on the special regulations which they should adopt. He told them that he had already consulted learned bishops and holy abbots; that by some he was advised to lead an eremitical life, by others a monastic life, or else to join the Cistercian Order. He added that, if he had to follow his own inclinations, he preferred the canonical life of the Apostles, but that, before all, they must pray to know and do the will of God. It was then that St. Augustine, Bishop of Hippo, appeared to him and gave him his rule, saying: "I am Augustine, Bishop of Hippo; behold here the rule which I have written; if your fellow-brethren, my sons, shall have observed it well, they shall stand without fear in the presence of Christ on the terrible day of the last judgment". As all agreed to the choice of a canonical institute, Norbert composed a formulary of their profession, which they pronounced on the Feast of Christmas, 1121. To this formulary St. Norbert added fastings, abstinence, and other works of mortification, together with some pious customs and practices peculiar to monastic orders, whereby his order became, as it were, monastico-canonical.

The five particular ends of the Norbertine Order are: *Laus Dei in choro* (the singing of the Divine Office); *Zelus animarum* (zeal for the salvation of souls); *Spiritus jugis pœnitentiæ* (the spirit of habitual penance); *Cultus Eucharisticus* (a special devotion to the Holy Eucharist); *Cultus Marianus* (a special devotion to the Blessed Virgin, mostly to her Immaculate Conception). The two first arise from the nature of a canonical order, which is both contemplative and

active. The third is taken from monastic orders. The fourth and fifth are characteristic of the Norbertine Order, to which these special devotions were bequeathed by the founder. The title of the first chapter of the "Statuta", "De tremendo altaris Sacramento", seems to indicate that devotion to the Holy Eucharist as a sacrifice and sacrament should have the first place in the heart of a son of St. Norbert.

St. Norbert wrote an Office in honour of the Immaculate Conception which contained these words: "Ave, Virgo quæ Spiritu Sancto præservante, de tanto primi parentis peccato triumphasti innoxia!"

The third chapter of the "Statuta" begins with these words: "Horæ Deiparæ Virginis Mariæ, candidi ordinis nostri patronæ singularis, etc."

Guerenus writes in his commentaries on the Canticle of Canticles: "St. Norbert, with

his holy Order, was raised up by Divine Providence to render conspicuous in his day two mysteries, the Blessed Sacrament of the Holy Eucharist and the Immaculate Conception of Our Lady".

As to the second end, zeal for souls, the preface to the "Statuta" says: "Our order is the propagation of God's glory; it is zeal for souls, the administration of the sacraments, service in the Church of God. Our order is to preach the Gospel, to teach the ignorant, to have the direction of parishes, to perform pastoral duties, etc." At the time of St. Norbert the clergy were not numerous, often badly prepared for their ministry, and dissolute. Besides, there were numerous villages without church or priest. What was needed was clerical training to impart piety and learning. The order has had its share in the carrying out of this good work, and the Norbertine Abbeys have been called, by popes and bishops, seminaries of missionaries and parish priests. From its beginning the order has accepted parishes which were, and are still, in many cases administered by Norbertine priests. That the Order of Prémontré may obtain benefices and administer parishes was again decided by Benedict XIV by the Bull "Oneroso" of 1 Sept., 1750.

COMPOSITION OF THE ORDER.—The order is composed of three classes: (1) priests and clerics under an abbot or provost; (2) nuns who embrace the Rule of St. Norbert; (3) members of the Third Order of St. Norbert. Both priests and nuns have a two years' novitiate and make solemn vows. In some countries Norbertine nuns are now bound by simple vows only. In the monasteries there are laybrothers and lay-sisters who likewise make their vows. The members of the Third Order, originally called *fratres et sorores ad*

succurrendum, wear the white scapular under their secular dress and have certain prayers to say. The spirit of the Third Order must evidently be the spirit of the order itself. The members should possess zeal for souls, love mortification, and practise and promote an enlightened devotion to the Holy Eucharist and to the Immaculate Conception. As a modern author (Duhayon, S.J., "La Mine d'or", c. v) says:

"By the institution of the Third Order in the midst of the stream of temporal anxieties St. Norbert has introduced the religious life into the family circle. Nobody before St. Norbert had conceived the idea of realizing in the Church a state of life which should be midway between the cloister and the world, or in other words a religious order which should penetrate into the Christian homes. . . .

After his death it was imitated by other

founders, especially by St. Francis and St. Dominic".

PROPAGATION OF THE ORDER.—The order increased very rapidly and, in the words of Adrian IV, it spread its branches from sea to sea. Before the death of Hugh of Fosse, the first abbot general, a hundred and twenty abbots were present at the general chapter. Of the first disciples, nearly all became abbots of new foundations, and several were raised to the episcopal dignity. Development was chiefly effected through the foundation of new abbeys, but several

religious communities already in existence wished to adopt the constitutions of Prémontré and were affiliated to and incorporated with the order. We have already mentioned the names of abbeys founded in France, Belgium, and Germany, but colonies of the sons of St. Norbert were sent to nearly every country of Europe and even to Asia. In 1130 King Stephen gave them his castle on the River Keres, and thus was founded the Abbey of

St. Stephen, the first of numerous monasteries in Hungary. Almaric, who had shared in St. Norbert's apostolate, a famous preacher in aid of the Crusades, was requested by Innocent II to preach in Palestine. At the head of a chosen band of Norbertines he set out in 1136 for the Holy Land, where he was hospitably received by Fulco of Anjou, King of Jerusalem, and by William, Patriarch of the Holy City. In the following year Almaric founded the Abbey of St. Abacuc. Henry Zdik, Bishop of Olmütz, made a pilgrimage to Jerusalem. He visited St. Abacuc and was so much touched by what he saw that he asked to be received into the order. Having obtained some religious, he returned to Bohemia and founded the Abbey of Mount Sion at Strahov, Prague. This abbey flourished so much that it was called the seminary of bishops, hav-

ABBAY OF MONDAYE, FRANCE

ABBAY OF TEPL, BOHEMIA

ing given eight bishops to Prague, ten to Olmütz, and some to other dioceses; a patriarch (John of Luxemburg) to Aquileia, and a cardinal (John of Prague) to the Church. In 1141 the Abbey of St. Samuel, near Jerusalem, was founded, and in 1145 another at Bethlehem. The abbeys were destroyed in 1187, when many of the religious were put to the sword or perished in the fire. Those who escaped founded a new community at Acre; but in 1291 this place, the last stronghold of the Christians in the Holy Land, was taken by the Sultan Saraf, who cut to pieces the abbot, Egide de Marle, and put the religious, twenty-six in number, to death.

In 1147 Abbot Walter of Laon led a colony to Portugal and founded the Abbey of St. Vincent, near Lisbon. Two young Spanish noblemen, Sanchez de Assures and Dominic, while travelling in France, had heard of St. Norbert. They went to Prémontré and were admitted to the order by St. Norbert. Ordained priests, they were sent to preach in Spain, and having obtained a few religious from La Case-Dieu, an abbey in Gascony, they founded in 1143 the Abbey of Retorta, the first in Spain. In 1149 the mother-house sent some of its religious to found the Abbey of St. Samuel at Barletta, in Apulia, Italy. At the same time sons of St. Norbert went forth from one abbey or another to found new houses in Great Britain and Ireland, Poland, Denmark, Norway, and even Riga on the Baltic Sea. In addition, sixteen cathedral chapters were composed of Norbertine canons, under a bishop elected by them. One of these was Candida Casa or Whithorn, in Scotland. It is impossible to give the exact number of abbeys, priories, and convents of nuns, so much do the various lists differ from one another. Perhaps the oldest list known is that which was made for the general chapter of 1320, and given by Le Paige. The most complete has been compiled by Hugo, the annalist of the order. Some authors say that there were 1300 abbeys and 500 convents of nuns, without counting the smaller residences, but these figures seem to be much exaggerated. However, whatever these lists may mean, they show the prodigious fecundity of the order during the first two centuries of its existence.

ORGANIZATION.—The highest authority of the order is centred in the general chapter. The abbot general presides over it, but he owes obedience to it. The abbot general has the power to make the canonical visitation of any abbey, but his abbey is visited by the three principal abbots of the order, viz. by the Abbots of Laon, Floreffe, and Cuissy. The abbots are elected for life in a manner prescribed by the "Statuta". The abbot names his prior and other officials of his

abbey. In certain matters he has to obtain the consent of the *majores de domo*. The abbeys were divided into circaries (provinces), named after the countries in which they were situated. Each circary had a visitor, and the most important had also a vicar-general named by the abbot general. Hugo in his "Annales" gives the name of each abbey and convent and of the circary to which they belonged. The four large volumes of the "Annales" give a description and an historical notice of each abbey and hence they supply very important information to the student of the history of the order. Hugo had also prepared and nearly completed, when he died in 1739, two more volumes, the first of which was to treat of learned persons of the order and of the books they had written; the second was to give the lives of sons and daughters of St. Norbert who had been

canonized or beatified, or who were deemed to have had the note of sanctity. The Rev. Leo Goovaerts, of the Norbertine Abbey of Averbode, Belgium, has since published a "Dictionnaire bio-bibliographique", in which he gives the names of over three thousand authors, a notice of their lives, and a description of the books they had written. George Lienhardt, Abbot of Roggensburg, gives in his "Hagiologia" the names of hundreds of persons whose holiness of life constitutes the brightest ornament of the Order of St. Norbert.

LOSS OF FIRST FERVOUR; CAUSES AND REMEDIES.—

The spiritual fervour, so remarkable and edifying in the first two centuries, had gradually been growing cold. A number of religious communities were no longer animated by the spirit of St. Norbert. With the gradual disappearance of manual labour, intellectual activity, and certain observances, spiritual progress was retarded and even a kind of spiritual stagnation set in, to the great detriment of these communities. Affluence was another cause of this weakness. The first religious had cleared part of the forests, and by making the land more productive had created more resources, while the charity of benefactors had also increased the revenues, and with this affluence arose also a spirit of worldliness; but another evil was that this affluence excited the rapacity of covetous men in Church and State. The superiors of some houses had become more lax in abolishing abuses, and so irregularities had gradually crept in. Owing to the distance of many houses from the mother-house at Prémontré and also to national aspirations, cohesion, the strength of any society, had been weakened in the order; already in Saxony, England, and Spain a tendency was observed to form separate congregations with regulations of their own. With the approval of the popes the austere rule, especially with regard to perpetual abstinence from flesh meat,

ABBAY OF TONGERLOO, BELGIUM

ABBAY OF LELESZ, NORTH EASTERN HUNGARY

was mitigated first in 1290, then in the constitutions of 1505, and again in those of 1630, but in spite of these mitigations, the "Statuta" composed and approved in the time of St. Norbert have remained substantially the same as they were in the beginning. At the beginning of the seventeenth century a new spirit seemed to animate the whole order, but especially in Lorraine, where the venerable Abbot Lairvelz succeeded in reforming forty abbeys and in introducing into them the observances of the primitive constitutions. It was seen that the order was full of vitality and doing good and useful work. To encourage the studies of their religious, colleges were established near some university, as at Rome, Louvain, Paris, Cologne, Prague, Madrid, Salamanca, and elsewhere. To these colleges and universities young religious were sent. After the completion of their studies they returned to the abbey, where they taught philosophy and theology.

COMMENDATORY ABBOTS.—To speak of one country only, the concordat between Leo X and Francis I in 1516, which gave power to the King of France to nominate bishops, abbots, and other Church dignitaries, was abused to such an extent that, with reference to abbeys alone, bishops, secular priests, and even laymen were put at the head of an abbey, and sometimes of two or more abbeys. They took possession of all the

temporalities, and frequently cared nothing for the material and spiritual welfare of the abbey. And all this was done when Lutherans and Calvinists were making the fiercest attacks on the Catholic religion, and when earnest men were pleading for reform in Catholic institutions. Hugo, the annalist of the order, who gives the lists of abbots and of the abbots elected by the order

or commendatory, shows how far the evil had prevailed for more than two hundred years. Taiée (vol. II, 195) in his "Etude sur Prémontré" (Laon, 1874), writes that in 1770, of the 92 Norbertine abbeys and priories in France, 67 were given *in commendam* and only 25 had abbots or priors of the order.

LOSS OF ABBEYS.—Owing to a decree of the general chapter numerous convents of nuns had already disappeared before the end of the twelfth century. As to abbeys and priories the continuous wars in many countries, and in the East the invasions of Tatars and Turks, made community life almost impossible and ruined many abbeys. The wars and the heresies of Hus and Luther destroyed several abbeys. The Abbey of Episcopia in the Isle of Cyprus was taken by Islam in 1571. The Hussites took possession of several houses in Moravia and Bohemia; the Lutherans, in Saxony, Prussia, Denmark, and Sweden; the Calvinists, in Holland; and Henry VIII in England and Ireland. In Hungary many were destroyed by Solymán. With all these losses the order had still in 1627 twenty-two provinces or circaries, and Lienhardt gives a list of 240 houses still in existence in 1778. Joseph II of Austria suppressed many houses and put others under commendatory abbots, but Leopold, Joseph's successor, restored nine abbeys and with these he incorporated others. The French Revolution suppressed in 1790 all religious houses in France, in 1796 in Belgium, and afterwards all those in the occupied provinces of the Rhine. Only a few houses were still existing (9 in the Austrian Empire, 3 in Russian Poland, and 15 in Spain), but the abbeys in Spain were

suppressed by the revolution which convulsed that country in 1833. The dispersed religious of the Belgian Province had long wished to reassemble and form new communities, but they were not allowed to do so under the Dutch Government (1815-30). When Belgium was separated from Holland and made into a separate kingdom, freedom of religion was granted, and the surviving religious, now well advanced in years, revived community life and reconstituted five Norbertine houses in Belgium (see BACKX).

The religious of the confiscated abbey of Berne in Holland founded a new abbey at Heeswijk. The Abbey of Berne-Heeswijk has founded St. Norbert's Priory at West De Pere, Wisconsin, U. S. A. To the priory is attached a flourishing classical and commercial college. The Abbey of Grimbergen in Belgium obtained possession of the former Norbertine Abbey of Mondaye in France, and founded a new abbey. Mondaye in turn founded the priories of St. Joseph at Balarin (Department of Gers) and of St. Peter at Nantes. The Abbey of Tongerlo has founded three priories in England, viz.: Crowle, Spalding, and Manchester. The same abbey has also sent missionaries to Belgian Congo, Africa, where the Prefecture of Ouellé (Wellé) has been confided to them. The prefecture has four chief centres: Ibembo, Amadi, Gombari, and Djibir, with many stations served from each centre.

The Abbey of Averbode founded three Priories in Brazil (Pirapora, Jaguarão, and Petropolis), with a college attached to each priory. The Abbey of the Park, near Louvain, has also sent to Brazil several priests who have charge of parishes and do missionary work. The Abbey of Grimbergen founded a house of the order

at Wetaskiwin, in Alberta, Canada. The Priory of West De Pere has been made independent, with a novitiate of its own. The other priories are attached to the abbey by which they were founded.

In 1856 a new congregation of Norbertine canons, since incorporated with the order, was formed at Frigolet. Frigolet founded Conques and St-Jean de Cole in France, and Storrington and Weston-Bedworth in England. The abbeys in Hungary have jointly founded at Budapest a college where young religious of these abbeys study under Norbertine professors, and also follow the university lectures in order to obtain the diploma required to become professors in one of the six colleges conducted by these abbeys. The order also possesses a college in Rome (Via di Monte Tarpeo) for Norbertine students at the Gregorian University. The procurator of the order resides at this college, of which he is also the rector. At the death of Lécy in 1834, the last Abbot General of Prémontré, the order was left without a spiritual head. In 1867 Jerome Zeidler, Abbot of Strahov, was elected, but he died in Rome during the Vatican Council. At a general chapter held in Vienna in 1883 Sigismond Stary, Abbot of Strahov, was elected. At his death he was succeeded by Norbert Schachinger, Abbot of Schlägl, in Austria.

STATISTICS.—The following statistics show the present state of the order in each circary. Particulars are also given having reference to some convents of nuns who, though no longer under the jurisdiction of the order, are or have been related to it. The figures have been taken from printed catalogues published in

ABBAY OF CSORNA, HUNGARY

December, 1910, or from letters since received. When the desired information had not arrived in time, a catalogue of a former year has been consulted.

Circary of Brabant (Belgium and Holland).—Averbode Abbey: priests, 82; clerics and novices, 20; lay brothers, 36; of these, 27 priests and 21 lay brothers have been sent to Brazil, and 2 priests and 3 lay brothers to Veile in Denmark. Grimbergen Abbey: priests, 37; clerics, 5; lay brothers, 7; of these, 4 priests are in Canada. Park-Louvain Abbey: priests, 44; clerics, 4; of these, 8 priests in Brazil. Postel Abbey: priests, 25; clerics, 2; of these, 1 priest in Belgian Congo, and 1 in Brazil. Tongerlo Abbey: priests,

Bohemia: priests, 82; clerics, 13; the college of Pilsen is conducted by the abbey (professors, 10; students, 380). Wilten Abbey, Tyrol: priests, 45; clerics, 3; lay brothers, 3.

Circary of Hungary.—Csorna Abbey: priests, 38; clerics, 12; the abbey conducts and supplies professors to the gymnasium of Keszthely (15 professors, 325 students), Szombathely (15 professors, 400 students). Jaszo Abbey: priests, 73; clerics, 37; the abbey conducts the following gymnasia and supplies the professors: Kassa, 50 students; another at Kassa, 460 students; Grosswardein (Nagy-Várad), 550 students; Rozsnyo, 200 students. These two abbeys have a

PREMONTRE ABBEY, NEAR SOISSONS (in 1656)

77; clerics, 19; lay brothers, 29; of these, 14 priests and 5 lay brothers are in England; 10 priests and 10 lay brothers in Belgian Congo. Berne-Heeswijk Abbey: priests, 41; clerics, 12; lay brothers, 9; a flourishing college with 100 students is attached to the abbey. St. Norbert's Priory, West De Pere, Wisconsin, U. S. A.: priests, 19; clerics, 3; lay brothers, 4; and a college conducted by the fathers.

Circary of France.—The Abbey of Mondaye and other houses are confiscated. Some of the dispersed religious formed a new house at Bois-Seigneur-Isaac, near Nivelles, Belgium: priests, 27; clerics, 7; lay brothers, 4.

Circary of Provence.—The Abbey of Frigolet and all other houses are confiscated. The dispersed religious bought the former Norbertine Abbey of Lefte, Dinant, Belgium: priests, 38; clerics, 7; lay brothers, 8; of these, 4 priests in France; 8 priests and 2 clerics in England; and 2 priests in Madagascar.

Circary of Austria.—Geras Abbey: priests, 26; clerics, 4. Neu-Reisch Abbey in Moravia: priests, 11; clerics, 2. Schlägl: priests, 43; clerics, 3. Sellau Abbey, Bohemia: priests, 20; clerics, 5. Strahov Abbey, Prague: priests, 67; clerics, 8. Tepl Abbey,

college for their religious, who study at the University of Budapest: 17 students are at Budapest, and six clerics at the University of Fribourg.

Convents of Norbertine Nuns (the Second Order).—Oosterhout Priory, Holland, 48 nuns. Neerpelt Priory, Belgium, 23 nuns. Bonlieu Abbey, nuns expelled from France, reassembled at Grimbergen, Belgium, 36 nuns. Le Mesnil-St-Denis Priory, Seine et Oise, France, 31 nuns. Abbey of St. Sophia, Toro, Spain, 22 nuns. Abbey of St. Maria near Zamora, Villoria de Orbigo, Spain, 16 nuns. Zwierzyniec, near Cracow, Austrian Poland, 47 nuns. Imbramowice Abbey, Russian Poland; for a great many years the nuns were not allowed to admit novices, but some years ago leave was given with great restrictions by the Russian government to admit a few. The Abbey of Czerwinski, where there were only six very old nuns, was suppressed and the nuns sent to Imbramowice. Several novices were admitted, and at present there are at this convent 9 nuns. Priory of Berg Sion, near Utznach, in the Diocese of St. Gall, Switzerland, 30 nuns. Convent of Norbertine Nuns, Third Order, St. Joseph's at Heiligenberg, near Olmütz, with branch house St. Norbert's, at Prague.

Congregation of Norbertine Sisters; mother-house at Duffel, Belgium, with branch houses.

HEIMBUCHER, *Orden und Kongregationen* (Paderborn, 1907).

F. M. GEUDENS.

Premonstratensians. See PREMONSTRATENSIAN CANONS.

Prémontré, ABBEY OF, about twelve miles west of Laon, Department of Aisne, France; founded by St. Norbert. The land had belonged to the Abbey of St. Vincent, to whom it had been given by a former Bishop of Laon. Religious of St. Vincent's had tried in vain to cultivate it. As shown in the charter of donation the place was called *Præmonstratus*, or *pratum monstratum*, *Pré-montré*, probably from a clearing made in the forest, but the name has easily lent itself to the adapted meaning of *locus præmonstratus*, a place foreshown, as for example in the life of St. Godfrey, one of St. Norbert's first disciples (1127): "Venit ad locum vere juxta nomen suum, a Domino præmonstratum, electum et prædestinatum" (Acta SS., II January). A venerable tradition says that the Bishop of Laon and St. Norbert visited Prémontré about the middle of January and that the bishop gave the white habit to St. Norbert on 25 January, the feast of the Conversion of St. Paul. At the conclusion of the Council of Liège (1131), Innocent II and St. Norbert came to Laon and remained with Bishop Bartholomew. They also visited the Abbey of Prémontré and were rejoiced to see some five hundred religious—priests, clerics, and lay-brothers—all united in the observance of their duties under Abbot Hugh of Fosse. In the general chapter of 1141 it was decided to remove the convents of nuns to at least one league's distance from the abbeys of men. Hugh died on 10 Feb., 1161, and was succeeded by Philip, then Abbot of Belval in Argonne. John II founded in 1252 a college or house of studies for Norbertine clerics at the University of Paris.

At the death of Virgilius, forty-third Abbot General of Prémontré, Cardinal Francis of Pisa had intrigued so much at the Court of Rome that he succeeded in being named commendatory Abbot of Prémontré, and in 1535 took possession of the abbey and all its revenues. Cardinal Francis was succeeded by Cardinal d'Este, the pope's legate in France, who held the abbey *in commendam* until he died in 1572. Taïée ("Etude sur Prémontré", Laon, 1874, 210) calls these two cardinals *les fléaux de Prémontré*. After the death of Cardinal d'Este a free election was held and Jean Des Pruets, Doctor of the Sorbonne, an earnest and zealous priest, was elected, and his election confirmed by Gregory XIII, 14 Dec., 1572. With admirable zeal and prudence Des Pruets undertook the difficult task of repairing the financial losses and of promoting conventual discipline at Prémontré and other houses of the order. He died 15 May, 1596, and was succeeded by two zealous abbots, Longpré and Gosset; but the latter was succeeded by Cardinal Richelieu, as commendatory abbot. The last abbot general, L'Ecuy, was elected in 1781. At the French Revolution the confiscated Abbey of Prémontré was bought by a certain Cagnon, who demolished several buildings and sold the material. Having passed through several hands, the property was bought by Mgr de Garsignies, Bishop of Laon and Soissons, whose successor sold it to the Department of Aisne, by whom the buildings were converted into an asylum. Of the old abbey as it was from the twelfth to the sixteenth century hardly anything remains, but three large buildings of the seventeenth and eighteenth centuries are still standing. A part of one of these buildings is used as a church, dedicated to St. Norbert.

Presbyterianism in a wide sense is the system of church government by representative assemblies called presbyteries, in opposition to government by bishops (episcopal system, prelacy), or by congregations (congregationalism, independency). In its strict sense, Presbyterianism is the name given to one of the groups of ecclesiastical bodies that represent the features of Protestantism emphasized by Calvin. Of the various churches modelled on the Swiss Reformation, the Swiss, Dutch, and some German are known as the Reformed; the French as Huguenots (q. v.); those in Bohemia and Hungary by their national names; the Scotch, English, and derived churches as Presbyterian. There is a strong family resemblance between all these churches, and many of them have given their adherence to an "Alliance of the Reformed Churches throughout the World holding the Presbyterian System", formed in 1876 with the special view of securing interdenominational co-operation in general church work.

I. **DISTINCTIVE PRINCIPLES.**—The most important standards of orthodox Presbyterianism are the "Westminster Confession of Faith" and "Catechisms" of 1647 (see FAITH, PROTESTANT CONFESSIONS OF). Their contents, however, have been more or less modified by the various churches, and many of the formulas of subscription prescribed for church officials do not in practice require more than a qualified acceptance of the standards. The chief distinctive features set forth in the Westminster declarations of belief are Presbyterian church government, Calvinistic theology, and absence of prescribed forms of worship.

A. **Polity.**—Between the episcopal and congregational systems of church government, Presbyterianism holds a middle position, which it claims to be the method of church organization indicated in the New Testament. On the one hand, it declares against hierarchical government, holding that all clergymen are peers one of another, and that church authority is vested not in individuals but in representative bodies composed of lay (ruling) elders and duly ordained (ruling and teaching elders). On the other hand, Presbyterianism is opposed to Congregational independency and asserts the lawful authority of the larger church. The constitutions of most of the churches provide for four grades of administrative courts: the Session, which governs the congregation; the Presbytery, which governs a number of congregations within a limited territory; the Synod, which governs the congregations within a larger territory; and the General Assembly, which is the highest court. Generally the church officers include, besides the pastor, ruling elders and deacons. These officers are elected by the congregation, but the election of the pastor is subject to the approval of the presbytery. The elders with the pastor as presiding officer form the session which supervises the spiritual affairs of the congregation. The deacons have charge of certain temporalities, and are responsible to the session.

B. **Theology.**—The Westminster Confession gives great prominence to the question of predestination, and favours the infralapsarian view of reprobation. It teaches the total depravity of fallen man and the exclusion of the non-elect from the benefits of Christ's atonement. But within the last thirty years there has been a tendency to mitigate the harsher features of Calvinistic theology, and nearly all the important Presbyterian churches have officially disavowed the doctrines of total depravity and limited redemption.

Some have even gone so far as to state a belief that all who die in infancy are saved. Such passages of the standards as proclaim the necessity of a union between Church and State and the duty of the civil magistrate to suppress heresy have also to a great extent been eliminated or modified. In its doctrine on the Sacraments the Presbyterian Church is thoroughly Calvinistic. It holds that baptism is necessary to salvation not as a means (*necessitate mediæ*), but only as something that has been commanded (*necessitate præcepti*). It teaches that Christ is present in the Lord's Supper not merely symbolically, as Zwingli held, nor, on the other hand, substantially, but dynamically or effectively and for believers only.

C. *Worship*.—No invariable forms are recognized in the conduct of public services. Directories of worship have been adopted as aids to the ordering of the various offices but their use is optional. The services are generally characterized by extreme simplicity and consist of hymns, prayers, and readings from the Scriptures. In some of the churches instrumental music is not allowed nor the use of any other songs than those contained in the Book of Psalms. The communion rite is administered at stated intervals or on days appointed by the church officers. Generally the sermon is the principal part of the services. In Europe and in some American churches the minister wears a black gown while in the pulpit. Of recent years certain Presbyterian missionary societies in the United States and Canada have used a form of Mass and other services according to the Greek liturgy in their missions for Ruthenian immigrants.

II. HISTORY.—The Presbyterian, like the Reformed churches, trace their origin to Calvin. The claims to historical continuity from the Apostles through the Waldenses and the Scotch Culdees have been refuted by Presbyterian scholars. It was in the ecclesiastical republics of Switzerland that the churches holding the Presbyterian polity were first established. John Knox (q. v.), who had lived with Calvin at Geneva, impressed upon the Scottish Reformation the ideas of his master, and may be regarded as the father of Presbyterianism as distinct from the Reformed churches. In 1560 a Confession of Faith which he drew up was sanctioned by the Scotch Parliament, which also ratified the jurisdiction exercised by the General Assembly of the Presbyterian Church. This was the beginning of the Kirk or the Scotch Establishment. There have been many divisions among the Presbyterians of Scotland, but to-day nearly all the elements of Presbyterianism in that country have been collected into two great churches: the Established Church and the United Free Church (see SCOTLAND, ESTABLISHED CHURCH OF). After Scotland the important centres of Presbyterianism are England, Ireland, Wales, the British colonies, and the United States.

A. *England*.—There was a strong Presbyterian tendency among certain English Reformers of the sixteenth century. For a time men like Cranmer, Latimer, and Hooper would have reconstructed the church after the manner of Geneva and Zurich, but during the reign of Elizabeth the "prelatical" system triumphed and was firmly maintained by the sovereign. This policy was opposed by the Puritans who included both Presbyterians and Congregationalists. Towards the close of Elizabeth's reign, the Presbyterians secretly formed an organization out of which grew in 1572 the first English presbytery. During the reigns of James I and Charles I the struggle between the Established Church and Presbyterianism continued. In 1647 the Long Parliament abolished the prelacy and Presbyterianism was established as the national religion. In the same year the Westminster Assembly of divines presented to Parlia-

ment its Confession of Faith. With the restoration of the monarchy (1660), the State Church became once more episcopal. English Presbyterianism now began to decline. Its principle of government was quite generally abandoned for independent administration, and during the eighteenth century most of its churches succumbed to rationalism. But during the latter part of the nineteenth century there was a revival of Presbyterianism in England. Those who belonged to the United Presbyterian Church of Scotland coalesced in 1876 with the English Presbyterian Synod (an independent organization since the Scotch disruption of 1843), forming the Presbyterian Church of England, which is a very active body.

B. *Wales*.—The "Welsh Calvinistic Methodist Church" had its origin prior to, and independent of, English Methodism. Its first organization was effected in 1736, and it shared the enthusiasm of the Methodists of England under the Wesleys, but differed from them in doctrine and polity, the English being Arminian and episcopal, the Welsh, Calvinistic and Presbyterian. A Confession of Faith adopted in 1823 follows the Westminster Confession, but is silent as to election and the asperities of the Calvinistic doctrine of reprobation. In 1864 a General Assembly was organized. The Welsh Presbyterians give great attention to home and foreign missions.

C. *Ireland*.—The history of Presbyterianism in Ireland dates from the Ulster plantation during the reign of James I. The greater part of Ulster had been confiscated to the crown, and thither emigrated a large number of Scotch Presbyterians. At first they received special consideration from the Government, but this policy was reversed whilst William Laud was Archbishop of Canterbury. The independent life of Presbyterianism in Ireland began with the formation of the Presbytery of Ulster in 1642, but its growth was checked for a time after the Stuart restoration in 1660. During the eighteenth and early part of the nineteenth century there was a general departure from the old standards and Unitarian tendencies caused various dissensions among the Ulster Presbyterians. There are still two Presbyterian bodies in Ireland that are Unitarian. The disruption in the Scottish churches and other causes produced further divisions, and to-day there are, exclusive of the two mentioned above, five Presbyterian bodies in Ireland, the most important of which is the Presbyterian Church of Ireland.

D. *Colonial and Missionary Churches*.—Presbyterianism in Canada dates its origin from 1765, when a military chaplain began regular ministrations in Quebec. There was very little growth, however, until the early part of the nineteenth century, when British immigration set in. Before 1835 there were six independent organizations. The disruption of 1843 in Scotland had its echo in Canada, and secessionist bodies were formed, but during the sixties four organic unions prepared the way for the consolidation in 1875 of all the important bodies into one denomination, the Presbyterian Church in Canada. There remain only two small organizations not affiliated with this main body. The Canadian Church maintains many educational institutions and carries on extensive mission work. Its doctrinal standards are latitudinarian. Canada has the largest of the colonial churches, but there are important Presbyterian organizations in the other British possessions. In Australia Presbyterianism may be dated from the formation of the Presbytery of New South Wales in 1826. There have been several divisions since then, but at present all the churches of the six provinces are federated in one General Assembly. In New Zealand the church of North Island, an offshoot of the Scottish Kirk, organized 1856, and the church of South Island (founded by Scottish Free Churchmen, 1854) have consolidated in one General As-

sembly. There is a considerable number of Scotch and English Presbyterians in S. Africa. In 1909 they proposed a basis of union to the Wesleyan Methodists, Congregationalists, and Baptists, but thus far without result. In Southern India a basis of union was agreed on by the Congregationalists, Methodists, and Presbyterians in July, 1908. There are Presbyterian churches organized by British and American missionaries in various parts of Asia, Africa, Mexico, S. America, and the West Indies.

E. *United States*.—In tracing the history of Presbyterianism in the United States, the churches may be divided into three groups: (1) the American churches, which largely discarded foreign influences; (2) the Scottish churches, directly descended from Presbyterian bodies in Scotland; (3) the Welsh church, a descendant of the Calvinistic Methodist church of Wales.

(1) *The American Churches*.—The earliest American Presbyterian churches were established in Virginia, New England, Maryland, and Delaware during the seventeenth century and were chiefly of English origin. The man who brought the scattered churches into organic unity, and who is considered as the apostle of American Presbyterianism, was Rev. Francis Makennie from the Presbytery of Laggan, Ireland. With six other ministers he organized in 1706 the Presbytery of Philadelphia, which ten years later was constituted a synod. Between 1741 and 1758 the synod was divided into two bodies, the "Old Side" and the "New Side", because of disagreements as to the requirements for the ministry and the interpretation of the standards. During this period of separation the College of New Jersey, later Princeton University, was established by the "New Side", with Rev. John Witherspoon, afterwards a signer of the Declaration of Independence, as first president. In 1788 the synod adopted a constitution, and a general assembly was established. The dissolution of the Cumberland Presbytery by the Synod of Kentucky led to the formation in 1810 of the Cumberland Presbyterian Church. From controversies regarding missionary work and doctrinal matters two independent branches resulted (1837), the "Old School" and the "New School". Both lost most of their southern presbyteries when anti-slavery resolutions were passed. The seceders united to form a southern church known since 1865 as the Presbyterian Church in the United States. Fraternal relations exist between the northern and the southern churches, who are kept apart especially by their different policies as to the races. In the Cumberland church the coloured members were organized into a separate denomination in 1869. That same year the "Old School" and the "New School" reunited, forming the Presbyterian Church in the United States of America, the largest and most influential of the Presbyterian bodies in America. Since then its harmony has been seriously threatened only by the controversy as to the sources of authority in religion, and the authority and credibility of the Scriptures (1891-4). This difficulty terminated with the trials of Prof. Charles A. Briggs and Prof. H. P. Smith, in which the court declared its loyalty to the views of the historic standards. In 1903 the church revived the Confession of Faith, mitigating "the knotty points of Calvinism". Its position became thereby essentially the same as that of the Cumberland church (white), and three years later (1906) the two bodies entered into an organic union. A part of the Cumberland church, however, repudiated the action of its general assembly and still undertakes to perpetuate itself as a separate denomination.

(2) *The Scottish Churches*.—(a) *Seceders*. The second secessionist body from the established church of Scotland, the Associated Synod (Seceders), organized through its missionaries in 1753 the As-

sociate Presbytery of Pennsylvania. Not long after another separatist body of Scotland, the Old Covenanter Church (Cameronians), founded a daughter church in America known as the Reformed Presbytery (1774). In 1782 these new seceder and covenant bodies united under the name of Associate Reformed Presbyterian Church. Some members of the former body refused to enter this union and continued the Associate Presbytery of Pennsylvania. There were secessions from the united organization in 1801, and 1820. In 1858 nearly all these various elements were brought together in the United Presbyterian Church of North America. Two bodies that remain outside this union are the Associate Reformed Presbyterian Church, which since 1821 has maintained an independent existence, and the Associate Synod of North America, a lineal descendant of the Associate Presbytery of Pennsylvania, founded in 1858 by those who preferred to continue their own organization rather than enter into the union effected that year. (b) *Cameronians or Covenanters*.—The Reformed Presbytery, which merged with the Associate Presbytery in 1782, was renewed in an independent existence in 1798 by the isolated covenanters who had taken no part in the union of 1782. This renewed presbytery expanded into a synod in 1809. In 1833 there was a division into two branches, the "Old Lights" (synod) and the "New Lights" (general synod), caused by disagreements as to the attitude the church should take towards the Constitution of the United States. In 1840 two ministers, dissatisfied with what they considered laxity among the "Old Lights", withdrew from the synod, and formed the "Covenanted Reformed Church" which has been several times disorganized and counts only a handful of members. In 1883 dissatisfaction with a disciplinary decision of the general synod (New Lights) caused the secession of a small number of its members, who have formed at Allegheny, Pa., the Reformed Presbyterian Church in the United States and Canada. Negotiations for a union of the general synod and the synod were made in 1890, but were unsuccessful.

(3) *The Welsh Church*.—The first organization of a Welsh Calvinistic Methodist church in the United States was at Remsen, N. Y., in 1824. Four years later a presbytery was established, and the growth of the denomination has kept pace with the increase in the Welsh population. The English language is fast gaining control in the church services.

III. *STATISTICS*. The Presbyterian denomination throughout the world, exclusive of the Reformed churches, numbers over 5,000,000 communicants. Of these the United States has 1,897,534 (12 bodies); Scotland, 1,233,226 (6 bodies); Canada, 289,556 (3 bodies); Wales, 195,000; Ireland, 112,481 (4 bodies); England, 90,808 (2 bodies); Australia, 50,000; New Zealand, 28,000; Jamaica, 12,017; S. Africa, 11,323.

Presbytery.—The part of the church reserved for the higher clergy was known in antiquity by various names, among them *presbyterium*, because of its occupation during the liturgical functions by the priests attached to a church, arranged in a half-circle round the bishop. The presbytery was also known as *apsis*, *exedra*, *concha*, designations referring to its form; *bema* from the fact that it was elevated above the level of the nave and in consequence reached by a stairway of a few steps; *tribuna* because of its location and general resemblance to the tribunal in civil basilicas whence the magistrates administered justice. These various names were, in the Middle Ages, mostly superseded by the term *choir*, which in turn yielded to the modern term sanctuary. The presbytery was separated from the rest of the church by rails (*cancelli*). Eusebius, in his dedication oration at Tyre (H. E., X, iv), describes this feature of the church and its objects: "the Holy of Holies, the altar", he explains, was inclosed with wooden lattice-work, accurately wrought with artistic carving to render it "inaccessible to the multitude". In Constantinople, as appears from the episode related by Theodoret in which the actors were Theodosius the Great and St. Ambrose, the emperor was accustomed to remain within the precincts of the presbytery during the celebration of the liturgy, but in the West this was not permitted (Theodoret, H. E., V, 17). The Council in Trullo (canon lxix), following an ancient tradition, specifically excepts the emperor from the general rule reserving the presbytery to the clergy. From this strict prohibition relative to the laity the term *adyta* (inaccessible) came to be used of the presbytery. *Presbyterium* also denoted a body of priests taken collectively. In modern times the house of the clergy is frequently called the presbytery (*presbytère*).

MAURICE M. HASSETT.

Prescription (Lat. *præ*, before, and *scribere*, to write, in later legal Latin involving the idea of limitation) is a method created by law for acquiring ownership or ridding oneself of certain burdens on the fulfilment of fixed conditions. It is, therefore, either acquisitive or liberating, the former being frequently termed usucaption. Prescription has its origin in enactments of the civil law which have been confirmed by the canon law and which so far as the principle underlying them is concerned are universally acknowledged to be perfectly valid in conscience. Public good demands that provision should be made for security of title to property as well as for the prevention of litigation as much as possible. Hence the State, using its right of eminent domain, may for grave reasons of the common welfare transfer ownership from one individual to another or release from lawful obligations. A person, therefore, who has under the proper conditions acquired real estate by prescription may retain it with a safe conscience even though the former owner were to appear and claim it.

Prescription, deriving its value from positive law, presupposes certain conditions in order to produce the effect attributed to it. Moralists are agreed that the object, the ownership of which is to pass, must be open to prescription. It must be something that may be made the subject matter of private barter and to which it is possible to gain a title recognized by both natural and positive law. Thus one could not secure dominion over a public highway on pretence that prescription had operated in his behalf. The reason is that the authority of the law cannot be invoked, without which the process falls.

2. The beneficiary must act in good faith. The

civil codes are not so explicit in demanding this, but in conscience it is essential. This simply means that a man must be honestly convinced that what he has in his possession really belongs to him. The Fourth Lateran Council requires this in no uncertain terms. Prescription cannot legitimize theft or detention of property known to be that of another. It may be noted, however, that when the scope of the prescription is to free one from certain servitudes, and the attitude of him who profits by it need only be passive, then "good faith" is interpreted to mean that he should not hinder the other party exercising his right; he is not bound to warn him that prescription is running against him. This has its application in rural districts and with regard to such matters as the right to fish, to draw water, to pasture, and the like. Bad faith on the part of a decedent will prevent his immediate and sole heir from availing himself of prescription. The heir is then juridically one person with the deceased and must take over the latter's obligations. Consequently he can no more benefit by it than could his predecessor. In addition the good faith which is indispensable for prescription postulates in the possessor of a thing some sort of title to it. It need not be a true title because then there would be no need of prescription. It must have the semblance of a good title, such as the purchase of something which did not as a matter of fact belong to the seller, or at least there must be valid ground for supposing the existence of a title as in the case of things acquired by inheritance.

From the point of view of the law, prescription is unintelligible without the fact of possession, whether this last stand for the holding of some thing or the enjoyment of some right. Either way the possession referred to must be accompanied by a veritable proprietary state of mind and is not satisfied by fiduciary relations such as trusteeship or by those of deposit, rental, and the like. Theologians exact as necessary qualities of this possession that it should be peaceable, that is, not assailed by lawsuits, sure, uninterrupted, and open, that is, not clandestine. Much stress is laid on the fact of possession by the common law which regards it as the very foundation of prescription. Tenure of property, other requisites being verified, will confer a right by prescription not only to the land or buildings as the case may be but also to such income as may have been derived from them in the meantime.

The plea of prescription cannot be successfully advanced unless it can be shown that possession has been had over a period of time stipulated by law. This space is different for different kinds of goods. The canon law allows prescription of movables on proof of possession for three years with at least a supposed title; without other title than that they have been held a long time, possession for thirty years is required. Against immovable ecclesiastical property prescription may be used only after possession for forty years, whilst a special provision demands an hundred years when the action lies against the Roman Church. The civil law in various countries exhibits such substantial differences in fixing this requirement that there is no way to summarize it. In general a longer time is required for immovable than movable property. In the United States of America many of the States exact twenty years for immovables; in Maine forty years are necessary, whilst in others the time sinks to seven or even five years as in California. In England rights of common and all other profits from land become absolute and indefeasible after sixty years. The same is true of rights of way and easements in general after forty years. Moreover, prescriptive rights may be extinguished and will be presumed to have lapsed when they have not been used for twenty years, or sometimes even less.

TON, *The Law of the Church* (London, 1906); SABETTI, *Compendium theol. moral.* (Ratisbon, 1902); BALLERINI, *Opus theol. morale* (Prato, 1899).
JOSEPH F. DELANY.

IN CIVIL JURISPRUDENCE.—Prescription "in some form and under some name" is said to have existed as a part of the municipal law of every civilized nation, except the Jewish [Angell, "A treatise on the limitations of actions" (Boston, 1876), 5; Broom, "A selection of legal maxims" (London, 1911), 690; Domat, "The Civil law in its natural order", tr. Strahan (Boston, 1850), sections 2183, 2184], and Devas, "Political Economy" (London, 1901), 491, remarks that "the doctrine of prescription in economics as well as in politics is essential to social welfare." It is in accord with public policy that ownership of things which the law considers capable of ownership (Broom, op. cit., 279) should not remain forever uncertain, and that litigation should not be immortal, litigants themselves being mortal (Voet, cited on title page, Brown, "The law of limitation as to real property," London, 1869), and their muniments of title perishable (Angell, op. cit., 2). In the old Roman law *usucapio* (*rem usu capio*) was the process by which a Roman citizen's possession of a corporeal thing during a length of time defined by law "ripened . . . into full ownership" (*dominium*) ["The Institutes of Justinian", tr. Sandars (London, 1898), II, tit. VI; Pothier, "Pandectæ Justinianæ", XLI, tit. III, 1, 11]. "*Fundus*", remarks Cicero (*Oratio pro Cæcina*, 26), "*a patre relinqui potest, at usucapio fundi, hoc est, finis sollicitudinis ac periculi litium, non a patre relinquatur sed a legibus*", the land is derived from the ancestor, but its quiet enjoyment from usucaption. This method of assurance of title was not open to foreigners (*peregrini*); nor could it be applied to provincial land (*solum provinciale*), for in such land Roman law recognized no right of ownership, but right of possession only. To supply these defects there was provided under the empire, in favour of foreigners and of possessors of provincial land during a defined time, a written formula of defence or exception, otherwise called a *præscriptio*, the *longi temporis* or *longæ possessionis præscriptio*. Taken alone, the word *præscriptio* simply signified a formula available to defendants in a legal action for the purpose of limiting its inquiry ("The Institutes of Justinian", Introduction, sect. 104), and possession remained no more than a defence until a law of Justinian allowed a right of action founded on possession for thirty years [Girard, "Manuel élémentaire de droit romain" (Paris, 1901), 300, 298], the *longissimi temporis possessio* [Leage, "Roman Private Law" (London, 1906), 142].

The operation of *usucapio* was subject to some restrictions similar to those of canon law prescription. A purchaser in good faith and for full value from a thief would not, by usucaption, acquire ownership in the thing stolen, nor would ownership thus accrue to one who acquired possession, knowing that the thing really belonged to another (Leage, op. cit., 135, 136). Nor could property be gained by *usucapio* or right of possession by *præscriptio*, in a thing taken by violence (Girard, op. cit., 298; cf. as to *præscriptio*, 299, note 3). The law of Justinian just referred to conferred ownership on a possessor in good faith, but only if no violence had been used (Leage, op. cit., 142). "Length of time", remarks Domat, "does not secure unjust possessors from the guilt of sin, . . . on the contrary, their long possession is only a continuance of their injustice." But this authority on the modern civil law holds that "civil policy does not permit that possessors be molested after a long possession, or that they be obliged to make good their titles or even to declare the origin of their possession. For the pretext of inquiring after unjust possessors would disturb the peace and quiet of just and lawful possessors" (note to section 2209).

In English law the term prescription is applied to rights only which are defined to be incorporeal hereditaments, such as a right of way or a common or an advowson. "No prescription", remarks Blackstone, "can give a title to lands and other corporeal substances of which more certain evidence may be had" (Commentaries, II, 264, 266; III, 250).

According to English law if a legal beginning be possible [English Law Reports, 17 Appeal cases (1882), 648; Brown, op. cit., 139], it will be presumed from use during the defined time, such length of use establishing a conclusive presumption that even a person whose use had commenced wrongfully has procured a legal title [Broom, op. cit., 689; Lightwood, "A treatise on possession of land" (London, 1894), 153]. But this presumption only holds against a person who is deemed capable of asserting his rights and who is not under legal disability; for *contra non valentem agere nulla currit præscriptio* (Broom, op. cit., 696). Against those unable to act the maxim *vigilantibus non dormientibus jura subveniunt*—the law assists those who are vigilant, not those who sleep over their rights—does not apply [ibid., 689; Wood, "A treatise on the limitation of actions" (Boston, 1901), 416, 417]. The use necessary to gain right by prescription must not only be long, but "without force, without secrecy, as of right and without interruption" (Wood, op. cit., 418, note), "*nec vi, nec clam nec precario*" ("The Institutes of Justinian", II, tit. iii).

Until, as to most instances, altered by modern statutes, the period required to make a prescription good by English law was "time whereof the memory of man runneth not to the contrary", and the law deemed memory to run as far back at least as the commencement of the reign of Richard I (A. D. 1189) [Stephen, "New Commentaries on the Laws of England" (London, 1908), I, 468, 470; Horwood, "Year Books of the reign of King Edward the First" (London, 1866), 136, 426]. In this requirement of time, prescription and that other immemorial right known as custom were alike. But prescription differs from custom in being personal, while custom is local and for many persons, "generally as an undefined class but of a particular locality" (Brown, op. cit., 213). The English law term for the acquiring of title to land by long possession and claim is adverse possession. In England, during the early Norman period, the discretion of the judges regulated the time within which possessors of land might be disturbed in their possession. Afterwards by various statutes the dates of certain important events, such as the return of King John from Ireland, the coronation of Henry III, or, similarly to prescription, the commencement of the reign of Richard I, limited the commencement of various actions to recover land (Lightwood, op. cit., 154, 155). The earliest statute defining a certain number of years as a limitation to an action affecting land was a statute of 32 Henry 8 [Carson, "Real property statutes" (London, 1902), 124]. Possession of land necessary to gain title by adverse possession must be "so open, notorious and important as to operate as a notice to all parties that it is under a claim of right"; the possessor "must possess, use and occupy the land as owner and as an owner would do," not as would a mere trespasser (Wood, op. cit., 583, 584).

CHARLES W. SLOANE.

Presence, REAL. See EUCHARIST.

Presence of God.—*Doctrinal.*—All solid devotion and devotional practices must be founded upon the truths of faith, and these truths must be borne in mind when treating of the presence of God from an ascetical and devotional point of view. First, it is of faith that God is present by His Essence everywhere and in all things by reason of His Immensity. (Creed of St. Athanasius; Council of Lateran, c. "Firmiter"; Vati-

can Council, Sess. III, c. i.) It is also of faith that God is in an especial manner really and substantially present in the souls of the just. This indwelling of God in the souls of the just is attributed by what theologians call appropriation to the Holy Ghost, but in reality it is common to the three Divine Persons.

Ascetical.—To put ourselves in the presence of God, or to live in the presence of God, as spiritual writers express it, means to become actually conscious of God as present, or at least so to live as though we were thus actually conscious. It is a simple act which involves the impression of the unseen Being with whom we have immediate relation and familiar converse, whose goodness towards us is assured, and who loves us with an everlasting love; who exercises a particular providence among us, who is present everywhere and “who”, in the words of Cardinal Newman, “is heart-reading, heart-changing, ever accessible and open to penetration” (Grammar of Assent, 112). The simple child as well as the advanced contemplative may thus represent God as present to the mind, and live in the consciousness of His presence. It is only the angels and blessed who can behold the face of God.

The servant of God or the devout soul may be mindful of His presence in another way, namely, by the exercise of reason directed by faith. He sees God in the earth, the sea, the air and in all things; in heaven where He manifests His glory, in hell where He carries out the law of His justice. He thinks of Him as present in all things within us and without us, and especially as dwelling secretly in his innermost soul, hidden from all our senses, yet speaking, as it were, to the conscience with a voice that is in us but not of us; the voice of One who is with us yet over us.

Devotional.—One may therefore practise the devotion of living in the presence of God: (1) by a lively faith in that Divine presence, that God is near us and within us as Elias says: “the Lord liveth . . . in whose sight I stand” (III Kings, xvii, 1; cf. IV Kings, i, 14); (2) when distracted the mind may be easily brought back to the remembrance of God’s presence by the simple reflection: “The Lord is here”; “The Lord sees me”; (3) when occupied with conversation or business by breathing from time to time some secret aspiration or affection for God and then keeping the mind recollected; (4) in dereliction of spirit, by keeping God in mind more faithfully, knowing that nothing can come between Him and the soul but grave sin, through which His special operation in the soul by grace ceases. Men may be said to come to God as they become more like Him in goodness, and to withdraw from Him, when they become unlike Him by their wickedness.

As the immediate preparation for mental prayer, it is fitting and necessary “to place ourselves in the presence of God”. This is to be done by an act of faith in the Divine presence, from which should follow: (1) an act of adoration; (2) an act of humility; (3) an act of sorrow or contrition; (4) an act of petition for light and grace. These acts may be made in the interior of the soul.

ARTHUR DEVINE.

Presentation, ORDER OF THE, founded at Cork, Ireland, by Nano (Honorata) Nagle (see below). In 1775 she entered with some companions on a novitiate for the religious life. With them she received the habit 29 June, 1776, taking the name of Mother Mary of St. John of God. They made their first annual vows 24 June, 1777. The foundress had begun the erection of a convent close to that which she had built for the Ursulines, and it was opened on Christmas Day, 1777. They adopted as their title “Sisters of the Sacred Heart”, which was changed in 1791 to that of “Pres-

entation Sisters”. Their habit was similar to that of the Ursulines. The second superioress was Mother Mary Angela Collins. Soon after her succession a set of rules, adapted from that of St. Augustine, was drawn up by Bishop Moylan, and approved by Pius VI in Sept., 1791. This congregation of teaching sisters was raised to the status of a religious order by Pius VII in 1800.

Communities from Cork were founded at Killarney in 1793; Dublin in 1794; and at Waterford in 1798. A second convent at Cork was established in 1799, by Sister M. Patrick Fitzgerald; and a convent at Kilkenny in 1800, by Sister M. Joseph McLoughlan. At the present day, there are 62 convents, and about 1500 sisters. Each community is independent of the mother-house, and subject only to its own superioress and the bishop of its respective diocese. The schools, under the British Government Board, have for their first object the Catholic and moral training of the young, which is not interfered with by the Government. The secular system followed is the “National”, superseded, in many cases, by the “Intermediate”, both of which ensure a sound English education; to which are added domestic economy, Latin, Irish, French, and German. The average attendance of children in each of the city convents of Dublin, Cork, and Limerick is over 1200; that in the country convents between 300 and 400, making a total of 22,200 who receive an excellent education gratis. For girls who are obliged to earn a living, work-rooms have been established at Cork, Youghal, and other places, where Limerick lace, Irish point, and crochet are taught. The first foreign country to receive a Presentation Convent was Newfoundland in 1829, when Sisters Josephine French and M. de Sales Lovelock went from Galway. There are now fourteen houses of the order on the island and about twenty in the United States, the first of which was founded at San Francisco by Mother Xavier Cronin from Kilkenny in 1854.

In 1833 a house was founded by Mother Josephine Sargeant from Clonmel at Manchester, England, from which sprang two more, one at Buxton and one at Glossop. Their schools are well attended; the number of children, including those of an orphanage, being about 1400. India received its first foundation in 1841, when Mother Xavier Kearney and some sisters from Rahan and Mullingar established themselves at Madras. Soon four more convents in the presidency were founded from this, and in 1891 one at Rawal Pindi. Their schools are flourishing, comprising orphanages, and day and boarding-schools, both for Europeans and natives. At Rawal Pindi the sisters do much good work among the Irish soldiers, who go to them for religious instruction. In 1866 Mother Xavier Murphy and some sisters left Fermoy for a first foundation at Hobart Town, Tasmania, under the auspices of its first archbishop, Dr. Murphy. There is a branch of this house at Launceston. St. Kilda, Melbourne, received sisters from Kildare in 1873, and Wagga Wagga a year later, with Mother M. John Byrne at their head. From these two houses numerous others branched forth to all parts of Australia; to-day there are over twenty convents, about 500 nuns, and thousands of children attending their schools.
M. DE SALES WHYTE.

PRESENTATION ORDER IN AMERICA.—About half a century after its establishment, the Presentation Order sent four sisters from the Galway convent to Newfoundland, at the request of Dr. Fleming, Vicar Apostolic of the island. The mother-house is at St. John’s; there are now (1911) thirteen convents, 120 nuns, and over 2000 pupils. In November, 1854, some Presentation Nuns arrived at San Francisco from Ireland. Mother M. Teresa Comerford and her sisters had great initial difficulties; but Archbishop Alemany succeeded in interesting prominent Catholics of the

city in their work, and in course of time two fine convents were built within the city limits, besides convents at Sonoma and Berkeley. The earthquake of 1906 destroyed both of their convents in the city, with practically their entire contents; but the sisters have courageously begun their work afresh, and bid fair to accomplish as much good work as in the past.

The Presentation Convent, St. Michael's, New York City, was founded 8 Sept., 1874, by Mother Joseph Hickey, of the Presentation Convent, Terenure, Co. Dublin, with two sisters from that convent, two from Clondalkin, and seven postulants. Rev. Arthur J. Donnelly, pastor of St. Michael's Church, on completing his school building, went to Ireland in 1873 to invite the Presentation Nuns to take charge of the girls' department. The consent of the nuns having been obtained, Cardinal Cullen applied to the Holy See for the necessary Brief authorizing the nuns to leave Ireland and proceed to New York, which was accorded by Pius IX. The work of the nuns at St. Michael's has been eminently successful. From 1874 to 1910 there have been entered on the school register 16,781 names. In 1884 the sisters took charge of St. Michael's Home, Green Ridge, Staten Island, where over two hundred destitute children are cared for.

In 1886 Mother Magdalen Keating, with a few sisters, left New York at the invitation of Rev. P. J. Garrigan, afterwards Bishop of Sioux City, and took charge of the schools of St. Bernard's Parish, Fitchburg, Massachusetts. The mission proved most flourishing, and has branch houses in West Fitchburg and Clinton, Massachusetts; Central Falls, Rhode Island; and Berlin, New Hampshire. The order was introduced into the Diocese of Dubuque by Mother M. Vincent Hennessey in 1874. There are now branch-houses at Calmar, Elkader, Farley, Key West, Lawler, Waukon, Clare, Danbury, Whittemore, and Madison, Nebraska. The order came to Fargo, North Dakota, in 1880 under Mother Mary John Hughes, and possesses a free school, home, and academy. St. Colman's, Watervliet, New York, was opened in 1881, the sisters having charge of the flourishing orphanage. In 1886 some sisters from Fargo went to Aberdeen, South Dakota, and since then, under the guidance of Mother M. Joseph Butler, they have taken charge of schools at Bridgewater, Bristol, Chamberlain, Elkton, Jefferson, Mitchell, Milbank, and Woonsocket, besides two hospitals. There are in the United States 438 members of the order, who conduct 32 parochial schools, attended by 6909 pupils; 5 academies, with 416 pupils; 3 orphanages, with 519 inmates; 2 hospitals.

MOTHER M. STANISLAUS.

NAGLE, NANO (HONORIA), foundress of the Presentation Order, b. at Ballygriffin, Cork, Ireland, 1728; d. at Cork, 20 April, 1784. After an elementary education in Ireland, where Catholic schools were then proscribed, she went to France for further studies, where some of her kinsmen were living in the suite of the exiled King James, and entered on a brilliant social life in the court circles of the capital. One morning, when returning from a ball, she was struck by the sight of crowds of working-men and women waiting for a church to be opened for early Mass. A few weeks later she returned to Ireland, and only the stringent laws then in force against Catholic educational activity prevented her from consecrating herself at once to the Christian training of Irish children, who were growing up in ignorance of their Faith. A short time spent as a postulant at a convent in France confirmed her belief that her mission lay rather in Ireland, a conviction strengthened by the advice of her directors. Her first step on returning to Ireland was to familiarize herself with the work of some ladies who had privately organized a school in Dublin, and, on the death of her mother and sister, she went to Cork, where in the face of the most adverse conditions she began her crusade

against the ignorance and vice there prevalent. Her first pupils were gathered secretly, and her part in the undertaking having been discovered, it was only after a period of opposition that she secured the support of her relatives. In less than a year, however, she had established two schools for boys and five for girls, with a capacity for about two hundred. The foundress herself conducted the classes in Christian doctrine and instructed those preparing for First Communion, searching the most abandoned parts of the city for those in need of spiritual and temporal help. Her charity extended also to aged and infirm women, for whom she established an asylum at Cork, and especially to working-women, whose perseverance in faith and virtue was a source of solicitude to her. The demands of her numerous charitable undertakings proving excessive for her resources, she solicited contributions from house to house, at the cost of much humiliation.

For the purpose of perpetuating her work she decided to found a convent; and a community of Ursulines, young Irishwomen trained especially for the purpose, was sent to Cork in 1771, although they did not venture to assume their religious garb for eight years. As the Ursuline Rule, with which Nano had not thoroughly acquainted herself, did not permit entire consecration to the visitation of the sick and the education of poor children, she resolved to form a community more peculiarly adapted to the duties she had taken up, while remaining a devoted friend of the Ursulines. In 1775 she founded the Presentation Order (see above). She set an example of charity and self-abnegation to her community, giving seven hours daily to the class-room and four to prayer, in addition to the demands of her duties as superior and her work of visitation. It was said there was not a single garret in Cork that she did not know. Her austerities and the persistence with which she continued her labours in the most inclement weather brought on a fatal illness; she died exhorting her community to spend themselves for the poor. Her remains were interred in the cemetery of the Ursuline convent she had built.

FLORENCE RUDGE MCGAHAN.

Presentation, RELIGIOUS CONGREGATIONS OF THE.—(1) *Daughters of the Presentation*, founded in 1627 by Nicolas Sanguin (b. 1580; d. 1653), Bishop of Senlis, a prelate who was atoning by a life of sanctity for the errors of an ill-spent youth. Having given himself unstintingly to the service of the plague-stricken during a pest which devastated Senlis during the early years of his episcopate, he turned his attention to the foundation of a teaching order to combat the prevailing ignorance and the resulting vice in the diocese. Two young women from Paris, Catherine Dreux and Marie de la Croix, began the work of teaching in 1626 and the following year were formed into a religious community, which shortly afterwards was enclosed under the Rule of St. Augustine. The opposition of the municipal authorities gave way before the Bull of erection granted by Urban VIII (4 Jan., 1628) and letters patent of Louis XIII granted in 1630, the year in which the first solemn profession was held. In 1632 papal permission was obtained for two of Bishop Sanguin's sisters and a companion to leave for a time their monastery of Moncel of the Order of St. Clare, to form the new community in the religious life. Seven years later they were received as members into the new order, over which they presided for more than thirty years. The congregation did not survive the Revolution, although under Bonaparte one of the former members organized at Senlis a school which was later taken over by the municipality. The habit was black serge over a robe of white serge, with a white guimpe, a black bandeau, and veil. The original constitutions seem to have been altered by Mgr Sanguin's nephew and successor in the See of Senlis, owing to the frequent ref-

erence made in them to the devotion of the Slavery of Our Lady, which was suppressed by the Church.

(2) *Sisters of the Presentation of the Blessed Virgin*, founded in 1684 by Ven. Marie Poussepin at Sainville in the Diocese of Chartres, for teaching and the care of the sick. At the time of the religious disturbances in France, over seventeen hundred sisters were engaged in France, Spain, South America, and Asiatic Turkey, where they have charge of a number of schools and protectories for girls. At Agua de Dios in Colombia they care for a colony of lepers. In 1813 the mother-house was established at Saint-Symphorien near Tours.

(3) *Sisters of the Presentation of Mary*, also called White Ladies, founded in 1796 at Montpezat by Ven. Marie Rivier (d. 1838), assisted by the Abbé Pontanier, for the instruction of poor girls. The first novitiate was opened at Thueys, near Aubenas, but the mother-house was permanently established at Bourg-Saint-Andéol in the Diocese of Viviers. The congregation soon spread over France and in 1853 a house was established in Canada. At the time of the dispersion of the religious orders in France the congregation numbered two thousand members in charge of schools and orphan asylums. The Polish mother-house is at Cracow.

(4) *Sisters of the Presentation of Our Lady*, founded at Ghent in 1805 by Miss Weewauters, in religion Mother Mary Augustine, and Canon de Decker (d. 1874) for the education of girls. The mother-house is at Saint-Nicolas, on which are dependent a number of filial houses, with about two hundred members.

HEIMBUCHER, *Orden u. Kongregationen* (Paderborn, 1907); HÉLYOT, *Dict. des Ordres rel.* (Paris, 1859); *Vie de M. Rivier* (Avignon, 1842).

FLORENCE RUDGE MCGAHAN.

Presentation, RIGHT OF.—Out of gratitude for the foundation or endowment of churches and benefices, the Church grants founders, if they wish to reserve it, the right of patronage, the first and chief privilege of which is the right of presenting a cleric for the benefice. Presentation therefore means the naming to the ecclesiastical authorities of a suitable cleric, thereby conferring on the latter the right to have the vacant benefice. Like election and nomination presentation confers on the cleric presented a real right (*jus ad rem*), so that the ecclesiastical superior entrusted with the institution may not give the benefice to another. There are many forms of the right of patronage; here we need refer only to the right of ecclesiastical patronage belonging to ecclesiastical bodies as such, e. g. a chapter, and to the right of lay-patronage, possessed by laymen or ecclesiastics in their private capacity. Hence there exist notable differences in the manner of exercising the right of patronage, as might naturally be expected, especially when we remember that the foundations or endowments giving rise to the right of ecclesiastical patronage are made with property already belonging to the Church (see PATRON AND PATRONAGE). Theoretically no special form of presentation is necessary: it suffices if the act signifies the presentation, and excludes anything that might indicate a collation of the benefice, and if there is no simony; in practice it is made in writing, generally after voting has taken place or an arrangement has been made, when the patron is not an individual and when there are co-patrons. It is communicated to the ecclesiastical superior, usually the bishop, who has to perform the canonical institution. The patron exercises his right personally if past the age of puberty (fourteen or twelve years respectively), although he may act by an attorney; if he has not attained this age, he must act through those who have authority over him: mother, guardian, protector. If the patron is an individual, he makes the presentation by himself; if it is a college, e. g. a chapter, a secret vote is taken and an absolute majority is required; if the co-patrons

act individually, as when the different members of a family are called on to present a candidate, the most important point is to observe all the regulations governing the foundation; account is taken of the branches of the family and of the persons in each branch, in which case a relative majority is sufficient. A ballot is resorted to also when the patronage is exercised by a numerous community, e. g. the men of a parish who have attained their majority. In case of tie, the bishop selects one of the candidates proposed. As to the suitability of the candidate, see PATRON AND PATRONAGE. Often, in virtue of a local law, as in Austria, the patron must select from a list of suitable candidates three for ecclesiastical patrons. By the acceptance of the presentation, the cleric presented acquires immediately the right to the benefice, if the patronage is ecclesiastical; but the right is definitive only, if the patronage is lay, on the expiration of the four months allowed the patron to exercise his right of presentation, unless the bishop has already proceeded to the institution. On learning of the presentation and acceptance, the bishop examines into the fitness of the candidate, whom he admits or rejects according to the case; if he admits him, he gives him canonical institution, regularly within two months; if he rejects, the patron may present another, unless in the previous instance he had knowingly presented an unfit candidate (cf. Lib. III, Decret., tit. xxxviii, "De jure patronatus"; Conc. Trid. Sess. VII, c. 13; Sess. XXIV, c. 18; Sess. XXV, c. 9, de Ref.; see also BENEFICE).

See commentaries on *De jure patronatus*, III, xxxviii, and VI; FERRARIS, *Prompta bibliotheca*, s. v. *Beneficia*, a. III and V; s. v. *Juspatronatus*; SÄGMÜLLER, *Lehrbuch d. kathol. Kirchenrechts* (Freiburg, 1909), § 84.

A. BOUDINHON.

Presentation Brothers.—In the early part of the nineteenth century when the Penal Laws were relaxed, and the ban which was placed on the Catholic education of youth in Ireland during a long period of persecution was removed, great efforts were made to employ the opportunities which a comparative freedom placed within the reach of Irish Catholics, and several new religious congregations of both men and women sprang into existence. Amongst these was the Institute of Presentation Brothers founded by Edmund Ignatius Rice. The Brothers continued a diocesan congregation approved of by Rome until 1889, when a change was effected in the constitution of the body with a view to its more rapid development. With the sanction of the bishops under whom the Brothers then laboured, all the houses of the Institute were united under a superior-general and Leo XIII approved and confirmed the new constitutions. The rapid spread of the order since then has been very marked. It now has several branches in each of the provinces of Ireland, and is also established in England and Canada. The Brothers conduct colleges, primary schools, industrial schools, and orphanages. A new novitiate and training college has been erected at Mount St. Joseph, Cork. The superior-general resides there. The Commissioners of National Education, after investigating the methods of training adopted by the institute, fully approved of them and recognized the training college. In the colleges, special attention is paid to the teaching of experimental science. Classes are taught in connexion with the Intermediate Education Board and Technical Department. Students are prepared for the Civil Service as well as for the National University. In the industrial schools and orphanages, in addition to the ordinary school studies, various trades are taught, as also agriculture and horticulture. Moreover, all the boys get a two years' course in manual instruction.

BROTHER DE SALES.

Presentation of Mary, CONGREGATION OF THE.—This congregation, devoted to the education of young girls, was founded in 1796 at Theuyts, Ardèche,

France, by the Venerable Mother Marie Rivier. The mother-house is now at Saint-Andéol, Ardèche. The superior general is the Mother Marie Ste-Honorine. The provincial house in Canada was founded on 18 October, 1853, by Mgr Jean-Charles Prince, first Bishop of St. Hyacinthe. It is also the mother-house and the religious make their vows there. The first six religious, with Mother Marie St-Maurice as superior, settled at Ste-Marie de Monnoir, where Rev. E. Crevier, pastor of this parish, had prepared a convent for them. They opened a boarding-school and a class for day pupils; both of these are very prosperous at the present time. In 1855 the novitiate was transferred to St. Hugues (in the county of Bagot), and in 1858 it was definitively located at St. Hyacinthe in a convent which was occupied up to this time by the Sisters of the Congregation of Notre Dame of Montreal. This house was of insufficient accommodation and the community was obliged to erect, not far from the seminary, a large building of which they took possession in 1876. The house occupied since 1858 then became an academy. Later it was necessary to add a large annex to the first building. The students were installed there in 1907. The provincial house is at the same time the mother-house of the institution in Canada. The Congregation of the Presentation of Mary comprises 30 houses in Canada and 16 in the United States, educating 13,670 children.

SISTER MARY ST. DAVID.

Presentation of the Blessed Virgin Mary, FEAST OF THE.—The Protoevangel of James, the Gospel of Pseudo-Matthew, the Gospel of the Nativity of Mary, and other apocryphal writings (Walker, "Apocryph. Gosp.", Edinburgh, 1873) relate that Mary, at the age of three, was brought by her parents to the Temple, in fulfilment of a vow, there to be educated. The corresponding feast originated in the Orient, probably in Syria, the home of the apocrypha. Card. Pitra (Anal. Spici. Solesmensi, p. 275) has published a great canon (liturgical poem) in Greek for this feast, composed by some "Georgios" about the seventh or eighth century. The feast is missing in the earlier Menology of Constantinople (eighth century); it is found, however, in the liturgical documents of the eleventh century, like the "Calend. Ostromiranum" (Martinow, "Annus græco-slav.", 329) and the Menology of Basil II (ἐκδόδος τῆς παναγίας Θεοτόκου). It appears in the constitution of Manuel Comnenos (1166) as a fully recognized festival during which the law courts did not sit. In the West it was introduced by a French nobleman, Philippe de Mazières, Chancellor of the King of Cyprus, who spent some time at Avignon during the pontificate of Gregory XI. It was celebrated in the presence of the cardinals (1372) with an office accommodated from the office chanted by the Greeks. In 1373 it was adopted in the royal chapel at Paris, 1418 at Metz, 1420 at Cologne. Pius II granted (1460) the feast with a vigil to the Duke of Saxony. It was taken up by many dioceses, but at the end of the Middle Ages, it was still missing in many calendars (Grotefend, "Zeitrechnung", III, 137). At Toledo it was assigned (1500) by Cardinal Ximenes to 30 September. Sixtus IV received it into the Roman Breviary, Pius V struck it from the calendar, but Sixtus V took it up a second time (1 September, 1585). In the province of Venice it is a double of the second class with an octave (1680); the Passionists and Sulpicians keep it as a double of the first class; the Servites, Redemptorists, Carmelites, Mercedarians, and others as a double of the second with an octave. In the Roman Calendar it is a major double. The Greeks keep it for five days. In some German dioceses, under the title "Illatio", it was kept 26 November (Grotefend, III, 137).

F. G. HOLWECK.

Prester John, name of a legendary Eastern priest and king.

FIRST STAGE.—The mythical journey to Rome of a certain Patriarch John of India in 1122, and his visit to Callistus II, cannot have been the origin of the legend. Not until much later, in a MS. dating from the latter part of the fifteenth-century "Tractatus pulcherrimus" (Zarneke), do we find the patriarch and priest united in one person. The first combination of the two legends appears at the end of the twelfth century, in an apocryphal book of devotions called the "Narrative of Eliseus". The first authentic mention of Prester John is to be found in the "Chronicle" of Otto, Bishop of Freising, in 1145. Otto gives as his authority Hugo, Bishop of Gabala. The latter, by order of the Christian prince, Raymond of Antioch, went in 1144 (after the fall of Edessa) to Pope Eugene II, to report the grievous position of Jerusalem, and to induce the West to send another crusade. Otto met the Syrian prelate at Viterbo, where in the pope's presence he learned that a certain John, who governed as priest and king in the Far East, had with his people become converted to Nestorianism. A few years earlier he had conquered the brother monarchs of Media and Persia, Samiardi. Prester John had emerged victorious from the terrible battle that lasted three days, and ended with the conquest of Ecbatana; after which the victor started for Jerusalem to rescue the Holy Land, but the swollen waters of the Tigris compelled him to return to his own country. He belonged to the race of the three Magi, their former kingdoms being subject to him. His enormous wealth was demonstrated by the fact that he carried a sceptre of pure emeralds.

It is doubtful if the West gave unreserved credence to this tale, judging from the long silence of its chronicles. Some twenty years later there came to light in unaccountable ways letters from this mysterious personage to the Byzantine emperor Manuel, Barbarossa, and other princes, which roused extravagant hopes. About a hundred manuscripts of the letter to Manuel of Constantinople are still extant (with many variants), and afford an interesting insight into this exceedingly complicated fiction. This wild medieval tale contains the principal incidents of the long Alexander legend. This letter is probably a Nestorian forgery. From that time it was believed that a Christian kingdom existed in the Far East, or in the heart of Asia. The legend furnished a wealth of material for the poets, writers, and explorers of the Middle Ages. In England Sir John Mandeville exploited it to excess. In Germany Wolfram von Eschenbach, in "Parsifal", was the first to unite the legend of the Holy Grail with this history of Prester John. He found many and more extravagant imitators (e. g. Albrecht von Scharfenstein in "Jüngere Titurel").

It is questionable whether the letter of Pope Alexander III, dated from the Rialto in Venice in 1177 and beginning with the words "Alexander episcopus [or *Papa*], servus servorum Dei, carissimo in Christi filio Joanni, illustro et magnifico Indorum regi", has anything to do with Prester John. The pope had heard many rumours of a powerful Christian ruler in the East. His physician in ordinary, Philippus, on returning from those parts, brought him further information. The pope sent his confidant to the king with the much-discussed letter, and an invitation to enter the Roman Church; also a caution against boastfulness about his vast power and wealth. Provided that he listened to this warning, the pope would willingly grant his two requests (apparently, to cede him a church in Rome, and to accord him certain rights in the church of the Holy Sepulchre in Jerusalem). The result of this mission is not known; but judging from the

details in the letter, it is certain that the recipient was no mythical personage. The pope may have recognized him as the Presbyter of the legend, but this is uncertain.

HISTORICAL FOUNDATION OF THE ORIGIN OF THE LEGEND.—Otto von Freising does not mention the exact year of the battle between the Eastern conqueror and the Persian sultan; he only remarks that in 1145 it had taken place "ante non multos annos". On the other hand, there is found in the Annals of Admont (1181), part of which, as far as 1141, are a continuation of Otto's chronicle, the following note: "Johannes presbyter rex Armeniæ et Indiæ cum duobus regibus fratribus Persarum et Medorum pugnavit et vicit". Minute research has shown that in that year the Persian Sultan Sanjar was completely vanquished by a conqueror from the east, not very far from the ancient Ecbatana. The Arabic historian Ibn-el-Athir (1160-1233) says that, in the year of the *Hegira* of 536 (1141), Sanjar, the most powerful of the Seljuk princes, had mortally offended his vassal the Shah of Kharezm. The latter called to his assistance Ku Khan, or Korkhan of China (Chinese, *Yeliutasche*), who had come in 1122 from Northern China at the head of a mighty army. Korkhan killed Sanjar and 100,000 of his men. The Arabic versions are substantially corroborated by other Asiatic historians of that epoch: by the Syrian writer Abulfaradsch (on account of his Jewish descent called Bar Hebræus, 1226-86), by the Arabic Abulfeda (1273-1331), the Persian Mirkhond (1432-89) etc. It is not certain whether the Spanish Jew, Benjamin of Tudela, who travelled in Central Asia in 1171, refers to this event. If so, the hypothesis based on the researches of d'Avezac, Oppert, Zarncke, and Yule becomes a certainty, i. e. the land of this uncertain and shifting legend is the Kingdom of Karakhitai (1141-1218), founded in Central Asia by the priest-king of the tale. The disputed points are the name, the religion, and the priestly character of the mysterious personage.

Independently of the much earlier work of d'Avezac, Oppert thinks that Ku-Khan, Korkhan or Corchan (Coirchan), as the East-Asian conqueror is called in the chronicles, could easily have become Jorchan, Jochanan, or in Western parlance, John; this name was then very popular, and was often given to Christian and Mohammedan princes (Zarncke). History knows nothing about the Christianity of *Yeliutasche*. Yet it is clear that the league of the West against the Mohammedans stirred up the oppressed Christians on the borders of Tatar Asia to look for a deliverer. The sacerdotal character of the legendary king still offers an unsolved riddle.

SECOND STAGE.—The political aspect of the legend again came forward in the thirteenth century. In November, 1219, Damietta was conquered by the crusaders. In the spring of 1221 the report was circulated among the victors that in the East, King David, either the son or nephew of the Presbyter, had placed himself at the head of three powerful armies, and was moving upon the Mohammedan countries. An Arabic prophecy foretold that when Easter fell on 3 April, the religion of Mohammed would be abolished. This occurred in 1222, and many expected that King

David and his host would offer their support to the long-awaited army of Frederick II. The enthusiasm that this announcement created in the camp at Damietta led to a premature outbreak of the Franks against Cairo, and the defeat of the army. The historical germ is easily discovered. King David is no other than the Mongolian conqueror Jenghiz Khan, who at this time with three legions pushed forward towards the West, and in a most sanguinary battle annihilated the power of Islam in Central Asia. He and many of his successors were favourable to the Christians, and averse to the Mohammedans; the Mongol Kingdom also surpassed all Asiatic principalities by its display; but the name of David given to the Eastern conqueror still remains unexplained.

THIRD STAGE.—The horrible slaughter committed by the Mongols soon proved that they were no pious pilgrims bound for the Holy Sepulchre, still less were they Christians. After a short time the legend assumed another form. It said that the Mongolians were the wild hordes mentioned in the Presbyter's letter to Manuel. They had risen up against their own ruler, King David, murdering both him and his father. The "Speculum historiale" of Vincent of Beauvais says: "In the year of our Lord 1202, after murdering their ruler [David] the Tatars set about destroying the people". Certain historical facts form the basis of this remarkable report. Bar Hebræus mentions that in 1006 the Mongolian tribe of the Keriats in Upper Asia had become Christians (Nestorians). According to the account of Rubruquis, the Franciscan, these Keriats were related to the Naymans, another Mongolian shepherd tribe, and paid tribute to their ruler Coirchan; they also were Nestorian Christians, and in that vicinity were considered the countrymen of Prester John. The prince of the Keriats, Unc-Khan, was in 1202 completely subject to the

PRESTER JOHN
From a print published in Paris about 1660

superior power of Jenghiz Khan, who meanwhile was on the friendliest terms with his family, thus giving the Keriats a certain amount of independence. Marco Polo speaks of Unc-Khan as the "great prince who is called Prester John, the whole world speaking of his great power". In 1229 the celebrated missionary John of Monte Corvino converted a Nestorian prince belonging to this tribe, who afterwards served Mass for him (*Rex Gregorius de illustri genere Magni Regis qui dictus fuit Presbyter Johannes*). And yet neither he nor the other missionaries, who at this time were trying to convert the Mongolian princes of Upper Asia, paid much attention to the extravagant embellishments of the legend. One of these missionaries, Odoricus de Foro Julii, wrote "that not a hundredth part of the things related of Prester John were true". For centuries the Prince of the Keriats was looked upon as the Prester John of the legend. The papal librarian Assemani and the geographer Ritter justified this scientific hypothesis by a mass of original documents. It is undoubtedly true, that in this explanation of the legend many of its peculiarities are more clearly brought out; e. g. the sacerdotal character of the hero; for according to Rubruquis, the Nestorians of that locality were accustomed to dedicate to the priesthood even the children in their cradles. The main point, however, is still unexplained, namely, the

origin of the legend; the account of Rubruquis, however, carefully considered, supports the Oppert-Zarneke hypothesis, and elucidates the transition of the legend from the Karakhitai, to the Keria. Zarneke meanwhile agrees with Oppert only in essentials, and in many points sharply and unjustly criticizes his colleague. Oppert is an Orientalist, Zarneke is not.

FOURTH STAGE.—With the collapse of the Mongol Kingdom, hitherto the setting for this legend, the latter, finding no favourable background in Upper or Middle Asia, was shifted to the hill country of the Caucasus, or to indefinite parts of India. It is true that all earlier accounts of the Presbyter designated India as his kingdom, but in the Middle Ages the term India was so vague that the legend obtained in this way no definite location. But in the fourteenth century there appeared many real or fictitious accounts of voyages (Zarneke), which pointed to the modern East Indies as the kingdom of the Priest-King. The most important document of this, or a somewhat later period, is the afore-mentioned "Tractatus pulcherrimus". In some maps, especially a Catalonian published in 1375, we find Christian kingdoms given in India. In another map of 1447, towers are to be found at the foot of the Caucasus, and underneath is written: "The Presbyter, King John built these towers to prevent [the Tatars] from reaching him". The Admont Annals (1181) had already spoken of the Presbyter as King of Armenia. Professor Brun of Odessa supports the hypothesis founded on these and other plausible grounds, namely that the Armenian general, Ivane, who in 1124 gained a great victory over the Crescent, was the first Presbyter John (Zeitsch. f. Erdkunde, 1876, 279).

FIFTH STAGE.—Marco Polo speaks of the country called *Abascia* as part of India, meaning probably Abyssinia. Many scholars (among others Yule) are of the opinion that Pope Alexander's enigmatical letter was sent to the Negus of Ethiopia; at a much earlier time it was customary to see in him the Presbyter of the legend. In 1328 the Christian bishop, John of Columbo (not Colombo) in India, designated the Negus as Prester John: *quem vos vocatis Prestre Johan*. In Jerusalem at the beginning of the fifteenth century the Abyssinian priests described their country to the Christian Portuguese merchants as the Kingdom of Prester John. The Grand Master of the Knights of Rhodes expressed the same opinion in a letter written to King Charles VII of France in 1448. This interpretation was most popular at the end of the fifteenth and the beginning of the sixteenth century, on account of the voyages of discovery made by the Portuguese, who at first persistently sought the Presbyter's kingdom along the whole African coast (Vasco de Gama even carried with him letters of introduction to this supposed Christian ruler), and believed that in Ethiopia they had at last fallen in with him. As a matter of fact, the Christian Kingdom of Abyssinia had for centuries successfully withstood the onslaughts of Islam. The Negus combined in his person a kind of spiritual with temporal power, and the name of John recurs in a remarkable manner in the long line of princes of that land. The oldest map, discovered by P. Joseph Fischer, on which America is mentioned (1507), places the Presbyter's country in Asia (Province of Thebet; Tibet) in the following words: "This is the land of the good King and lord, known as Prester John, lord of all Eastern and Southern India, lord of all the kings of India, in whose mountains are found all kinds of precious stones." On the Carta Marina (1516) it is placed in Africa: "Regnum Habesch et Habacci Presbiteri Joh. sive India Maior Ethiopie" etc. In later times it was the general opinion that Abyssinia was the Presbyter's native land, "Terra do Preste", as the Portuguese called it. Only towards the end of

the seventeenth century did this opinion disappear. In Leutholf's great work on Abyssinia (Frankfort, 1681) it is said that the land had been wrongly named the Presbyter's kingdom. The legend had a stimulating effect on Portuguese discoverers, and indirectly encouraged the missionary activity of Franciscans and Dominicans in Central Asia and China, the conversion of the Mongolian ruler being often their goal. Some also exhibited a certain scientific interest in the solution of the legend; the narrative of Rubruquis, for instance, is still the starting point for all modern research.

ALOIS STOCKMANN.

Preston, THOMAS, alias ROGER WIDDINGTON, Benedictine, d. in the Clink prison, 5 April, 1640. He studied first at the English College in Rome, his professor of theology being the distinguished Jesuit Vasquez. He was professed in the Benedictine Order in 1590 at Monte Cassino, being then a priest of mature age, and, says Weldon, a learned and virtuous man. He was sent on the English mission in 1603, landing at Yarmouth, and lived with Dom Sigebert Buckley (the last survivor of the monks of Westminster) until the latter's death in 1710. Before this he had been indicted at the Middlesex Sessions for the crime of being a priest, and the year after Dom Buckley's death he seems to have been in prison, as he delegated his authority to two other monks. Expelled from England three years later, he took part at Reims in the negotiations for the union of the English monks of Monte Cassino, Valladolid, and the old English Congregation. He returned to England and was again imprisoned, first in the Clink, on the south side of the Thames, and later in the Archbishop of Canterbury's palace at Croydon. In one prison or another he wrote, under the assumed name of Widdington, several works treating of the oath of allegiance proposed by King James I, of which (together with many other Benedictines and secular priests) he was an upholder and apologist against the Jesuits. Weldon says that Preston "evermore disowned" the books written under the name of Widdington, but there is no doubt that he was the author of them. Towards the end of his life, however, he seems to have altered his views, or at any rate to have made full submission on the question of the oath to the authorities of Rome.

D. O. HUNTER-BLAIR.

Preston, THOMAS SCOTT, Vicar-General of New York, prothonotary Apostolic, chancellor, distinguished convert, author, preacher, and administrator, b. at Hartford, Connecticut, 23 July, 1824; d. at New York, 4 Nov., 1891. From his youth he was serious, pious, and zealous. He studied in the Episcopalian general seminary, located at Ninth Avenue and Twentieth Street, New York, where he was recognized as the leader of the High Church party. In 1846 he received deacon's orders, and served in this

capacity at Trinity Church, the Church of the Annunciation in West Fourteenth Street, and at Holy Innocents, West Point. In 1847 he was ordained presbyter by Bishop Delancey of Western New York, his own bishop having refused to advance him to this order on account of his ritualistic views. He believed himself now a validly ordained priest of the English branch of the One, Holy, Catholic, Apostolic Church, and served for some time at St. Luke's, Hudson Street, New York, hearing confessions and urging frequent Holy Communion. He was a deep student of the early history of the Church and of the Fathers, and thus gradually began to feel the branch theory untenable. He was convinced of the truth of Catholicity, as well as of his obligation to embrace it, before he had ever read a professedly Catholic book, or spoken to a priest. He was baptized and received into the Church on 14 November, 1849. In the autumn of 1850 he was ordained priest, and assigned to duty in the cathedral. In 1851 he was appointed pastor of Yonkers with out-missions at Dobbs Ferry and Tarrytown. In 1853 he became secretary to Archbishop Hughes, and chancellor of the diocese. He was appointed pastor of St. Ann's in 1863, and was promoted in 1872 to be vicar-general. During the absence of Archbishop Corrigan in 1890 he was administrator of the diocese. He founded and directed for many years the Sisters of the Divine Compassion. He was a man of exquisite refinement, of tender piety, and of intense loyalty. His Advent and Lenten conferences attracted multitudes from all parts of the city. His works are: "Reason and Revelation" (New York, 1868); "The Divine Paraclete" (1879); "Ark of the Covenant" (1860); "The Divine Sanctuary" (1887); "Gethsemani" (1887); "The Sacred Year" (1885); "Vicar of Christ" (1878); "The Protestant Reformation" (1879); "Protestantism and the Church" (1882); "Protestantism and the Bible" (1888); "Christian Unity" (1881); "The Watch on Calvary" (1885); "Christ and the Church" (1870); "God and Reason" (1884); "Devotion to the Sacred Heart".

Preston, Vicar General* (New York); *Catholic Family Almanac* (1893); *Monsignor Preston's Views* (New York, 1890); CORNELL, *Beginnings of the Church in Yonkers* (Yonkers, 1893); *Golden Jubilee of St. Ann's Parish* (1902).

MICHAEL J. LAVELLE.

Presumption (Lat. *præsumere*, "to take before", "to take for granted") is here considered as a vice opposed to the theological virtue of hope. It may also be regarded as a product of pride. It may be defined as the condition of a soul which, because of a badly regulated reliance on God's mercy and power, hopes for salvation without doing anything to deserve it, or for pardon of his sins without repenting of them. Presumption is said to offend against hope by excess, as despair by defect. It will be obvious, however, to one who ponders what is meant by hope, that this statement is not exact. There is only a certain analogy which justifies it. As a matter of fact we could not hope too much, assuming that it is really the supernatural habit which is in question.

Suarez ("De spe", disp. 2^a, sect. 3, n. 2) enumerates five ways in which one may be guilty of presumption, as follows: (1) by hoping to obtain by one's natural powers, unaided, what is definitely supernatural, viz. eternal bliss or the recovery of God's friendship after grievous sin (this would involve a Pelagian frame of mind); (2) a person might look to have his sins forgiven without adequate penance (this, likewise, if it were based on a seriously entertained conviction, would seem to carry with it the taint of heresy); (3) a man might expect some special assistance from Almighty God for the perpetration of crime (this would be blasphemous as well as presumptuous); (4)

one might aspire to certain extraordinary supernatural excellencies, but without any conformity to the determinations of God's providence. Thus one might aspire to equal in blessedness the Mother of God; (5) finally, there is the transgression of those who, whilst they continue to lead a life of sin, are as confident of a happy issue as if they had not lost their baptismal innocence. The root-malice of presumption is that it denies the supernatural order, as in the first instance, or travesties the conception of the Divine attributes, as in the others. Theologians draw a sharp distinction between the attitude of one who goes on in a vicious career, precisely because he counts upon pardon, and one whose persistence in wrongdoing is accompanied, but not motivated, by the hope of forgiveness. The first they impeach as presumption of a very heinous kind; the other is not such specifically. In practice it happens for the most part that the expectation of ultimate reconciliation with God is not the cause, but only the occasion, of a person's continuing in sinful indulgence. Thus the particular guilt of presumption is not contracted.

SLATER, *Manual of Moral Theology* (New York, 1908); RICK-ABY, *Moral Teaching of St. Thomas* (London, 1896); ST. THOMAS, *Summa* (Turin, 1885); BALLERINI, *Opus Theol. Morale* (Prato, 1899).

JOSEPH F. DELANY.

Presumption (IN CANON LAW), a term signifying a reasonable conjecture concerning something doubtful, drawn from arguments and appearances, which by the force of circumstances can be accepted as a proof. It is on this presumption our common adage is based: "Possession is nine points of the law". Presumption has its place in canon law only when positive proofs are wanting, and yet the formulation of some judgment is necessary. It is never in itself an absolute proof, as it only presumes that something is true. Canonists divide presumption into (1) presumption of law (*juris*), or that which is deduced from some legal precept or authority expressed in law or based upon precedents or similarities, and (2) presumption of a judge or man (*judicis* or *hominis*), when the law is silent on the subject and an opinion must be formed according to the way that circumstances and indications would affect a prudent man or judge.

There are several sub-varieties of presumption of law. Thus, it is called presumption of law alone (*juris tantum*) when a thing is judged to be so until the contrary is proved. Hence the legal formulæ: "Everyone is presumed innocent until his guilt is proved"; "Once bad always bad" (i. e. in the same species of ill-doing, if amendment is not certain); "What is known in a remote place is known in a neighbouring place", and others similar. It is denominated presumption *juris et de jure*, when the law so strongly supports the presumption that it is held to be certain in judicial proceedings. Against such a presumption no proofs are admitted except the evident truth. Thus, goods described in the inventory made by a guardian are presumed to belong to the possessions of the deceased, nor would the later testimony of the guardian himself to the contrary ordinarily be admitted. As to the presumption *judicis* or *Hominis*, it is called (a) *vehement*, when the probability is very strongly supported by most urgent conjectures. Thus, a birth would be held illegitimate, which took place eleven months after a husband's decease. A vehement presumption is considered equivalent to a full proof in civil causes of not too great importance. As to whether it should have sufficient effect in criminal causes to produce the condemnation of an accused person, canonists do not agree. It is termed (b) *probable*, when it arises from less urgent and only less probable conjectures and indications. Such presumption is looked on as merely a semi-proof, unless it be sustained by public

rumour, in which case it is held as sufficient proof. Finally, it is denominated (c) *rash*, or *temerarious*, if it rests on insufficient conjectures or scarcely probable arguments. Such presumption is to be entirely rejected as a proof.

The foundation of these legal presumptions is to be sought in the natural conclusions drawn from the ordinary happenings of common life and the consideration of the motives that usually sway men in given circumstances. The general rules are thus formulated: "What is natural is presumed to be in the person or case in question"; "Change is not to be presumed"; "Presumption is to be formed from the favourable side". As to effects, when there is question of presumption *juris*, it abstracts from the necessity of proof; not so presumption *hominis*. A judge can follow the first in civil cases even when doubt remains, not so the second. The former places the burden of proof on the adversary, but the latter does not. Finally, the first is considered of itself equivalent to proof, while the second needs corroboration from something extraneous to itself.

WILLIAM H. W. FANNING.

Pretorium.—This name is derived from the Latin *prætorium*, in later Greek τὸ πραιτόριον. Originally, *prætorium* signified the general's or prætor's tent in Roman camps; then it was applied to the military council sitting there in judgment, and later to the official residence of the provincial governor, a palace or castle. In the Gospel (v. g., Matt., xxvii, 27) it denotes the building Pilate occupied at the time of Christ's Passion. There were two castles of this kind, both built by Herod. The first rose on the site of the tower of Birah, or tower of the House (II Esd., ii, 8; cf. I Mach., xiii, 53), called Baris by Josephus ("Ant. Jud.", XV, xi, 4; "Bell. Jud.", I, iii, 3). The tower of Baris stood on a rocky mass about 350 feet long and 130 feet wide, cut perpendicularly to a height of 30 feet on the south side, at a distance of a hundred yards from the north-west corner of the Temple enclosure, and to a height of 15 feet on the north, where it was separated from Mount Bezetha by a ditch nearly 200 feet wide. On this rock, now occupied by the Turkish barracks, Herod built a new fortress. Between the rock and the Temple enclosure he made two wide courts surrounded with porticoes. The castle, called Antonia in honour of Mark Antony, is described by Josephus in glowing terms (Bell. Jud., V, v, 8). Some years later, Herod built a second palace, on the northern brow of Mount Sion, at the western extremity of the town.

That Pilate resided in one of these two castles when Jesus was brought before him can scarcely be doubted; and the early tradition which locates the pretorium in the fortress of Antonia is well supported by history and archæology. During the Paschal solemnities, riots and sedition often broke out amongst the Jews in the precincts of the Temple; the Roman soldiers were therefore held under arms at the different porticoes, watching the populace, to suppress any attempted insurrection, the Temple being the watch-tower of the city, as the Antonia was of the Temple (Bell. Jud., V, v, 8). In case of sedition the Temple was accessible only from the Antonia (cf. Bell. Jud., II, xv, 5, 6; VI, i-iii). Pilate came from Cæsarea to Jerusalem solely to look after the Jews assembled around the sanctuary, and in such circumstances he would naturally have resided in the Antonia. St. John (xix, 13) tells us that the paved court, in Greek *Lithostrotos*, where our Lord was sentenced to death, bore the significant name of Gabbatha, in Syro-Chaldean (from Heb. *gaphiphta*, i. e. the raised). So interesting a place could not have been forgotten by the first Christians. In the year 340, St. Cyril

of Jerusalem reminded his flock, as a well-known fact, that the house of Caiphas and the pretorium of Pilate had remained "unto that day a heap of ruins by the might of Him who hung upon the Cross" (Catech., xiii, xxxviii, xxxix). Now, the western palace of Herod was spared by Titus, and served as a citadel to the legion left to garrison the Upper City (Bell. Jud., VII, i, 1). During the rebellion of the Jews under Bar-Cocheba, Julius Severus took it by assault; but Hadrian rebuilt it and made of it the citadel of Ælia Capitolina (Eutychius of Alex., "Annales"). Whereas the Antonia was utterly destroyed by Titus (Bell. Jud., VI, ii, 7), and history tells of no building raised upon its ruins before the fifth century.

THE ARCH OF ECCE HOMO, JERUSALEM

In 333 the Bordeaux pilgrim mentions Golgotha as being on his left as he was walking from Mount Sion towards the northern Gate: "On the right", he says, "we perceive, down in the valley, walls where once stood the house or pretorium of Pilate. There the Lord was judged before His Passion." The Breviary of Jerusalem (c. 436) mentions in the pretorium "a great basilica called St. Sophia, with a chapel, *cubiculum*, where our Lord was stripped of his garments and scourged". Peter the Iberian (c. 454) went down from Golgotha "to the basilica named after Pilate", and thence to that of the Paralytic, and then to Gethsemane. The local tradition remained constant, showing at all times up to the present day the pretorium of Pilate to have been in the Antonia.

Of this fortress there still remain three piers and two archivolts of the triple gateway, which gave access to the castle. The central arch, which crosses the street, and which from the sixteenth century only has been called Arch of the Ecce Homo, measures 20 feet. The smaller one, on the north, is enclosed in the new church of the Ecce Homo (1); the small southern arch has disappeared. The gateway extends 66 feet. To the east of the Arch of the Ecce Homo is a court paved with rectangular stone blocks, over 15 inches thick. It measures about 130 feet by 95 feet, and is bordered at the east end by foundation walls of ancient buildings.

THE ROCK OF BARIS AND THE TURKISH BARRACKS, JERUSALEM

This is the outer court or the Lithostrotos. On the day of Christ's trial, the Jews could not penetrate further amongst pagan dwellings without contracting a legal delilement. On this pavement stands the chapel of the Condemnation (2), restored in the twelfth century and rebuilt in 1904. The chapel of the Flagellation (3) rises about 100 feet more to the east; it dates probably from the fifth century, but has been three times rebuilt. On the rock of Baris, the natural site of the royal palace, was the tribunal, "the inner court", called "the court of the pretorium" in the Syrian Version (Mark, xv, 16). The chapel of the Crowning with Thorns (5), built in the twelfth century, is still well preserved. The basilica of St. Sophia (6), reconstructed in the twelfth century, stood towards the east. It was transformed later into a Turkish tribunal, and finally razed to the ground in 1832, when new barracks were erected.

BARNABAS MEISTERMANN.

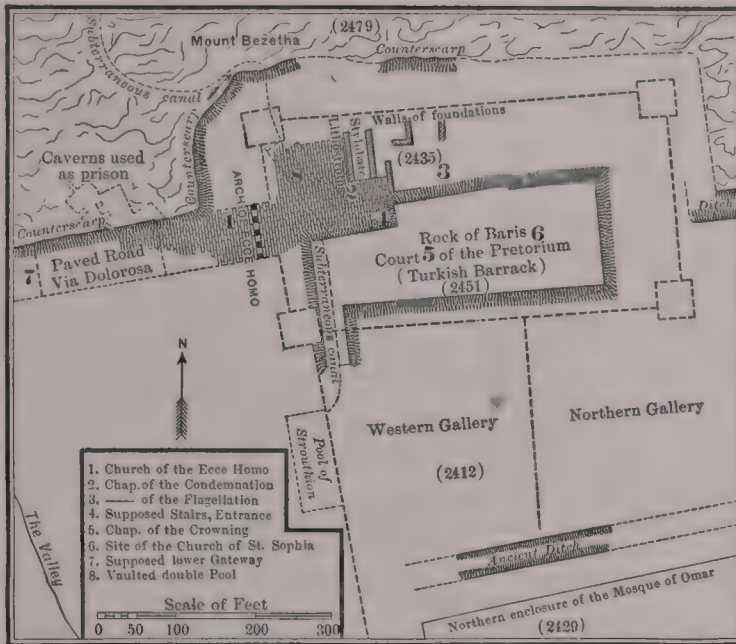

Pride is the excessive love of one's own excellence. It is ordinarily accounted one of the seven capital sins. St. Thomas, however, endorsing the appreciation of St. Gregory, considers it the queen of all vices, and puts vainglory in its place as one of the deadly sins. In giving it this pre-eminence he takes it in a most formal and complete signification. He understands it to be that frame of mind in which a man, through the love of his own worth, aims to withdraw himself from subjection to Almighty God, and sets at naught the commands of superiors. It is a species of contempt of God and of those who bear his commission. Regarded in this way, it is of course a mortal sin of a most heinous sort. Indeed St. Thomas rates it in this sense as one of the blackest of sins. By it the creature refuses to stay within his essential orbit; he turns his back upon God, not through weakness or ignorance, but solely because in his self-exaltation he is minded not to submit. His attitude has something Satanic in it, and is probably not often verified in human beings. A less atrocious kind of pride is that which impels one to make much of oneself unduly and without sufficient warrant, without however any disposition to cast off the dominion of the Creator. This may happen, according to St. Gregory, either because a man regards himself as the source of such advantages as he may discern in himself, or because, whilst admitting that God has bestowed them, he reputes this to have been in response to his own merits, or because he attributes to himself gifts which he has not; or, finally, because even when these are real he unreasonably looks to be put ahead of others. Supposing the conviction indicated in the first two instances to be seriously entertained, the sin would be a grievous one and would have the added guilt of heresy. Ordinarily, however, this erroneous persuasion does not exist; it is the demeanour

that is reprehensible. The last two cases generally speaking are not held to constitute grave offences. This is not true, however, whenever a man's arrogance is the occasion of great harm to another, as, for instance, his undertaking the duties of a physician without the requisite knowledge. The same judgment is

to be rendered when pride has given rise to such temper of soul that in the pursuit of its object one is ready for anything, even mortal sin. Vain-glory, ambition, and presumption are commonly enumerated as the offspring vices of pride, because they are well adapted to serve its inordinate aims. Of themselves they are venial sins unless some extraneous consideration puts them in the ranks of grievous transgressions. It should be noted that presumption does not here stand for the sin against hope. It means the desire to essay what exceeds one's capacity.

Priene, a titular see of Asia Minor, suffragan of Ephesus. The foundation of the town of Priene dates from the period when the Carians, Leleges and Lycians, were sole masters of the country. Later it was occupied by the Ionians and became one of the twelve cities of Ionia. It was a holy city, and chose the leader of the Panionian feasts. Its temple of Athena, built by Alexander, contained an ancient statue of that goddess. Situated on the southern slope of Mount Mycale, it never attained great development, although it had at first two harbours and a fleet. In the time of Augustus it was already forty stadia from the sea because of the inroads of the Meander. It was conquered by the Lycian King Ardys, then by Cyrus, and remained subject to the Persians till the time of Alexander. Priene endured great hardships under the Persian general Tabates and later under Hiero, one of its citizens. After regaining autonomy, it remained attached to the Ionic confederation. It was the birthplace of the philosopher Bias. The "Notitiæ episcopatum" mentions it as a suffragan of Ephesus until the thirteenth century. Four of its bishops are known: Theosebius, present at the Council of Ephesus (431); Isidore, who was living in 451; Paul, present at the Council of Constantinople (692); Demetrius, in the twelfth century. The beautiful ruins of Priene are at Samsoun Kalessi, near the Greek village of Kelitesh in the vilayet of Smyrna, about two miles from the sea.

Prierias, SYLVESTER. See MAZZOLINI, SYLVESTER.

Priest.—This word (etymologically “elder”, from *πρεσβύτερος*, *presbyter*) has taken the meaning of “sacerdos”, from which no substantive has been formed in various modern languages (English, French, German). The priest is the minister of Divine worship, and especially of the highest act of worship, sacrifice. In this sense, every religion has its priests, exercising more or less exalted sacerdotal functions as intermediaries between man and the Divinity (cf. Heb., v, 1: “for every high priest taken from among men, is ordained for men in the things that appertain to God, that he may offer up gifts and sacrifices for sins”). In various ages and countries we find numerous and important differences: the priest properly so called may be assisted by inferior ministers of many kinds; he may belong to a special class or caste, to a clergy, or else may be like other citizens except in what concerns his sacerdotal functions; he may be a member of a hierarchy, or, on the contrary, may exercise an independent priesthood (e. g. Melchisedech, Heb., vii, 1-33); lastly, the methods of recruiting the ministers of worship, the rites by which they receive their powers, the authority that establishes them, may all differ. But, amid all these accidental differences, one fundamental idea is common to all religions: the priest is the person authoritatively appointed to do homage to God in the name of society, even the primitive society of the family (cf. Job, i, 5), and to offer Him sacrifice (in the broad, but especially in the strict sense of the word). Omitting further discussion of the general idea of the priesthood, and neglecting all reference to pagan worship, we may call attention to the organization among the people of God of a Divine service with ministers properly so-called: the priests, the inferior clergy, the Levites, and at their head the high-priest. We know the detailed regulations contained in Leviticus as to the different sacrifices offered to God in the Temple at Jerusalem, and the character and duty of the priests and Levites. Their ranks were recruited, in virtue not of the free choice of individuals, but of descent in the tribe of Levi (especially the family of Aaron), which had been called by God to His ritual service to the exclusion of all others. The elders (*πρεσβύτεροι*) formed a kind of council, but had no sacerdotal power; it was they who took counsel with the chief priests to capture Jesus (Matt., xxvi, 3). It is this name *presbyter* (elder) which has passed into the Christian speech to signify the minister of Divine service, the priest.

The Christian law also has necessarily its priesthood to carry out the Divine service, the principal act of which is the Eucharistic Sacrifice, the figure and renewal of that of Calvary. This priesthood has two degrees: the first, total and complete, the second an incomplete participation of the first. The first belongs to the bishop. The bishop is truly a priest (*sacerdos*), and even a high-priest; he has chief control of the Divine worship (*sacrorum antistes*), is the president of liturgical meetings; he has the fullness of the priesthood, and administers all the sacraments. The second degree belongs to the priest (*presbyter*), who is also a *sacerdos*, but of the second rank (“*secundi sacerdotes*” Innocent I ad Eugub.); by his priestly ordination he receives the power to offer sacrifice (i. e. to celebrate the Eucharist), to forgive sins, to bless, to preach, to sanctify, and in a word to fulfil the non-reserved liturgical duties or priestly functions. In the exercise of these functions, however, he is subject to the authority of the bishop to whom he has promised canonical obedience; in certain cases even he requires not only authorization, but real jurisdiction, particularly to forgive sins and to take care of souls. Moreover, certain acts of the sacerdotal power, affecting the society of which the bishop is the head, are reserved to the latter—e. g. confirmation, the final rite of Christian initiation, ordination, by which the ranks of the clergy are recruited, and the solemn consecration of

new temples to God. Sacerdotal powers are conferred on priests by priestly ordination, and it is this ordination which puts them in the highest rank of the hierarchy after the bishop.

As the word *sacerdos* was applicable to both bishops and priests, and one became a *presbyter* only by sacerdotal ordination, the word *presbyter* soon lost its primitive meaning of “ancient” and was applied only to the minister of worship and of the sacrifice (hence our *priest*). Originally, however, the *presbyteri* were the members of the high council which, under the presidency of the bishop, administered the affairs of the local church. Doubtless in general these members entered the *presbyterate* only by the imposition of hands which made them priests; however, that there could be, and actually were *presbyteri* who were not priests, is seen from canons 43-47 of Hippolytus (cf. Duchesne, “*Origines du culte chrétien*”, append.), which show that some of those who had confessed the Faith before the tribunals were admitted into the *presbyterium* without ordination. These exceptions were, however, merely isolated instances, and from time immemorial ordination has been the sole manner of recruiting the *presbyteral* order. The documents of antiquity show us the priests as the permanent council, the auxiliaries of the bishop, whom they surround and aid in the solemn functions of Divine Worship. When the bishop is absent, he is replaced by a priest, who presides in his name over the liturgical assembly. The priests replace him especially in the different parts of the diocese, where they are stationed by him; here they provide for the Divine Service, as the bishop does in the episcopal city, except that certain functions are reserved to the latter, and the others are performed with less liturgical solemnity. As the churches multiplied in the country and towns, the priests served them with a permanent title, becoming rectors or titulars. Thus, the bond uniting such priests to the cathedral church gradually became weaker, whereas it grew stronger in the case of those who served in the cathedral with the bishop (i. e. the canons); at the same time the lower clergy tended to decrease in number, inasmuch as the clerics passed through the inferior orders only to arrive at the sacerdotal ordination, which was indispensable for the administration of the churches and the exercise of a useful ministry among the faithful. Hence ordinarily the priest was not isolated, but was regularly attached to a definite church or connected with a cathedral. Accordingly, the Council of Trent (Sess. XXIII, cap. xvi, renewing canon vi of Chalcedon) desires bishops not to ordain any clerics but those necessary or useful to the church or ecclesiastical establishment to which they are to be attached and which they are to serve.

The nature of this service depends especially on the nature of the benefice, office, or function assigned to the priest; the Council in particular desires (cap. xiv) priests to celebrate Mass at least on Sundays and holydays, while those who are charged with the care of souls are to celebrate as often as their office demands.

Consequently, it is not easy to say in a way applicable to all cases what are the duties and rights of a priest; both vary considerably in individual cases. By his ordination a priest is invested with powers rather than with rights, the exercise of these powers (to celebrate Mass, remit sins, preach, administer the sacraments, direct and minister to the Christian people) being regulated by the common laws of the church, the jurisdiction of the bishop, and the office or charge of each priest. The exercise of the sacerdotal powers is both a duty and a right for priests having the care of souls, either in their own name (e. g. parish priests) or as auxiliaries (e. g. parochial curates). Except in the matter of the care of souls the sacerdotal functions are likewise obligatory in the case of priests having any benefice or office in a

church (e. g. canons); otherwise they are optional, and their exercise depends upon the favour of the bishop (e. g. the permission to hear confessions or to preach granted to simple priests or to priests from outside the diocese). As for the case of a priest who is entirely free, moralists limit his obligations, as far as the exercise of his sacerdotal powers is concerned, to the celebration of Mass several times a year (St. Alphonsus Liguori, l. VI, no. 313) and to the administration of the sacraments in case of necessity, in addition to fulfilling certain other obligations not strictly sacerdotal (e. g. the Breviary, celibacy). But canonical writers, not considering such a condition regular, hold that the bishop is obliged in this case to attach such a priest to a church and impose some duty on him, even if it be only an obligatory attendance at solemn functions and processions (Innocent XIII, Constitution "Apostolici ministerii", 23 March, 1723; Benedict XIII, Const. "In supremo", 23 Sept., 1724; Roman Council of 1725, tit. vi, c. ii).

As to the material situation of the priest, his rights are clearly laid down by canon law, which varies considerably with the actual condition of the Church in different countries. As a matter of principle, each cleric ought to have from his ordination to the subdiaconate a benefice, the revenues of which ensure him a respectable living and, if he is ordained with a title of patrimony (i. e. the possession of independent means sufficient to provide a decent livelihood), he has the right to receive a benefice as soon as possible. Practically the question seldom arises in the case of priests, for clerics are ordinarily ordained with the title of ecclesiastical service, and they cannot usefully fill a remunerated post unless they are priests. Each priest ordained with the title of ecclesiastical service has therefore the right to ask of his bishop, and the bishop is under an obligation to assign him, a benefice or ecclesiastical office which will ensure him a respectable living; in this office the priest has therefore the right to collect the emoluments attached to his ministry, including the offerings which a legitimate custom allows him to receive or even demand on the occasion of certain definite functions (stipends for Masses, curial rights for burial etc.). Even when old or infirm, a priest who has not rendered himself unworthy and who is unable to fulfil his ministry remains a charge on his bishop, unless other arrangements have been made. It is thus apparent that the rights and duties of a priest are, in the concrete reality, conditioned by his situation. (See **BENEFICE**; **PASTOR**; **PARISH PRIEST**; **PRIESTHOOD**.)

A. BOUDINHON.

Priest, ASSISTANT.—The assistant priest (*presbyter assistens*, anciently called *capellanus*) is the first and highest in dignity of the ministers who assist the bishop in pontifical functions. Where there are cathedral chapters, ordinarily the first dignitary acts as assistant priest; but if the bishop only assists at a service, then the first canon after the dignitaries should serve in this capacity. If a priest preaches at pontifical Mass, the preacher should also be assistant priest. A cardinal-bishop acts as assistant priest for the pope. By privilege, prothonotaries *de numero participantium* and mitred abbots may have an assistant priest when they celebrate pontifical Mass; and so also, but with some restrictions, supernumerary prothonotaries and prothonotaries *ad instar*. Certain dignitaries and canons in virtue of ancient custom are similarly privileged, and finally the Sacred Congregation of Rites tolerates the custom of having an assistant priest at a priest's first solemn Mass. While assisting the celebrant the assistant priest wears the

cope and amice over his surplice or rochet; but while assisting the bishop presiding at the throne he wears his regular choral dress. At the throne his stool is placed on the platform of the throne, regularly at the right and a little in front of the first assistant deacon. When the celebrant uses the faldstool, the assistant priest sits on the bench at the deacon's right; but when the celebrant uses the bench, the assistant priest sits on a stool placed at the end of the bench and usually at the right of the deacon. His chief duty is to attend to the book, which he holds for most of the parts which the celebrant sings, and at the altar he turns the leaves, points out the text, etc. He ministers the ring, presents the towel, and receives the kiss of peace first, from the celebrant, and conveys it to the choir. At the throne he also ministers the incense and incenses the bishop. Sometimes it is his duty to publish the episcopal indulgences. When the bishop presides at the throne, part of the time the assistant priest occupies his place at the throne, and part of the time his regular place in the choir, and then he ministers the incense, incenses the bishop, and brings the kiss of peace from the celebrant to the bishop. In other pontifical functions besides the Mass and the Divine Office his duties are similar to those described.

J. F. GOGGIN.

Priest, THE HIGH.—The high-priest in the Old Testament is called by various names: הכהן, i. e. the priest (Num., iii, 6); הכהן הגדול, i. e. the great priest (Lev., xxi, 10); כהן הראש, i. e. the head priest (IV Kings, xxv, 18); הכהן המשיח, i. e. the anointed priest (Lev., iv, 3): Gr., Ἀρχιερεύς (Lev., iv, 3), also in later books and New Testament. In the Old Testament ὁ ἱερεὺς (Num., iii, 6); ἱερεὺς ὁ πρῶτος (IV Kings, xxv, 18); ὁ ἱερεὺς ὁ μέγας (Lev., xxi, 10), are the common forms. A coadjutor or second priest was called כהן המשנה (IV Kings, xxv, 18; see Gesenius, s. v. מִשְׁנָה).

Aaron and his sons were chosen by God to be priests, Aaron being the first high-priest and Eleazar his successor; so that, though the Scripture does not say so explicitly, the succession of the eldest son to the office of high-priest became a law. The consecration of Aaron and his sons during seven days and their vestments are described in Ex., xxviii, xxix (cf. Lev., viii, 12; Ecclus., xlv, 7 sqq.). Aaron was anointed with oil poured on his head (Lev., viii, 12); hence he is called "the priest that is anointed" (Lev., iv, 3). Some texts seem to require anointing for all (Ex., xxx, 30; Lev., x, 7; Num., iii, 3), but Aaron was anointed with oil in great profusion, even on the head (Ex., xxix, 7), to which reference is made in Ps. cxxxii, 2, where it is said that the precious ointment ran down upon his beard and "to the skirt of his garment". The ointment was made of myrrh, cinnamon, calamus, cassia, and olive oil, compounded by the perfumer or apothecary (Ex., xxx, 23-25; Josephus, "Ant.", III, viii, 3), and not to be imitated nor applied to profane uses (Ex., xxx, 31-33).

After the Exile anointing was not in use: both high-priests and priests were consecrated by simple investiture. The rabbis held that even before the Exile the high-priest alone was anointed by pouring the sacred oil "over him" and applying it to his forehead over the eyes "after the form of the Greek X" (Edersheim, "The Temple, Its Ministry and Service at the Time of Jesus Christ", 71). No age is specified, and thus youth was no impediment to the appointment by Herod of Aristobulus to the high-priesthood, though the latter was in his seventeenth year (Josephus, "Antiq.", XV, iii, 3). Josephus gives a list of eighty-three high-priests from Aaron to the destruction of the Temple by the Romans (Ant., XX, x). They were in the be-

gining chosen for life, but later removed at will by the secular power (Jos., "Ant.", XV, iii, 1; XX, x), so that "the numbers of the high-priests from the days of Herod until the day when Titus took the Temple and the city, and burnt them, were in all twenty-eight; the time also that belonged to them was one hundred and seven years" (Jos., "Ant.", XX, x). Thus one-third of the high-priests of fifteen centuries lived within the last century of their history: they had become the puppets of the temporal rulers. The frequency of change in the office is hinted at by St. John (xi, 51), where he says that Caiaphas was "the high-priest of that year". Solomon deposed Abiathar for having supported the cause of Adonias, and gave the high-priesthood to Sadoc (III Kings, ii, 27, 35); then the last of Heli's family was cast out, as the Lord had declared to Heli long before (I Kings, ii, 32). It seems strange, therefore, that Josephus (Ant., XV, iii, 1) states that Antiochus Epiphanes was the first to depose a high-priest. It may be that he regarded Abiathar and Sadoc as holding the office conjointly, since Abiathar "the priest" and Sadoc "the priest" were both very prominent in David's reign (III Kings, i, 34; I Par., xvi, 39, 40). Josephus may have considered the act of Solomon the means of a return to unity; moreover, in the same section where he mentions the change, he says that Sadoc was high-priest in David's reign (Ant., VIII, i, 3), and adds "the king [Solomon] also made Zadok to be alone the high-priest" (Ant., VIII, i, 4). Shortly before the destruction of the Temple by the Romans the zealots chose by lot a mere rustic named Phannias as the last high-priest: thus the high-priesthood, the city and the Temple passed away together (Josephus, "Bell. Jud.", IV, iii, 8).

The prominence of Solomon at the dedication of the Temple need not lead to the conclusion that the king officiated also as priest on the occasion. Smith ("Ency. Bib.", s. v. *Priest*) maintains this, and that the kings of Juda offered sacrifice down to the Exile, alleging in proof such passages as III Kings, ix, 25; but since priests are mentioned in this same book, for instance, viii, 10, 11 such inference is not reasonable. As Van Hoonacker shows, the prominence of the secular power in the early history of the people and the apparent absence of even the high-priest during the most sacred functions, as well as the great authority possessed by him after the Exile, do not warrant the conclusion of Wellhausen that the high-priesthood was known only in post-Exilic times. That such a change could have taken place and could have been introduced into the life of the nation and so easily accepted as a Divine institution is hardly probable. We have, however, undoubted references to the high-priest in pre-Exilic texts (IV Kings, xi, xii; xvi, 10; xxii; xxiii, etc.) which Buhl ("The New Schaff-Herzog Ency. of Religious Knowledge", s. v. *High Priest*) admits as genuine, not interpolations, as some think, by which the "later office may have had a historic foreshadowing". We see in them proofs of the existence of the high-priesthood, not merely its "foreshadowing". Then too the title "the second priest" in Jer., lii, 24, where the high-priest also is mentioned, is a twofold witness to the same truth; so that though, as Josephus tells us (Ant., XX, x), in the latter years of the nation's history "the high-priests were entrusted with a dominion over the nation" and thus became, as in the days of the sacerdotal Machabees, more conspicuous than in early times, yet this was only an accidental lustre added to an ancient and sacred office.

In the New Testament (Matt., ii, 4; Mark, xiv, 1, etc.) where reference is made to chief priests, some think that these all had been high-priests, who having been deposed constituted a distinct class and had great influence in the Sanhedrin. It is clear from John, xviii, 13, that Annas, even when deprived of the pontificate, took a leading part in the deliberations of

that tribunal. Schürer holds that the chief priests in the New Testament were ex-high-priests and also those who sat in the council as members and representatives of the privileged families from whom the high-priests were chosen (The Jewish People, Div. II, V, i, 204-7), and Maldonatus, in Matt., ii, 6, cites I Par., xxxvi, 14, showing that those who sat in the Sanhedrin as heads of priestly families were so styled.

The high-priest alone might enter the Holy of Holies on the day of atonement, and even he but once a year, to sprinkle the blood of the sin-offering and offer incense: he prayed and sacrificed for himself as well as for the people (Lev., xvi). He likewise officiated "on the seventh days and new moons" and annual festivals (Jos., "Bell. Jud.", V, v, 7). He might marry only a virgin "of his own people", though other priests were allowed to marry a widow; neither was it lawful for him to rend his garments nor to come near the dead even if closely related (Lev., xxi, 10-14; cf. Josephus, "Ant.", III, xii, 2). It belonged to him also to manifest the Divine will made known to him by means of the urim and thummim, a method of consulting the Lord about which we have very little knowledge. Since the death of the high-priest marked an epoch in the history of Israel, the homicides were then allowed to return home from the city where they had found a refuge from vengeance (Num., xxxv, 25, 28).

The typical character of the high-priest is explained by St. Paul (Heb., ix), where the Apostle shows that while the high-priest entered the "Holy of Holies" once a year with the blood of victims, Christ, the great high-priest, offered up His own blood and entered into Heaven itself, where He "also maketh intercession for us" (Rom., viii, 34; see Piconio, "Trip. Expos. in Heb.", ix).

In addition to what other priests wore while exercising their sacred functions the high-priest put on special golden robes, so called from the rich material of which they were made. They are described in Ex., xxviii, and each high-priest left them to his successor. Over the tunic he put a one piece violet robe, trimmed with tassels of violet, purple, and scarlet (Joseph., III, vii, 4), between the two tassels were bells which rang as he went to and from the sanctuary. Their mitres differed from the turbans of the ordinary priests, and had in front a golden plate inscribed "Holy to the Lord" (Ex., xxviii, 36). Josephus describes the mitre as having a triple crown of gold, and adds that the plate with the name of God which Moses had written in sacred characters "hath remained to this very day" (Ant., VIII, iii, 8; III, vii, 6). In a note to Whiston's Josephus (Ant., III, vii, 6) the later history of the plate is given, but what became of it finally is not known. The precious vestments of the high-priest were kept by Herod and by the Romans, but seven days before a festival they were given back and purified before use in any sacred function (Jos., "Ant.", XVIII, iv, 3). On the day of atonement, according to Lev., xvi, 4, the high-priest wore pure linen, but Josephus says he wore his golden vestments (Bell. Jud., V, v, 7), and to reconcile the two Edersheim thinks that the rich robes were used at the beginning of the ceremony and changed for the linen vestments before the high-priest entered the Holy of Holies (The Temple, p. 270). For additional information concerning the vestments and ornaments of the high-priest see EPHOD, ORACLE, PECTORAL, URIM AND THUMMIM.

Bib.*, s. v. *Priest*, gives the radical view; ORR, *The Problem of the Old Testament* (1906), 180-90, refutes Wellhausen and others of the radical school.

JOHN J. TIERNEY.

Priesthood.—The word priest (Germ. *Priester*; Fr. *prêtre*; Ital. *prete*) is derived from the Greek *πρεσβύτερος* (the elder, as distinguished from *νεώτερος*, the younger), and is, in the hieratical sense, equivalent to the Latin *sacerdos*, the Greek *ιερεύς*, and the Hebrew כהן. By the term is meant a (male) person called to the immediate service of the Deity and authorized to hold public worship, especially to offer sacrifice. In many instances the priest is the religious mediator between God (gods) and man and the appointed teacher of religious truths, especially when these include esoteric doctrines. To apply the word priest to the magicians, prophets, and medicine-men of the religions of primitive peoples is a misuse of the term. The essential correlative of priesthood is sacrifice, consequently, mere leaders in the public prayers or guardians of shrines have no claim to the title priest. Our subject may be conveniently treated under four heads: I. The Pagan Priesthood; II. The Jewish Priesthood; III. The Christian Priesthood; IV. The Blessings arising from the Catholic Priesthood.

I. THE PAGAN PRIESTHOOD.—A.—Historically the oldest of pagan religions, the most fully developed, and the most deeply marked by vicissitude is that of India. Four divisions, distinct in history and nature, are recognizable: Vedism, Brahminism, Buddhism, and Hinduism. Even in the ancient Vedic hymns a special priesthood is distinguishable, for, although originally the father of the family was also the offerer of sacrifice, he usually sought the co-operation of a Brahmin. From the essential functions of praying and singing during the sacrifice arose in Vedism the three classes of sacrificing (*adhvariū*), singing (*ud-gātar*), and praying priests (*hotar*). The four categories of soldier, priest, artisan or farmer, and slave developed formally in later Brahminism into the four rigidly distinguished castes (Dahlmann), the Brahmins meanwhile forging ahead of the soldiers to the position of chief importance. The Brahmins alone understood the intricate and difficult sacrificial ceremonial; thanks to their great knowledge and sacrifices, they exercised an irresistible influence over the gods; a pantheistic explanation of the god Brahma invested them with a divine character. The Brahmin was thus a sacred and inviolable person, and to murder him the greatest sin. Brahminism has wrongly been compared with medieval Christianity (cf. Teichmüller, "Religionsphilosophie", Leipzig, 1886, p. 528). In the Middle Ages there was indeed a privileged priesthood, but not an hereditary priestly caste; then as now the lowest classes could attain to the highest ecclesiastical offices. Still less justified, in view of the pantheistic character of the Brahminic religion, are all attempts to trace a genetic connexion between the Catholic and Indian priesthoods, since the monotheistic spirit of Catholicism and the characteristic organization of its clergy are irreconcilable with a pantheistic conception of the Deity and the unsocial temper of a caste system.

The same remarks apply with even greater force to Buddhism which, through the reform introduced by King Asoka (239–23 B. C.), forced Brahminism into the background. As this reform inaugurated the reign of Agnosticism, Illusionism, and a one-sided morality, the Brahminic priesthood, with the decay of the ancient sacrificial services, lost its *raison d'être*. If there be no eternal substance, no Ego, no immortal soul, no life beyond, the idea of a God, of a Redeemer, of a priesthood forthwith disappears. The Buddhist redemption is merely an ascetical self-redemption wrought by sinking into the abyss of nothingness (Nirvana). The bonzes are not priests in the strict sense; nor has Buddhist monasticism anything beyond the name in common with Christian monasticism. Modern zealots for Buddhism declare with increasing boldness since Schopenhauer, that what they chiefly

desire is a religion without dogma and without an alien redeemer, a service without a priesthood. It will therefore perhaps appear all the more extraordinary that Buddhism, in consequence of the efforts of the reformer Thong-Kaba, has developed in Tibet a formal hierarchy and hierocracy in Lamaism (Lama = Brahma).

The monasticism and the religious services of Lamaism also present so striking a similarity with Catholic institutions that non-Catholic investigators have unhesitatingly spoken of a "Buddhist Catholicism" in Tibet. Pope and dalai-lama, Rome and the city of Lhasa are counterparts; Lamaism has its monasteries, bells, processions, litanies, relics, images of saints, holy water, rosary-beads, bishop's mitre, crosier, vestments, copes, baptism, confession, mass, sacrifice for the dead. Nevertheless, since it is the interior spirit that gives a religion its characteristic stamp, we can recognize in these externals, not a true copy of Catholicism, but only a wretched caricature. And, since this religious compound undoubtedly came into existence only in the fourteenth century, it is evident that the remarkable parallelism is the result of Catholic influence on Lamaism, not vice versa. We can only suppose that the founder Thong-Kaba was educated by a Catholic missionary. Of modern Hinduism, Schanz draws a gloomy picture: "In addition to Vishnu and Siva, spirits and demons are worshipped and feared. The River Ganges is held in special veneration. The temples are often built near lakes because to all who bathe there Brahma promises forgiveness of sin. Beasts (cows), especially snakes, trees, and lifeless objects, serve as fetishes. Their offerings consist of flowers, oil, incense, and food. To Siva and his spouse bloody sacrifices are also offered. Nor are idolatry and prostitution wanting" ("Apologie d. Christentums", Freiburg, 1905, II, 84 sq.).

B.—In the kindred but ethically superior religion of the Iranians (Parseeism, Zoroastrianism, Mazdeism), which unfortunately never overcame the theological dualism between the good god (Ormuzd = Athura-Mazda) and the wicked anti-god (Ahriman = Angrô-Mainyu), there existed from the beginning a special priestly caste, which in the Avesta (q. v.) was divided into six classes. The general name for priest was *áthravan* (man of fire), and the chief duty of the priesthood was the fire-service, fire being the special symbol of Ormuzd, the god of light. After the destruction of the Persian monarchy only two categories of priests remained: the officiating (*zoatar*, *jôti*) and the ministering (*rathwi*). Both were later succeeded by the Median magicians (*magus*), called in modern Parseeism *mobed* (from *mogh-pati*, magic-father). In addition to the maintenance of the sacred fire, the duties of the priests were the offering of sacrifices (flesh, bread, flowers, fruit), the performance of purifications, prayers, and hymns, and instructing in the holy law. Sacrificial animals were placed on a bundle of twigs in the open air, lest the pure earth should be defiled with blood. The human sacrifices, customary from time immemorial, were abolished by Zoroaster (Zarathustra). In ancient times the fire-altars were placed in the open air, and preferably on the mountains, but the modern Parsees have special fire-temples. The *haoma*, as the oldest sacrifice, calls for particular mention; manufactured out of the narcotic juice of a certain plant and used as a drink-offering, it was identified with the Deity Himself and given to the faithful as a means of procuring immortality. This Iranian *haoma* is doubtlessly identical with the Indian *soma*, the intoxicating juice of which (*asclepias acida* or *sacrostemma acidum*) was supposed to restore to man the immortality lost in Paradise (see EUCHARIST). When, during the reign of the Sassanides, Mithras the sun-god—according to the later Avesta, high-priest and mediator between God and man—had gradually supplanted the creative god

Ormuzd, Persian Mithra-worship held the field almost unopposed; and under the Roman Empire it exerted an irresistible influence on the West (see MASS).

C.—To turn to classical antiquity, Greece never possessed an exclusive priestly caste, although from the Dorian-Ionian period the public priesthood was regarded as the privilege of the nobility. In Homer the kings also offer sacrifices to the gods. Public worship was in general undertaken by the State, and the priests were state officials, assigned as a rule to the service of special temples. The importance of the priesthood grew with the extension of the mysteries, which were embodied especially in the Orphic and Eleusinian cults. Sacrifices were always accompanied with prayers, for which as the expression of their religious sentiments the Greeks showed a special preference.

But among no people in the world were religion, sacrifice, and the priesthood to such an extent the business of the State as among the ancient Romans. At the dawn of their history, their legendary kings (e. g. Numa) are themselves the sacrificial priests. Under the Republic, the priestly office was open only to the patricians until the Lex Ogulina (about 300 B. C.) admitted also the plebeians. As the special object of Roman sacrifice was to avert misfortune and win the favour of the gods, divination played in it from the earliest times an important rôle. Hence the importance of the various classes of priests, who interpreted the will of the gods from the flight of birds or the entrails of the beasts of sacrifice (*augures*, *haruspices*). There were many other categories: *pontifices*, *flamines*, *fetiales*, *luperci* etc. During imperial times the emperor was the high-priest (*pontifex maximus*).

D.—According to Tacitus, the religion of the ancient Germans was a simple worship of the gods, without images; their services took place, not in temples, but in sacred groves. The priests, if one may call them such, were highly respected, and possessed judicial powers, as the Old High German word for priest, *êwarte* (guardians of justice), shows. But a far greater influence among the people was exercised by the Celtic priests or druids (Old Irish, *druí*, magician). Their real home was Ireland and Britain, whence they were transplanted to Gaul in the third century before Christ. Here they appear as a priestly caste, exempt from taxes and military service; they constitute with the nobility the ruling class, and by their activity as teachers, judges, and physicians become the representatives of a higher religious, moral, and intellectual culture. The druids taught the existence of Divine providence, the immortality of the soul, and transmigration. They appear to have had images of the gods and to have offered human sacrifices—the latter practice may have come down from a much earlier period. Their religious services were usually held on heights and in oak-groves. After the conquest of Gaul the druids declined in popular esteem.

E.—The oldest religion of the Chinese is Sinism, which may be characterized as "the most perfect, spiritualistic, and moral Monotheism known to antiquity outside of Judea" (Schanz). It possessed no distinct priesthood, the sacrifices (animals, fruits, and incense) being offered by state officials in the name of the ruler. In this respect no alteration was made by the reformer Confucius (sixth century B. C.), although he debased the concept of religion and made the almost deified emperor "the Son of Heaven" and the organ of the cosmic intellect. In direct contrast to this priestless system Laotse (b. 604 B. C.), the founder of Taoism (*tao*, reason), introduced both monasticism and a regular priesthood with a high-priest at its head. From the first century before Christ, these two religions found a strong rival in Buddhism, although Confucianism remains even to-day the official religion of China.

The original national religion of the Japanese was

Shintoism, a strange compound of nature-, ancestor-, and hero-worship. It is a religion without dogmas, without a moral code, without sacred writings. The Mikado is a son of the Deity, and as such also high-priest; his palace is the temple—it was only in much later times that the Temple of Ise was built. About A. D. 280 Confucianism made its way into Japan from China, and tried to coalesce with the kindred Shintoism. The greatest blow to Shintoism, however, was struck by Buddhism, which entered Japan in A. D. 552, and, by an extraordinary process of amalgamation, united with the old national religion to form a third. This fusion is known as Rio-bu-Shinto. In the Revolution of 1868, this composite religion was set aside, and pure Shintoism declared the religion of the State. In 1877 the law establishing this situation was repealed, and in 1889 general religious freedom was granted. The various orders of rank among priests had been abolished in 1879.

F.—With the ancient religion of the Egyptians the idea of the priesthood was inseparably bound up for many thousand years. Though the ruler for the time being was nominally the only priest, there had developed even in the ancient kingdom (from about 3400 B. C.) a special priestly caste, which in the middle kingdom (from about 2000 B. C.), and still more in the late kingdom (from about 1090 B. C.), became the ruling class. The great attempt at reform by King Amenhotep IV (died 1374 B. C.), who tried to banish all gods except the sun-god from the Egyptian religion and to make sun-worship the religion of the State, was thwarted by the opposition of the priests. The whole twenty-first dynasty was a family of priest-kings. Although Moses, learned as he was in the wisdom of the Egyptians, may have been indebted to an Egyptian model for one or two external features in his organization of Divine worship, he was, thanks to the Divine inspiration, entirely original in the establishment of the Jewish priesthood, which is based on the unique idea of Jahweh's covenant with the Chosen People (cf. "Realencyklopädie für protest. Theologie", XVI, Leipzig, 1905, 33). Still less warranted is the attempt of some writers on the comparative history of religions to trace the origin of the Catholic priesthood to the Egyptian priestly castes. For at the very time when this borrowing might have taken place, Egyptian idolatry had degenerated into such loathsome animal-worship, that not only the Christians, but the pagans themselves turned away from it in disgust (cf. Aristides, "Apol.", xii; Clement of Alexandria, "Cohortatio", ii).

G.—In the religion of the Semites, we meet first the Babylonian-Assyrian priests, who, under the name "Chaldeans", practised the interpretation of dreams and the reading of the stars and conducted special schools for priests, besides performing their functions in connexion with the sacrifices. Hence their division into various classes: sacrificers (*nišakku*), seers (*bārâ*), exorcists (*āšipu*) etc. Glorious temples with idols of human and hybrid form arose in Assyria, and (apart from the obligatory cult of the stars) served for astrological and astronomical purposes. Among the Syrians the cruel, voluptuous cult of Moloch and Astarte found its special home, Astarte especially (Babylonian, *Ishtar*) being known to the ancients simply as the "Syrian Goddess" (*Dea Syria*). Likewise among the semitized Phœnicians, Amonites, and Philistines these ominous deities found special veneration. Howling and dancing priests sought to appease the bloodthirsty Moloch by sacrifices of children and self-mutilation, as the analogous Galli strove to pacify the Phrygian goddess Cybele. The notorious priests of Baal of the Chanaanites were for the Jews as strong an incentive to idolatry as the cult of Astarte was a temptation to immorality. The south-Semitic religion of the ancient pagan Arabians was a plain religion of the desert without a distinct priesthood;

modern Islam or Mohammedanism has a clergy (*muezzin*, announcer of the hours of prayer; *imâm*, leader of the prayers; *khâtib*, preacher), but no real priesthood. The west-Semitic branch of the Hebrews is treated in the next section.

Of the vast literature only a few fundamental works can be cited:—General Works:—MÜLLER, *Physical Religion* (London, 1891); IDEM, *Anthropological Relig.* (London, 1892); IDEM, *The Books of the East* (Oxford, 1879-94); LIPPERT, *Allgemeine Geschichte des Priestertums* (2 vols., Berlin, 1883); DE LA SAUSSAYE, *Lehrbuch der Religionsgesch.* (2 vols., Freiburg, 1905); VOLLERS, *Die Weltreligionen in ihrem geschichtl. Zusammenhang* (Jena, 1907).

Concerning the Indian priesthood:—ASMUS, *Die indogerman. Religion in den Hauptpunkten ihrer Entwicklung* (2 vols., Leipzig, 1875-7); BARTH, *Les religions de l'Inde* (Paris, 1880); LAQUEENAN, *Du brahmanisme et ses rapports avec le judaïsme et le christianisme* (Paris, 1888); MONIER-WILLIAMS, *Brahmanism and Hinduism* (London, 1891); OLDENBURG, *Die Religion des Veda* (Leipzig, 1894); HOPKINS, *The Religions of India* (London, 1895); HARDY, *Die vedisch-brahman. Büsser* (1908); VINCENT, *Canaan* (Paris, 1907).

II. THE JEWISH PRIESTHOOD.—In the age of the Patriarchs the offering of sacrifices was the function of the father or head of the family (cf. Gen., viii, 20; xii, 7, etc.; Job, i, 5). But, even before Moses, there were also regular priests, who were not fathers of family (cf. Ex., xix, 22 sqq.). Hummelauer's hypothesis ("Das vormosaïsche Priestertum in Israel", Freiburg, 1899) that this pre-Mosaic priesthood was established by God Himself and made hereditary in the family of Manasses, but was subsequently abolished in punishment of the worship of the golden calf (cf. Ex., xxxii, 26 sqq.), can hardly be scientifically established (cf. Rev. bibl. internat., 1899, pp. 470 sqq.). In the Mosaic priesthood we must distinguish: priests, Levites, and high-priest.

A.—Priests.—It was only after the Sinaitical legislation that the Israelitic priesthood became a special class in the community. From the tribe of Levi Jahweh chose the house of Aaron to discharge permanently and exclusively all the religious functions;

Aaron himself and later the first-born of his family was to stand at the head of this priesthood as high-priest, while the other Levites were to act, not as priests, but as assistants and servants. The solemn consecration of the Aaronites to the priesthood took place at the same time as the anointing of Aaron ■ high-priest and with almost the same ceremonial (Ex., xxix, 1-37; xl, 12 sqq.; Lev., viii, 1-36). This single consecration included that of all the future descendants of the priests, so that the priesthood was fixed in the house of Aaron by mere descent, and was thus hereditary. After the Babylonian Exile strict genealogical proof of priestly descent was even more rigidly

AARON, THE HIGH PRIEST
Giovanni Strazza, Archiepiscopal Palace, Milan

demanded, and any failure to furnish the same meant exclusion from the priesthood (I Esd., ii, 61 sq.; II Esd., vii, 63 sq.). Certain bodily defects, of which the later Talmudists mention 142, were also a disqualification from the exercise of the priestly office (Lev., xxi, 17 sqq.). Age limits (twenty and fifty years) were also appointed (II Par., xxxi, 17); the priests were forbidden to take to wife a harlot or a divorced woman (Lev., xxi, 7); during the active discharge of the priesthood, marital intercourse was forbidden. In addition to an unblemished earlier life, levitical cleanness was also indispensable for the priesthood. Whoever performed a priestly function in levitical uncleanness was to be expelled like one who entered the sanctuary after partaking of wine or other intoxicating drinks (Lev., x, 9; xxii, 3). To incur an uncleanness "at the death of his citizens", except in the case of immediate kin, was rigidly forbidden (Lev., xxi, 1 sqq.). In cases of mourning no outward signs of sorrow might be shown (e. g. by rending the garments). On entering into their office, the priests had first to take a bath of purification (Ex., xxix, 4; xl, 12), be sprinkled with oil (Ex., xxix, 21; Lev., viii, 30), and put on the vestments.

The priestly vestments consisted of breeches, tunic, girdle, and mitre. The breeches (*feminalia linea*) covered from the reins to the thighs (Ex., xxviii, 42). The tunic (*tunica*) was a kind of coat, woven in a special manner from one piece; it had narrow sleeves, ex-

tended from the throat to the ankles, and was brought together at the throat with bands (Ex., xxviii, 4). The girdle (*baleus*) was three or four fingers in breadth and (according to rabbinic tradition) thirty-two ells long; it had to be embroidered after the same pattern and to be of the same colour as the curtain of the forecourt and the tabernacle of the covenant (Ex., xxxix, 38). The official vestments were completed by the mitre (Ex., xxxix, 26), a species of cap of fine linen. As nothing is said of foot-covering, the priests must have performed the services barefooted as Jewish tradition indeed declares (cf. Ex., iii, 5). These vestments were prescribed for use only during the services; at other times they were kept in an appointed place in charge of a special custodian. For detailed information concerning the priestly vestments, see Josephus, "Antiq.," III, vii, 1 sqq.

The official duties of the priests related partly to their main occupations, and partly to subsidiary services. To the former category belonged all functions connected with the public worship, e. g. the offering of incense twice daily (Ex., xxx, 7), the weekly renewal of the loaves of proposition on the golden table (Lev., xxiv, 9), the cleaning and filling of the oil-lamps on the golden candlestick (Lev., xxiv, 1). All these services were performed in the sanctuary. There were in addition certain functions to be performed in the outer court—the maintenance of the sacred fire on the altar for burnt sacrifices (Lev., vi, 9 sqq.), the daily offering of the morning and evening sacrifices, especially of the lambs (Ex., xxix, 38 sqq.). As subsidiary services the priests had to present the cursed water to wives suspected of adultery (Num., v, 12 sqq.), sound the trumpets announcing the holy-days (Num., x, 1 sqq.), declare the lepers clean or unclean (Lev., xiii-xiv; Deut., xxiv, 8; cf. Matt., viii, 4), dispense from vows, appraise all objects vowed to the sanctuary (Lev., xxvii), and finally offer sacrifice for those who broke the law of the Nazarites, i. e. a vow to avoid all intoxicating drinks and every uncleanness (especially from contact with a corpse) and to let one's hair grow long (Num., vi, 1-21). The priests furthermore were teachers and judges; not only were they to explain the law to the people (Lev., x, 11; Deut., xxxiii, 10) without remuneration (Mich., iii, 11) and to preserve carefully the Book of the Law, of which a copy was to be presented to the (future) king (Deut., xvii, 18), but they had also to settle difficult lawsuits among the people (Deut., xvii, 8; xix, 17; xxi, 5). In view of the complex nature of the liturgical service, David later divided the priesthood into twenty-four classes or courses, of which each in turn, with its eldest member at its head, had to perform the service from one Sabbath to the next (IV Kings, xi, 9; cf. Luke, i, 8). The order of the classes was determined by lot (I Par., xxiv, 7 sqq.).

The income of the priests was derived from the tithes and the firstlings of fruits and animals. To these were added as accidentals the remains of the food, and guilt-oblations, which were not entirely consumed by fire; also the hides of the animals sacrificed and the natural products and money vowed to God (Lev., xxvii; Num., viii, 14). With all these perquisites, the Jewish priests seem never to have been a wealthy class, owing partly to the increase in their numbers and partly to the large families which they reared. But their exalted office, their superior education, and their social position secured them great prestige among the people. In general, they fulfilled their high position worthily, even though they frequently merited the stern reproof of the Prophets (cf. Jer., v, 31; Ezech., xxii, 26; Os., vi, 9; Mich., iii, 11; Mal., i, 7). With the destruction of Jerusalem by Titus in 70 B. C. the entire sacrificial service and with it the Jewish priesthood ceased. The later rabbis never represent themselves as priests, but merely as teachers of the law.

B.—*Levites in the Narrow Sense*.—It has been said above that the real priesthood was hereditary in the house of Aaron alone, and that to the other descendants of Levi was assigned a subordinate position as servants and assistants of the priests. The latter are the Levites in the narrow sense. They were divided into the families of the Gersonites, Caathites, and Merarites (Ex., vi, 16; Num., xxvi, 57), so named after Levi's three sons, Gerson, Caath, and Merari (cf. Gen., xlvi, 11; I Par., vi, 1). As simple servants of the priests, the Levites might not enter the sanctuary, nor perform the real sacrificial act, especially the sprinkling of the blood (*aspersio sanguinis*). This was the privilege of the priests (Num., xviii, 3, 19 sqq.; xviii, 6). The Levites had however to assist the latter during the sacred services, prepare the different oblations and keep the sacred vessels in proper condition. Among their chief duties was the constant guarding of the tabernacle with the ark of the covenant; the Gersonites were encamped towards the west, the Caathites towards the south, the Merarites towards the north, while Moses and Aaron with their sons guarded the holy tabernacle towards the east (Num., iii, 23 sqq.). When the tabernacle had found a fixed home in Jerusalem, David created four classes of Levites: servants of the priests, officials and judges, porters, and finally musicians and singers (I Par., xxiii, 3 sqq.). After the building of the Temple by Solomon the Levites naturally became its guardians (I Par., xxvi, 12 sqq.). When the Temple was rebuilt Levites were established as guards in twenty-one places around (Talmud; Middoth, I, i). In common with the priests, the Levites were also bound to instruct the people in the Law (II Par., xvii, 8; II Esd., viii, 7), and they even possessed at times certain judicial powers (II Par., xix, 11).

They were initiated into office by a rite of consecration: sprinkling with the water of purification, shaving of the hair, washing of the garments, offering of sacrifices, imposition of the hands of the eldest (Num., viii, 5 sqq.). As to the age of service, thirty years was fixed for the time of entrance and fifty for retirement from office (Num., iv, 3; I Par., xxiii, 24; I Esd., iii, 8). No special vestments were prescribed for them in the Law; in the time of David and Solomon the bearers of the ark of the covenant and the singers wore garments of fine linen (I Par., xv, 27; II Par., v, 12). At the division of the Promised Land among the Twelve Tribes, the tribe of Levi was left without territory, since the Lord Himself was to be their portion and inheritance (cf. Num., xviii, 20; Deut., xii, 12; Jos., xiii, 14). In compensation, Jahweh ceded to the Levites and priests the gifts of natural products made by the people, and other revenues. The Levites first received the tithes of fruits and beasts of the field (Lev., xxvii, 30 sqq.; Num., xviii, 20 sqq.), of which they had in turn to deliver the tenth part to the priests (Num., xviii, 26 sqq.). In addition, they had a share in the sacrificial banquets (Deut., xii, 18) and were, like the priests, exempt from taxes and military service. The question of residence was settled by ordering the tribes endowed with landed property to cede to the Levites forty-eight Levite towns, scattered over the land, with their precincts (Num., xxxv, 1 sqq.); of these, thirteen were assigned to the priests. After the division of the monarchy into the Northern Kingdom of Israel and the Southern Kingdom of Judah, many Levites from the northern portion moved to the Kingdom of Judah, which remained true to the Law, and took up their abode in Jerusalem. After the Northern Kingdom had been chastised by the Assyrian deportation in 722 B. C., the Southern Kingdom was also overthrown by the Babylonians in 606 B. C., and numbers of the Jews, including many Levites, were hurried away into the "Babylonian exile". Only a few Levites returned to their old home under Esdras in 450 (cf. I Esd., ii, 40 sqq.).

With the destruction of the Herodian Temple in A. D. 70 the doom of the Levites was sealed.

C.—*The High-priest*.—At Jahweh's command Moses consecrated his brother Aaron first high-priest, repeated the consecration on seven days, and on the eighth day solemnly introduced him into the tabernacle of the covenant. The consecration of Aaron consisted in washings, investment with costly vestments, anointing with holy oil, and the offerings of various sacrifices (Ex., xxix). As a sign that Aaron was endowed with the fullness of the priesthood, Moses poured over his head the oil of anointing (Lev., viii, 12), while the other Aaronites, as simple priests, had only their hands anointed (Ex., xxix, 7, 29). The high-priest was for the Jews the highest embodiment of theocracy, the monarch of the whole priesthood, the special mediator between God and the People of the Covenant, and the spiritual head of the synagogue. He was the priest *par excellence*, the "great priest" (Greek, ἀρχιερεύς; Heb., הַכֹּהֵן הַגָּדוֹל, the "prince among the priests", and, because of the anointing of his head, the "anointed priest". To this exalted office corresponded his special and costly vestments, worn in addition to those of the simple priests (Ex., xxviii). A (probably sleeveless) purple-blue upper garment (*tunica*) fell to his knees, the lower seam being ornamented alternately with small golden bells and pomegranates of coloured thread. About the shoulders he also wore a garment called the ephod; this was made of costly material, and consisted of two portions about an ell long, which covered the back and breast, were held together above by two shoulderbands or epaulets, and terminated below with a magnificent girdle. Attached to the ephod in front was the shield (*rationale*), a square bag bearing on the outside the names of the twelve tribes engraved on precious stones (Ex., xxviii, 6), and containing within the celebrated Urim and Thummim (q. v.) as the means of obtaining Divine oracles and prophecies. The vestments of the high-priest were completed by a precious turban (tiara), bearing on a golden frontal plate the inscription: "Sacred to Jahweh" (Heb. קֹדֶשׁ לַיהוָה).

The high-priest had supreme supervision of the Ark of the Covenant (and of the Temple), of Divine service in general and of the whole personnel connected with public worship. He presided at the Sanhedrin. He alone could perform the liturgy on the Feast of Expiation, on which occasion he put on his costly vestments only after the sacrifices were completed. He alone might offer sacrifice for his own sins and those of the people (Lev., iv, 5), enter the holy of holies (*sanctum sanctorum*), and seek counsel of Jahweh on important occasions. The office of high-priest in the house of Aaron was at first hereditary in the line of his first-born son Eleazar, but in the period from Heli to Abiathar (1131 to 973 B. C.) it belonged, by right of primogeniture, to the line of Ithamar. Under the rule of the Seleucidæ (from about 175 B. C.) the office was sold for money to the highest bidder. At a later period it became hereditary in the family of the Hasmoneans. With the destruction of the central sanctuary by the Romans, the high-priesthood disappeared.

Against the foregoing account of the Mosaic priesthood, based on the Old Testament, the negative biblical critics of to-day make a determined stand. According to the hypothesis of Graf-Wellhausen, Moses (about 1250 B. C.) cannot be the author of the Pentateuch. He was not the Divinely appointed legislator, but simply the founder of Monolatry, for ethical Monotheism resulted from the efforts of much later Prophets. Deuteronomy D made its appearance in substance in 621 B. C., when the astute high-priest Helkias by a pious fraud palmed off on the god-fearing King Josias the recently composed "Book of the Laws" D as written by Moses (cf. IV Kings, xxii, 1 sqq.). When Esdras returned to Jerusalem from

the Babylonian Exile about 450 B. C., he brought back the "Book of the Ritual" or the priest's codex P, i. e., the middle portions between Genesis and Deuteronomy, composed by himself and his school in Babylon, although it was only in 444 B. C. that he dared to make it public. A clever editor now introduced the portions relating to public worship into the old, pre-Exilic historical books, and the entirely new idea of an Aaronic priesthood and of the centralization of the cult was projected back to the time of Moses. The story of the tabernacle of the covenant is thus a mere fiction, devised to represent the Temple at Jerusalem as established in fully developed form at the dawn of Israelitic history and to justify the unity of worship. Although this hypothesis does not contest the great antiquity of the Jewish priesthood, it maintains that the centralization of the cult, the essential difference between priests and Levites, the supreme authority of the priests of the Temple at Jerusalem as compared with the so-called hill-priests (cf. Ezech., xlv, 4 sqq.), must be referred to post-Exilic times.

Without entering upon a detailed criticism of these assertions of Wellhausen and the critical school (see PENTATEUCH), we may here remark in general that the conservative school also admits or can admit that only the original portion of the Pentateuch is to be accepted as Mosaic, that in the same text many repetitions seem to have been brought together from different sources, and finally that additions, extensions, and adaptations to new conditions by an inspired author of a later period are by no means excluded. It must also be admitted that, though one place of worship was appointed, sacrifices were offered even in early times by laymen and simple Levites away from the vicinity of the Ark of the Covenant, and that in restless and politically disturbed epochs the ordinance of Moses could not always be observed. In the gloomy periods marked by neglect of the Law, no attention was paid to the prohibition of hill-sacrifices, and the Prophets were often gratified to find that on the high places (*bamoth*) sacrifice was offered, not to pagan gods, but to Jahweh. However, the Pentateuch problem is one of the most difficult and intricate questions in Biblical criticism. The Wellhausen hypothesis with its bold assumptions of pious deceits and artificial projections is open to as great, if not greater, difficulties and mysteries as the traditional view, even though some of its contributions to literary criticism may stand examination. It cannot be denied that the critical structure has suffered a severe shock since the discovery of the Tell-el-Amarna letters dating from the fifteenth century B. C., and since the deciphering of the Hammurabi Code. The assumption that the oldest religion of Israel must have been identical with that of the primitive Semites (Polydemonism, Animism, Fetishism, Ancestor-worship) has been proved false, since long before 2000 B. C. a kind of Henotheism, i. e., Polytheism with a monarchical head, was the ruling religion in Babylon. The beginnings of the religions of all peoples are purer and more spiritual than many historians of religions have hitherto been willing to admit. One thing is certain: the final word has not yet been spoken as to the value of the Wellhausen hypothesis.

III. THE CHRISTIAN PRIESTHOOD.—In the New Testament bishops and priests are, according to Catholic teaching, the sole bearers of the priesthood, the former enjoying the fullness of the priesthood (*summus sacerdos s. primi ordinis*), while the presbyters are simple priests (*simplex sacerdos s. secundi ordinis*). The deacon, on the other hand, is a mere attendant of the priest, with no priestly powers. Omitting all special treatment of the bishop and the deacon, we here confine our attention primarily to the presbyterate, since the term "priest" without qualification is now taken to signify the presbyter.

A. *The Divine Institution of the Priesthood.*—According to the Protestant view, there was in the primitive Christian Church no essential distinction between laity and clergy, no hierarchical differentiation of the orders (bishop, priest, deacon), no recognition of pope and bishops as the possessors of the highest power of jurisdiction over the Universal Church or over its several territorial divisions. On the contrary, the Church had at first a democratic constitution, in virtue of which the local churches selected their own heads and ministers, and imparted to these their inherent spiritual authority, just as in the modern republic the "sovereign people" confers upon its elected president and his officials administrative authority. The deeper foundation for this transmission of power is to be sought in the primitive Christian idea of the universal priesthood, which excludes the recognition of a special priesthood. Christ is the sole high-priest of the New Testament, just as His bloody death on the Cross is the sole sacrifice of Christianity. If all Christians without exception are priests in virtue of their baptism, an official priesthood obtained by special ordination is just as inadmissible as the Catholic Sacrifice of the Mass. Not the material sacrifice of the Eucharist, consisting in the offering of (real) gifts, but only the purely spiritual sacrifice of prayer harmonizes with the spirit of Christianity. One is indeed forced to admit that the gradual corruption of Christianity began very early (end of first century), since it cannot be denied that Clement of Rome (Ep. ad Cor., xlv, 4), the Teaching of the Twelve Apostles (Didache, xiv), and Tertullian (De bapt., xvii; "De præsc. hæc.", xli; "De exhort. cast.", vii) recognize an official priesthood with the objective Sacrifice of the Mass. The corruption quickly spread throughout the whole East and West, and persisted unchecked during the Middle Ages, until the Reformation finally succeeded in restoring to Christianity its original purity. Then "the idea of the universal priesthood was revived; it appeared as the necessary consequence of the very nature of Christianity. . . . Since the whole idea of sacrifice was discarded, all danger of reversion to the beliefs once derived from it was removed" ("Realencycl. für prot. Theol.", XVI, Leipzig, 1905, p. 50).

To these views we may answer briefly as follows. Catholic theologians do not deny that the double "hierarchy of order and jurisdiction" gradually devel-

oped from the germ already existing in the primitive Church, just as the primacy of the pope of Rome and especially the distinction of simple priests from the bishops was recognized with increasing clearness as time advanced (see HIERARCHY). But the question whether there was at the beginning a special priesthood in the Church is altogether distinct. If it is true that "the reception of the idea of sacrifice led to the idea of the ecclesiastical priesthood" (loc. cit., p. 48), and that priesthood and sacrifice are reciprocal terms, then the proof of the Divine origin of the Catholic priesthood must be regarded as established, once it is shown that the Eucharistic Sacrifice of the Mass is coeval with the beginnings and the essence of Christianity. In proof of this we may appeal even to the Old Testament. When the Prophet Isaiah foresees the entrance of pagans into the Messianic Kingdom, he makes the calling of priests from the heathen (i. e. the non-Jews) a special characteristic of the new Church (Is., lxvi, 21): "And I will take of them to be priests and Levites, saith the Lord". Now this non-Jewish (Christian) priesthood in the future Messianic Church presupposes a permanent sacrifice, namely that "clean oblation", which from the rising of the sun even to the going down is to be offered to the Lord of hosts among the Gentiles (Mal., i, 11). The sacrifice of bread and wine offered by Melchisedech (cf. Gen., xiv, 18 sqq.), the prototype of Christ (cf. Ps. cix, 4; Heb., v, 5 sq.; vii, 1 sqq.), also refers prophetically, not only to the Last Supper, but also to its everlasting repetition in commemoration of the Sacrifice of the Cross (see MASS). Rightly, therefore, does the Council of Trent emphasize the intimate connexion between the Sacrifice of the Mass and the priesthood (Sess. XXIII, cap. i, in Denzinger, "Enchiridion", 10th ed., 957): "Sacrifice and priesthood are by Divine ordinance so inseparable that they are found together under all laws. Since therefore in the New Testament the Catholic Church has received from the Lord's institution the holy visible sacrifice of the Eucharist it must also be admitted that in the Church there is a new, visible and external priesthood into which the older priesthood has been changed." Surely this logic admits of no reply. It is, then, all the more extraordinary that Harnack should seek the origin of the hierarchical constitution of the Church, not in Palestine, but in pagan Rome. Of the Catholic Church he writes: "She continues ever to govern the peoples; her popes lord it like Trajan and Marcus Aurelius. To Romulus and Remus succeeded Peter and Paul; to the proconsuls the archbishops and bishops. To the legions correspond the hosts of priests and monks; to the imperial bodyguard the Jesuits. Even to the finest details, even to her judicial organization, nay even to her very vestments, the continued influence of the ancient empire and of its institutions may be traced" ("Das Wesen d. Christentums", Leipzig, 1902, p. 157). With the best of good will, we can recognize in this description only a sample of the writer's ingenuity, for an historical investigation of the cited institutions would undoubtedly lead to sources, beginnings, and motives entirely different from the analogous conditions of the Empire of Rome.

But the Sacrifice of the Mass indicates only one side of the priesthood; the other side is revealed in the power of forgiving sin, for the exercise of which the priesthood is just as necessary as it is for the power of consecrating and sacrificing. Like the general power to bind and to loose (cf. Matt., xvi, 19; xviii, 18), the power of remitting and retaining sins was solemnly bestowed on the Church by Christ (cf. John, xx, 21 sqq.). Accordingly, the Catholic priesthood has the indisputable right to trace its origin in this respect also to the Divine Founder of the Church. Both sides of the priesthood were brought into prominence by the Council of Trent (loc. cit., n. 961): "If any one shall say that in the New Testament there is no visible and

external priesthood nor any power of consecrating and offering the Body and Blood of the Lord, as well as of remitting and retaining sins, but merely the office and bare ministry of preaching the Gospel, let him be anathema." Far from being an "unjustifiable usurpation of Divine powers", the priesthood forms so indispensable a foundation of Christianity that its removal would entail the destruction of the whole edifice. A Christianity without a priesthood cannot be the Church of Christ. This conviction is strengthened by consideration of the psychological impossibility of the Protestant assumption that from the end of the first century onward, Christendom tolerated without struggle or protest the unprecedented usurpation of the priests, who without credentials or testimony suddenly arrogated Divine powers with respect to the Eucharist, and, on the strength of a fictitious appeal to Christ, laid on baptized sinners the grievous burden of public penance as an indispensable condition of the forgiveness of sin.

As for the "universal priesthood", on which Protestantism relies in its denial of the special priesthood, it may be said that Catholics also believe in a universal priesthood; this, however, by no means excludes a special priesthood but rather presupposes its existence, since the two are related as the general and the particular, the abstract and the concrete, the figurative and the real. The ordinary Christian cannot be a priest in the strict sense, for he can offer, not a real sacrifice, but only the figurative sacrifice of prayer. For this reason the historical dogmatic development did not and could not follow the course it would have followed if in the primitive Church two opposing trains of thought (i. e. the universal versus the special priesthood) had contended for supremacy until one was vanquished. The history of dogma attests, on the contrary, that both ideas advanced harmoniously through the centuries, and have never disappeared from the Catholic mind. As a matter of fact the profound and beautiful idea of the universal priesthood may be traced from Justin Martyr (*Dial. cum Tryph.*, cxvi), Irenæus (*Adv. hæ.*, IV, viii, 3), and Origen ("De orat.", xxviii, 9; "In Levit.", hom. ix, 1), to Augustine (*De civit. Dei*, XX, x) and Leo the Great (*Sermo*, iv, 1), and thence to St. Thomas (*Summa*, III, Q. lxxxii, a. 1) and the Roman Catechism. And yet all these writers recognized, along with the Sacrifice of the Mass, the special priesthood in the Church. The origin of the universal priesthood extends back, as is known, to St. Peter, who declares the faithful, in their character of Christians, "a holy priesthood, to offer up spiritual sacrifices", and "a chosen generation, a kingly priesthood" (I Peter, ii, 5, 9). But the very text shows that the Apostle meant only a figurative priesthood, since the "spiritual sacrifices" signify prayer and the term "royal" (*regale*, βασιλειον) could have had but a metaphorical sense for the Christians. The Gnostics, Montanists, and Catharists, who, in their attacks on the special priesthood, had misapplied the metaphor, were just as illogical as the Reformers, since the two ideas, real and figurative priesthood, are quite compatible. It is clear from the foregoing that the Catholic clergy alone are entitled to the designation "priest", since they alone have a true and real sacrifice to offer, the Holy Mass. Consequently, Anglicans who reject the Sacrifice of the Mass are inconsistent, when they refer to their clergy as "priests". The preachers in Germany quite logically disclaim the title with a certain indignation.

B. *The Hierarchical Position of the Presbyterate.*—The relation of the priest to the bishop and deacon may be briefly explained by stating that he is, as it were, the middle term between the two, being hierarchically the subordinate of the bishop and the superior of the deacon (cf. Council of Trent, Sess. XXVI, can. vi). While the pre-eminence of the bishop over the priest consists mainly in his power of ordina-

tion, that of the priest over the deacon is based on his power of consecrating and absolving (cf. Council of Trent, loc. cit., cap. iv; can. i and vii). The independence of the diaconate appears earlier and more clearly in the oldest sources than that of the priesthood, chiefly because of the long-continued fluctuation in the meaning of the titles *episcopus* and *presbyter*, which until the middle of the second century were interchangeable and synonymous terms. Probably

there was a reason in fact for this uncertainty, since the hierarchical distinction between bishop and priest seems to have been of gradual growth. Epiphanius (*Adv. hæ.*, lxxv, 5) offered an explanation of this condition of uncertainty by supposing that priests were appointed in some places where there was no bishop, while in other places where no candidates for priesthood were found, the people were satisfied with having a bishop, who, however, could not be without a deacon. Cardinal Franzelin ("De eccles. Christi", 2nd ed., Rome, 1907, thes. xvi) gives good grounds for the opinion that in the Bible bishops are indeed named *presbyter*, but simple priests are never called *episcopi*. The problem is, however, far from being

solved, since in the primitive Church there were not yet fixed names for the different orders; the latter must rather be determined from the context according to the characteristic functions discharged. The appeal to the usage of the pagan Greeks, who had their *ἐπίσκοποι* and *πρεσβύτεροι*, does not settle the question, as Ziebarth ("Das griechische Vereinswesen", Leipzig, 1896) has shown in reply to Hatch and Harnack. Any attempt at a solution must take into account the varying use in different countries (e. g. Palestine, Asia Minor). In some places the "presbyters" may have been real bishops, in others priests in the present meaning of the term, while elsewhere they may have been mere administrative officers or worthy elders chosen to represent the local church in its external relations (see HIERARCHY OF THE EARLY CHURCH).

Like the Apostolic writings, the "Didache", Hermas, Clement of Rome, and Irenæus often use the

PRIEST SAYING MASS
IX Century Ivory, Frankfort

terms "bishop" and "priest" indiscriminately. In fact, it is really a moot question whether the presbyterate gradually developed as an offshoot of the episcopate—which is in the nature of things more likely and in view of the needs of the growing Church more readily understood—or whether, conversely, the episcopate had its origin in the elevation of the presbyterate to a higher rank (Lightfoot), which is more difficult to admit. On the other hand, even at the beginning of the second century, Ignatius of Antioch (Ep. ad Magnes., vi and *passim*) brings out with remarkable clearness the hierarchical distinction between the monarchical bishop, the priests, and the deacons. He emphasizes this triad as essential to the constitution of the Church: "Without these [three] it cannot be called the Church" (Ad Trall., iii). But, according to the law of historic continuity, this distinction of the orders must have existed in substance and embryo during the first century; and, as a matter of fact, St. Paul (I Tim., v, 17, 19) mentions "presbyters" who were subordinate to the real bishop Timothy. But in the Latin writers there is no ambiguity. Tertullian (De bapt., xvii) calls the bishop the "summus sacerdos", under whom are the "presbyteri et diaconi"; and Cyprian (Ep. lxi, 3) speaks of the "presbyteri cum episcopo sacerdotali honore conjuncti", i. e. the priests united by sacerdotal dignity with the bishop (see BISHOP).

About 360, after the development of the orders had long been complete, Aërius of Pontus first ventured to obliterate the distinction between the priestly and episcopal orders and to place them on an equality with respect to their powers. For this he was ranked among the heretics by Epiphanius (Adv. hæ., lxxv, 3). The testimony of St. Jerome (d. 420), whom the Scottish Presbyterians cite in behalf of the presbyteral constitution of the Church, raises some difficulties, as he appears to assert the full equality of priests and bishops. It is true that Jerome endeavoured to enhance the dignity of the priesthood at the expense of the episcopate and to refer the bishop's superiority "rather to ecclesiastical custom than to Divine regulation" (In Tit., i, 5: "Episcopi noverint se magis consuetudine quam dispositionis dominicæ veritate presbyteris esse majores"). He desired a more democratic constitution in which the priests hitherto undeservedly slighted would participate, and he urged the correction of the abuse, widespread since the third century, by which the archdeacons, as the "right hand" of the bishops, controlled the whole diocesan administration (Ep. cxliv ad Evangel.). It is at once evident that Jerome disputes not the hierarchical rank (*potestas ordinis*) of the bishops but their powers of government (*potestas jurisdictionis*)—and this not so much in principle, but only to insist that the deacons should be dislodged from the position they had usurped and the priests established in the official position befitting their higher rank. How far Jerome was from being a follower of Aërius and a forerunner of Presbyterianism appears from his important admission that the power of ordination is possessed by the bishops alone, and not by the priests (loc. cit. in P. L., XXII, 1193: "Quid enim facit—excepta ordinatione—episcopus quod presbyter non faciat?"). By this admission Jerome establishes his orthodoxy.

C. *The Sacramentality of the Presbyterate.*—The Council of Trent decreed (Sess. XXIII, can. iii, in Denzinger, n. 963): "If any one shall say that order or sacred ordination is not truly and properly a sacrament instituted by Christ our Lord . . . let him be anathema." While the synod defined only the existence of the Sacrament of Holy Orders, without deciding whether all the orders or only some fall within the definition, it is admitted that the priestly ordination possesses with even greater certainty than the episcopal and the diaconal ordination the dignity of a sacrament (cf. Benedict XIV, "De syn. dioces.",

VIII, ix, 2). The three essentials of a sacrament—outward sign, interior grace, and institution by Christ—are found in the priestly ordination.

As regards the outward sign, there has been a long-protracted controversy among theologians concerning the matter and form, not alone of the priestly ordination, but of the Sacrament of Holy Orders in general. Is the imposition of hands alone (Bonaventure, Morin, and most modern theologians), or the presentation of the instruments (Gregory of Valencia, the Thomists), or are both together (Bellarmine, De Lugo, Billot etc.) to be regarded as the essential matter of the sacrament? As to the priestly ordination in particular, which alone concerns us here, the difference of views is explained by the fact that, in addition to three impositions of hands, the rite includes a presentation to the candidate of the chalice filled with wine, and of the paten with the host. Concerning the latter Eugenius IV says expressly in his "Decretum pro Armenis" (1439; in Denzinger, n. 701): "The priesthood is conferred by the handing of the chalice containing wine and of the paten with bread." However, in view of the fact that in the Bible (Acts, xiii, 3; xiv, 22; I Tim., iv, 14; v, 22; II Tim., i, 6), in all patristic literature, and in the whole East the imposition of hands alone is found, while even in the West the presentation of the sacred vessels does not extend back beyond the tenth century, we are forced to recognize theoretically that the latter ceremony is unessential, like the solemn anointing of the priest's hands, which is evidently borrowed from the Old Testament and was introduced from the Gallican into the Roman Rite (cf. "Statuta ecclesiæ antiquæ" in P. L., LVI, 879 sqq.). In defence of the anointing, the Council of Trent condemned those who declared it "despicable and pernicious" (Sess. XXXIII, can. v). As regards the sacramental form, it may be accepted as probable that the prayer accompanying the second extension of hands (*χειροτονία*) is the essential form, although it is not impossible that the words spoken by the bishop during the third imposition of hands (*χειροθεσία*): "Receive the Holy Ghost, whose sins you shall remit, they are remitted, etc.", constitute a partial form. The first imposition of hands by the bishop (and the priests) cannot be regarded as the form, since it is performed in silence, but it also may have an essential importance in so far as the second extension of hands is simply the moral continuation of the first touching of the head of the *ordinandus* (cf. Gregory IX, "Decret.", I, tit. xvi, cap. III). The oldest formularies—e. g. the "Euchologium" of Serapion of Thmuis (cf. Funk, "Didascalia", II, Tübingen, 1905, 189), the "Pseudo-Apostolic Constitutions" (Funk, loc. cit., I, 520), the lately discovered "Testament of the Lord" (ed. Rahmani, Mainz, 1899, p. 68), and the Canons of Hippolytus (ed. Achelis, Leipzig, 1891, p. 61)—contain only one imposition of hands with a short accompanying prayer. In the eleventh century the Mozarabic Rite is still quite simple (cf. "Monum. liturg.", V, Paris, 1904, pp. 54 sq.), while, on the contrary, the Armenian Rite of the Middle Ages shows great complexity (cf. Conybeare-Maclean, "Rituale Armenorum", Oxford, 1905, pp. 231 sqq.). In the Greek-Byzantine Rite, the bishop, after making three signs of the cross, places his right hand on the head of the *ordinandus*, meanwhile reciting a prayer, and then, praying in secret, holds the same hand extended above the candidate, and invokes upon him the seven gifts of the Holy Ghost (cf. Goar, "Euchol. Græc.", Paris, 1647, pp. 292 sqq.). For other formularies of ordination see Denzinger, "Ritus Orientalium", II (Würzburg, 1864); Manser in Buchberger, "Kirchliches Handlexikon", s. v. Priesterweihe.

As a sacrament of the living, ordination presupposes the possession of sanctifying grace, and therefore confers, besides the right to the actual graces of the

priestly office, an increase of sanctifying grace (cf. "Decret. pro Armenis" in Denzinger, n. 701). But in all cases, whether the candidate is in the state of sanctifying grace or not, the sacramental imprints on the soul an indelible spiritual mark (cf. Council of Trent, Sess. VII, can. ix, in Denzinger, n. 852), i. e. the priestly character, to which are permanently attached the powers of consecrating and absolving—the latter, however, with the reservation that for the valid administration of the Sacrament of Penance the power of jurisdiction is also required (see CHARACTER). As the priestly character, like that imparted by baptism and confirmation, is indelible, ordination can never be repeated, and a return to the lay state is absolutely impossible (cf. Council of Trent, Sess. XXIII, can. iv, in Denzinger, n. 964). That priestly ordination was instituted by Christ is proved not alone by the Divine institution of the priesthood (see above, A), but also by the testimony of Holy Writ and Tradition, which unanimously testify that the Apostles transmitted their powers to their successors, who in turn transmitted them to the succeeding generation (cf. I Tim., v, 22). Since the charismatic gifts of the "apostles and prophets" mentioned in the "Didache" had nothing to do with the priesthood as such, these itinerant missionaries still needed the imposition of hands to empower them to discharge the specifically priestly functions (see CHARISMATA).

For the valid reception of the Sacrament of Orders, it is necessary that the minister be a bishop and the recipient a baptized person of the male sex. The first requisite is based on the episcopal prerogative of ordaining; the second on the conviction that baptism opens the door to all the other sacraments and that women are definitively barred from the service of the altar (cf. Epiphanius, "De hæc.", lxxix, 2). St. Paul is a resolute champion of an exclusively male priesthood (cf. I Cor., xiv, 34). In this respect there is an essential difference between Christianity and Paganism, since the latter recognizes priestesses as well as priests—e. g. the hierodules of Ancient Greece, the vestal virgins of Rome, the bajaders of India, the wu of China, and the female bonzes of Japan. The early Church condemned as an absurdity the female priesthood of Montanism and of the Collyridiani, and it never regarded the Apostolic institute of deaconesses as a branch of Holy orders. For the licit reception of priestly ordination, canon law demands: freedom from every irregularity, completion of the twenty-fourth year, the reception of the earlier orders (including the diaconate), the observation of the regular interstices, and the possession of a title to ordination.

In addition to the requisites for the valid and lawful reception of the priesthood the question arises as to the personal worthiness of the candidate. According to earlier canon law this question was settled by three ballots (*scrutinia*); it is now decided by official examination and certification. One of the most important means of securing worthy candidates for the priesthood is careful inquiry regarding vocations. Intruders in the sanctuary have at all times been the occasion of the greatest injury to the Church, and of scandal to the people. For this reason, Pope Pius X, with even greater strictness than was shown in previous ecclesiastical regulations, insists upon the exclusion of all candidates who do not give the highest promise of a life conspicuous for firmness of faith and moral rectitude. In this connexion the importance and necessity of colleges and ecclesiastical seminaries for the training of the clergy cannot be too strongly emphasized.

D. *The Official Powers of the Priest.*—As said above, the official powers of the priest are intimately connected with the sacramental character, indelibly imprinted on his soul. Together with this character is conferred, not only the power of offering up the Sacrifice of the Mass and the (virtual) power of forgiving

sins, but also authority to administer extreme unction and, as the regular minister, solemn baptism. Only in virtue of an extraordinary faculty received from the pope is a priest competent to administer the Sacrament of Confirmation. While the conferring of the three sacramental orders of the episcopate, presbyterate, and diaconate, pertains to the bishop alone, the pope may delegate a priest to administer the four minor orders, and even the subdiaconate. According to the present canon law, however, the papal permission granted to abbots of monasteries is confined to the conferring of the tonsure and the four minor orders on their subjects (cf. Council of Trent, Sess. XXIII de Ref., cap. x). Concerning the privilege of conferring the diaconate, claimed to have been given to Cistercian abbots by Innocent VIII in 1489, see Gasparri, "De sacr. ordin.", II (Paris, 1893), n. 798, and Pohle, "Dogmatik", III (4th ed., Paderborn, 1910), pp. 587 sqq. To the priestly office also belongs the faculty of administering the ecclesiastical blessings and the sacramentals in general, in so far as these are not reserved to the pope or bishops. By preaching the Word of God the priest has his share in the teaching office of the Church, always, however, as subordinate to the bishop and only within the sphere of duty to which he is assigned as pastor, curate, etc. Finally, the priest may participate in the pastoral duty in so far as the bishop entrusts him with a definite ecclesiastical office entailing a more or less extensive jurisdiction, which is indispensable especially for the valid absolution of penitents from their sins. Certain external honorary privileges, e. g. those enjoyed by cardinal-priests, prelates, ecclesiastical councillors, etc., do not enhance the intrinsic dignity of the priesthood.

General Works:—ST. THOMAS, *Supplem.*, Q. xxxiv sqq., and the commentators: PETRUS SOTO, *De instit. sacerdotum* (Dillingen, 1568); HALLIER, *De sacris electionibus et ordinationibus ex antiquo et novo jure* (Paris, 1636), also in MIGNE, *Cursus theol.*, XXIV; MORIN, *Comment. de sacris Ecclesie ordinat.* (Paris, 1655; Antwerp, 1695); OBERNDORFER, *De sacr. ord.* (Freising, 1759); among later works consult: KÖPPLER, *Priester u. Opferrgabe* (Mainz, 1886); GASPARRI, *Tractatus canonicus de sacr. ordinat.* (Paris, 1893); SCHANZ, *Die Lehre von den Sakramenten d. kath. Kirche* (Freiburg, 1893); GHR, *Die Lehre von den hll. Sakramenten der kath. Kirche*, II (Freiburg, 1903); KLUGE, *Die Idee des Priestertums in Israel-Juda u. im Urchristentum* (1906); POURRAT, *La théologie sacramentaire* (Paris, 1907); SALTET, *Les réordinations* (Paris, 1907). The following are written rather from the ascetical standpoint: OLIER, *Traité des saints ordres* (7th ed., Paris, 1868); MANNING, *The Eternal Priesthood* (London, 1883); MERCIER, *Retraite pastorale* (7th ed., Brussels, 1911).

Concerning the alleged pagan influences on the Catholic Sacrifice and priesthood: DÖLLINGER, *Heidentum u. Judentum* (Ratisbon, 1857); HATCH, *The Influence of Greek Ideas and Usages upon the Christian Church*, ed. by FAIRBAIRN (London, 1890); ANRICH, *Das antike Mysterienwesen in seinem Einfluss auf das Christentum* (Göttingen, 1894); WOBBERMIN, *Religionsgeschichtl. Studien zur Frage der Beeinflussung des Christentums durch das antike Mysterienwesen* (Berlin, 1896); CUMONT, *Textes et mon. relatifs aux mystères de Mithra* (Brussels, 1896-9); ROBERTSON, *Christianity and Mythology* (London, 1900); CHAPUIS, *L'influence de l'essénisme sur les origines chrét. in Rev. de théol. et philos.* (1903), pp. 193 sqq.; CUMONT, *The Mysteries of Mithra*, tr. McCORMACK (London, 1903); GRILL, *Die persische Mysterienreligion u. das Christentum* (Leipzig, 1903); DIETERICH, *Eine Mithrasliturgie* (Leipzig, 1903); BLÖTZER, *Die heidnischen Mysterien u. die Hellenisierung des Christentums in Stimmen aus Maria-Laach* (1906), pp. 376 sqq., 500 sqq.; (1907), pp. 37 sqq., 182 sqq.; FEINE, *Ueber Babylonische Einflüsse im Neuen Testament in Neue kirchl. Zeitschr.* (1906), pp. 696 sqq.; JENSEN, *Das Gilgamesch-Epos in der Weltliteratur*, I (Strasbourg, 1906); WENDLAND, *Die hellenisch-römische Kultur in ihren Beziehungen zu Judentum u. Christentum* (Tübingen, 1907); SOITAU, *Das Fortleben des Heidentums in der altchristl. Kirche* (Berlin, 1906); DE JONG, *Das antike Mysterienwesen* (Leiden, 1909); CLIMEN, *Religionsgeschichtl. Erklärung des Neuen Testaments* (Giessen, 1909).

Concerning the relations between the bishop and priests in the primitive Church consult: KURZ, *Der Episkopat der höchste vom Presbyterat verschiedene Ordo* (Vienna, 1877); HATCH, *The Organization of the Early Christian Churches* (2nd ed., London, 1882); SMITH and CHEETHAM, *Dict. of Christ. Antiq.*, s. v. Priest; SCHULTE-PLASSMAN, *Der Episkopat ein vom Presbyterat verschiedener, selbständiger und sakramentaler Ordo* (Paderborn, 1883); LÖNING, *Die Gemeindefassung des Urchristentums* (Halle, 1889), cf. *Hist. Jahrb. der Görresgesellschaft*, XII (1900), 221 sqq.; SOB-KOWSKI, *Episkopat und Presbyterat in den ersten christl. Jahrhund.* (Würzburg, 1893); GOBET, *L'origine divine de l'épiscopat* (Fribourg, 1898); DUNIN-BORKOWSKI, *Die neueren Forschungen über die Anfänge des Episkopats* (Freiburg, 1900); MICHELS, *L'origine de l'épiscopat* (Louvain, 1900); WEIZSÄCKER, *Das apostolische*

Zeitalter der christl. Kirche (3rd ed., Leipzig, 1902); BRUDERS, *Die Verfassung der Kirche von den ersten Jahrzehnten der apostolischen Wirksamkeit bis zum Jahre 175 nach Chr.* (Mainz, 1904); KNOPF, *Das nachapostolische Zeitalter* (Leipzig, 1905); BATIFFOL, *L'église naissante et le Catholicisme* (2nd ed., Paris, 1908); HARNACK, *Entstehung und Entwicklung der Kirchenverfassung und des Kirchenrechts* (Leipzig, 1910). For special treatment of the views of St. Jerome, consult: BLONDEL, *Apologia pro sententia Hieronymi de episcopis et presbyteris* (Amsterdam, 1646); KÖNIG, *Der katholische Priester vor 1500 Jahren: Priester und Priestertum nach Hieronymus* (Breslau, 1890); SANDERS, *Études sur S. Jérôme* (Paris, 1903), 296 sqq.; TIXERONT, *Hist. des dogmes*, II (Paris, 1909). On clerical training see bibliography under SEMINARY.

IV. WHAT THE CATHOLIC PRIESTHOOD HAS DONE FOR CIVILIZATION.—Passing entirely over the supernatural blessings derived by mankind from the prayers of the priesthood, the celebration of the Holy Sacrifice, and the administration of the sacraments, we shall confine ourselves to the secular civilization, which, through the Catholic priesthood, has spread to all nations and brought into full bloom religion, morality, science, art, and industry. If religion in general is the mother of all culture, Christianity must be acknowledged as the source, measure, and nursery of all true civilization. The Church, the oldest and most successful teacher of mankind, has in each century done pioneer service in all departments of culture. Through her organs, the priests and especially the members of the religious orders, she carried the light of Faith to all lands, banished the darkness of paganism, and with the Gospel brought the blessings of Christian morality and education. What would have become of the countries about the Mediterranean during the epoch of the migration of the nations (from 375) if the popes, bishops, and clergy had not tamed the German hordes, converted them from Arianism to Catholicism, and out of barbarism evolved order? What Ireland owes to St. Patrick, England owes to St. Augustine, who, sent by Pope Gregory the Great, brought not only the Gospel, but also a higher morality and culture. While the light of Christianity thus burned brightly in Ireland and Britain, part of Germany was still shrouded in the darkness of paganism. Bands of missionaries from the Island of Saints now brought to the continent the message of salvation and established new centres of culture. Charlemagne's great work of uniting all the German tribes into an empire was only the glorious fruit of the seed sown by St. Boniface of Certon (d. 755) on German soil and watered with the blood of martyrs. The Church of the Middle Ages, having now attained to power, continued through her priests to propagate the Gospel in pagan lands. It was missionaries who first brought to Europe news of the existence of China. In 1246 three Franciscans, commissioned by the pope, appeared in audience before the emperor of the Mongols; in 1306 the first Christian church was built in Peking. From the Volga to the Desert of Gobi, the Franciscans and Dominicans covered the land with their missionary stations. In the sixteenth century the zeal of the older orders was rivalled by the Jesuits, among whom St. Francis Xavier must be accorded a place of honour; their achievements in the Reductions of Paraguay are as incontestable as their great services in the United States. As for the French colonies in America, the American historian Bancroft declares that no notable city was founded, no river explored, no cape circumnavigated, without a Jesuit showing the way. Even if Buckle's one-sided statement were true, viz. that culture is not the result of religion, but vice versa, we could point to the work of Catholic missionaries, who are striving to lift the savages in pagan lands to a higher state of morality and civilization, and thence to transform them into decent Christians.

In the wake of religion follows her inseparable companion, morality; the combination of the two forms is the indispensable preliminary condition for the continuation and vitality of all higher civilization. The decadence of culture has always been heralded by a

reign of unbelief and immorality, the fall of the Roman Empire and the French Revolution furnishing conspicuous examples. What the Church accomplished in the course of the centuries for the raising of the standard of morality, in the widest sense, by the inculcation of the Decalogue, that pillar of human society, by promulgating the commandment of love of God and one's neighbour, by preaching purity in single, married, and family life, by waging war upon superstition and evil customs, by the practice of the three counsels of voluntary poverty, obedience, and perfect purity, by holding out the "imitation of Christ" as the ideal of Christian perfection, the records of twenty centuries plainly declare. The history of the Church is at once the history of her charitable activity exercised through the priesthood. There have indeed been waves of degeneracy and immorality sweeping at times even to the papal throne, and resulting in the general corruption of the people, and in apostasy from the Church. The heroic struggle of Gregory VII (d. 1085) against the simony and incontinence of the clergy stands forth as a fact which restored to the stale-grown salt of the earth its earlier strength and flavour.

The most wretched and oppressed classes of humanity are the slaves, the poor, and the sick. Nothing is in such harsh contrast to the ideas of human personality and of Christian freedom as the slavery found in pagan lands. The efforts of the Church were at first directed towards depriving slavery of its most repulsive feature by emphasizing the equality and freedom of all children of God (cf. I Cor., vii, 21 sqq.; Philem., 16 sqq.), then towards ameliorating as far as possible the condition of slaves, and finally towards effecting the abolition of this unworthy bondage. The slowness of the movement for the abolition of slavery, which owed its final triumph over the African slave-traders to a crusade of Cardinal Lavigerie (d. 1892), is explained by the necessary consideration of the economic rights of the owners and the personal welfare of the slaves themselves, since a bold "proclamation of the rights of man" would simply have thrown millions of helpless slaves breadless into the streets. Emancipation carried with it the obligation of caring for the bodily needs of the freedmen, and, whenever the experiment was made, it was the clergy who undertook this burden. Special congregations, such as the Trinitarians and the Mercedarians, devoted themselves exclusively to the liberation and ransom of prisoners and slaves in pagan, and especially in Mohammedan lands. It was Christian compassion for the weakly and languishing Indians which suggested to the Spanish monk, Las Casas, the unfortunate idea of importing the strong negroes from Africa to work in the American mines. That his idea would develop into the scandalous traffic in the black race, which the history of the three succeeding centuries reveals, the noble monk never suspected (see SLAVERY).

As to the relief of the poor and sick, a single priest, St. Vincent de Paul (d. 1660), achieved more in all the branches of this work than many cities and states combined. The services of the clergy in general in the exercise of charity cannot here be touched upon (see CHARITY AND CHARITIES). It may however be noted that the famous School of Salerno, the first and most renowned, and for many centuries the only medical faculty in Europe, was founded by the Benedictines, who here laboured partly as practitioners of medicine, and partly to furnish a supply of skilled physicians for all Europe. Of recent pioneers in the domain of charity and social work may be mentioned the Irish "Apostle of Temperance", Father Theobald Matthew and the German "Father of Journeymen" (*Gesellenwater*), Kolping.

Intimately related with the morally good is the idea of the true and the beautiful, the object of science and

art. At all times the Catholic clergy have shown themselves patrons of science and the arts, partly by their own achievements in these fields and partly by their encouragement and support of the work of others. That theology as a science should have found its home among the clergy was but to be expected. However, the whole range of education lay so exclusively in the hands of the priesthood during the Middle Ages, that the ecclesiastical distinction of *clericus* (cleric) and *laicus* (layman) developed into the social distinction of educated and ignorant. But for the monks and clerics the ancient classical literature would have been lost. A medieval proverb ran: "A monastery without a library is a castle without an armory." Hume, the philosopher and historian, says: "It is rare that the annals of so uncultivated a people as were the English as well as the other European nations, after the decline of Roman learning, have been transmitted to posterity so complete and with so little mixture of falsehood and fable. This advantage we owe entirely to the clergy of the Church of Rome, who, founding their authority on their superior knowledge, preserved the precious literature of antiquity from a total extinction" (Hume, "Hist. of England", ch. xxiii, Richard III). Among English historians Gildas the Wise, Venerable Bede, and Lingard form an illustrious triumvirate. The idea of scientific progress, first used by Vincent of Lerins with reference to theology and later transferred to the other sciences, is of purely Catholic origin. The modern maxim, "Education for all", is a saying first uttered by Innocent III. Before the foundation of the first universities, which also owed their existence to the popes, renowned cathedral schools and other scientific institutions laboured for the extension of secular knowledge. The father of German public education is Rhabanus Maurus. Of old centres of civilization we may mention among those of the first rank Canterbury, the Island of Iona, Malmesbury, and York in Great Britain; Paris, Orléans, Corbie, Cluny, Chartres, Toul, and Bec in France; Fulda, Reichenau, St. Gall, and Corvey in Germany. The attendance at these universities conducted by clergymen during the Middle Ages awakens one's astonishment: in 1340 the University of Oxford had no less than 30,000 students, and in 1533, when the German universities were almost deserted, about 20,000 students, according to Luther, flocked to Paris.

The elementary schools also, wherever they existed, were conducted by priests. Charlemagne had already issued the capitulary "Presbyteri per villas et vicus scholas habeant et cum summa charitate parvulos doceant", i. e. The priests shall have schools in the towns and hamlets and shall teach the children with the utmost devotion. The art of printing was received by the whole Church, from the lowest clergy to the pope, as a "holy art". Almost the whole book production of the fifteenth century aimed at satisfying the taste of the clergy for reading, which thus furthered the development of the book trade. Erasmus complained: "The booksellers declare that before the outbreak of the Reform they disposed of 3000 volumes more quickly than they now sell 600" (see Döllinger, "Die Reformation, ihre innere Entwicklung u. ihre Wirkungen", I, Ratisbon, 1851, p. 348). Early Humanism, strongly encouraged by Popes Nicholas V and Leo X, numbered among its enthusiastic supporters many Catholic clerics, such as Petrarch and Erasmus; the later Humanistic school, steeped in paganism, found among the Catholic priesthood, not encouragement, but to a great extent determined opposition. Spain's greatest writers in the seventeenth century were priests: Cervantes, Lope de Vega, Calderón etc. At Oxford in the thirteenth century, by their skill in the natural sciences the Franciscans acquired celebrity and the Bishop Grosseteste exercised great influence. The friar, Roger Bacon (d. 1249), was famous for his scientific knowledge, as were

also Gerbert of Rheims, afterwards Pope Silvester II, Albertus Magnus, Raymond Lully, and Vincent of Beauvais. Copernicus, canon of Thorn, is the founder of modern astronomy, in which even to the present day the Jesuits especially (e. g. Scheiner, Clavius, Secchi, Perry) have rendered important services. For the first geographical chart or map we are indebted to Fra Mauro of Venice (d. 1459). The Spanish Jesuit, Hervas y Panduro (d. 1809), is the father of comparative philology; the Carmelite, Paolino di san Bartolomeo, was the author of the first Sanskrit grammar (Rome, 1790). The foundation of historical criticism was laid by Cardinal Baronius (d. 1607), the monks of St. Maur, and the Bollandists. A study of the history of art would reveal a proportionately great number of the apostles of the beautiful in art among the Catholic clergy of all centuries. From the paintings in the catacombs to Fra Angelico and thence to the Beuron school we meet numerous priests, less indeed as practising artists than as Mæcenases of art. The clergy have done much to justify what the celebrated sculptor Canova wrote to Napoleon I: "Art is under infinite obligations to religion, but to none so much as the Catholic religion."

The basis on which higher culture finds its secure foundation is material or economic culture, which, in spite of modern techniques and machinery, rests ultimately on labour. Without the labourer's energy, which consists in the power and the will to work, no culture whatever can prosper. But the Catholic priesthood more than any other professional body has praised in word and proved by deed the value and blessing of the labour required in agriculture, mining, and the handicrafts. The curse and disdain, which paganism poured on manual labour, were removed by Christianity. Even an Aristotle (Polit., III, iii) could anathematize manual labour as "philistine", the humbler occupations as "unworthy of a free man". To whom are we primarily indebted in Europe for the clearing away of the primitive forests, for schemes of drainage and irrigation, for the cultivation of new fruits and crops, for the building of roads and bridges, if not to the Catholic monks? In Eastern Europe the Basilians, in Western the Benedictines, and later the Cistercians and Trappists, laboured to bring the land under cultivation, and rendered vast districts free from fever and habitable. Mining and foundries also owe their development, and to some extent their origin, to the keen economic sense of the monasteries. To place the whole economic life of the nations on a scientific foundation, Catholic bishops and priests early laid the basis of the science of national economy—e. g. Duns Scotus (d. 1308), Nicholas Oresme, Bishop of Lisieux (d. 1382), St. Antoninus of Florence (d. 1459), and Gabriel Biel (d. 1495). The Church and clergy have therefore truly endeavoured to carry out in every sphere and in all centuries the programme which Leo XIII in his famous Encyclical "Immortale Dei" of 1 Nov., 1885, declared the ideal of the Catholic Church: "Imo inertiae desidiaeque inimica [Ecclesia] magnopere vult, ut hominum ingenia uberes ferant exercitatione et cultura fructus". The "flight from the world", with which they are so constantly reproached, or the "hostility to civilization", which we hear so often echoed by the ignorant, have never prevented the Church or her clergy from fulfilling their calling as a civilizing agency of the first order, and thus refuting all slanders with the logic of facts.

For the literature of the various branches of ecclesiastical and clerical activity in the furtherance of civilization the special articles must be consulted, e. g. MISSIONS, SCHOOLS, UNIVERSITIES, etc. Only a few works can be here given. General.—BALMES, *Der Protestantismus verglichen mit dem Katholizismus in seinen Beziehungen zur europäischen Civilisation* (Ratisbon, 1844); GUIZOT, *Hist. de la civilisation en Europe* (Paris, 1840); LACHAUD, *La civilisation ou les bienfaits de l'Eglise* (Paris, 1890); LILLY, *Christianity and Modern Civilization* (London, 1903); *Christ and Civilization, a Survey of the Influence of the Christian Religion upon the Course of Civilization* (London, 1910); DEVAS, *Key to the World's Progress* (2nd ed., London, 1908); HETTINGER, *Apologie des*

Christentums, V (9th ed., Freiburg, 1908); EHRHARD, *Kathol. Christentum u. moderne Kultur* (2nd ed., Mainz, 1906), (cf.); SADOZ SZALO, *Ehrhardt's Schrift etc., ein Beitrag zur Klärung der religiösen Frage der Gegenwart* (Graz, 1909); CATHEIN, *Die kathol. Weltanschauung in ihren Grundlinien mit besonderer Berücksichtigung der Moral* (2nd ed., Freiburg, 1910).

Special works are: SCHELL, *Der Katholizismus als Prinzip des Fortschritts* (7th ed., Würzburg, 1909); PESCH, *Die soziale Befähigung der Kirche* (2nd ed., Berlin, 1897); DE CHAMPAGNY, *La charité chrétienne dans les premiers siècles* (Paris, 1856); COCHIN, *L'abolition de l'esclavage* (Paris, 1862); MARGRAF, *Christentum u. Sklaverei* (1865); KATZINGER, *Gesch. der kirchl. Armenpflege* (Freiburg, 1868); SCHAUB, *Die kathol. Caritas u. ihre Gegner* (Freiburg, 1909); MONTALEMBERT, *The Monks of the West* (tr. Boston, 1872); WHEWELL, *Hist. of the Inductive Sciences* (London, 1847); WISEMAN, *Science and Religion* (London, 1853); MAITRE, *Les écoles de l'Occident* (Paris, 1858); WEDEWER, *Das Christentum u. die Sprachwissenschaft* (1867); ROSCHER, *Principles of Pol. Economy* (tr. Kulturbild* (2nd ed., Cologne, 1904); WILLMANN, *Gesch. des Idealismus* (3 vols., Brunswick, 1908); ILGNER, *Die volkswirtschaftl. Anschauungen des hl. Antonin von Florenz* (Breslau, 1904).

J. POHLE.

Priests, CONFRATERNITIES OF.—Three confraternities of priests—the Apostolic Union, the Priests' Eucharistic League, the Priests' Communion League—have reached a stage of unprecedented diffusion throughout the Church and receive special treatment elsewhere in this ENCYCLOPEDIA. Confraternities of a local character form the subject of this article. A confraternity is a society of persons associated for some pious object. The members are linked together by a bond of brotherhood for mutual co-operation in the pursuit of a specific object of religion or charity by means of prayer, example, and counsel. This definition will exclude societies among the clergy formed for purely scientific or literary work. The clergy funds of English dioceses, even though they include certain religious obligations towards the living and the dead, fall outside its limits. The "*Societas pro clero defuncto*" is a mutual engagement to pray for the deceased clergy of a district; it is an association but not a confraternity. On the other hand the numerous societies of secular clergy in all parts of Spain, called by the name of "*Monte-pio*", will doubtless, many of them, fall under the title of confraternity, on account of the importance assigned to the duty of visiting the sick brethren and affording them not only material aid but spiritual consolation, and administering to them the sacraments. Two or more of the associates are appointed to visit the sick at least every three days.

A confraternity of priests in the strict sense of the word seeks before all else the personal sanctification of its members. Sacerdotal confraternities in different parts of the world present a close family-likeness, their common object being to preserve priests from the dangers of spiritual and social isolation, and to afford them something of that mutual support which belongs to a religious community. "*Conjunctæ vires plus valent quam singulæ*" is the expression by which the Holy See has recently consecrated the principle. The particular aims of priests' confraternities may be reduced to three: personal holiness, ecclesiastical learning, and mutual financial aid. The first two are universal, the third appears occasionally. The religious exercises almost invariably insisted upon are: the half-hour's meditation, Mass with preparation and thanksgiving of fifteen minutes, visit to the Blessed Sacrament, the devout recitation of the Breviary, rosary, weekly confession, monthly recollection, and biennial retreats. Ecclesiastical learning is understood to comprise the study of those subjects which are proper to the various departments of the ministry, and great importance is attached to associated study by means of conferences and discussions. Financial

assistance embraces cases of sickness and old age, as well as loans, medical attendance, and legal advice.

I. SPAIN.—The uncertainty of the position of ecclesiastics under a hostile Government has led to the display of considerable activity, of late years in different parts of Spain, in the establishment of the "*Monte-pio*", an association for the help of priests in sickness or old age. Such societies are to be found in the Dioceses of Córdoba, Madrid-Alcalá (founded 1909), and for the clergy of the cities of Valencia (1897), Toledo (1901), León (1902), Orviedo (1903), Saragossa (1904), Palencia (1905), Astorgia (1906), Urgel (1906), Orense, Salamanca (1907), and in the districts of north Aragon, Ayerbo, and Bolea in Huesca. In Granada there is the "*Refugio de San Pedro Nolasc*" under the care of the religious of St. John of God for priests who by reason of age or infirmity are ordinarily unable to celebrate Mass. Should there be further accommodation after these have been provided for, priests over sixty years of age who are able to celebrate regularly are also admitted. There is a society of clergy for mutual aid in the Diocese of Majorca (established 1846) and Vitoria (1846), also in the cities of San Sebastian and Guernica; another called "*La Providenza*" is found in the Diocese of Tarragona. A brotherhood for mutual assistance in case of illness exists among the clergy of the town of Vich (1846) in the Diocese of Barcelona. Masses are said for all deceased members once a year, and for individual members shortly after death. The co-operative society called "*The Spanish Clergy Association*", established in Ambrona (Soria) for the purchase of provisions, hardly falls within the scope of the present article, nor does the society now being projected in Madrid by Fr. Armendariz for the vindication of the clergy from the calumnies of the anticlerical press. In Ciudad Real, Cadiz, and other dioceses there exists a brotherhood in which each priest prays for his fellow members. At his death his mass-register is shown to the brotherhood, and if it appears that he has faithfully offered Mass for deceased members, each living member offers a Mass for him. The brotherhoods framed upon the type of the "*Asociación de Sacerdotes del Obispado de Jaén*", under the title of Our Lady of Capilla and St. Euphrasius, dedicate their lives to the apostolate of the working-class in any of the forms required by the present social conditions. They teach Christian doctrine in the schools; they distribute wholesome literature; they attract the young to confraternities and the practices of religion; and they are always ready for work in the confessional, so as to make it easy for people to approach the sacraments. They hold a day's retreat every month, during which the charitable duties for the next month are allotted. In case of sickness three of the associates are selected to minister spiritually to the sick brother.

The "*Venerable Congregación de Sacerdotes de San Felipe Neri y Nuestra Señora de la Presentación*" took its rise under the invocation of St. Philip in the parish church of St. James, Valladolid, as early as the year 1645. Later on the members erected the church of the Oratory, where the congregation is now installed, and in 1609 united with the ancient but languishing confraternity of the Presentation. The personal sanctification of the associates, and as a consequence the greater spiritual profit of the faithful, form the objects of the Institute. Priests and clerics in sacred orders are eligible for admission, and on entering take an oath of fidelity to the rules which prescribe certain religious duties and in particular visitation of the sick, attendance at the funerals of the brethren, and prayers for the dead. As a type of other forms may be taken the ancient "*Hermanidad* [Brotherhood] de San Pedro de la Ciudad de Xerez". Its aim is the performance of spiritual and corporal works of mercy. The confraternity supplies a legal

adviser and two medical doctors at a low fee; moreover, it also provides decent interment for parents of the brethren, and for sacristans who have assisted the society in its charitable offices. There are likewise brotherhoods of the clergy in Seville, Puerto de S. Maria, in Santucar de Renameda, Carmina, Ecija, and in the principal cities of Andalusia. To these must be added the association of priests entitled "Hermandad de Sacerdotes operarios Diocesanos del Sagrado Corazón de Jesús", founded in 1872 by Manuel Domingo y Sol (d. 1909). This association, which has received the approval of the pope, takes charge of the discipline in the seminaries, of which it has several in Spain, one in Mexico, and the Spanish College in Rome, whose late rector, Benjamin D. Miñana, became superior of the society on the death of the founder.

II. PORTUGAL.—A confraternity has existed in Lisbon from the year 1415 with the title of "Veneravel Irmandade dos Clerigos Pobres" under the protection of the Holy Trinity and is now installed in the suppressed convent of St. Martha. It is composed of secular and regular priests and clerics in orders. Its chief works are to render special homage to the Blessed Trinity, to afford spiritual and temporal succour to the brethren, and to aid primary education. In 1887 the brotherhood took up the functions of a benefit society.

III. AUSTRIA.—Austria possesses several confraternities of the clergy. The "Associatio Perseverantiæ Sacerdotalis", founded in 1868 for secular or regular priests, has its seat in Vienna. The aim proposed to members is their sanctification and perseverance. The zealous promotion of devotion to the Sacred Heart is a prominent feature of the association. Much is made of intercourse between members; the anniversary day of ordination is observed with fitting solemnity. The society has a monthly journal called the "Korrespondenz der Associatio" (Vienna). The "Priester-Sodalität zum heiligsten Herzen Jesu" of Botzen was established in 1866. Candidates are admitted after a year's probation. The key-note of the association is personal holiness by the thoughtful and reverent discharge of priestly duties. It supplies a guide to life by fixing a minimum for certain religious exercises likely to be crowded out: thus, meditation, twenty minutes, and when this is impossible its place is to be supplied by spiritual reading or ejaculatory prayer; confession, at least fortnightly; retreat, at least every second year, with three days' recollection other years; preparation for Mass and thanksgiving (fifteen minutes) in the church for example's sake; night prayers with the congregation. Stress is laid on regular application to the studies of the ministry; specialization is encouraged as promoting interest. Other points are: careful preparation of all instructions, zeal in the work of the confessional, special care of talented boys and of neglected children. "Der Marianische Kongregation im Priester-seminar" in Brixen has for its object to foster sacerdotal piety among its members and to cultivate the ecclesiastical spirit among the students of the seminary. The means insisted on are a personal devotion to Our Lady, public devotions with sermons twice a month, and mutual admonition. Its journal is the "Priester-Konferenz-Blatt". At Innsbruck there is a confraternity connected with the Jesuit College entitled "Priestergebetsverein", consisting of priests and seminarians in theology. The essential object of the association is to maintain the bonds of spiritual companionship established in the seminary when the young priests leave to take up their pastoral work. The means employed are prayer (particularly associated devotion to the Sacred Heart) and correspondence (the periodical of the confraternity being sent to members, and members writing to the committee at least once a year).

IV. FRANCE.—A peculiar feature of the "Associa-

tion des Prêtres séculiers du Sacré-Cœur" (Issoudun, France) is its intimate relation with the Missionaries of the Sacred Heart, of whose congregation it is the offspring. "Le soutien d'un prêtre, c'est le prêtre" is the principle which has guided the missionaries in founding an association whereby they may co-operate in the sanctification of the secular clergy. The confraternity was founded in 1858, blessed by Pius IX in 1860, and enriched by him with special favours in 1867 and 1874. In 1882 the roll of the association contained 700 names. At that date a journal was inaugurated, to be succeeded three years later by the monthly review entitled "Le Sacré-Cœur". Each member under the advice of his director arranges his rule of life with sufficient detail to forestall omissions and yet with a certain elasticity so as not to interfere with parochial duties [see the "Manuel" (Issoudun), published by the Missionaries of the Sacred Heart].

V. ROME.—The "Pia Unio S. Pauli Apostoli", established in Rome, may be accepted as an approved type of a priestly association. It dates back to 1797, when it was instituted as a confraternity of priests for the corporal and spiritual assistance of sick brethren. With the co-operation of the laity the good work extended and ultimately embraced the distinct works of fostering vocations to the priesthood, the care of the young on festival days, and the holding of discussions on moral subjects. It was reorganized by Pius X in a decree dated 26 May, 1910, and attached to the church of S. Maria della Pace. The central idea of the association is sanctification by the exercise of the sacred ministry. On the economic side financial aid is given in time of sickness and a loan committee has been projected. Provision is also made for the legal defence of the clergy when this is desirable.

VI. UNITED STATES.—The needs of the teeming, active, and diversified population of America have called into being a number of agencies for dealing with the spiritual and social problems which are constantly arising. Mention therefore should be made here of the following societies of priests: "Association for the Protection of Belgian and Dutch Immigrants"; "Association of the Secular Polish Clergy"; "Catholic Board for Mission Work among the Coloured People"; "The Bureau of Catholic Indian Missions"; "Catholic Missionary Union", which provides funds to enable bishops to defray the expenses of giving missions to non-Catholics in their dioceses. Finally the "Priests' Total Abstinence League" appears to come nearest to the true idea of a confraternity whose central idea is self-sanctification. [See the "Catholic Directory" (Milwaukee, 1910), 725-731.]

VII. SPANISH AMERICA.—It must suffice here to give the names of several societies of priests in certain districts of South America: Argentina, the "Asociación Eclesiástica de S. Pedro" with centres at Buenos Aires and Córdoba; Colombia, "Asociación de sufragios del Clero" at Bogota; Brazil, "Liga Sacerdotal Riograndeza" at Porto Alegre. In Mexico there is the "Asociación del Espíritu Santo" and the "Asociación de S. Juan Nepomuceno" at Guadalajara, and the "Asociación de Socorros mutuos de Clérigos" in the City of Mexico.

VIII. GERMANY.—In Germany almost all the associations for priests have as their object either the cultivation of the ascetical life among the clergy or the assistance of the members in their temporal necessities. One of the most important of the pious societies is the "Associatio Perseverantiæ Sacerdotalis" (see III. AUSTRIA). The association has already been introduced into about 27 dioceses in Germany. The "Eucharistic Association of the Priests of the Adoration" was founded in 1858 for secular priests, and was canonically erected into a confraternity on 16 January, 1887. Its objects are to foster among the clergy truly priestly sentiments and a lively love and veneration for the Blessed

Sacrament. Each member is to spend each week one hour without intermission in adoration before the Blessed Sacrament, and to celebrate one Mass yearly for deceased members, to whom he is also to apply once monthly the plenary indulgence granted for each hour of adoration. The official organ, "S. Eucharistia", is published in six languages; the membership is about 7000 in Germany. Among this class of associations may be also mentioned the "Priesterabstinentenband" (with its organ "Sobrietas") for promoting total abstinence, and the *Katechetenvereine* in Munich, etc.

There are three important associations for priests with the primary object of the rendering of assistance to members in temporal matters. These are (1) the "Priesterverein zur Unterstützung kranker Mitglieder"; (2) "St. Josephs-Priesterverein" in Görz; (3) the "Pax". The first, which is essentially an insurance society, pays to sick priests three marks daily, provided they have been members for at least one year. The entrance fee varies from 2 marks to over 100 marks according to the age of the applicant; the annual tax is 10 marks. Founded in 1882 it paid 127,192 marks to 513 members in 995 cases of sickness in the first twenty-five years of its existence. The association has almost 1000 members (600 in the Archdiocese of Cologne). St. Josephs-Priesterverein in Görz (primarily an Austrian association) was founded in 1876 by Mgr Filipp in Meran, and was transferred in 1882 to Görz; its object is to secure places in sanatoria for sick priests who need to take a cure to recover their health. The fee for membership is three Kronen yearly (about 60 cents), or a single payment of fifty Kronen. The "Pax", or the "Association of the Catholic Priests of Germany", was founded in 1905 to supply good and cheap insurance for ecclesiastical corporations; the foundation of a pension fund, the affording of legal protection, and the procuring of abatements at sanatoria and hotels are also in contemplation and to some extent attained. Specially favourable terms have been secured from the life insurance company "Concordia", at Cologne, and the fire insurance company "Rhineland", at Neuss. Any priest who takes an insurance with either of these companies becomes thereby a member of the association. The members (about 1500) come from all parts of Germany, although the southern and eastern dioceses (except Fulda) are not equally well represented. The Polish priests have founded a separate insurance society, the "Unitas".

KROBE, *Kirchliches Handbuch*, II (Freiburg, 1909), 377-79.

HENRY PARKINSON.

Priests' Communion League, an association of priests established at Rome on 20 July, 1906, in the Church of San Claudio, in charge of the Fathers of the Blessed Sacrament, and raised by Pius X to the dignity of an archconfraternity ten days later. Its object is to spread the practice of frequent and daily Communion among the faithful in conformity with the Decree "Sacra Tridentina Synodus" of 20 December, 1905. The conditions for joining the league are: (1) To have one's name inscribed on the register of the league; (2) to pledge oneself (though under no obligation of conscience) to promote zealously the observance of the Decree upon frequent and daily Communion by the apostolate of prayer, of preaching, and of the press; (3) to subscribe for the monthly periodical "Emmanuel", published by the Fathers of the Blessed Sacrament. The members of the league begin their work by explaining to the people what the Eucharist is; when, how, wherefore, and with what love it was instituted by Jesus Christ; what are its effects, whether considered as a sacrifice, as the real, perpetual presence of God among us, and, above all, the nourishment of our souls. They endeavour strenuously to dissipate the fear

by which many of the faithful are prevented from frequenting the Holy Table, and teach them that to communicate lawfully every day nothing more is exacted than what even yearly Communion requires, namely, the state of grace and a right intention, although it is desirable that they should be free also from deliberate venial sins. As the best means to spread the practice of daily Communion is daily attendance at Mass, they exhort the people to hear it every day. They should give their parishioners, during a period of not less than three days, a series of instructions dealing especially with the practice of and preparation for daily Communion. Members of the league take care to prepare children for the reception of Holy Communion at an early age. Priests belonging to the league enjoy the right of a privileged altar three times a week, provided they have not that right already; they may celebrate Mass an hour before sunrise and an hour after midday, and may distribute Holy Communion till sunset; they may gain a plenary indulgence on all the first-class feasts of the mysteries of faith, of the Blessed Virgin, and the Apostles; and an indulgence of 300 days for every work they perform for the intention of the league; they may impart at the end of the triduum, after the general Communion, the papal benediction with the plenary indulgence attached. Lastly, penitents confessing to priests enrolled in the league may gain a plenary indulgence once a week, if accustomed to communicate very frequently.

A. LETELLIER.

Priests' Eucharistic League.—I. *Object.*—The Priests' Eucharistic League (*Confraternitas sacerdotalis adorationis Sanctissimi Sacramenti*) was established in Paris by the Venerable Pierre-Julien Eymard, founder of the Congregation of the Blessed Sacrament. Already in 1857 he had been deeply impressed by the necessity of such an adaptation of his work of Eucharistic adoration as would attract the clergy to a more intimate and constant intercourse with the sacramental Lord. Still it was not until 1867 that the plan of a distinct confraternity was matured, and the Blessed Curé d'Ars was among the first to enrol his name on the list of members. The association assumed its present form in 1879, received the approval of Leo XIII on 25 Jan., 1881, and six years later, on 16 Jan., 1887, was definitively approved and canonically erected by Cardinal Parocchi, cardinal vicar, in the church of S. Claudio in Rome. To this church is attached the Archconfraternity of the Most Holy Sacrament, and it is the canonical centre of the Priests' Eucharistic League; but the office of the central administration of the league is at the house of the fathers of the Congregation of the Most Holy Sacrament, Brussels.

The primary object of this confraternity is the frequent and prolonged worship of the Blessed Sacrament by priests. As Christ is truly "God with us" in the Eucharist, it is His desire that priests should appear often in His presence and remain for reverent and affectionate intercourse. From this close intimacy a higher spiritual life must ensue. At this source priests will learn how to adore Him in spirit and in truth and draw light and power to carry out more fruitfully their apostolic mission. Its next object is to extend the Kingdom of Christ by forming apostles of the Eucharist. Reverent and docile companionship brings knowledge, love, and a desire to share with others the precious treasures of this supreme sacrament. Hence the devout adorer will labour assiduously to revive faith in the Holy Eucharist, and will encourage the faithful to partake of the life-giving banquet. A third object of the confraternity is to band together priests as apostles of the Eucharist who "will pledge themselves to take up and defend on all occasions the cause and the honour of Jesus Christ, and promote by every means in their power frequent visits to the Blessed

Sacrament as well as frequent communion". The regular and associated practice of the weekly adoration fosters a spirit of religious brotherhood. Priests animated by the Eucharistic spirit, impelled by the Eucharistic instinct, will be stimulated by the example of the neighbouring clergy and by a sense of spiritual companionship with a vast unseen array of associates performing the same acts of homage and devotion in all parts of the world.

The precise and specific works of the association are the following: (1) to spend each week one full and continuous hour of adoration before the Blessed Sacrament exposed on the altar or veiled in the tabernacle; (2) to report monthly to the local director on a prescribed schedule (*libellus*) the performance of the above undertaking; (3) to apply once a month the indulgences attached to the hour of adoration for the benefit of the souls of members who may have died during the previous month; (4) to offer the Holy Sacrifice once a year for all deceased members of the association. Repeated failure to transmit the *libellus* entails, after due warning, loss of membership.

II. *Membership and Privileges*.—The confraternity was originally intended for members of the secular clergy only; but as far back as 1898 the admission of religious has been authorized; and by a concession of the superior general of the Congregation of the Blessed Sacrament dated 2 Nov., 1902, seminarists in the United States become eligible for admission even before receiving the subdiaconate. The Holy See has favoured the practice of this devotion with numerous advantages, notably with the singularly rich indulgences of "The Station of the Blessed Sacrament" (Beringer, "Les Indulgences", II, 129), and the faculty of granting the indulgence of the Crosier Fathers (cf. Beringer, I, 504).

III. *Organization*.—The organization of the confraternity enjoys the merit of simplicity. Ordinary members are grouped under their respective diocesan directors. These are united under a general director for a district or a whole country, while the entire association throughout the world is subject to the central direction of the Fathers of the Blessed Sacrament at Brussels. For the greater convenience of administration local centres have been established in Austria, Argentina, Canada, Chili, Holland, Italy, Spain, and the United States. The diocesan directors are elected by members with the approval of the ordinary. They officially represent the confraternity in a diocese and maintain its efficiency and regular working. The life and energy of the members is promoted by periodical assemblies of the respective groups. Conferences of diocesan members are held on the occasion of the clergy retreats and at other convenient times. In the United States, besides these diocesan conferences, conventions of several dioceses have been held at Covington, Kentucky (1894), at Notre Dame, Indiana (1894, 1898), and at Philadelphia (1899). More important gatherings from a large number of dioceses, called congresses, have been held at Washington (1893), St. Louis (1901), New York (1904), and Pittsburgh (1906). The numerous local congresses held in France form a significant feature of the religious activity of the Church there (cf. "Annales", 1909, pp. 446-9; 1910, p. 158). Perhaps the most noteworthy characteristic of the confraternity is the rapidity with which it has spread throughout every portion of the world. Canada has a total of two thousand four hundred and fifty members, the United States 8015, while the grand total for the whole confraternity in March of the year 1911 is one hundred thousand five hundred and sixty-one, of whom twelve are cardinals and two hundred and forty bishops or archbishops. The real value of these figures is checked by the record kept of the individual reports sent in by members of their discharge of the duty of the weekly hour of adoration. Should a member have failed for a year to send in his *libellus*,

he receives a reminder, which, if ineffective, is followed by the removal of his name from the register.

IV. *Literature*.—A number of monthly periodicals serve to maintain the fervour and activity of the associates: the "Emmanuel" (sixteenth year; New York); "Annales des Prêtres Adorateurs" (twenty-third year; Brussels); "Annales de l'Association des Prêtres Adorateurs" (twenty-third year; Brussels); "Annali dei Sacerdoti Adoratori" (sixteenth year; Turin); "Anales de los Sacerdotes Adoradores" (third year; Buenos Aires); "SS. Eucharistia" (twentieth year; Bozen), the organ of the league for Austria, Germany, and Switzerland; "Eucharist and Priest" (sixteenth year; Verapoly, Malabar Coast). In addition to these sources of information and piety, there is much dogmatic and devotional literature on the subject of the hour of adoration, such as "The Real Presence", "The Month of our Lady of the Blessed Sacrament", "The Month of Mary", "The Month of St. Joseph", by the Venerable Père Eymard. The late Père Tesnière published: "The Adoration of the Blessed Sacrament"; "The Eucharistic Christ"; "The Eucharistic Heart"; "The Mysteries of the Rosary". The commendable practice has much increased among the members of the confraternity of making the hour of adoration at a time when the faithful are able to take part in it. Private or solemn exposition is adopted according to circumstances, and for the benefit of the faithful prayers are recited and suitable hymns sung between the intervals of meditation. In this connexion the associations, entitled "Agrégation du très saint Sacrement" and "Œuvre de l'Exposition Menseulle du très saint Sacrement dans les Paroisses", will be of service.

In addition to the literature mentioned in the article, see *Statutes of the Eucharistic League* (New York); *Report of the Nineteenth Eucharistic Congress* (Westminster, 1908), 255-266; POIRIER, *Advantages of the Priests' Eucharistic League, Its Origin and Present Status* (paper read at the Montreal Congress) in *Emmanuel* (Nov., 1910), 279-290.

HENRY PARKINSON.

Primacy (Lat. *primatus*, *primus*, first), the supreme episcopal jurisdiction of the pope as pastor and governor of the Universal Church. = (See POPE.)

Prima Primaria. See SODALITY.

Primary School. See SCHOOLS.

Primate (Lat. *primas*, from *primus*, "first").—In the Western Church a primate is a bishop possessing superior authority, not only over the bishops of his own province, like the metropolitan, but over several provinces and metropolitans. This does not refer to episcopal powers, which each bishop possesses fully, but to ecclesiastical jurisdiction and organization, especially in national churches. Primates exist only in the West, and correspond not to the patriarchs but to the exarchs of the East. There is no uniformity in the institution, it has no place in common law; primatial rights are privileges. In their widest acceptance these rights would be: to convoke and preside over national councils, to crown the sovereign, to hear appeals from the metropolitan and even episcopal courts, and finally the honorary right of precedence. This organization formerly useful, as it favoured and maintained unity in national churches, has lost its importance and disappeared; first, because national Churches as such no longer exist, and secondly on account of the gradual disciplinary centralization of the Western Churches around the Roman See. Except in the case of Gran in Hungary, the primatial title is merely honorific. At the solemnities accompanying the canonization of the Japanese martyrs in 1867, no special place was reserved for primates; and in the Vatican Council the precedence of primates was recognized only at the instance of the Prince-Primate of Hungary (Vering, "Kirchenrecht", § 133), as something exceptional and not to be considered a prece-

dent. The Brief "Inter multiplices", 27 November, 1869 (Acta S. Sedis, V, 235), ranks the primates according to their date of promotion after the patriarchs, but adds: *Ex speciali indulgentia*, i. e. by special favour, for that occasion only, nor must it be interpreted as conferring any right on them or diminishing the right of others. The history of the primacies in the Middle Ages is largely concerned with interminable disputes concerning special rights, privileges, etc. The real primacies were at first those that did not bear the name. The Bishop of Carthage exercised a true primatial jurisdiction over the provinces of Roman Africa, without being called a primate; on the other hand, in the provinces, other than the Proconsular, the oldest bishop, who resembled a metropolitan, was called the primate. The title Primate of Africa was restored again in 1893 by Leo XIII in favour of the Archbishop of Carthage. The Bishop of Toledo was also a primate for the Visigothic kingdom. On the other hand, the Bishops of Thessalonica and Arles, invested with the vicariate of the pope, had authority over several provinces. We meet later with claims to primatial authority in every country, and refusals to recognize these claims; the primates who have exercised a real authority being especially those of Mayence, the successors of St. Boniface, and of Lyons, made by Gregory VII, Primate of the Gauls, in reality of the provinces called formerly "Lugdunenses". All kinds of reasons were invoked: the evangelization of the country, the importance of the see, pontifical concessions, etc. It is impossible to give more than the mere names of primacies: in Spain, Toledo, Compostella, Braga; in France, Lyons, Reims, Bourges, Vienne, Narbonne, Bordeaux, Rouen; in Germany, Mayence, Trier, Magdeburg; in England, Canterbury, York; in Scotland, St. Andrews; in Ireland, Armagh; in the Scandinavian countries, Lund. But of all these nothing but a title has remained; and at the Vatican Council the only bishops figuring as primates, in virtue of recent concessions, were those of Salzburg, Antivari, Salerno, Bahia, Gnesen, Tarragona, Gran, Mechlin, and Armagh (Coll. Lacens., VII, pp. 34, 488, 726).

A. BOUDINHON.

Prime.—I. THE NAME.—The name Prime (*prima hora*) belongs with those of Terce, Sext, None, to the short offices recited at the different hours of the day, called by these names among the Romans, that is, *prima* towards 6 a. m.; *tertia*, towards 9 a. m.; *sexta*, towards noon; *nona* towards 3 p. m. At first Prime was termed *matutina* (*hora*), morning hour; later, in order to distinguish it from the nocturnal hours of Matins and Lauds, and to include it among hours of the day, it was called *prima*. The name is first met with in the Rule of St. Benedict. In the Bangor Antiphonary it is called *secunda*.

II. ORIGIN.—This short office is one of those whose origin is best known. Cassian, speaking of Prime, says expressly "*sciendum . . . hanc matutinam canonicam functionem [i. e. Prime] nostro tempore in nostro quoque monasterio primitus institutam*" (Instit., III, IV).

As the chronology of Cassian's works has recently been established fairly accurately, the institution of Prime must be placed towards 382 (see Pargoire, op. cit. below, 288). Apropos of this monastery, of which Cassian speaks as the cradle of Prime, it has now been proved that it was not St. Jerome's monastery at Bethlehem, but another, perhaps one established beyond the Tower of Ader (or of the Flock) beyond the village of the Shepherds, and consequently beyond the modern Beth-saur; it has been identified either with Deir-er-Raouat (convent of the shepherds) or with Seiar-er-Ganhem (enclosure of the sheep).

We learn further from Cassian the reason that led to the institution of this office. The office of the night, comprising Matins and Lauds, ended then at sunrise, so that Lauds corresponded to the dawn. After the night offices at Bethlehem, as in the other Palestinian monasteries, the monks might retire to rest. As no other office called them together before Terce, those who were lazy seized the opportunity of prolonging their sleep till nine in the morning, instead of applying themselves to manual work or spiritual reading. To end this abuse, it was decided, in the above monastery, to continue the custom of reposing after the night office, but, to prevent an undue prolongation of sleep, the monks were recalled to choir at the hour of Prime, and after the recital of a few psalms they were to work until Terce (Cassian, "Instit.", III, iv). All this is established by authentic texts. The only difficulty is that some contemporaries of Cassian or even his predecessors, as Eusebius of Cæsarea, St. Jerome, St. Basil, St. John Chrysostom, speak of an office recited at sunrise, and which therefore would seem to be identical with Prime. But it must be noted that they are speaking of Lauds, which in some communities was recited later, and so was identified with the hour but not with the subject matter of Prime.

III. CONTENTS.—The matter composing the new hour was drawn from the office of Lauds; or rather Prime, as an office, was a repetition of part of Lauds, and added nothing to the *ensemble* of the psalmody, only Psalms i, lxii, and lxxxix, which were formerly part of Lauds, were recited at this hour. Such at least was the original composition of Prime; but the monasteries which gradually adopted it in the East and in the West changed its constitution as they liked. It is impossible to describe here all the variations this office underwent in the different liturgies. We need only remark that one of the most characteristic features of Prime is the recitation of the famous symbol "*Quicumque vult salvus esse*", called the Athanasian Creed, which has recently been the subject of much controversy in the Anglican Church. St. Benedict orders to be recited at Prime on Sundays four groups of eight verses of Ps. cxviii; on week-days, three psalms, beginning with the first and continuing to Ps. xix, taking three psalms each day (Ps. ix and xvii being divided into two). In that way Prime is symmetrical, like the other short hours of the day. It resembles these also in composition, the psalmody being accompanied by a hymn, an antiphon, capitulum, versicle, and prayer. In the Roman Liturgy the office of Prime is not composed so symmetrically. Usually it consists of Ps. liii, cxvii, the first four groups of eight verses of Ps. cxviii, and during the week Pss. liii, xxiii, xxv, xxiv, xxii, and xxi. The capitulum and other elements are after the model of the short hours (cf. NONE).

IV. THE OFFICE OF THE CHAPTER.—So far we have spoken only of the office of Prime properly so called, which ends like the other short hours. It is followed by some prayers which are called the office of the chapter, and are composed in the Roman Liturgy of the reading of the martyrology, of a prayer, "*Sancta Maria et omnes sancti*", a prayer concerning work, "*Respice in servos tuos . . . Dirigere et sanctificare*", and a blessing. This addition to Prime is a legacy bequeathed by the monks to the secular clergy. As has been said above, originally after Prime the monks had to betake themselves to manual work or reading. The office therefore ended with a prayer for their work "*. . . et opera manuum nostrarum dirige super nos et opus manuum nostrarum dirige*", and the prayer "*Dirigere*". Later the reading of the martyrology, the necrology, the rule, and a prayer for the dead were added (see Bäumer-Biron, loc. cit., I, 361-62).

In view of its origin and constitution, Prime is to be considered as the prayer of the beginning of the day, whereas Lauds is devoted to recalling with the dawn the memory of Christ's Resurrection, Prime is the

morning hour which consecrates all the work of the day. Its institution has made the liturgical day more regular and symmetrical. Prime, until then without an office, received its psalmody like Terce, Sext, None, Vespers. With Complin and Lauds, the liturgical day reached the sacred septenary, "septies in die laudem dixi tibi". While for the night office there was the text: "media nocte surgebam ad confitendum tibi".

F. CABROL.

Primer, THE, the common English name for a book of devotions which from the thirteenth to the sixteenth century was the ordinary prayer-book used by the laity. The contents of these books varied greatly, but they possessed certain common elements which practically speaking are never absent. The most important feature, judging by the position usually assigned to it as well as by the lavish use of miniatures and other forms of ornament with which it is associated, was the Little Office of the Blessed Virgin Mary. In different liturgical centres, for example, at Rome, Salisbury, York, or Paris, the constituents of this Little Office differed from each other in various details; for example, the Psalms recited at Prime "according to the use of York" were not the same as those appointed for the same hour in the Sarum breviary and hence in the later printed editions of the Primer it is common to find upon the title-page or in the colophon a statement of the particular use followed, e.g., "Horæ secundum usum Romanum" or "secundum usum Sarum". Such designations however qualify only the Little Office of the Blessed Virgin, and not the other contents of the volume. Next in importance, but not usually next in order, was the Office for the Dead, or rather Vespers, followed by Matins and Lauds. These were commonly known as *Placebo* and *Dirige* (hence our English word "dirge"), from the antiphons with which the Vespers and the Matins respectively began. Three other constant elements are also invariably included in the Primer: the Fifteen Psalms (i.e., the Gradual Psalms, Ps. cxix-cxxiii), the Seven Psalms (i.e., the Penitential Psalms), and the Litany of the Saints. As already stated, these invariable features of the Primer are supplemented in nearly all extant copies with a variety of other devotions of which a word will be said later on.

Origin of the Primer.—The question of the origin and primitive association of the invariable elements just specified has been of late thoroughly examined by Mr. Edmund Bishop (see introduction to the Early English Text Society's edition of the Primer, London, 1897), who has corrected the erroneous views previously advanced by Henry Bradshaw and others. As Mr. Bishop has shown, the Primer was constituted out of certain devotional accretions to the Divine Office itself which were invented first by the piety of individuals for the use of monks in their monasteries, but which gradually spread and came to be regarded as an obligatory supplement to the office of the day. Of these accretions the Fifteen Psalms and the Seven Psalms were the earliest in point of time to establish themselves generally and permanently. Their adoption as part of the daily round of monastic devotion was probably largely due to the influence of St. Benedict of Aniane at the beginning of the ninth century. The "Vigiliæ Mortuorum", or Office for the Dead, was the next accretion to be generally

received. Of the *cursus* or Little Office of the Blessed Virgin we hear nothing until the time of Bernierius of Verdun (c. 960) and of St. Udalric of Augsburg (c. 971); but this form of devotion to Our Lady spread rapidly. Two English manuscripts which contain it date from before the Norman Conquest and have been published in facsimile by the Henry Bradshaw Society. In these provision was probably made only for the private recitation of the Office of the Blessed Virgin, but after the ardent encouragement given to this form of devotion by St. Peter Damian in the middle of the tenth century many monastic orders adopted it or retained it in preference to some other devotional offices, e.g., those of All Saints and of the Blessed Trinity, which had found favour a little earlier. By the second half of the fourteenth century a certain measure of uniformity had been attained with regard to these devotional accretions both among the monastic orders and in cathedral and collegiate churches, so that we learn from Radulphus de Rivo (c. 1360) that the daily recital of the Office of the Blessed Virgin and of the *Vigiliæ Mortuorum* were then regarded as obligatory upon all ecclesiastics by the general consent of nations, while by the laudable practice of many, other particular offices were also observed, such as the Penitential and Gradual psalms and so forth. Throughout all this it would seem that the sense that these things were accretions to the Divine Office itself was not lost. Hence there was a tendency to perform these devotions in private, and for this purpose they were probably often collected into a separate book. Moreover, since these devotions, unlike the Divine Office, were invariable, they could be learned and practised with comparative ease by those who had little pretensions to scholarship. There was always a tendency in the laity to copy the exercises of piety which prevailed among the monastic orders. To take part in the full Divine Office of the Church, which changed from day to day, was beyond their reach, but by rendering themselves familiar with the Hours of the Blessed Virgin, they were enabled both to make their own something of that burden of prayer which the monks actually performed, and also to imitate that sevenfold consecration of the day, which no doubt seemed to them the most distinctive feature in the monastic life. Hence it came to pass, no doubt, that the collection of these accretions to the Office, gathered into one small volume, became the favourite prayer-book of the laity, whilst copyists naturally supplemented these more strictly liturgical forms of prayer by the addition of many private devotions, often in the vernacular. For it must be remembered that the Psalms, the *Officium B. M. V.*, the *Vigiliæ Mortuorum*, etc., were recited by the laity as well as by the clergy in Latin. True, a number of manuscript primers of the fifteenth century are in existence, in which the whole contents have been translated into English, but these are comparatively rare exceptions. On the other hand, out of over a hundred editions of the Primer printed for the English book-trade before the breach with Rome in 1533, not one is known to contain the Office or the Psalms in English.

Primers for Children.—The origin of the name "primer" is still obscure. The earliest instance yet discovered of the use of the word is in a Latin will of 1323, where it evidently means a prayer-book. Probabilities favour the view (see "The Month", February, 1911, pp. 150-63) that it was called "primer" because the more elaborate forms developed out of a book containing the invariable elements already specified, preceded by the alphabet, the Pater noster, Ave Maria, Creed, etc., which compilation was used as a first reading book for children. This will not seem strange when we remember that children in the Middle Ages learned to read not in English but in Latin, and that almost every child that learned to read learned with the more or less definite purpose of becoming a clerk,

i.e., a cleric, whose profession required him to recite the Office and to know the Psalms by heart. Further the day-book of John Dorne (Oxford Hist. Soc., 1888), bookseller in Oxford in 1520, preserves many entries of the sale of books called "*primarium pro pueris*", with indications which make it certain that they contained the Little Office of the Blessed Virgin, and though none of these now survive, some later reformed examples are in existence of the "*Primer—moste necessary for the educacyon of Children*" (1538), which contain the A. B. C. together with a modified office. When, therefore, we read in Chaucer's "*Prioress's Tale*" (1386) of the primer used by the "*litel clergeon seven years of age*"—

"This litel child, his litel book lerninge,
As he sat in the scole at his prymer",

there can be no doubt that the book was none other than the Primer here described. Indeed, the religious character of such elementary manuals persisted for long centuries afterward and Dr. Johnson, the lexicographer, as late as 1773, still defined a primer as "a small prayer-book in which children are taught to read".

Early Printed Primers.—A very large number of editions of the Primer came from the press before Henry VIII threw off his allegiance to the pope. Such books containing the Little Office of the Blessed Virgin and the *Vigiliæ Mortuorum* with miscellaneous private devotions were common enough everywhere throughout Europe and were generally known as "*Horæ*". But the English name, the name commonly used when these books were spoken of in English, was "*Primer*". Though Caxton himself is known to have printed four editions, and there are probably more of his that have perished, while his successors multiplied editions rapidly, the English printers were unequal to supply the demand. A vast number were produced "*secundum usum Sarum*" by the presses of Paris, Rouen, and elsewhere, many of them exceedingly beautiful in their typography and ornamentation, and a considerable number printed on vellum. Besides the constant elements already specified, these books commonly contain some other minor offices, e.g., that of the Passion, that of the Angels, etc., and a vast number of commemorations of individual saints. The beginnings of the four Gospels are also often found with the Athanasian and other creeds, and prayers for Confession and Communion. An almost invariable adjunct, either in Latin or English, was the fifteen prayers attributed to St. Bridget and known as "*the fifteen O's*", and there were often devotions of a more fantastical kind which claimed to have been enriched by extravagant grants of indulgence, mostly quite unauthentic. Perhaps no better idea can be given of the miscellaneous contents, some Latin, some English, of many of the larger primers than by making an extract from the index of one of Wynkyn de Worde's quarto editions. Thus:

A prayer made upon Ave Maria.

Gaude virgo mater.

De profundis for all crysten soules.

A prayer to oure lady and saynt John the evangelyst: O intemerata.

A prayer to our lady; Sancta Maria.

Another devout prayer to our lady: Obsecro.

To our lady: Sancta Maria regina.

To our lady: Stella celi extirpavit.

Prayers to the Sacrament at the leavacion: *Ave verum*.

A prayer to the trinite; sancta trinitas unus deus, with two other prayers, Deus qui superbis, Deus qui liberasti.

Domine Jesu Christe qui me creasti.

Domine Jesu Christe qui solus.

Two prayers with two collectes to the thre Kynges of Coleyn.

Rex Jaspar, rex Melchior, and Trium regum trinum munus.

The XV OOS of the passion of our Lorde in latyn. Prayers to the pyte of our lorde: Adoro te domine.

A prayer to our lord crucifyed: Precor te amantissime.

Another to his V woundes: O pie crucifixe.

The prayer of saynt Bernardyn: O bone Jesu, with an antheme and a collecte.

O rex gloriose.

To the crosse: Santifica me.

To thy proper Aungell: O sancte angele.

Post Reformation Primers.—So strong was the hold which the Primer had taken upon the affections of Englishmen that after the breach with Rome various imitations, still bearing the name of Primer and framed upon the same general lines, were put forward with more or less of ecclesiastical approval by Marshall and Bishop Hilsey, while in 1545 appeared "*the Royal Primer*", which was published in the name of Henry VIII himself, and was to supersede all others. Other substitutes, still further modified in the direction of the reformed doctrine now in favour, were published in the reign of Edward VI. For the most part these books were entirely in English and when under Queen Mary the old form of Primer was restored, several editions then produced, though thoroughly Catholic in their contents, were printed in English as well as in Latin. Under Elizabeth the Protestant substitutes for the Primer returned, but that printed in 1559 was still called "*the Primer set forth at large with many godly and devoute Prayers*" and it included a form of "*Office*" divided into seven hours, with the "*seven psalms*", the litany (much modified), and "*the Dirige*" (see "*Private Prayers*", Parker Society, 1851). Meanwhile the Catholics had to be content with such ancient copies of the Marian or earlier editions which they would secrete, or with the few copies of the Roman *Horæ* printed entirely in Latin which could be smuggled in from abroad. The first Catholic Primer of penal times seems to have been that edited by Richard Verstegan (*Antwerp*, 1599). It adhered to the old conception of the Primer by making the Office of Our Blessed Lady the most conspicuous feature of the whole, but a great deal of new matter was introduced into the miscellaneous devotions, and in the subsequent editions printed in many of the cities to which Catholics resorted upon the continent, e.g., Douai, St. Omers, Rouen, etc., a great deal of innovation was tolerated. Of really old English devotions the "*Jesus Psalter*", which we know from John Dorne's day-book to have been printed and sold separately before 1520, was one of the features most relished and most consistently retained. The edition of 1706 seems to have been much improved as regards the translations of the hymns, and of some of these John Dryden is believed to have been the author. The whole number of Catholic editions of the Primer known to have been printed under that name, either in England or abroad since Elizabeth, amounts to over forty.

Primianus. See DONATISTS.

Primicerius (etymologically *primus in cera*, sc. in *tabula cerata*, the first in a list of a class of officials), a term applied in later Roman times to the head of any administration—thus "*primicerius notariorum*",

"primicerius protectorum" etc. (cf. Forcellini, "Tottius latinitatis Lexicon", s. v.). In ecclesiastical use the term was given to heads of the colleges of *Notarii* and *Defensores*, which occupied so important a place in the administration of the Roman Church in later antiquity and in the early Middle Ages. When young clerics were assembled in schools for training in the ecclesiastical service in the different districts of the Western Church (from the fifth or sixth century), the directors of these schools were also commonly given this title. Thus, an inscription of the year 551 from Lyons mentions a "Stephanus primicerius scolæ lectorum servientium in ecclesia Lugdunensi" (Le Blant, "Inscriptions chrétiennes de la Gaule", I, 142, n. 45; cf. similar notices in Ducange, "Glossarium", s. v.; Gregory of Tours, "Hist. Francorum", II, xxxvii). St. Isidore of Seville treats of the obligations of the primicerius of the lower clerics in his "Epistola ad Ludfredum" (P. L., LXXXIII, 896). From this position the primicerius also derived certain powers in the direction of liturgical functions. In the regulation of the common life of the clergy in collegiate and cathedral churches, according to the Rule of Chrodegang and the statutes of Amalarius of Metz, the primicerius appears as the first capitular after the archdeacon and archpresbyter, controlling the lower clerics and directing the liturgical functions and chant. The primicerius thus became a special dignitary of many chapters by a gradual development from the position of the old primicerius of the *scola cantorum* or *lectorum*.

Primus and Felician, SAINTS, suffered martyrdom about 304 in the Diocletian persecution. The "Martyrologium Hieronymianum" (ed. De Rossi-Duchesne, 77) gives under 9 June the names of Primus and Felician who were buried at the fourteenth milestone of the Via Nomentana (near Nomentum, now Mentana). They were evidently from Nomentum. This notice comes from the catalogue of Roman martyrs of the fourth century. In 648 Pope Theodore translated the bones of the two saints to the Roman Church of San Stefano, under an altar erected in their honour (Liber Pontificalis, I, 332), where they remain. Their feast is still observed on 9 June.

Prince Albert, DIOCESE OF, a suffragan see of St. Boniface, Manitoba, in the Province of Saskatchewan, Canada. Originally part of the Diocese of St. Albert, it was formed, 4 June, 1891, into the Vicariate Apostolic of the Saskatchewan, bounded in the south by 52° 30' N. lat., in the west by 109° W. long., in the east by the present boundaries of the province of the same name, and in the north by the Arctic Sea. On 2 Dec., 1907, most of this was erected into the Diocese of Prince Albert, and Rt. Rev. Albert Pascal, O.M.I., became its bishop. The new diocese is bounded on the south by a line passing between the thirtieth and the thirty-first township, approximately 51° 30' N. lat. Its western and eastern limits are coincident with the boundaries of the civil province as far north as the sixtieth township (about 54° 20') in the west, and the fifty-second township (or 53° 30') in the east, thus forming in the north a line of demarcation with two right angles just half way between its eastern and western limits.

Fort Carlton within that territory had been periodically visited by Catholic missionaries ever since

1842. In 1870 Father Moulin was put in charge of the French half-breed families who had settled on the banks of the south branch of the Saskatchewan. In 1874 the permanent mission of St. Laurent was established by Father André, who was replaced in Nov., 1877, by Father Lestanc, the real founder of that missionary post on the south branch of the Saskatchewan. Then followed the missions of St. Anthony, at Batoche, established in 1881 by Father Végreville, succeeded by Father Moulin, and of Prince Albert, started by Father André in 1882. The first missionaries of the diocese were French Oblates of Mary Immaculate. The uprising of the dissatisfied population in 1885 resulted in the battles of Fish Creek and Batoche, the murder of two missionaries by Plains Crees, the destruction of several missionary establishments, and the capture and execution of the half-breed leader, Louis Riel. St. Louis de Langevin was founded by Father Lecocq in 1886. The advent of railways prompted the foundation of parishes and farming settlements, of which the most important is the German colony of St. Peter, founded in 1903 by the Very Rev. Bruno Doerfler, O.S.B., now attended by several priests of the same order.

The Catholic population of the diocese is estimated (1911) at 45,000, of whom some 15,000 follow the Ruthenian Rite. The French have 18 parishes, with resident priests, and number 11,050; the Germans are between 10,500 and 11,000, distributed in 12 parishes; while the English-speaking population, about 3100, have 4 parishes of their own. In other centres the Catholics are of mixed nationalities. There are also some 1000 Catholic Crees, whose spiritual needs are attended to by French Oblates established on, or near, their reserves. The schools of all these parishes, whether public or separate, are equally satisfactory but not up to the Catholic ideal (see SASKATCHEWAN, PROVINCE OF). Saskatoon has 15,000 inhabitants, and Prince Albert, 8000. The diocese counts 28 Oblate fathers, 22 secular priests, 14 Benedictines, and 6 communities of women. It has 42 academies and parish schools, 2 Catholic hospitals, and 2 boarding-schools for Indians with 130 pupils.

Prince Edward Island. See CHARLOTTETOWN, DIOCESE OF.

Prior, a monastic superior. In the Rule of St. Benedict the term prior occurs several times, but does not signify any particular superior; it is indiscriminately applied to any superior, be he abbot, provost, dean, etc. In other old monastic rules the term is used in the same generic sense. With the Cluniac reform the term prior received a specific meaning; it supplanted the provost (*præpositus*) of the Rule of St. Benedict. In the congregation of Hirschau, which arose in Germany in the eleventh century, the term prior was also substituted for provost, and the example of the Cluniac and Hirschau congregations was gradually followed by all Benedictine monasteries, as well as by the Camaldolese, Vallombrosians, Cistercians, and other offshoots of the Benedictine Order. In the Benedictine Order and its branches, in the Premonstratensian Order, and in the military orders there are two kinds of priors,—the claustral prior (*prior claustralis*) and the conventual prior (*prior conventualis*). The claustral prior, in a few monasteries called dean, holds the first place after the abbot (or grand-master in military orders), whom he assists in the government of the monastery and whose place he supplies in his absence. He has no ordinary jurisdiction by virtue of his office, since he performs the duties of his office entirely according to the will and under the direction of the abbot. His jurisdiction is, therefore, a delegated one

and extends just as far as the abbot desires, or the constitutions of the congregation prescribe. He is appointed by the abbot, generally after a consultation with the capitulars of the monastery, and may be removed by him at any time. In many monasteries, especially larger ones, the claustral prior is assisted by a subprior, who holds the third place in the monastery. In former times there were in larger monasteries, besides the prior and the subprior, also a third, fourth, and sometimes even a fifth prior. Each of these was called *circa* (or *circator*), because it was his duty to make the rounds of the monastery to see whether anything was amiss and whether the brethren were intent on the work allotted to them respectively. He had no authority to correct or punish the brethren, but was to report to the claustral prior whatever he found amiss or contrary to the rules.

The *conventual prior* is the independent superior of a monastery that has no abbot; he rules in temporals and spirituals just like an abbot. Ordinarily he is elected by the chapter of his monastery and holds his office for life, though in former times he was often elected for a specified period of time. He may be assisted by a subprior, whose office is similar to that of the claustral prior in an abbey. In the Congregation of Cluny and others of the tenth, eleventh, and twelfth centuries there was also a greater prior (*prior major*) who preceded the claustral prior in dignity and, besides assisting the abbot in the government of the monastery, had some delegated jurisdiction over external dependencies of the abbey. The appellation of simple, or obedientiary, prior (*prior simplex* or *prior obedientiarius*) is often applied to the superior of a monastic establishment which is a dependency of an abbey. He is an obedientiary of the abbot, is appointed by him, and may be removed by him at any time.

The Augustinian Hermits, Carmelites, Servites, and Brothers of Mercy have three kinds of priors,—the conventual prior, the provincial prior, and the prior general. The conventual prior is the first superior over a monastery. He is generally elected by the chapter of the monastery for a specified time, and his election requires the approbation of the provincial prior. The provincial prior is the superior over a number of monasteries that are united into a province. He is generally elected for a specified time by the conventual priors and delegates from the various monasteries of the province, and his election requires the approbation of the prior general. The prior general is the superior over the whole order; he is elected in the general chapter for a specified time and resides in Rome. The Dominicans also have conventual and provincial priors, but the superior of the whole order is not called prior general, but master general. The Carthusians have conventual priors and a prior general, but no provincial priors. Their prior general is the only superior of an order who does not reside in Rome. Before their suppression in France the prior of the Grande Chartreuse was always prior general, an office now filled by the prior of Farneta near Lucca in Italy. In all these orders the second superior of a monastery is called subprior and his office is similar to that of the claustral prior in the Benedictine Order.

MICHAEL OTT.

Prioress (PRIORISSA, PRÆPOSITA), a superioress in a monastic community for women. The term prioress is properly applied only to a superioress in a convent which has the papal approbation and whose members make solemn profession, that is, to convents which belong to an order in the strict sense of the word. In some places, however, it is customary

to apply the title of prioress also to a superioress in a convent which has only the episcopal approbation and whose members do not make solemn profession. In general, the office of a prioress in an order for women corresponds to that of the prior in the same order for men. If the prioress is the first superior, her authority over the convent is similar to that of a conventual prior over his priory; if the first superior is an abbess, the office of the prioress is similar to that of a claustral prior in an abbey.

For bibliography see PRIOR.

MICHAEL OTT.

Priory, a monastery whose superior is a prior. The Dominicans, Augustinian Hermits, Carthusians, Carmelites, Servites, and Brothers of Mercy call all their monasteries priories. The Benedictines and their offshoots, the Premonstratensians, and the military orders distinguish between conventual and simple or obedientiary priories. Conventual priories are those autonomous houses which have no abbots, either because the canonically required number of twelve monks has not yet been reached or for some other reason. The Congregation of Cluny had many conventual priories. There were likewise many conventual priories in Germany and Italy during the Middle Ages, and in England all monasteries attached to cathedral churches were known as cathedral priories. Nearly all the monasteries of the famous Maurist Congregation in France (seventeenth and eighteenth centuries) were called priories. At present the Benedictine Order has twenty-seven conventual priories. Simple or obedientiary priories are dependencies of abbeys. Their superior, who is subject to the abbot in everything, is called simple or obedientiary prior.

For bibliography see PRIOR.

MICHAEL OTT.

Prisca, SAINT, a martyr of the Roman Church, whose dates are unknown. The name Prisca or Priscilla is often mentioned by early authorities of the history of the Church in Rome. The wife of Aquila, the pupil of St. Paul, bore this name. The grave of a martyr Prisca was venerated in the Roman Catacomb of Priscilla on the Via Salaria. The place of interment is explicitly mentioned in all the seventh-century itineraries to the graves of the Roman martyrs (De Rossi, "Roma sotterranea", I, 176, 177). The epitaph of a Roman Christian named Priscilla was found in the "larger Catacomb", the *Cæmeterium maius*, on the Via Nomentana, not far from the Catacomb of St. Agnes [De Rossi, Bull. di arch. crist. (1888-1889), 130, note 5]. There still exists on the Aventine a church of St. Prisca. It stands on the site of a very early title church, the *Titulus Priscæ*, mentioned in the fifth century and built probably in the fourth. In the eighteenth century there was found near this church a bronze tablet with an inscription of the year 224, by which a senator named Caius Marius Pudens Cornelianus was granted citizenship in a Spanish city. As such tablets were generally put up in the house of the person so honoured, it is possible that the senator's palace stood on the spot where the church was built later. The assumption is probable that the Prisca who founded this title church, or who, perhaps as early as the third century, gave the use of a part of the house standing there for the Christian church services, belonged to the family of Pudens Cornelianus. Whether the martyr buried in the Catacomb of Priscilla belonged to the same family or was identical with the founder of the title church cannot be proved. Still some family relationship is probable, because the name Priscilla appears also in the senatorial family of the Acilii Glabrones, whose burial-place was in the Catacomb of Priscilla on the Via Salaria. The "Martyrologium Hieronymianum" mentions under 18 January a martyr Priscilla on the

Via Salaria (ed. De Rossi-Duchesne, 10). This Priscilla is evidently identical with the Prisca whose grave was in the Catacomb of Priscilla and who is mentioned in the itineraries of the seventh century. Later legendary traditions identified the founder of the *Titulus Priscæ* with St. Paul's friend, Priscilla, whose home would have occupied the spot on which the church was later erected. It was from here that St. Paul sent a greeting in his Epistle to the Romans. Another legend relates the martyrdom of a Prisca who was beheaded at the tenth milestone on the Via Ostiensis, and whose body Pope Eutychianus is said to have translated to the church of Prisca on the Aventine. The whole narrative is unhistorical and its details impossible. As 18 January is also assigned as the day of the execution of this Priscilla, she is probably the same as the Roman martyr buried in the Catacomb of Priscilla. Her feast is observed on 18 January.

J. P. KIRSCH.

Priscianus, Latin grammarian, b. at Caesarea (Mauretania), taught at Constantinople under Anastasius I (491-518). He delivered the panegyric of the Emperor Anastasius about 512; we possess this work in 312 hexameter verses, preceded by a prologue of 22 iambic *senarii*. Besides this he composed a "Periegesis" in 1087 hexameters; a translation of the work of the same name, written under Hadrian by Dionysius of Alexandria; three works, dedicated to a certain Symmachus (perhaps the consul of 485), on numbers, numeration, and coins, on the metrical character of Latin comedies, on rhetoric according to the "Pro-gymnasmata" of Hermogenes; the "Partitiones XII versuum Æneidos" (on the versification of the Æneid); a treatise "De accentibus"; a compendium on declensions ("Institutio de nomine et pronomine et verbo"). But he is chiefly celebrated for a great work of which the last-named is an extract, the eighteen books of the "Institutiones Grammaticæ", the most important grammatical work of antiquity which we possess. Each of these eighteen books has its own special title and subject. The first sixteen, often separately copied ("Priscianus Maior"), treat of forms ("De accentibus"); the last two ("Priscianus Minor") of syntax. They are dedicated to a certain Julianus, consul and patrician. In this preface Priscian declares that he borrows his doctrines from the enormous volumes (*spatiosa volumina*) of Apollonius Dyscolus and from "the sea" (*pelagus*) of Herodian. He also cites Juba, Heliodorus, and Hephæstion. Moreover, he follows his sources servilely, as is proved by comparison with the extant fragments of Apollonius. His knowledge of Latin authors is chiefly derived from his predecessor Flavius Caper (end of second century). Priscian lacks judgment and taste, but he is valuable because he has preserved for us the theories of the Greek grammarians, and numerous Latin quotations for which he is our sole authority. The best edition is Hertz in Keil's "Grammatici Latini", II, III (1855-9).

A copy of Priscian carried to England in the time of Aldhelm (d. 709) was quoted by Bede and Alcuin, and copied by Rabanus Maurus, who reintroduced Priscian on the Continent. Together with Donatus he became the personification of grammar. More than a thousand manuscripts of his work exist. His portrait accompanies the allegorical figure of Grammar at Santa Maria Novella, and on the doorway of the cathedral of Chartres.

PAUL LEJAY.

Priscillianism.—This heresy originated in Spain in the fourth century and was derived from the Gnostic-Manichaean doctrines taught by Marcus, an Egyptian from Memphis. His first adherents were a lady named Agape and a rhetorician named Helpidius, through whose influence Priscillian "a man of noble birth, of great riches, bold, restless, eloquent, learned through much reading, very ready at debate and discussion" (Sulpicius Severus, "His. Sac.", II, 46), was also enrolled. His high position and great gifts made him the leader of the party, and he became an ardent apostle of the new doctrines. Through his oratorical gifts and reputation for extreme asceticism he attracted a large following. Among those drawn to him were two bishops, Instantius and Salvianus. The adherents of the new sect organized themselves into an oath-bound society, the rapid spread of which attracted the attention of the Catholic Bishop of Cordova, Hyginus, who made known his fears to Idacius, Bishop of Emeritu, and, at the instance of the latter and of Ithacius of Ossanova, a synod was held at Saragossa in 380. Bishops were present at this synod not only from Spain but from Aquitaine. Though summoned, the Priscillianists refused to appear, and the synod pronounced sentence of excommunication against the four leaders, Instantius, Salvianus, Helpidius, and Priscillian. The enforcement of the synod's decrees was committed to Ithacius, an impulsive and violent man. He failed to bring the heretics to terms, and, in defiance, Priscillian was ordained to the priesthood and appointed Bishop of Avila. Idacius and Ithacius appealed to the imperial authorities. The Emperor Gratian issued a decree which not only deprived the Priscillianists of the churches into which they had intruded themselves but sentenced Priscillian and his followers to exile. Instantius, Salvianus, and Priscillian proceeded to Rome to gain the aid of Pope Damasus in having this sentence revoked. Denied an audience, they went to Milan to make a similar request of St. Ambrose, but with the same result. They then resorted to intrigue and bribery at the Court with such success that they were not only freed from the sentence of exile, but permitted to regain possession of their churches in Spain, where, under the patronage of the imperial officials, they enjoyed such power as to compel Ithacius to withdraw from the country. He, in turn, appealed to Gratian, but before anything had been accomplished the emperor was murdered in Paris, and the usurper Maximus had taken his place. Maximus, wishing to curry favour with the orthodox party and to replenish his treasury through confiscations, gave orders for a synod, which was held in Bordeaux in 384. Instantius was first tried and condemned to deposition. Thereupon Priscillian appealed to the emperor at Trier. Ithacius acted as his accuser and was so vehement in his denunciations that St. Martin of Tours, who was then in Trier, intervened, and, after expressing his disapproval of bringing an ecclesiastical case before a civil tribunal, obtained from the emperor a promise not to carry his condemnation to the extent of shedding blood. After St. Martin had left the city, the emperor appointed the Prefect Evodius as judge. He found Priscillian and some others guilty of the crime of magic. This decision was reported to the emperor who put Priscillian and several of his followers to the sword; the property of others was confiscated and they were banished. The conduct of Ithacius immediately met with the

severest reprobation. St. Martin, hearing what had taken place, returned to Trier and compelled the emperor to rescind an order to the military tribunes, already on their way to Spain to extirpate the heresy. There is no ground in the condemnation and death of Priscillian for the charge made against the Church of having invoked the civil authority to punish heretics. The pope censured not only the actions of Ithacius but also that of the emperor. St. Ambrose was equally stern in his denunciation of the case and some of the Gallican bishops, who were in Trier under the leadership of Theognistus, broke off communion with Ithacius, who was subsequently deposed from his see by a synod of Spanish bishops, and his friend and abettor, Idatius, was compelled to resign. The death of Priscillian and his followers had an unlooked-for sequel. The numbers and zeal of the heretics increased; those who were executed were venerated as saints and martyrs. The progress and spread of the heresy called for fresh measures of repression. In 400 a synod was held in Toledo at which many persons, among them two bishops, Symphonius and Dictinnius, were reconciled to the Church. Dictinnius was the author of a book "Libra" (Scales), a moral treatise from the Priscillianist viewpoint. The upheaval in the Spanish peninsula consequent on the invasion of the Vandals and the Suevi aided the spread of Priscillianism. So menacing was this revival that Orosius, a Spanish priest, wrote to St. Augustine (415) to enlist his aid in combating the heresy. Pope Leo at a later date took active steps for its repression and at his urgent insistence councils were held in 446 and 447 at Astorga, Toledo, and Galicia. In spite of these efforts the sect continued to spread during the fifth century. In the following century it commenced to decline, and after the Synod of Braga, held in 563, had legislated concerning it, it soon died out.

In regard to the doctrines and teaching of Priscillian and his sect, it is not necessary to go into the merits of the discussion as to whether Priscillian was guilty of the errors traditionally ascribed to him, whether he was really a heretic, or whether he was unjustly condemned—the object of misunderstanding and reprobation even in his lifetime and afterwards made to bear the burden of heretical opinions subsequently developed and associated with his name. The weight of evidence and the entire course of events in his lifetime make the supposition of his innocence extremely improbable. The discovery by Schepss of eleven treatises from his pen in a fifth- or sixth-century manuscript, in the library of the University of Würzburg, has not put an end to a controversy still involved in considerable difficulty. Künstle (*Antipriscillianiana*), who has examined all the testimony, has decided in favour of the traditional view, which alone seems capable of offering any adequate solution of the fact that the Church in Spain and Aquitaine was aroused to activity by the separatist tendency in the Priscillianist movement. The foundation of the doctrines of the Priscillianists was Gnostic-Manichæan Dualism, a belief in the existence of two kingdoms, one of Light and one of Darkness. Angels and the souls of men were said to be severed from the substance of the Deity. Human souls were intended to conquer the Kingdom of Darkness, but fell and were imprisoned in material bodies. Thus both kingdoms were represented in man, and hence a conflict symbolized on the side of Light by the Twelve Patriarchs, heavenly spirits, who corresponded to certain of man's powers, and, on the side of Darkness, by the Signs of the Zodiac, the symbols of matter and the lower kingdom. The salvation of man consists in liberation from the domination of matter. The twelve heavenly spirits having failed to accomplish this release, the Saviour came in a heavenly body, which appeared to be like that of other men,

and through His doctrine and His apparent death released the souls of men from the influence of the material. These doctrines could be harmonized with the teaching of Scripture only by a strange system of exegesis, in which the liberal sense was entirely rejected, and an equally strange theory of personal inspiration. The Old Testament was received, but the narrative of creation was rejected. Several of the apocryphal Scriptures were acknowledged to be genuine and inspired. The ethical side of the Dualism of Priscillian with its low concept of nature gave rise to an indecent system of asceticism as well as to some peculiar liturgical observances, such as fasting on Sundays and on Christmas Day. Because their doctrines were esoteric and exoteric, and because it was believed that men in general could not understand the higher paths, the Priscillianists, or at least those of them who were enlightened, were permitted to tell lies for the sake of a holy end. It was because this doctrine was likely to be a scandal even to the faithful that Augustine wrote his famous work, "De mendacio".

Prisons.—I. IN ANCIENT TIMES.—Many jurists consults and Scriptural interpreters include imprisonment among the number of penalties recognized in Hebrew legislation, but the fact may well be questioned. However, on the coming of the Chaldeans under Nebuchadnezzar, there were at least three prisons at Jerusalem, and, about the same time, the names of the places of detention were expressive of the regime to which the culprits were subjected, such as *Beth ha-keli* (house of detention), *Beth hasourim* (house of those in chains), *Beth ha-mah-pecheth* (from the name of an instrument for chaining the hands and feet), and *Bor* (cistern, underground receptacle) [cf. Thonissen, "Etudes sur l'histoire du droit criminel des peuples anciens" (Brussels, 1869)].

At Athens imprisonment was imposed as a penalty, though this is doubted by many. It seems there was only one prison placed under the authority of the Eleven. The prisoners were not isolated and could be visited by their friends and the members of their family. Some were deprived of freedom of movement by having their feet attached to wooden blocks (Thonissen, "Le droit pénal de la république athénienne", 1875). At Rome there still remains at the foot of the Capitol the ancient Mamertine prison. It comprised an upper portion and a dungeon, the *Tullianum*. The prisoners were enclosed in the former which was lighted only by narrow loopholes, and, if they were condemned to death, they were thrown into the dungeon through an opening in its roof, to be strangled like Cataline's accomplices or starve to death like Jugurtha. Their naked corpses were then thrown out on the steps of the *Gemonies*. Imprisonment, which the laws did not usually pronounce, was of two kinds, simple detention or detention in chains. It was for life or for a time, according to the gravity of the offence. The supervision of the public prisons at Rome was entrusted to the *triumviri capitales*. Under the empire perpetual imprisonment was abolished theoretically,

imprisonment being considered not so much a penalty as a means of supervising culprits. The care of the gaols, up to the middle of the third century, was included among the duties of the *triumviri capitales*. In the provinces a more regular administration entirely under military control was then being instituted. At first the accused do not seem to have been separated from the convicted, nor were the sexes kept apart; though there are instances of solitary imprisonment (Humbert in Daremburg and Saglio, "Diet. des antiquités grecques et romaines", s. v. Carcer).

II. INFLUENCE OF CHRISTIANITY.—It was natural that when Christians were being hunted down and cast into gaol for their faith, the Church should recommend the faithful to visit the prisoners. The deacons and deaconesses were especially charged with the care of the incarcerated Christians, bringing them the comforts of religion, food, clothing, and especially money, which was needed to procure certain mitigations, even liberty. The deaconesses more particularly were appointed to this office, for in visiting the Christians they ran less risk of awakening the suspicion of the pagans. At an early period the bishops began to purchase the liberty of the prisoners. For this they made collections, and if the receipts were not sufficient, they sold the church property. Not only their own flock but the Christians in distant lands were the objects of their charitable zeal. Debtors, towards whom Rome was so heartless, were not forgotten. Justinian granted private debtors the right of asylum in the house of God, but only if the creditors abused their rights; this favour was not, however, extended to public or state debtors. The Church, the help of sinners, could not but extend her assistance and protection to criminals; for crime is primarily a sin. In the earliest times, as soon as more peaceful days had dawned, she endeavoured to free them from prison, to punish and correct them in another way. For this she employed three means. (1) The paschal indulgence. By virtue of an edict of Valentinian I in 367 all prisons were opened at Easter and the prisoners set free. This edict was called the *indulgentia pascalis*. The privilege was not extended to those arrested for sacrilege, poisoning, treason, adultery, rapine, or murder. Valentinian the younger, Theodosius, and Theodoric issued similar edicts, but they excluded in addition recidivists. (2) The right of asylum. Under Constantine the Church had the right of asylum, which was granted also by his successors. Charlemagne ordained in a capitulary that no one taking refuge in a church should be taken from it by force, but should be unmolested till the court had pronounced its decision. This privilege in the course of time was abused and consequently was abolished. The right of asylum was not extended to adulterers, ravishers of young girls, or public debtors; it was confined to those who were unjustly pursued. (3) The right of intercession. The bishops had the right to ask the civil judge to pardon condemned prisoners, especially those sentenced to death; frequently, however, they petitioned to have prisoners discharged. In the course of time, through the influence of the Church, the lot of prisoners was greatly improved. The Council of Nicæa (325) ordered the *procuratores pauperum* to visit the gaols and offer their services. The Synod of Orléans (549) obliged the archdeacon to see all the prisoners on Sundays. The active intervention of the Church began in the days of Constantine the Great and continued for a long period. The bishops and priests were invited and authorized to supervise the conduct of the judges, to visit prisoners on a certain week-day, Wednesdays or Fridays, and find out the reason of their imprisonment, to speak with them about their position and wants, to inform the proper authorities of any de-

fects they noticed and to have changes made. During the Middle Ages this right and duty was enforced only here and there. St. Charles Borromeo was a great reformer and reorganized the whole prison system in his diocese, even to the smallest details, on an essentially humanitarian and Christian basis. The clergyman deputed by the bishop to look after the prisoners had to inquire constantly "*quæ illorum cura adhibeatur, cum in primis ad animæ salutem, tum etiam ad corporis sustentationem*", i. e. what care was taken of them, first in regard to their spiritual needs and then as to their physical welfare.

Influence of the Papacy.—The influence of the Papacy also was very great, and the prison system at Rome became a model. Popes Eugenius IV (1435), Paul V (1611), and Innocent X (1655) passed regulations improving the conditions of prisoners, until finally Clement XI (1703), by constructing St. Michael's prison, introduced the most essential change needed to ameliorate the penal system: the construction of a house of correction for youthful offenders, as is recorded in the inscription on the façade: "*Perditis adolescentibus corrigendis instituendisque ut qui inertes oberant instructi reipublicæ serviant*" (for the correction and education of abandoned youths; that they who, without training, were detrimental to the State, may, with training, be of service to it). The methods employed to reclaim culprits were separation, silence, work, and prayer. Each prisoner had his cell at night, but all worked in common during the day. A religious confraternity supervised them and undertook their education. Each one was taught a trade, and was encouraged by a system of rewards. The punishments consisted in bread and water diet, work in their cells, black holes, and flogging. In the large workshop of the gaol was inscribed the motto: "*Parum est coercere improbos pœna nisi probos efficias disciplina*" (It avails little to punish the wicked unless you reform them by discipline). In 1735 Clement XII erected a prison for women on the model of St. Michael's. If Clement is considered the creator of the modern penitentiary system, it must be pointed out that at Amsterdam the principle of separation at night and work in common during the day had been introduced in 1603 (Von Hippel, "*Beiträge zur Geschichte der Freiheitsstrafe*" in "*Zeitschr. für die Gesch. Straf.*", 1897, p. 437, and Roux, "*Revue pénitentiaire*", 1898, p. 124 sqq.), and that the work of the Dutch inspired many imitators in Germany and Italy, where learned juriconsults proclaimed that the reformation of the culprit was the object of punishment (Rivière, "*Revue pénitentiaire*", 1895, p. 1152). A priest, Filippo Franci, after experimenting at Venice and Naples on the effect of separating prisoners according to sex, age, and social rank, succeeded in making his house of refuge at Florence (*casa pia di refugio*), by the application of individual separation, a model establishment for the correctional education of children.

Influence of the Religious Orders.—In the Middle Ages the Church founded religious orders which bound themselves by vow to the redemption of captives; the Trinitarians, or Mathurins, established in 1198 by St. John of Matha and Felix de Valois, and the Nolasceans, founded in 1223. In Spain, France, and especially Italy, there were, moreover, associations or confraternities labouring to improve the condition of prisoners: the *Confraternità della Misericordia* and the *Compagnia di Santa Maria della croce al Tempio detta de Neri* at Florence, the *Pia Casa di Misericordia* at Pisa, the *Casa della pietà* at Venice, etc. Besides the prisons depending on the State, there were prisons under the control of the religious authorities. Each convent had one or at times two prisons in which religious were incarcerated. The term of imprisonment was tem-

poral or perpetual. The culprit had to do penance and amend his ways. He was isolated and often chained. Generally the discipline was severe; not unfrequently corporal punishment was added to incarceration and the prisoner put on bread and water. The Church had the right to punish clerics for penal offences and had its own episcopal prisons, but from the middle of the sixteenth century, as a result of the changed relations of Church and State, the *privilegium fori* disappeared and the State resumed its right of punishing clerics in non-religious matters. In the episcopal prisons clerics were treated more gently than were the monks in convent prisons, nevertheless in certain cases the discipline was very rigorous. The Church had jurisdiction also over the laity in offences of a religious character. Finally, it created a new procedure, differing from the ordinary, viz. the inquisitorial procedure in cases of heresy. Imprisonment was the severest punishment the inquisitors could inflict directly. According to the inquisitorial theory, it was not really a punishment, but a means for the culprit to obtain pardon for his crimes, and to amend and be converted, while close supervision prevented him from infecting the rest of the flock. The prisoners were subjected to two regimes: the severe and the milder; but, in either case, the captive was given only bread and water; he was confined to a cell, and forbidden all communication, though the latter provision was not strictly enforced. Those under the milder discipline could, if they behaved well, take a little exercise in the corridors, a privilege granted also to the aged and infirm. Those condemned to the severe regime were cast fettered into a narrow dark cell; sometimes they were chained to the walls. The prisons were constructed without any regard to the health or convenience of the inmates, and the condition of the latter was wretched. The Inquisition sometimes commuted or remitted the punishment. The remission was *ad tempus*, for a longer or shorter period, according to the case.

III. MODERN PRISON REFORMS.—In spite of these efforts to better the prison system in earlier days there was much room for improvement in the buildings, diet, and discipline. Usually the main object of the authorities was to punish rather than to reform the culprit. Not unfrequently the greatest criminals and persons convicted of trifling offences were imprisoned together. Fortunately, after the construction of St. Michael's prison by Clement XI, the development of cellular imprisonment went on uninterruptedly. From Central Italy the movement spread towards Northern Italy, to Turin (erection of the House of Good Counsel, 1757), Venice (1760), Milan, where Empress Maria Theresa established in 1759 a house of correction containing 140 cells, 25 of which were for women and 20 for children. From Milan the system, as might be expected, was introduced almost immediately into the Austrian Low Countries where Maria Theresa's efforts were earnestly seconded by Viscount Jean Vilain XIV, Burgomaster of Ghent (Vicomte Vilain XIV, "Mémoires sur les moyens de corriger les malfaiteurs", Brussels, 1841). At his suggestion the celebrated prison of Ghent, finished in 1775, was erected (Holtzendorf, "Handbuch", I, pl. 3, gives the plan of this prison). The system adopted there was isolation by night and work in common by day. Moreover a division of the culprits according to juridical and moral classification was seriously undertaken.

A general change in prison discipline was effected through the efforts of John Howard the philanthropist, b. in 1726 at Hackney, London (Rivière, "Howard, sa vie, son œuvre" in "Revue pénitentiaire", 1891, pp. 662 sqq.; Howard-Wines, "Punishment and Reformation", 122 sqq.; Krohne, "Lehrbuch"; Cuche, "Traité de science et de législation

pénitenciaires", 304). Having visited the prisons of England, Germany, France, Italy, Portugal, Turkey, and North America, he published in 1744 a remarkable work, "State of the prisons in England and Wales with preliminary observations and an account of some foreign prisons". Howard described the wretched conditions of the prisons: imprisonment in common without regard to age or sex, want of space, bad food, damp and vitiated air, want of light, filth, immorality, the use of spirituous liquors, gambling with cards and dice. After noting the evils, he proposes the remedies. It is on a religious training of the prisoners that he relies most for a reform; the second great means is work; he holds that society is bound by the ties of brotherhood and even by the hope of reclaiming the culprit, to provide him with proper food and subject him to a hygienic regime; he favoured the separation of prisoners, though he did not approve of the system of shutting them alone in cells both by day and night, except for certain classes of culprits; all others he would separate only during the night. Howard was the interpreter of the opinion of the civilized world. It is interesting to note the results of this change of opinion in the different countries, or, at least, to point out the original systems.

United States of America.—(1) The Pennsylvania system is the work of the Philadelphia Society for Alleviating the Miseries of Public Prisons, founded in 1776. The fundamental idea of this regime is rigorous and continued isolation to excite to repentance and lead the culprit to a better life. At first the system was carried to such an extreme that the cells were without light in order that the darkness might act more powerfully on the prisoner's mind and conscience. Some writers say that the culprits had no work to do, but that is uncertain. The Pennsylvania system, in its rigorous form as it was originally established, prevented, it is true, the mutual corruption of the prisoners and the planning of crimes to be committed on their release, which are the negative effects of individual separation; but it was not suited to produce positive results, that is, an awakening of the moral sense in man left to his own meditations; the cell can have an influence for moral good only when it enables the reflections of solitude to be guided and strengthened by outside influences (Cuche, op. cit., 312 sqq.).

(2) The system of Auburn or silence (Chestel, "Avantages du Système d'Auburn", 1900), introduced in the State of New York, consists in isolating the prisoners only at night, in making them work together in strict silence during the day, and in separating them according to age and morality. This is, in general, the same as the regime of the prisons of Amsterdam, St. Michael, and Ghent. The principal objection urged against it is the difficulty of enforcing silence, and of preventing the inmates from communicating with one another. Moreover, such unnatural life makes the culprits irascible.

(3) In the so-called system of classification, the prisoners are divided not only according to sex, age, degree of guilt, aptitude for work, but also according to their moral character and the possibility of amendment; in each division work is in common. Such a system depending entirely on the judgment of the governor of the gaol seems difficult to carry out in practice.

(4) In the mitigated Pennsylvania system, the inmates are isolated in cells day and night; they are separated also in church, in school, and on the grounds, but they work at a lucrative trade, read books, are visited by members of the prison staff, are allowed to receive their relations from time to time, and may write to them.

(5) The state reformatories are intended to provide rigorous training for prisoners between the ages

or sixteen and thirty who give hope of being corrected; the indeterminate sentence is the basis and the paroling of prisoners the completion of this system. The model establishment is the Reformatory at Elmira (Aschrott, "Aus dem Strafen u. Gefängniswesen Nordamerikas", 1889; Winter, "Die New-Yorker staatliche Besserungsanstalten zu Elmira", 1890; Yoon, "Rapport sur l'organisation pénitentiaire aux États-Unis" in "Revue pénitentiaire", 1895; Barrows, "The Reformatory System in the United States", Washington, Govt. Printing Office, 1900; Sanborn, "Rapport sur le Reformatory d'Elmira"; Cuche, op. cit., 358 sqq.). The committee of directors release, before the end of their term, those who deserve this favour. The convicts are isolated at night; and in the daytime receive a professional, physical, and intellectual training. Every opportunity is taken to provide for the moral and religious improvement of the culprits. It is not the object of the system to train the prisoners only at specified hours but rather to do so continually, by bringing them into constant contact with an intelligent and devoted staff of instructors, and thus gradually inspire better resolutions. A last characteristic of the system is the multiplication of classifications and gradations. The reward consists in being promoted from grade to grade, which results in an increase of comfort and a greater remuneration for manual work; the punishment in a corresponding descent. When he has been promoted to the first class or category, the convict, if his conduct during the preceding six months has been satisfactory, may be let out on parole. Generally a situation is found for him, and his employer sends in regularly an account of his conduct to the administration of the reformatory; certain officers are, moreover, appointed to watch over the paroled convicts and are authorized to arrest them and bring them back to the reformatory if their conduct is not satisfactory. This last stage of freedom on parole lasts six months, after which the prisoners are discharged from prison for good. (For treatment of juvenile offenders see JUVENILE COURTS.)

Great Britain.—Captain Maconochie introduced about 1840 a special system called the progressive into the convict settlement of Norfolk Island. This system consisted in proportioning the duration of the punishment to the work done and the good conduct of the convict. The duration was represented by a certain figure or number of good marks settled according to the gravity of the crime. The culprit had to merit these good marks before being liberated; each day he was awarded one or more, according to his work; if his conduct was unsatisfactory a slight penalty was imposed. Maconochie thus gave the convict the control of his own lot. The results were marvellous. When transportation was abolished, England remained faithful to the idea of making imprisonment in a cell only a small part of the penalty, and of gradually preparing the convict to return to society when he had gained his complete freedom. This system comprises the following stages: (1) The prisoner is at first confined to the cells for nine months. (2) He is then sent to one of the central public works prisons, Chatham, Dover, or Plymouth, where the Auburn regime is in force—separation at night, work in common during the day. The culprits are divided into four classes, according to their work and conduct, by means of a system of marks, enabling them to reach a higher grade. Violation of discipline relegates them to a lower grade and even to the cells. (3) The third period is one of conditional liberty, the prisoner being liberated on a ticket-of-leave. In Ireland Walter Crofton devised an intermediate stage between the public gaol and conditional liberty. To test the moral character of the convict and to see if he was fit for liberty, he was compelled

to reside six months in the prison at Lusk, a prison without walls, bars, or bolts, where the culprits were employed as free workmen in agriculture or a trade. This intermediate stage was abolished when Crofton's connexion with the Irish prisons ceased.

The progressive system has been adopted in Hungary; during the intermediate stage the prisoners are employed on farms. What characterizes the regime of penal servitude, in addition to its progressive organization, is the nature of the work imposed on the prisoners. In the second stage the prisoners are engaged only in public works. The gaol at Wormwood-Scrubs was built entirely by convicts, as were the breakwater at Portsmouth and part of the docks at Chatham etc. Prins (Science pénale et droit positif, p. 445 sq.) believes that the progressive regime, while not perfect, offers perhaps more scope than the purely cellular system, as it approaches more closely the normal conditions of life. The successive stages bring the convict nearer to liberty, and enable him to appreciate the advantages, the dangers, the meaning, and significance of freedom. The shops, where groups of prisoners work under the control of the authorities, accustom them to the conditions of free work. Rivière and Cuche, viewing the question from another standpoint, hold that if the common prison is only a preparatory school for recidivists, it still retains that character when it is imposed on a criminal who has just completed his stay in the cells. Persons who have caught a cold are not placed in a draught to fortify them against the draughts they must be exposed to later. At all events, what may have succeeded in one country or in the case of a particular race might produce evil results if applied elsewhere (Cuche, op. cit., 325).

Belgium.—When a discussion arises among prison experts as to the merits and demerits of the cell, the typical example is always the Belgian cell says Cuche (cf. "Notice sur l'organisation des prisons en Belgique", Brussels, 1910). It is necessary, therefore, to study it in detail. The cellular regime is due to Dupetiaux, Inspector-General of Prisons, who, in 1830, determined to put an end to the abuses of the penitentiary system in vogue in Belgium, and to place the criminal in a cell, compensating for the severity of the punishment by curtailing its duration. Although he soon had the satisfaction of seeing his plan succeed so far as to have cellular gaols erected, it was only on 4 March, 1870, that cellular imprisonment was adopted by law. All penalties of deprivation of liberty are undergone under the regime of cellular isolation by day and night. The rule, however, admits of exceptions. The physical or mental condition of some prisoners will not allow the application or continuance of cellular discipline. Again the crowding of the cellular gaols sometimes makes it necessary to allow the prisoners to be put together. Finally, those who are condemned to hard labour or perpetual imprisonment are isolated only during the first ten years in prison. At the expiration of that time, those condemned to a life sentence are allowed to choose either to continue their form of imprisonment or to be placed under ordinary discipline. From 1870 to 1909, 170 (76 per cent) selected to continue their cellular life, and 55 (24 per cent) choose the ordinary discipline.

The cellular system as it exists in Belgium is considered at present the most practical, though criminologists and practical experts are far from agreeing on the advantages and inconveniences of the cell, except in the cases of short terms, when there is unanimity. "The real value of a penitential institution is in no way absolute", says Cuche (op. cit., p. 331); "we have merely to see if its advantages are considerably greater than its inconveniences; it must be remembered, too, that its merit is greatly increased when intelligent and devoted men are in

charge of the establishment. If it be laid down as a principle that the prisoners shall be subjected to the cellular regime only as long as is judged proper by the physician who shall examine them on their admission and visit them regularly afterwards during the course of their punishment; if there be an official staff and a sufficient number of visitors to preserve the social element in each prisoner; finally if, in confining prisoners to their cells, due discrimination as to sex, age, and race is made, the evil results of prolonged isolation will in large measure disappear". M Henri Joly ("Problèmes de science criminelle", Paris, 1910, pp. 195, 211), who visited the central prison of Louvain on three occasions, was very favourably impressed by the system; he recognizes that an excellent programme is being carried out: the prisoner is separated as much as possible from his fellows, and brought into contact as far as possible with society properly so-called, with which he maintains the best relations; his only regrets are that there are so many prisoners and that conditional liberations are granted so rarely.

Proportional and progressive reductions of the term of incarceration are granted. The rule in force reduces a sentence of 6 months to 4 months and 23 days; a year to 9 months and 12 days; 3 years to 2 years, 1 month, and 8 days; 5 years to 3 years, 5 months, and 10 days; 10 years to 6 years, 3 months, and 9 days; 20 years to 9 years, 9 months, and 12 days. The legislature not having provided cases in which the original sentence is between 20 and 25 years, a conditional liberation is granted to the prisoner when he would have been definitely liberated if he had been granted a reduction of 10-12 of the years over 20. Experience shows that a mathematical reduction, uniform in every case, ignoring the principle of the individualization of the penalty, does not meet the necessity of repression. The only result of the system is to weaken the effect of prison restraint and to liberate much too rapidly criminals unworthy of the favour (Prins, op. cit., 523 sqq.).

The prisons are divided into two classes: central prisons, two in number, Louvain and Ghent; secondary prisons, numbering twenty-seven. The central prison of Louvain, and all the secondary prisons, except two which are to be changed, are arranged with a view to complete separation night and day. The central prison of Ghent, erected towards the close of the eighteenth century, has eight divisions, only one of which has been arranged for cellular imprisonment by day and night; the others contain only night cells, the prisoners being assembled during the day. The central prisons receive only male convicts. There is no central prison for women, on account of the few crimes committed by women; they are incarcerated in the secondary prisons. The central prison of Louvain receives those condemned to hard labour and seclusion, as well as prisoners sentenced to correctional imprisonment for more than five years. There is a special quarter in the central prison at Ghent for youthful convicts. The inmates are isolated in cells at night and work in common during the day. The law allows the courts and tribunals in sentencing an individual under the age of eighteen years completed to order him to remain at the disposal of the Government after the end of his term till he attains his majority: such persons are also sent to Ghent. However, those who on account of their youth, the moral conditions in which they are situated, or their previous conduct, do not deserve to be subjected to the more rigid discipline of the special quarters till their majority are sent to a philanthropic school. The secondary prisons, which with one exception have two distinct sections, one for men and one for women, are principally prisons for punishment; accused persons are detained there; they con-

tain, moreover, different classes of inmates, such as those detained only temporarily, beggars and vagabonds awaiting transference to the mendicity institutions.

The central administration of the prisons is under the control of the minister of justice. Connected with the central administration is the inspection department, divided into three sections: the first includes everything, except the accounting and construction departments; the second is engaged on the accounts; the third attends to buildings, improvements, and repairs. Besides the supervision of the inspectors, which embraces the prisons as a whole, there is permanent local supervision which, in each establishment, is confided to a commission, called the administrative commission. The members of this body, numbering three, six, or nine, according to the importance of the prison, are appointed by the king and selected preferably from the ranks of the clergy, physicians, manufacturers or merchants, engineers or architects. The royal procurator of the *arrondissement*, the burgomaster of the commune, and the military auditor, if there be one in the locality, are ex officio members. The commission participates in the work of reforming the lives of the condemned by visiting the cells as often as possible. It advises pardons and conditional liberation, and is consulted on the suggestions made by the governor. It is not a mere organ of control and consulting council; it participates in the working of the establishment, at least in the cases provided for by law, such as granting holidays to the staff, approving contracts, regulating the conditions relating to the work of the prisoners. The members of the staff of the central prison of Louvain may be taken as an example: a governor, two assistant governors, three Catholic chaplains, two Protestant chaplains, a Jewish chaplain, two teachers, two doctors, a druggist, two accountants, two store-keepers, five clerks, a head-warder, fifty guards, five assistant warders, and four inspectors of work. As the central prison of Louvain contains about 600 ordinary cells, there are about twelve prisoners for each warder. The inspectors of work are employed exclusively to give professional instruction to the prisoners, and to supervise the work of the principal trades, shoemaking, tailoring etc., as well as the repairing of the furniture and buildings. In five gaols where the small number of female inmates requires only one wardress, the latter is a lay person. In all the others the supervision of the female prisoners is confined to nuns.

The duty of the chaplains consists in presiding at religious exercises, and fulfilling the obligations of their ministry; religious instruction, administration of the sacraments, assistance to the dying. They go to the cells of their co-religionists unless the latter decline to receive them. The exercise of Catholic worship includes Mass and Benediction and also a moral and religious instruction on Sundays and feast days in the prison chapel. In the more important gaols a spiritual retreat is given every year by an outside clergyman. Attendance at religious exercises is optional. Cuche remarks quite correctly that "for adults as for children, experience proves that religion is the best method of inculcating morality". This incontestable truth has been admitted by every prison expert in the neighbouring countries. Krohne declares that it is only by means of religion that we can hope through punishment to reform the criminal, which is the principal object of imprisonment. Kraus, in the "*Handbuch d'Holtzendorff*", gives an excellent refutation of the objection drawn from the liberty of conscience of the culprit. "Besides the moral influence of religion there is," adds Cuche, "the Divine service with its ceremonies, a fact often forgotten. In a prison, especially if it is cellular, assistance at Divine worship and singing

of hymns, are excellent distractions, while they offer the prisoner an occasion for salutary reflection. In Germany choruses in four parts are sung in the evening. Krohne gives a simple and touching description of this ceremony. The same author recommends that each culprit should be given a hymn-book, as well as a New Testament, a Bible history, and a psalter. He even expresses the desire that the prisoner should be induced to purchase the hymn-book and the New Testament with his own money in order that he might keep them after his liberation."

Conditional Liberation.—Prins remarks: "As the system of conditional condemnation allows the judges to exercise their discretion, and remit the penalty in the case of offenders for whom a warning seems sufficient, conditional liberation allows the administration to act similarly towards those in prison, and to decide who should remain in prison till the end of their term and who should be prepared for definitive liberation by a conditional liberation. This plan acts as a stimulus, since it holds out to well-conducted prisoners the possibility of having their term shortened; it acts too as a restraint, as the liberated convict recognizes that the favour may be withdrawn; it is a stage of the punishment since it prepares the prisoner for his definitive liberation." Conditional liberation has become an essential part of the penal system throughout the world. As there is anticipated liberation, when the culprit seems reformed before the end of the term to which he was sentenced, so it logically follows there should be a supplementary detention when the criminal at the expiration of his term does not appear to be reformed. Under such circumstances an indeterminate sentence is advocated (Cuhe, "*Traité de science et de législation pénitentiaires*", 356-9). Some see in this theory the logical result of a repressive system having as its sole aim the moral reformation of the criminal; others consider it the logical result of the theory which considers the punishment as an act of social defence, the intensity of which is proportioned to the danger personified in the delinquent (cf. Prins, "*Science pénale et droit positif*", 455). This writer (op. cit., 459 sqq.) does not favour the indeterminate sentence as a penalty properly so called imposed on a normal responsible culprit, because it is not in harmony with the principles of our public law, which endeavours in the matter of punishment to safeguard the liberty of every individual against arbitrary use of power, and because it is very complicated in practice; he admits, however, that it is different when there is question of subjecting to government control youthful offenders, beggars, and vagabonds, or in the case of degenerates, lunatics or weak-minded persons.

Care of Liberated Criminals.—It is a duty of society to come to the aid of deserving liberated prisoners; for oftentimes they are not in a position to support themselves, and so fall again easily. Many societies have been established everywhere to assist and encourage liberated prisoners; their efforts should be directed especially towards youthful offenders. A new Central Association for the Aid of Discharged Prisoners was established in England early in 1911. While the association is an official body it combines and co-ordinates all the private philanthropic societies which in a disconnected way endeavoured to assist convicts on their discharge. Besides aiming to help the prisoner on his release more effectively than formerly, it aims to do away in most cases with the ticket-of-leave system. Persons discharged from penal servitude come under the cognizance and control of the central body. Representatives of the different societies are admitted to the convict prisons, and are thus enabled to divide the ground among the different agencies and to make a study

of individual cases in time to deal with them on the release of the prisoners. On discharge from prison the convict keeps in touch with the society to which he belongs. Except in unsuitable cases police supervision is suspended so long as the convict behaves well and obeys the conditions imposed upon him by the central association, working through the particular society. If he misbehaves, or if, in the opinion of the authorities charged with his care, he is not sincere in his efforts to abstain from criminal courses, he may be returned to police control. But so long as he makes an honest endeavour to regain his position, guided and aided by the association, he is freed from direct contact with the police or from anything likely to obtrude his past upon the notice of his neighbours or employers.

Prison-Reform Associations.—The international prison congresses have played an important part in prison reform. The first was held at Frankfort-on-the-Main in 1846. The Congress of London (1872), in which twenty-two countries were represented by 100 delegates, led to the creation of an international prison commission. The last, the ninth quinquennial session of the International Prison Congress, was held in Washington in 1910. Twenty-two countries belonging to the association were represented by delegates as well as a number of countries not yet officially members, among them China, Japan, and Egypt. One of the principal achievements of the congress was the formal approval of the indeterminate sentence, a product of American developments. The congress also approved the centralization of control of all penal institutions, including local jails, and the useful employment of all inmates, whether merely detained for trial or sentenced for long terms; and it favoured the discreet use of the probation system, advocating central supervision of probation in each state. Considerable attention was paid also to the methods of criminal procedure suitable for children and minors. The Prisons' Society of Rhenish Prussia and Westphalia (founded in 1826); the Society of Officers of the German Prisons (founded in 1864); the German *Juristentag* (founded in 1867); the International Union of Penal Law (founded in 1889); the *Société générale des prisons* in France, and the National Prison Congress of the United States, have likewise materially aided the work of prison reform.

The following reforms among others have been warmly advocated: (1) The uniform repressive system should be differentiated into a system of education, a system of repression, and a system of preservation, and each of these should be in turn subdivided according to the various classes of delinquents. In particular there should be a good division of the culprits, and a social effort made to reform those who are susceptible of it. (2) Short sentences are undesirable, as they are likely neither to intimidate nor to educate. (3) The cellular system is by far the most preferable, so long as danger to the physical and mental well-being of the culprit is averted. (4) The prisoner's work should be both useful and productive; it should not be monotonous or wearisome; the criminal should be applied to work in which he will easily find occupation on his liberation; the kinds of work should be sufficiently varied to suit the natural aptitude of the various prisoners. State public work is preferable. (5) While enforcing as far as possible the individualization of the penalty, the progressive system should be introduced, as it leads up gradually to liberty, and prepares the culprit to enter again into society. (6) In the case of youthful offenders it is more than ever necessary to substitute education and protection for punishment (see Collard, "*L'éducation protectrice de l'enfance en Prusse, La loi du 2 Juillet 1900 et son application*", Louvain, 1908). (7) The treatment of women

in prisons should be based on different principles from those applied to men. (8) In the case of conditional liberation the time of probation should be sufficiently prolonged.

CHARLES COLLARD.

Prisons, ECCLESIASTICAL.—It is plain from many decrees in the "Corpus Juris Canonici" that the Church has claimed and exercised the right, belonging to a perfect and visible society, of protecting its members by condemning the guilty to imprisonment. The object of prisons originally, both among the Hebrews and the Romans, was merely the safe-keeping of a criminal, real or pretended, until his trial. The ecclesiastical idea of imprisonment, however, is that confinement be made use of both as a punishment and as affording an opportunity for reformation and reflection. This method of punishment was anciently applied even to clerics. Thus, Boniface VIII (cap. "Quamvis", iii, "De pœn.", in 6) decrees: "Although it is known that prisons were specially instituted for the custody of criminals, not for their punishment, yet we shall not find fault with you if you commit to prison for the performance of penance, either perpetually or temporarily as shall seem best, those clerics subject to you who have confessed crimes or been convicted of them, after you have carefully considered the excesses, persons and circumstances involved in the case". The Church adopted the extreme punishment of perpetual imprisonment because, by the canons, the execution of offenders, whether clerical or lay, could not be ordered by ecclesiastical judges. It was quite common in ancient times to imprison in monasteries, for the purpose of doing penance, those clerics who had been convicted of grave crimes (c. vii, dist. 50). The "Corpus Juris", however, says (c. "Super His", viii, "De pœn.") that incarceration does not of itself inflict the stigma of infamy on a cleric, as is evident from a papal pronouncement on the complaint of a cleric who had been committed to prison because he vacillated in giving testimony. The reply recorded is that imprisonment does not *ipso facto* carry with it any note of infamy.

As to monastic prisons for members of religious orders, we find them recorded in decrees dealing with the incorrigibility of those who have lost the spirit of their vocation. Thus, by command of Urban VIII, the Congregation of the Council (21 Sept., 1624) decreed: "For the future, no regular, legitimately professed, may be expelled from his order unless he be truly incorrigible. A person is not to be judged truly incorrigible unless not only all those things are found verified which are required by the common law (notwithstanding the constitutions of any religious order even confirmed and approved by the Holy See), but also, until the delinquent has been tried by fasting and patience for one year in confinement. Therefore, let every order have private prisons, at least one in

every province". The crimes in question must be such as by natural or civil law would merit the punishment of death or imprisonment for life (Reiffenstuel, "Jus Can. univ.", no. 228). Innocent XII reduced the year required by the above-mentioned decree to six months (Decree "Instantibus", §2). A decree of the Sacred Congregation of the Council (13 Nov., 1632) declares that a religious is not to be judged incorrigible because he flees from imprisonment, unless, after being punished three times, he should make a fourth escape. As the civil laws do not, at present, permit of incarceration by private authority, the Congregation on the Discipline of Regulars has decreed (22 Jan., 1886) that trials for incorrigibility, preceding dismissal, should be carried out by summary, not formal, process, and that for each case recourse should be had to Rome. A vestige of the monastic imprisonment (which, of course, nowadays depends only on moral force) is found in the decree of Leo XIII (4 Nov., 1892), in which he declares that religious who have been ordained and wish to leave their order cannot, under pain of perpetual suspension, depart from the cloister (*exire ex clausura*) until they have been adopted by a bishop.

Pritchard, HUMPHREY, VENERABLE. See NICHOLS, GEORGE, VENERABLE.

Privilege (Lat., *privilegium*, like *priva lex*) is a permanent concession made by a legislator outside of the common law. It is granted by special favour, and gives the privileged an advantage over the non-privileged individuals; it differs from particular laws which also concern certain classes of persons or things; thus the clergy and the religious have their laws and their privileges. The favour, being lasting, is thus distinguished from a permission or single dispensation. It is granted to his subjects by a superior having authority over the law; it thus receives an official value approximating it to a law, in the sense that he who enjoys it may lawfully exercise it, and third parties are obliged to respect its use. A privilege, finally, deviates from the common law, including particular laws, whether it merely adds to it or derogates from it.

Privileges are of many kinds. Contrasted with the law, they are: (1) assimilated to the law, forming part of it (*clausa in corpore juris*), such are the privileges of clerics, or they are granted by special rescript. (2) They are superadded to the law (*præter jus*), when they relate to an object not touched by the law, or contrary to the law (*contra jus*), when they form an exception, allowing one to do or to omit what the law forbids or commands. As to the manner of concession, they are (3) granted directly or obtained by communication with those who enjoy them directly. Moreover, the concession may be (4) either verbal or by an official writing. Verbal concessions are valid in the forum of conscience, or better, in the case of acts that need not be justified in the external forum; to be valid in the external forum, they must have been granted officially by rescripts or at least attested by a competent official (Urban VIII, "Alias felicis", 20 Dec., 1631; Reg. Conc. 27 and 52). If we consider the motive for granting them, privileges are divided: (5) into remunerative, when they are based on the merits or services of the grantees, or purely gratuitous. From the point of view of the subject, privileges are (6) personal, real, or mixed; personal are granted directly to individuals; real to what the law terms a "thing", for instance, a dignity as such, e. g. the privilege of the pallium for an episcopal see; mixed, to a group of persons, like a chapter or a diocese (local privilege). With regard to their object,

privileges are (7) positive or negative, according as they allow the performance of an act otherwise forbidden, or exempt one from the performance of an act otherwise obligatory. Again they are (8) honorary or useful; (9) purely gratuitous or onerous, the latter entailing certain duties or obligations correlative to the privilege; among such are conventional privileges, like concordats. Finally, from the point of view of their duration, they are (10) perpetual or temporary.

Privileges recognized by the law require no proof and must be recognized by the court; all other privileges must be proved, not presumed. They are proved by the production of the original concession or by a duly certified copy. To avoid difficulties the superior is often asked to renew or confirm the privileges granted by him or his predecessors. This confirmation may be either in common form, recognizing the privilege again, but giving it no new force, or in specific form, which is a new grant, revalidating the former as far as needs may be. The two forms are distinguished by the context and the official wording employed (cf. Decret., lib. II, tit. xxx, "De confirmatione utili vel inutiles"). The teaching of the canonists on the interpretation of rescripts may be summed up as follows: Privileges are to be construed according to the letter, the interpretation being neither extensive nor restrictive but purely declaratory, that is the words are to be taken only in their full and usual signification. A privilege as being a concession of the ruler is understood generously, especially when it runs counter to no law; in as far as it derogates from the law, particularly if it interferes with the rights of a third party, it is interpreted strictly. Privileges are obtained by direct concession, which is the usual way, or by prescriptive custom, an exceptional and indirect manner, or by communication. The last is an extension of the privilege to others than the first grantees. It may occur in two ways: either explicitly, the legislator giving the former class what he gave the latter, or implicitly, when it is already decreed that the privileges granted to certain juridical entities are deemed accorded to certain others, unless the privilege be incommunicable or an exception be made by the superior. The best-known example of the communication of privileges is that existing among the Mendicant Orders, as appears by many pontifical Constitutions from the time of Sixtus IV. Similarly communication of privileges exists between archconfraternities and affiliated confraternities.

Privileges cease by the act of the legislator, the act of the grantees, or spontaneously. (1) The legislator may revoke his concession either formally, or implicitly by a contrary law containing the clause "notwithstanding all privileges to the contrary" or even, "notwithstanding all privileges the tenor of which ought to be reproduced textually". It is clear that a revocation may be only partial. (2) The grantees may terminate the privilege: first, by an express renunciation accepted by the superior; provided however that it is the case of a personal privilege; for privileges of general interest, like those of the clergy, may not be renounced. Second, by non-user; not always, however, as theoretically the use of privileges is optional, but when this non-user gives third parties a prescriptive right; thus by non-user the privilege of election or of option in a chapter may be lost. Third, by abuse, in which case the withdrawal of the privilege is a penalty requiring at least a judicial declaratory sentence. (3) A privilege ceases spontaneously when a circumstance which was a condition for its enjoyment ceases: thus a cleric in minor orders loses the clerical privileges if he again embraces a secular calling; second, by lapse of time: for instance, where an indult is granted for a certain number of years, or when an honorary title is con-

ferred on one for life; third, by the cessation of the subject: thus a personal privilege disappears with the person: the real privilege with the thing, e. g. the privileges of the churches of France ceased with the total suppression of the former state. Does a privilege cease when its *raison d'être* has completely ceased? Theoretically, it may be so; but, in practice, the privilege remains in possession and the grantee may wait till the superior intervenes.

XXII, tit. xi; Extrav. Comm., lib. V, tit. vii; FERRARIS, *Prompta bibliotheca*, s. v. *Privilegium*; D'ANNIBALE, *Summula*, I (Rome, 1908), nn. 227 sq.; SLATER, *Moral Theology* (London, 1908).

A. BOUDINHON.

Privileged Altar. See ALTAR, sub-title PRIVILEGED ALTAR.

Privileges, ECCLESIASTICAL, are exceptions to the law made in favour of the clergy or in favour of consecrated and sacred objects and places.

I.—The privileges in favour of the clergy are: personal inviolability, a special court, immunity from certain burdens and the right to a proper maintenance (*privilegium canonis, fori, immunilitatis, competentiae*). In addition, the clergy have precedence of the laity in religious assemblies and processions, a special place in the church, viz., the presbytery (c. 1, X de vita et honestate cleric., III, 1), and titles of honour. These honours increase according to the higher order or office.

Privilegium Canonis.—In earlier canon law the injuring or wounding of a cleric was punished by severe canonical penances, and on occasion by excommunication (cc. 21, 22, 23, 24, C. XVII, q. 4). A person wounding a bishop incurred *ipso facto* excommunication (Synod of Rome, 862 or 863, c. xiv). When about the middle of the twelfth century at the instigation of politico-religious agitators, like Arnold of Brescia, excesses were committed against the defenceless clergy and religious, who were forbidden to carry weapons, the Church was compelled to make stricter laws. Thus, the Second Council of Lateran (1139), c. xv, after the Synods of Clermont (1130), Reims (1131), and Pisa (1135), decreed that whosoever thenceforth laid malicious hand on a cleric or monk incurred *ipso facto* anathema, the raising of which, except in danger of death, was reserved to the pope and must be sought in person at Rome (c. 29, C. XVII, q. 4).

This privilege, which, from the opening words of the canon, is called the *privilegium canonis* "Si quis suadente diabolo" or simply *privilegium canonis*, continues even to-day (Pius IX, "Apostolicae Sedis moderationi", 12 October, 1869, II, 2), and is enjoyed also by nuns (c. 33, X de sent. excomm. V, 39), lay brothers (c. 33 cit.), novices (c. 21 in VI^{to} h. t. V, 11), and even by tertiaries, who live in common and wear the habit (Leo X, "Dum intra", 19 December, 1516; "Nuper in sacro", 1 March, 1518). According to the wording of the canon, however, it is necessary, for the incurring of the excommunication, that the injury inflicted on the cleric or monk be a malicious and real injury, under which is included unauthorized deprivation of freedom (c. 29, X h. t. V, 39). Consequently, excommunication is not incurred by a superior justly chastising one of his inferiors (cc. 1, 10, 24, 54, X h. t. V, 39); by one who acts in self-defence against a cleric (cc. 3, 10, X h. t. V, 39), by one who avenges insult or assault on wife, mother, sister, or daughter (c. 3 cit.); when the injury results from a joke (c. 1, X h. t. V, 39), or if the assailant be unaware (to be testified on oath, if necessary) of the clerical rank (c. 4, X h. t. V, 39). Instead of the pope, the bishop gives absolution in the case of a slight injury (c. 3, 17, 31, X h. t. V, 39); or if a journey to Rome

be impossible; if the obstacle to the journey be only temporary, the assailant must promise the bishop on oath at the time of receiving absolution to present himself before the pope on the disappearance of the obstacle; should he fail to do so, the sentence revives (cc. 1, 2, 6, 11, 13, 26, 32, 33, 37, 58, 60, X h. t. V, 39; c. 22 in VI^{to} h. t. V, 11). According to the Council of Trent, the bishop may also absolve when there is question of secret offences (Sess. XXIV de Ref., c. vi) and, in virtue of the quinquennial faculties *pro foro interno*, of the less serious offences. In consequence of the more extensive powers of releasing from ecclesiastical censures enjoyed by confessors to-day, personal appearance at Rome is perhaps necessary only in the most serious cases. Abbots absolve their subjects in the case of lighter offences occurring among themselves (c. 2, 32, 50, X h. t. V, 39). This privilege grows with the office. Thus, whosoever commits or causes a real injury to a cardinal, papal legate, or bishop incurs excommunication *speciali modo reservata* (Pius IX, "Apostolicæ Sedis moderationi", 12 October, 1869, I, 5). While the old German common law punished the injuring of a cleric with a heavier fine than the injuring of a lay person, the modern secular laws, like the Roman law, afford special protection to clerics only during the exercise of their calling.

Privilegium Fori.—This secures the clergy a special tribunal in civil and criminal causes before an ecclesiastical judge. The civil causes of clerics pertain by nature to the secular courts as much as those of the laity. But the thought that it was unseemly that the fathers and teachers of the faithful should be brought before laymen as judges, and also the experience that many laymen were greatly inclined to oppress the clergy (c. 3 in VI^{to} de immun., III, 23), led the Church to withdraw her servants even in civil matters from the secular courts, and to bring them entirely under her own jurisdiction.

In the Roman Empire, in virtue of the decisions of the synods, a cleric could in civil disputes cite another only before the bishop (cc. 43, 46, C. XI, q. 1). However, these synodal decrees obtained no recognition from the lay courts, until Justinian relegated all disputes of clerics among one another and complaints of laymen against clerics to the ecclesiastical forum (Novella lxxix, lxxxiii, cxxiii, cc. 8, 21, 22). In the Frankish kingdom, also, clerics could summon one another only before the bishops in civil causes (First Synod of Macon, 583, c. 8), while laymen engaged in a civil dispute with clerics could proceed before the secular court only with the bishop's permission (Third Synod of Orléans, 538, c. 35). The Edict of Clotaire II (614), c. 4, altered the existing laws, by determining that at least actions for debt against clerics might also be brought before the episcopal tribunal. The Carolingian legislation made herein no alteration, but it forbade clerics expressly to appear personally before the civil courts, ordering them to appoint a defender (*advocatus*) to represent them (Admonitio generalis, 789, c. 23).

In criminal causes, the bishop had in the Roman Empire no jurisdiction, except in trivial matters. To him pertained only the deposition of the criminal cleric before punishment was inflicted by the secular judge (Novella cxxiii, c. 21, § 1; cxxvii, c. 4). In the Frankish kingdom bishops were condemned and degraded at the synod, whereupon the secular court executed the sentence of death, when necessary. Still more in the case of the other clergy did the power of the lay courts to inflict punishment prevail. But, from the time of the Edict of Clotaire II (614), priests and deacons began to be treated in the same manner as the bishops. In this respect the Carolingian legislation remained essentially the same (Synod of Frankfort, 794, c. 30).

The gradual liberation of the clergy from the lay forum received a further incentive from the ever-increasing number of ecclesiastical causes, from the acceptance of the dictum that the clergy were subject to personal, and the Church to the Roman law, from the ecclesiastical prohibition to clerics to engage in duels or ordeals, from the growing political importance of the bishops as counts and territorial lords after the disintegration of the Carolingian Empire. Thus, in view of the ferocious acts of violence committed by the laity, Pseudo-Isidore could demand in the most urgent terms that no cleric be summoned before the secular courts (cc. 1, 3, 9, 10, 37, C. XI, q. 1). This principle was called into life by the medieval popes, and, by decretal law, the exclusive competence of ecclesiastical judges over clerics in civil and criminal causes was established (cc. 4, 8, 10, 17, X de iud., II, 1; cc. 1, 2, 9, 12, 13, X de foro compet., II, 2). In feudal affairs alone were the clergy subject to the secular courts (cc. 6, 7, X de foro compet., II, 2). The ecclesiastical courts were thus competent for civil causes of clerics among one another, of laymen against clerics, and for all criminal causes of clerics. This *privilegium fori* was also recognized by imperial laws (Authentica of Frederick II, "Statuimus", 1139, ad l. 33, C. de epise. I, 3). From early times, however, it met with great opposition from the State. With the growing ascendancy of the State over the Church, the privilege was more and more limited, and was finally everywhere abrogated.

To-day, according to secular law, the civil and criminal causes of clerics belong to the lay court. Only with respect to the purely spiritual conditions of their station and office, are clerics subject to their bishop, and then not without certain state limitations—especially with respect to certain practical punishments. However, the Church maintains in principle the *privilegium fori*, even for those in minor orders, provided that they have the tonsure and wear clerical garb, and either already serve in a church or are preparing in a seminary or university for the reception of higher orders (Council of Trent, Sess. XXIII de Ref., c. vi; Sess. XXV de Ref., c. xx; Syllabus, n. 31). On the other hand, the popes have in their recent concordats to a great extent relinquished this position. They have, however, demanded that the bishops should be apprised of criminal proceedings against a cleric, so that he may be able to take the necessary ecclesiastical measures (Bavarian Concordat, art. xii, litt. c.; Austrian Concordat, art. xiii, xiv; Concordat with Costa Rica, art. xiv, xv; that with Guatemala, art. xvi, xvii; that with Nicaragua, art. xiv, xv; that with San Salvador, art. xiv, xv). This warning of the bishop is also ordered by the laws of many states, as well as a similar regard for the cleric himself in the case of criminal proceedings (Regulation of the Prussian Minister of Justice of 12 June, 1873; of 25 August, 1879; Austrian Law of 7 May, 1874, § 29).

But, wherever the pope has not relinquished the *privilegium fori*, lawgivers and administrators, who directly or indirectly compel the judges to summon ecclesiastical persons before the secular forum, incur excommunication specially reserved to the pope (Pius IX, "Apostolicæ Sedis moderationi", 12 October, 1869, I, 7). In places where the papal derogation of the *privilegium fori* has not been secured but where justice can be obtained only before the secular judge, a lay complainant, before summoning a cleric before the secular courts, should seek the bishop's permission, or, if the complaint be against a bishop, the permission of the pope. Otherwise, the bishop can take punitive measures against him (S. Congregation of the Inquisition, 23 January, 1886). It is also in accordance with the spirit of

the *privilegium fori* that it is ordered in many dioceses that all complaints of and against clerics be laid first before the bishop for settlement; should no settlement be reached, the case may then be brought before the secular court [Archiv für kathol. Kirchenrecht, VII (1862), 200 sqq.; LXXXIII (1903), 505 sq., 562; LXXXV (1905), 571; LXXXVI (1906), 356 sq.].

Privilegium Immunitatis.—This consists in the exemption of ecclesiastical persons, things, and places from certain general obligations and taxation. The immunity is, therefore, either personal, or real, or local. Personal immunity is the exemption of the clergy from certain public burdens and obligations, which the general religious sentiment of the people declares in keeping with their office, or which render the discharge of their calling difficult. Whether this privilege, as well as the other clerical privileges, rests on Divine law, the Church has never dogmatically decided, although canon law declares that churches and ecclesiastical persons and things are free from secular burdens according to both Divine and human law (c. 4 in VI^{to} de cens., III, 20); that ecclesiastical immunity rests on the Divine command (Council of Trent, Sess. XXV de Ref., c. xx); and that it is false to assert that ecclesiastical immunity can be traced only from secular law; that the immunity of the clergy from military service could be abolished without any breach of the natural law or of justice, nay that it must be abolished in the interests of progress and civil equality (Syllabus, nn. 30, 32).

In accordance with the liberties granted the pagan priests, the Christian emperors after Constantine exempted the clergy from the obligation of undertaking municipal offices, trusteeships, guardianships, and all public functions, from military service, quartering, and the other personal *munera sordida* (later called villainage), and in part also from personal taxation (Cod. Just., I, 1, t. 3 de episc. Novella cxxiii, c. 5). For the most part these privileges also prevailed in the Teutonic kingdoms. Thus, Frederick II exempted the clergy from all taxation and from all socage and teaming (Authentica, "Item nulla" 1220 ad 1, 2, C. de episc. I, 3). But decretal law (c. 3 in VI^{to} de immun. III, 23; c. 3 in Clem. de cens. III, 13) demanded the complete immunity of the clergy (cc. 2, 4, 7, X de immun. III, 49; c. 4 in VI^{to} de cens. III, 20; c. 3 in VI^{to} de immun. III, 23; c. 3 in Clem. de cens. III, 13; c. un. in Clem. de immun. III, 17). This immunity was indeed in the Middle Ages, and especially at the end, complete, since in many cases we find the secular rulers doing their utmost to impose secular burdens on the clergy. The Council of Trent (Sess. XXV de Ref., c. xx), therefore, again exhorts the princes to respect this privilege. In recent times, and especially since the French Revolution, the State's demands on the clergy have been increasing. Hence the above-cited explanations of Pius IX in the Syllabus, nn. 30, 32.

The exemption of the clergy from national taxation is to-day almost entirely abolished; their exemption from municipal taxation still continues in some places. In Austria and Germany clerics are exempt from public offices and services and from serving as assessors and jurors. In these countries the clergy are also free from undertaking trusteeships, if they do not obtain the consent of their superiors. Finally, candidates for the ecclesiastical state, and still more ordained clergymen, are exempted in Germany and Austria from military service under arms. Less favour is shown the clergy in Italy, and practically none in France since the separation of Church and State. Conditions vary greatly in other lands.

Privilegium Competentiæ.—This is a right possessed by the clergy, in accordance with which, in the case

of executions against their property an income, sufficient to constitute a livelihood, must be left to them. A *beneficium competentiæ* was enjoyed by the Roman soldiers (fr. 6, 18, D. de re iudic. XLII, 1). The Glossa argues that, since the cleric is a *miles cælestis militiæ* (cf. also c. 19, C. XXIII, q. 8), the same privilege should be recognized in his case. But this constitutes as poor a foundation as the c. "Odoardus" (c. 3, X. de solut. III, 23), according to which excommunication may not be inflicted on an insolvent cleric, who binds himself to pay on the improvement of his financial position. The origin of the privilege is to be referred rather to custom and to the idea expressed in many canons, that a cleric may not be brought into such a position that he is forced to seek a livelihood in an unworthy manner. In both theory and practice the privilege afforded protection from personal arrest, foreclosure of a mortgage, and from the immediate vacation of property in favour of the lay person. It also extended to the patrimony forming the title of ordination. On the other hand, if the cleric has judicially denied his guilt, has been guilty of a fraud, disregarded cautions, or if the lay person be poorer than the debtor, the privilege is lost.

Since the abolition of the *privilegium fori*, the scope of the *privilegium competentiæ* has been dependent on the state laws. Thus, according to § 850, Ziff. 8 of the civil suit regulations of the German Empire, the yearly income or the pension of clerics is free from seizure to the extent of 1500 marks, and of the excess only one-third is liable. According to § 811, Ziff. 7, 8, 10, all objects necessary for the discharge of the clerical calling (e. g. books, proper clothing) are also exempt from seizure. In Austria, according to the law of 21 April, 1882, 800 gulden annually are exempt in the case of clergy employed in the care of souls and ecclesiastical beneficiaries, and 500 in the case of other clerics. In Italy also the *privilegium competentiæ* still prevails, but it has been abolished in France.

As the *privilegia clericorum* are the legal consequences of the religious station, granted for the protection of the clerical calling, they may not, being the rights of a class, be waived by any individual, nor may they be withdrawn from an individual except in specified cases. They are forfeited by degradation (c. 2 in VI^{to} de poen. V, 9); by the committing of a serious criminal act and simultaneously laying aside the clerical garb in spite of a triple warning of the bishop (cc. 14, 23, 25, 45, X de sent. excomm. V, 39; c. 10, X de iud. II, 1; c. 1, X de apostat. V, 9); by leading an unseemly or despicable life and simultaneously laying aside the clerical garb in spite of three warnings from the bishop (c. 16, X de vita et honest. cleric. III, 1; c. un. in VI^{to} h. t. III, 1; c. 1 in Clem. h. t. III, 1); and finally in the case of clerics in minor orders by laying aside the clerical garb (Pius IX, 20 September, 1860).

II.—Like clerics, consecrated and sacred things and places enjoy certain privileges and freedom from burdens and obligations; this is based on the *privilegium immunitatis*, and is termed real or local immunity. All objects intended for ecclesiastical use are termed *res ecclesiasticæ*. *Res ecclesiasticæ* in this wide sense are divided into *res ecclesiasticæ* in the narrow sense and *res sacræ*. Ecclesiastical things (*res ecclesiasticæ* in the narrow sense), or ecclesiastical property (*patrimonium* or *peculium ecclesiasticum*), mediate maintain the Divine worship, and include all buildings and real property belonging to the Church except the churches and cemeteries, the funds for the maintenance of the servants of the Church (*bona mensæ, bona beneficii*), and the ecclesiastical buildings (*bona fabricæ*), and finally the property designed for charitable objects or pious foundations (*res religiosæ, causæ*

piæ). Sacred objects (*res sacræ*) are immediately connected with Divine worship, and are set apart from all other things by an act of worship or consecration — things consecrated (*res consecratæ*), and by benediction as things blessed (*res benedictæ*). To *res consecratæ* belong churches, altars, chalices, and patens; to *res benedictæ* a series of ecclesiastical utensils and cemeteries.

As the ecclesiastical property serves for the public good, it was exempted by the Roman emperors from all the lower and extraordinary burdens, but not from the regular taxes (l. 3, C. de episc. I, 3). This example was followed in the Frankish empire, in which church property was subject to all the ordinary public burdens. In addition, however, many extraordinary burdens were imposed, such as the *dona gratuita* to the king, the furnishing of accommodation for him on his journeys, the rendering of court and war services to him as their feudal lord, and many arbitrary forms of oppression. Consequently, the Third Lateran Council (1179) demanded the complete exemption of church property from taxation, and that only in case of public need, and then only with the consent of the bishop or of the pope, should it be subjected to public burdens (cc. 2, 4, 7, X de immun. III, 49; c. 1, 3, in VI^{to} h. t. III, 23; c. un. in Clem. h. t. III, 17; c. un. Extrav. commun. III, 13). Frederick II accordingly granted church property exemption from all taxation (Authentica "Item nulla" ad l. 2, C de episc. I, 3). After the close of the Middle Ages, however, secular rulers subjected to a great extent church property to public burdens; the Council of Trent therefore admonished them to respect the old privilege of *immunitas realis* (Sess. XXV de Ref., c. xx), but without much success. In modern and recent times the tendency has everywhere been to subject church property more and more to public taxation. The assertion that the privilege of *immunitas realis* was of purely secular origin was declared erroneous by Pius IX in the Syllabus, n. 30. Here and there, as in Germany and Austria, the State laws accord partial freedom from taxation to ecclesiastical property. In Italy the papal property is alone exempt; in France exemption ceased with the separation of Church and State. In the United States the Church shares in the exemption generally granted to all institutions labouring for the public good. The conditions vary much in the other lands.

For places and things consecrated to the Divine service no rights can be claimed which involve a profane use. Consequently, such objects are in this sense extra-commercial. Otherwise, in sharp distinction from the *res sacræ* among the Romans and contrary to the practice of the early Christian centuries, they may, in accordance with the Germanic conception of private churches, be possessed by private individuals and even enter into civil transactions and commerce. In churches and cemeteries, however, no judicial transactions, political meetings, markets, banquets, theatrical performances, secular concerts, dances etc., may be held. The bishop may in all cases sanction their use outside of Divine service, provided that all scandal be avoided. Similarly, the use of the church-bell for secular purposes may be allowed or tolerated apart from cases of need, where the propriety of its use is self-evident (cc. 1, 5, 9, X. de immun. III, 49; c. 2 in VI^{to} h. t. III, 23). Mischief, disorder, and disturbance in the church (especially during Divine service), robbery of the church, the injury or destruction of things or buildings consecrated to the Divine service, disturbance of the peace proper to the cemetery or churchyard, are punished by the State as qualified crimes.

To the ecclesiastical local immunity belongs the right of asylum of churches. Even in the Old Testament it was decreed that the murderer or homicide

might be safe from vengeance in certain places, until the public had come to a decision concerning his surrender (Ex., xxi, 13; Num., xxxv, 6 sqq.; Deut., xix, 2 sqq.). Among the Greeks, and especially among the Romans, the temples, the altars, and the statues of the emperor were places of refuge (1, l. C. de his qui ad statuas confugiunt I, 25). Thus, when Christianity became the religion of the State, it followed as an inevitable consequence that the emperor should also raise to the right of sanctuary the churches and bishops (C. Just. de his qui ad ecclesias confugiunt I, 12). But, as the ecclesiastical right of sanctuary was still very limited, the Synod of Carthage (399) asked the emperor to remove these limitations. In the German empires it was the Church which founded the right of asylum as a protection against the rude conception of justice then prevalent and against savage revenge, by decreeing with the assent of the State that a criminal, who had reached the church or its immediate neighbourhood, might be delivered up only after he had performed ecclesiastical penance, and after the secular judge had promised that sentence of death or maiming would not be inflicted upon him (cc. 19, 36, C. XVII, q. 4, Capitulare de partibus Saxoniarum, 775–90, c. 2). The right of asylum, which had its origin in this manner and which was subsequently extended to the surroundings of the church, the cemeteries, the dwellings of bishops and parish-priests, seminaries, monasteries, and hospitals, was upheld especially by the popes, although they excluded from the privilege very great criminals, such as highway robbers, murderers, and those who chose the church or churchyard as the scene of their crimes so as to enjoy immediately the right of asylum (cc. 6, 10, X de immun. III, 49; c. 1, X de homic. V, 12).

Since the close of the Middle Ages, however, State legislation has been opposed to the ecclesiastical right of asylum, so that the popes have been compelled to modify it more and more (Gregory XIV, "Cum alias" of 24 May, 1591; Benedict XIII, "Ex quo divina", 8 June, 1725; Clement XII, "In suprema justitiæ", 1 Feb., 1734; Benedict XIV, "Officii Nostri", 15 March, 1750). The modern penal codes no longer recognize an ecclesiastical right of asylum, and the Church can all the more readily acquiesce therein, as modern justice is humane and well-regulated. However, even to-day those who violate "*ausu temerario*" the ecclesiastical right of asylum incur *excommunicatio lata sententiæ* simply reserved to the pope (Pius IX, "Apost. Sedis moderationi", 12 Oct., 1869, II, 5).

JOHANNES BAPTIST SÄGMÜLLER.

Proba, FALTONIA, Christian poetess of the fourth century. The name Faltonia is doubtful and is apparently due to a confusion, as the MSS. call the author simply Proba. As granddaughter of Probus, consul in 310, daughter of Petronius Probianus, consul in 322, wife of Claudius Celcinus Adalphius, prefect of Rome in 351, and mother of C. Clodius Hermogenianus Olybrius, consul in 379, and of Faltonius Alypius, Proba belonged to that Roman aristocracy which upheld the old pagan religion so long against Christianity. Proba was at first a pagan, as was her

husband, but once converted she persuaded him to follow her example. She had celebrated in an epic poem now lost the wars between Constantine and Magnentius. After her conversion she wrote a *zento* in hexameter verses in which she relates sacred history in terms borrowed exclusively from Virgil. The story of the Old Testament is briefly outlined, the author dwelling only on the Creation, the Fall, and the Deluge. The larger portion of the work recounts the life of Christ according to the Gospels. But the action of the poem is constrained and unequal, the manner absurd, the diction frequently either obscure or improper; nevertheless the work had a certain popularity during the Middle Ages.

GLOVER, *Life and Letters in the Fourth Century* (Cambridge, 1901), 144; for the latest edition, with an exhaustive study, see SCHENKL in *Poet. Christ. min.* I, *Corp. script. eccles. lat.* (Vienna, 1888).

PAUL LEJAY.

Probabilism is the moral system which holds that, when there is question solely of the lawfulness or unlawfulness of an action, it is permissible to follow a solidly probable opinion in favour of liberty even though the opposing view is more probable.

I. STATE OF THE QUESTION.—When a prohibiting law is certain, the subjects of the law are bound to abstain from performing the action which the law forbids, unless they are excused by one of the ordinary exempting causes. On the other hand, when it is certain that no law forbids an action, there is no obligation to abstain from performing it. Between these two extremes there can be varying degrees of uncertainty about the existence or cessation of a prohibiting law. There is doubt in the strict sense when the intellect neither assents nor dissents, because either there are no positive arguments for and against the law, or the arguments for and against the law are equal in strength. The opinion which favours the law, and which is technically called the safe opinion, can be more probable than the opinion which favours liberty and which still retains solid probability. Again, the opinion which favours the law can be most probable, and the opinion which favours liberty only slightly probable. In the same way the opinion which favours liberty and which is technically called the less safe opinion, can be more probable than the opposing view, or can be most probable.

In estimating the degree which is required and which suffices for solid probability, moralists lay down the general principle that an opinion is solidly probable which by reason of intrinsic or extrinsic arguments is able to gain the assent of many prudent men. All admit that extrinsic authority can have sufficient weight to make an opinion solidly probable; but there is divergence of view in estimating what number of experts is able to give an opinion this solid probability. The prevailing theory amongst Probabilists holds that if five or six theologians, notable for prudence and learning, independently adhere to an opinion their view is solidly probable, if it has not been set aside by authoritative decisions or by intrinsic arguments which they have failed to solve. Even one theologian of very exceptional authority, such as St. Alphonsus Liguori, is able to make an opinion solidly probable, as we know from the official declarations of the Holy See. All moralists agree that mere flimsy reasons are insufficient to give an opinion solid probability, and also that the support of many theologians who are mere collectors of the opinions of others is unable to give solid probability to the view which they maintain.

Non-Catholics who bring charges of laxity against the moral systems which Catholic theologians uphold, often forget that the Catholic Church, in theory and in practice, has condemned various views in favour of liberty which are based on insufficient data.

If the less safe opinion is speculatively uncertain, it is unlawful to follow it in practice, until all reasonable effort has been made to remove the uncertainty, by

considering the arguments on both sides and by consulting available authorities. It is unlawful, also, to act on the less safe view unless the speculative uncertainty has been changed into practical certainty that the action to be performed is lawful. The whole question at issue between different moral systems concerns the way in which the speculative uncertainty is changed into practical certainty; each system has what is called a reflex principle of its own, by which practical certainty can be obtained that the action to be performed is lawful. Rigorism, or, as it is frequently called, Tutorism, held that the less safe opinion should be most probable, if not absolutely certain, before it could be lawfully put into practice, while Laxism maintained that if the less safe opinion were slightly probable it could be followed with a safe conscience.

These two views, however, never received serious support from Catholic theologians, and were formally condemned by the Holy See. At one time or another in the history of the Church three other opinions gained many adherents. Some theologians, who put forward the system known as Probabiliorism, held that the less safe opinion can be lawfully followed only when it is more probable than the safe opinion. Others, upholding *Æquiprobabilism*, maintain that, when the uncertainty concerns the existence of a law, it is lawful to follow the less safe opinion when it has equal or almost equal probability with the safe opinion, but that, when there is question of the cessation of a law, the less safe opinion cannot lawfully be followed unless it is more probable than the safe view. Others again, who adhere to Probabilism, believe that, whether there is question of the existence or of the cessation of a law, it is lawful to act on the less safe opinion if it is solidly probable, even though the safe view is certainly more probable. In recent years a system known as Compensationism has tried to reconcile these three opinions by holding that not only the degree of probability attaching to various opinions must be taken into account, but also the importance of the law and the degree of utility attaching to the performance of the action whose morality is in question. The more important the law, and the smaller the degree of probability attaching to the less safe opinion, the greater must be the compensating utility which will permit the performance of the action of which the lawfulness is uncertain.

From what has so far been said it is clear that these various moral systems come into play only when the question concerns the lawfulness of an action. If the uncertainty concerns the validity of an action which must certainly be valid, it is not lawful to act on mere probability unless, indeed, this is of such a nature as to make the Church certainly supply what is needed for the validity of the act. Thus, apart from necessity, it is not lawful to act on mere probability when the validity of the sacraments is in question. Again, it is not lawful to act on mere probability when there is question of gaining an end which is obligatory, since certain means must be employed to gain a certainly required end. Hence, when eternal salvation is at stake, it is not lawful to be content with uncertain means. Moreover, the virtue of justice demands equality, and as such excludes the use of probability when the established rights of another are concerned. Consequently, if a certain debt has not been certainly paid, at least a payment *pro rata dubii* is required according to the prevailing view. It is evident, then, that the question which arises in connexion with the moral systems has to do solely with the lawfulness or unlawfulness of an action.

II. HISTORY OF PROBABILISM.—Probabilism as a moral system had no history prior to the end of the sixteenth century. Fathers, doctors and theologians of the Church at times solved cases on principles which apparently were probabilist in tendency. St. Augus-

tine declared that marriage with infidels was not to be regarded as unlawful since it was not clearly condemned in the New Testament: "Quoniam revera in Novo Testamento nihil inde præceptum est, et ideo aut licere creditum est, aut velut dubium derelictum" ("De Fide et Operibus", c. xix, n. 35 in "P. L.", XL, 221). St. Gregory of Nazianzus laid down, against a Novatian writer, that a second marriage was not unlawful, since the prohibition was doubtful: "Quo argumento id confirmas. Aut rem ita esse proba, aut, si id nequis, ne condemnes. Quod si res dubia est, vincat humanitas et facilitas" (Or. 39, "In sancta Lumina", n. 19 in "P. G.", XXXVI, 358). St. Thomas maintained that a precept does not bind except through the medium of knowledge: "Unde nullus ligatur per præceptum aliquod nisi mediante scientia illius" ("De Veritate", Q. xvii, a. 3); and Probabilists are accustomed to point out that knowledge implies certainty. On the other hand many theologians were Probabiliorist in their principles before the sixteenth century. Sylvester Prierias (Opinio, s. 2), Conradus (De Contract., Q. ult), and Cajetan (Opinio) were Probabiliorists; so that Probabiliorism had gained a strong hold on theologians when Medina arrived on the scene. Bartholomew Medina, a Dominican, was the first to expound the moral system which is known as Probabilism. In his "Expositio in 1am 2am S. Thomæ", he taught that, "if an opinion is probable it is lawful to follow it, even though the opposing opinion is more probable". His system soon became the common teaching of the theologians, so that in the introduction to his "Regula Morum" Father Terill, S. J. (d. 1676) was able to say that until 1638 Catholic theologians of all schools were Probabilists. There were exceptions such as Rebellus (d. 1608), Comitulus (d. 1626), and Philalethis (d. 1642), but the great body of the theologians of the end of the sixteenth and of the first half of the seventeenth century were on the side of Medina. Amongst them were Sa (d. 1596), Toletus (d. 1596), Gregorius de Valentia (d. 1603), Bāñez (d. 1604), Vasquez (d. 1604), Azor (d. 1607), Thomas Sanchez (d. 1610), Ledesma (d. 1616), Suarez (d. 1617), Lessius (d. 1623), Laymann (d. 1625), Bonacina (d. 1631), Castropalau (d. 1633), Alvarez (d. 1635), and Ildephonsus (d. 1639).

With the rise of Jansenism and the condemnation of "Augustinus" a new phase in the history of the Probabilist controversies began. In 1653 Innocent X condemned the five propositions taken from "Augustinus", and in 1655 the Louvain theologians condemned Probabilism. Tutorism was adopted by the Jansenists, and the Irish Jansenist theologian, Sinnichius (d. 1666), a professor of Louvain, was the foremost defender of the Rigorist doctrines. He held that it is not lawful to follow even a most probable opinion in favour of liberty. Jansenist Rigorism spread into France, and Pascal in his "Lettres Provinciales" attacked Probabilism with the vigour and grace of style which have given his letters their high place in literature. The "Lettres Provinciales" were condemned by Alexander VII in 1657, but Rigorism did not receive its final blow till the year 1690, when Alexander VIII condemned the proposition of Sinnichius: "Non licet sequi opinionem vel inter probabiles probabilissimam".

After this condemnation a moderate form of Tutorism was unfolded by theologians like Steyaert (d. 1701), Opstraet (d. 1720), Henricus a S. Ignatio (d. 1719), and Dens (d. 1775). During this period, dating from the middle of the seventeenth to the middle of the eighteenth century, the following were amongst the notable theologians who remained true to Probabilism: Lugo (d. 1660), Lupus (d. 1681), Cardenas (d. 1684), Deschamps (d. 1701), Lacroix (d. 1714), Sporer (d. 1714), Salmanticenses (1717-1724), Mazzotta (d. 1748).

Side by side with Probabilism and Rigorism a party held sway which favoured Laxism, and which maintained in theory or practice that a slightly probable opinion in favour of liberty could safely be followed. The principal upholders of this view were Juan Sanchez (d. 1620), Bauny (d. 1649), Leander (d. 1663), Diana (d. 1663), Tamburini (d. 1675), Caramuel (d. 1682), Moya (d. 1684). Laxism was expressly condemned by Innocent XI in 1679; and Alexander VII (1665-66), and Innocent XI (1679) condemned various propositions which savoured of Laxism.

Besides Rigorism, Probabilism, and Laxism, there was also a theory of Probabiliorism which held that it is not lawful to act on the less safe opinion unless it is more probable than the safe opinion. This view, which was in vogue before the time of Medina, was renewed in the middle of the seventeenth century, as an antidote against Laxism. Its revival was principally due to the efforts of Alexander VII and Innocent XI. In 1656 a general chapter of the Dominicans urged all members of the order to adopt Probabiliorism. Though previously Dominican theologians like Medina, Ledesma, Bāñez, Alvarez, and Ildephonsus were Probabilists, subsequently the Dominicans in the main were Probabiliorists. Amongst them were Mercorius (d. 1669), Gonet (d. 1681), Contenson (d. 1674), Fagnanus (d. 1678), Natalis Alexander (d. 1724), Concina (d. 1756), Billuart (d. 1757), Patuzzi (d. 1769). Probabiliorism was held by many Jesuits such as Gonzalez (d. 1705), Elizalde (d. 1678), Antoine (d. 1743), Ehrentreich (d. 1708), and Taberna (d. 1686). In 1700 the Gallican clergy, under Bossuet, accepted Probabiliorism. The Franciscans as a rule were Probabiliorists, and in 1762 a general chapter of the order, held at Mantua, ordered the members to follow Probabiliorism. In 1598 a general chapter of the Theatines adopted Probabiliorism. The Augustinians the Carmelites, the Trinitarians, and many Benedictines were also Probabiliorists. The most notable event in the history of the controversy occurred in connexion with Thyrsus Gonzalez, S.J., a professor of Salamanca, who (1670-72) wrote a work, entitled "Fundamentum Theologiæ Moralis", in favour of Probabiliorism. In 1673 the book was sent to the Jesuit General Oliva, who refused permission for its publication. Innocent XI favoured Gonzalez, and in 1680 sent, through the Holy Office, a decree to the General Oliva ordering that liberty be given to the members of the order to write in favour of Probabiliorism and against Probabilism. Gonzalez was elected general of the order in 1687, but his book was not published until 1694.

During the controversies between the Probabilists and the Probabiliorists, the system known as *Æquiprobabilism* was not clearly brought into prominence. *Æquiprobabilism* holds that it is not lawful to follow the less safe opinion when the safe opinion is certainly more probable; that it is not lawful to act on the less safe opinion even when it is equally probable with the safe opinion, if the uncertainty regards the cessation of a law; but that if the existence of the law is in question, it is lawful to follow the less safe opinion if it has equal or nearly equal probability with the safe opinion. Many of the moderate Probabilists of the sixteenth and seventeenth centuries foreshadowed in their writings the theory to which, in his later days, St. Alphonsus adhered. Even Suarez, who is regarded as a typical Probabilist, said: "Major probabilitas est quædam moralis certitudo, si excessus probabilitatis certus est (De Legibus, l. VIII, c. 3, n. 19). In the beginning of the eighteenth century Amort (d. 1775), Rassler (d. 1730), and Mayr (d. 1749), who are sometimes classed as moderate Probabilists, in reality defended *Æquiprobabilism*.

This view gained vigour and persistence from the teaching of St. Alphonsus, who began his theologi-

cal career as a Probabiliorist, subsequently defended Probabilism, especially in a treatise entitled "*Dissertatio scholastico-moralis pro usu moderato opinionis probabilis in concursu probabilioris*" (1749, 1755), and finally, about 1762, embraced *Æquiprobabilism*. In a new dissertation he laid down the two propositions that it is lawful to act on the less safe opinion, when it is equally probable with the safe opinion, and that it is not lawful to follow the less safe opinion when the safe opinion is notably and certainly more probable. In the sixth edition (1767) of his "*Moral Theology*" he again expressed these views, and indeed towards the end of his life frequently declared that he was not a Probabilist.

Probabilists sometimes hold that St. Alphonsus never changed his opinion once he had discarded Probabiliorism for Probabilism, though he changed his manner of expressing his view so as to exclude Laxist teaching and to give an indication of what must be regarded as a solidly probable opinion. As a matter of fact, as can be seen from a comparison between the "*Moral Theologies*" of moderate Probabilists and of *Æquiprobabilists*, there is little practical difference between the two systems, so far at least as the uncertainty regards the existence as distinguished from the cessation of a law. Since the time of St. Alphonsus the prevailing moral systems have been Probabilism and *Æquiprobabilism*. Probabiliorism has to a great extent disappeared, and even many Dominican theologians have espoused the cause of *Æquiprobabilism*. During the nineteenth century the principal *Æquiprobabilists* have been Konings, Marc, Aertnys, Ter Haar, de Caigny, Gaudé, and Wouters. Quite recently Ter Haar and Wouters have been engaged in controversy with Lehmkühl who, especially in his "*Probabilismus Vindicatus*" (1906) and in the eleventh edition of his "*Theologia Moralis*" (1910), has strongly supported the Probabilist thesis which has been accepted during the nineteenth century by the vast majority of theologians.

In late years the system of Compensationism has arisen, which holds that a compensating reason, proportionate to the gravity of the law and to the degree of probability in favour of the existence of the law, is required in order that a person might lawfully act on the less safe opinion. This theory was proposed by Mannier, Laloux, and Potton; but it has gained little support and has not yet become a rival of the old theories of Probabilism, *Æquiprobabilism*, or even Probabiliorism.

III. PROBABILISM.—A. *Teaching of Probabilists*.—The central doctrine of Probabilism is that in every doubt which concerns merely the lawfulness or unlawfulness of an action it is permissible to follow a solidly probable opinion in favour of liberty, even though the opposing view is more probable. Probabilists apply their theory only when there is question merely of the lawfulness or unlawfulness of an action, because in other cases certainty might be demanded on various grounds, as happens when the validity of the sacraments, the attainment of an obligatory end, and the established rights of another are concerned. They apply their doctrine whether the doubt about the lawfulness or unlawfulness of an action be a doubt of law, or a doubt of fact which can be reduced to a doubt of law. Thus if it is solidly probable that Friday morning has not yet set in, there is a doubt of fact which can be reduced to a doubt of law as to whether it is lawful in the circumstances to take meat. They also apply their doctrine not merely to human but also to Divine and natural laws, on the ground that the Divine legislator is not more exacting than a human legislator. They apply their principles whether the existence or the cessation of a law is concerned, since, in their estimation, liberty is always in possession. They also apply their doctrine even though the person whose

action is in question believes that the safe opinion is the more probable opinion. If, however, he looks on the safe opinion as morally certain, he cannot lawfully use the opinion of others who differ from him. Nor can a person on the same occasion use opposing probabilities in his favour in reference to several obligations of which one or another would be certainly violated; thus a priest cannot lawfully take meat on the probability that Friday has already elapsed, and at the same time postpone the reading of Complin on the probability that Friday will not elapse for some time. Finally, Probabilists insist that the opinion in favour of liberty must be based on solid arguments and not on mere flimsy reasons which are insufficient to gain the assent of prudent men.

B. *Arguments for Probabilism*.—(1) External arguments: (a) Probabilism, if untrue, is seriously detrimental to the spiritual life of the faithful, since it permits actions which ought to be forbidden, and the Church cannot tolerate or give approval to such a moral system. But the Church during many centuries has tolerated Probabilism, and has given it approval in the person of St. Alphonsus. Hence Probabilism is not a false system of morals. That the Church has tolerated Probabilism is shown from the numerous approved authors, who, since the time of Medina, have defended it without interference on the part of ecclesiastical authority. That the Church has given positive approval to Probabilism in the person of St. Alphonsus is proved from the fact that his works including his treatises in favour of Probabilism, received official sanction from the Decree of 18 May, 1803, the reply of the Sacred Penitentiary of 5 July, 1831, the Bull of Canonization of 26 May, 1839, and the Apostolic Letters of 7 July, 1871 (cf. Lehmkühl, "*Theologia Moralis*", I, nn. 165-75).

Æquiprobabilists reply that this argument proves too much for Probabilists, since the Church has also tolerated *Æquiprobabilism*, and has given it positive approval in the person of St. Alphonsus, whose works in favour of *Æquiprobabilism* received the sanction of the Holy See in the official documents of 1803, 1831, 1839, and 1871. If *Æquiprobabilism* is false, it is seriously detrimental to the spiritual life of the faithful, since it imposes burdens which ought not to be imposed. Hence, if any argument can be derived for Probabilism from the toleration or approval of the Church, a similar argument can be derived therefrom for *Æquiprobabilism*.

(b) In interpreting her own laws the Church applies the principles of Probabilism, since amongst the rules of law in "*Sexto Decretalium*" we read: "*Odia restringi, et favores convenit ampliari*" (r. 15); "*In obscuris minimum est sequendum*" (r. 30); "*Contra eum qui legem dicere potuit apertius, est interpretatio facienda*" (r. 57); "*In poenis benignior est interpretatio facienda*" (r. 89). What is true of the Church is equally true of other legislators, because God is not a more exacting Legislator than His Church, nor is the State to be presumed more strict than God and the Church (cf. Tanquerey, "*Theologia Moralis fundamentalis*", n. 413).

Æquiprobabilists reply to this argument that when the less safe opinion is certainly less probable than the safe opinion, the former has lost solid probability and consequently cannot, so far as conscience is concerned, obtain the privileges which the Divine Legislator, the Church, and the State concede in the case of really doubtful laws. Moreover, many of these rules of law directly apply to the external forum and ought not, without due limitation, be transferred to the forum of conscience.

(2) Internal arguments: (a) a law which has not been promulgated is not a law in the full and strict sense, and does not impose an obligation. But when there is a solidly probable opinion in favour of liberty, the law has not been sufficiently promulgated, since

there has not been the requisite manifestation of the mind of the legislator. Hence, when there is a solidly probable opinion in favour of liberty, the law is not a law in the full and strict sense, and does not impose any obligation (cf. Lehmkuhl, "Theologia Moralis", I, nn. 176-8).

Equiprobabilists reply that, when there is a solidly probable opinion in favour of liberty, the law is probably not sufficiently promulgated, and the question remains whether a law that is probably not sufficiently promulgated imposes any obligation in conscience. It would be begging the question to assume that no obligation is imposed simply because there is a probability that the law has not been sufficiently promulgated. Moreover, if the safe opinion happens to be the true opinion, a material sin is committed by the person who, acting on probability, performs the prohibited action. But, unless the law is promulgated, a material sin cannot be committed by its violation, since promulgation is a necessary condition of a binding law (cf. McDonald, "The Principles of Moral Science", p. 245).

(b) An obligation, concerning whose existence there is invincible ignorance, is no obligation. But, so long as there is a solidly probable opinion in favour of liberty, there is invincible ignorance about the obligation imposed by the law. Hence a law does not impose an obligation so long as the less safe opinion is solidly probable (cf. Lehmkuhl, "Theologia Moralis", I, n. 179).

Equiprobabilists reply that there is not invincible ignorance in regard to a law when the safe opinion is also the more probable opinion, because in these circumstances a person is bound by ordinary prudence to give assent to the safe opinion. Although it is true that an obligation concerning whose existence there is invincible ignorance is no obligation, this is not true when one is compelled to give assent to an opinion as the more probable opinion (cf. Wouters, "De Minus-probabilismo", p. 121).

(c) According to the axiom: *lex dubia non obligat*, a doubtful law does not bind. But a law is doubtful when there is a solidly probable opinion against it. Hence it is lawful to follow a solidly probable opinion in favour of liberty (cf. Tanquerey, "Theologia Fundamental", n. 409).

Equiprobabilists in reply say that the axiom *lex dubia non obligat* holds when the law is strictly doubtful, i. e. when the reasons for and against the law are equal or nearly equal. A fortiori the law does not bind when the safe opinion is more probable than the less safe opinion. It would, however, be begging the question to assume that the axiom holds when the less safe opinion is clearly less probable than the safe opinion.

(d) According to Equiprobabilists, it is lawful to follow the less safe opinion, when it is more probable than the safe opinion. But they must admit that Probabilism is more probable than Equiprobabilism, since the vast majority of theologians favour the milder view, and Equiprobabilists do not reject external authority. Hence on their own principles they ought to admit the practical truth of Probabilism.

Equiprobabilists reply that extrinsic authority is of no avail when the arguments on which the authority rests have been proved to be invalid; and they claim that they have proved the invalidity of the Probabilist arguments. Moreover, a reflex principle is useless unless its truth is proved with certainty, since its sole utility is to change speculative uncertainty into practical certainty. But greater probability does not give certainty. Accordingly, even if Equiprobabilists were to admit the greater probability of Probabilism, that admission would be useless for Probabilists. The case is different with Equiprobabilism, which has practical certainty, since nearly all theologians nowadays admit the lawfulness of following the less safe

opinion regarding the existence of a law, when it is equally or almost equally probable with the safe opinion.

(e) Many Probabilists lay stress on a practical argument in favour of their opinion, which is derived from the difficulty of distinguishing between various grades of Probability. It is impossible in practice, especially for ordinary people, to tell when one solidly probable opinion is more probable than another solidly probable opinion. But a moral system, to be of any serious utility, must be universal, so that not merely experts in moral science but also ordinary people can utilize it. Hence the systems which demand a knowledge of the various degrees of probability must be discarded as practically useless, and Probabilism alone must be accepted as a working system.

Equiprobabilists reply that their system merely asks, that if after due investigation it is found that the less safe opinion is notably and certainly less probable than the safe opinion, the law must be observed. The necessary investigation has frequently been already made by experts; and others, who are not experts, are safe in accepting the conclusions to which the experts adhere.

C. *Arguments against Probabilism.*—In addition to some arguments to be explained in connexion with the other modern moral systems, it is necessary to mention a few difficulties which have been urged directly against Probabilism.

(1) When the less safe opinion is notably and certainly less probable than the safe opinion, there is no true probability in favour of liberty, since the stronger destroy the force of the weaker reasons. Hence Probabilists cannot consistently maintain that it is safe in practice to act on the less safe opinion which is also the less probable.

Probabilists reply that the greater probability does not of necessity destroy the solid probability of the less probable opinion. When the foundations of the opposing probabilities are not derived from the same source, then at least the opposing arguments do not detract from one another; and even when the two probabilities are based on a consideration of the same argument, one opinion will retain probability in so far as the opposing opinion recedes from certainty.

(2) A moral system, to be of any use, must be certain, since an uncertain reflex principle cannot give practical certainty. But Probabilism is not certain, because it is rejected by all those theologians who upheld one or another of the opposing views. Hence Probabilism cannot be accepted as a satisfactory solution of the question at issue.

Probabilists reply that their system can be of no use to those who do not look on it as certainly true; but the fact that many theologians do not accept it does not prevent its adherents from regarding it as certain, since these can and do believe that the arguments urged in its favour are insuperable.

(3) Probabilism is an easy road to Laxism, because people are often inclined to regard opinions as really probable which are based on flimsy arguments, and because it is not difficult to find five or six serious authors who approve of opinions which right-minded men consider lax. The only sure way to safeguard Catholic morals is to reject the opinion which opens the way to Laxism.

Probabilists reply that their system must be prudently employed, and that no serious danger of Laxism arises if it is recognized that an opinion is not solidly probable unless there are arguments in its favour which are sufficient to gain the assent of many prudent men. As for the authority of approved authors, it must be remembered that five or six grave authors do not give solid probability to an opinion unless they are notable for learning and prudence, and independently adhere to an opinion which has not been set

aside by authoritative decisions or by unanswered arguments.

IV. MORAL SYSTEMS OPPOSED TO PROBABILISM.—

A. *Æquiprobabilism*.—This system can be expressed in the three following propositions:

(1) The opinions for and against the existence of a law having equal or nearly equal probabilities, it is permissible to act on the less safe opinion.

(2) The opinions for and against the cessation of a law having equal or nearly equal probabilities, it is not permissible to act on the less safe opinion.

(3) The safe opinion being certainly more probable than the less safe opinion, it is unlawful to follow the less safe opinion.

With the first of these propositions Probabilists agree; but they deny the truth of the second and third propositions (cf. Marc, "Institutiones Morales", I, nn. 91-103).

Arguments for *Æquiprobabilism*: (1) In proof of their first proposition *Æquiprobabilists* quote the axiom: *lex dubia non obligat*. When the opposing probabilities are equal or nearly equal, the law is doubtful in the strict sense, and a doubtful law imposes no obligation in conscience. They also apply the rule: *in dubio melior est conditio possidentis*. When the doubt regards the existence, as distinguished from the cessation of a law, liberty is in possession, and accordingly the opinion which favours liberty can be followed in practice.

(2) In proof of their second proposition, *Æquiprobabilists* quote the same axiom: *in dubio melior est conditio possidentis*. When the doubt concerns the cessation of a law, the law is in possession, and therefore the law must be observed until it is displaced by a stronger probability in favour of liberty.

Probabilists reply to this argument that liberty is always in possession, since law and obligation presuppose liberty in the subject.

(3) In proof of their third proposition *Æquiprobabilists* put forward various arguments, of which the following are the most forcible:

(a) A person is bound seriously to endeavour to bring his actions into harmony with objective morality. But a person who follows the less probable opinion in favour of liberty fails to observe this dictate of prudence, and consequently acts unlawfully (cf. Wouters, "De Minusprobabilismo", p. 71).

Probabilists reply that this argument, if carried to its logical conclusion, would end in Rigorism, because the only way efficiently to bring our actions into perfect harmony with objective morality is to follow the safe opinion, so long as the less safe opinion has not acquired moral certainty. This is the only way of preventing all serious danger of committing material sin, and consequently is the only way of observing perfect harmony with objective morality. Since, however, Rigorism is universally condemned, the argument must be rejected, and the principles of Probabilism must be adopted which hold that it is sufficient to observe harmony with objective morality in so far as this is known with moral certainty (cf. Lehmkühl, "Theologia Moralis", I, n. 191).

(b) On 26 June, 1680, the Holy Office, under the presidency of Innocent XI, issued, in connexion with the teaching of Thyrsus Gonzalez, S.J., a Decree of which the authentic text was published 19 April, 1902, by the Secretary of the Holy Office. So much controversy has recently arisen in regard to the value of this decree, that it is opportune to quote the whole text: "A report having been made by Father Laurea of the contents of a letter directed by Father Thyrsus Gonzalez, S.J., to Our Most Holy Lord; the Most Eminent Lords said that the Secretary of State must write to the Apostolic Nuncio of the Spains [directing him] to signify to the said Father Thyrsus that His Holiness, having received his letter favourably, and having read it with approval, has commanded that he

[Thyrsus] shall freely and fearlessly preach, teach, and defend with his pen the more probable opinion, and also manfully attack the opinion of those who assert that in a conflict of a less probable opinion with a more probable, known and estimated as such, it is allowed to follow the less probable; and to inform him that whatever he does and writes on behalf of the more probable opinion will be pleasing to His Holiness.

"Let it be enjoined upon the Father General of the Society of Jesus, as by order [*de ordine*] of His Holiness, not only to permit the Fathers of the Society to write in favour of the more probable opinion and to attack the opinion of those who assert that in a conflict of a less probable opinion with a more probable, known and estimated as such, it is allowed to follow the less probable; but also to write to all the Universities of the Society [informing them] that it is the mind of His Holiness that whosoever chooses may freely write in favour of the more probable opinion, and may attack the aforesaid contrary [opinion]; and to order them to submit entirely to the command of His Holiness".

Æquiprobabilists say that in this Decree there is a clear expression of the mind of Innocent XI about the morality of teaching that it is permissible to act on the less safe opinion when the safe opinion is certainly more probable. The pope disapproves of this teaching, commends Father Gonzalez for his opposition to it, and orders the General of the Jesuits to allow full liberty so that anyone who pleases may write against it.

Probabilists reply that, though Innocent XI was opposed to Probabilism, his official Decree merely commanded that liberty of teaching be allowed to the members of the order. Moreover, they point out that Gonzalez was not an *Æquiprobabilist*, but a Probabilist of a strict type whom St. Alphonsus regarded as an extremist.

B. *Probabiliorism*.—According to the teaching of Probabiliorists, it is unlawful to act on the less safe opinion unless it is also the more probable opinion. In addition to an argument derived from the Decree of Innocent XI, the principal arguments for Probabiliorism are the following:

(1) It is not lawful to follow the less safe opinion, unless it is truly and expeditely probable. But an opinion which is opposed by a more probable opinion is not truly and expeditely probable, since its arguments are annulled by more potent opposing arguments and cannot in consequence gain the assent of a prudent man. Hence it is not lawful for a person to follow the less safe opinion when he regards the safe opinion as more probable.

As has already been explained in connexion with Probabilism, Probabilists maintain that the less safe opinion does not necessarily lose its solid probability because of more probable opposing arguments. This being so, the law is not certain, and consequently does not impose an obligation in regard to action, even though in regard to speculative assent it is rightly looked on as more probable.

(2) As in speculative doubt we are bound to give assent to the view which is more likely to exclude error, so in practical doubt about lawfulness we are bound to adopt the opinion which is more likely to exclude the danger of material sin. But the more probable opinion is the more likely to exclude this danger. Consequently in practical doubt we are bound to adopt the Probabiliorist view. Probabilists reply that this argument leads to Tutorism rather than to Probabiliorism, because the only efficacious way of excluding reasonable danger of material sin is to act on the safe opinion so long as the less safe opinion is not morally certain. Moreover, Probabiliorism would impose an intolerable burden on the consciences of timorous minds, since it would demand an

investigation into the various degrees of probability, so as to enable a person definitely to say that one opinion is more probable than another. In view of the great diversity of opinion, which exists on many moral subjects, this definite judgment is practically impossible, especially in the case of the vast majority of men who are not experts in moral science.

C. Compensationism.—This maintains that a doubtful law is not devoid of all binding force, and that there must be a compensating reason, proportionate to the probability and gravity of the law, to justify the performance of the action which is probably forbidden. This teaching is based on an analogy with an act which has two effects, one good and the other bad. It is not lawful to perform such an act unless there is a justifying cause proportionate to the evil. In the case of a doubtful law the bad effect is the danger of material sin, and the good effect is the benefit, which arises from the performance of the action which is probably forbidden. Hence in this as in the former case, a compensating cause, proportionate to the probable evil, is required to justify the performance of the action.

Probabilists reply that this moral system leads to Tutorism, because it implies that if no compensating benefit exists, it is not lawful to perform an action so long as it certainly is not forbidden. Again, Probabilists say that the preservation of liberty is of itself a sufficient compensating reason when there is question of a law which is not certain. Finally, Probabilists are prepared to admit that, as a point of expediency though not of obligation, it is advisable to look for a compensating cause over and above the preservation of liberty when a confessor is directing penitents in the use of probable opinions. If no such compensating reason exists, the penitent can be advised, though not under pain of sin, to abstain from the performance of the action which is probably forbidden.

Probus, MARCUS AURELIUS, Roman Emperor, 276-82, raised to the throne by the army in Syria to succeed Tacitus. Of humble origin, he was born at Sirmium in Illyria; by courage and ability he won the confidence of the soldiers, and during the reign of Marcus Aurelius he subdued Palmyra and Egypt. As emperor, he ordained that the imperial edicts must be ratified by the senate, and he returned to the senate the right of appointing the governors of the former senatorial provinces. His reign was passed in wars with the Germans. He personally drove the Alamanii across the Rhine and forced them as far as the fortifications, extending from Ratisbon to Mainz. He made nine German kings tributary to Rome, and distributed sixteen thousand German warriors among the Roman legions. In 278 the emperor re-established peace in Rætia, Illyria, and Mœsia by cam-

paigns against the Burgundians and Vandals. In the meantime his generals had overcome the Franks on the lower Rhine. The next year the emperor went to Asia Minor where he punished the Isaurians and gained their fortified castle Cremna in Pisidia. His legions advanced as far as Syria and Egypt. Probus settled foreign colonists in all the boundary provinces. In this way, he brought about that the outlying provinces were peacefully settled by German tribes. During his long absence in Asia Minor rival emperors were proclaimed in various provinces; e. g. Saturninus at Alexandria, Proclus at Lyons, who controlled Gaul and Spain, and had a successor at Cologne named Bonosus. All these rivals were vanquished by the imperial troops. Probus celebrated triumphs at Rome over his enemies and even hoped to attain to an era of peace and plenty. In times of peace he employed the soldiers in constructing public works, building temples and bridges, regulation of rivers, digging canals to drain marshes, and planting vineyards, especially in Gaul, Pannonia, and Mœsia. By forcing the soldiers, who no longer had any interest in the prosperity of the citizens, to do this work, Probus roused them to revolt; in Rætia the prefect of the guard, Marcus Aurelius Carus, was proclaimed emperor. The troops sent against him by Probus joined the rebels, and the emperor himself was killed near his birthplace.

Processional, ROMAN.—Strictly speaking it might be said that the Processional has no recognized place in the Roman series of liturgical books. As the full title of the work so designated shows, the book consists of a single section of the Roman Ritual (titulus ix) with sundry supplementary materials taken from the Missal and the Pontifical. What we read on the title-page of the authentic edition runs as follows: "Processionale Romanum sive Ordo Sacrarum Processionum ex Rituali Romano depromptus additis quæ similia in Missali et Pontificali habentur". Seeing, however, that the Ritual does not always print in full the text of the hymns, litany, and other prayers which it indicates, it is convenient to have these set out at length with the music belonging to them. Processionals appropriated to the special uses of various local churches, e. g. "Processionale ad usum Sarum", are of fairly common occurrence among the later medieval manuscripts. At the close of the fifteenth century and in the beginning of the sixteenth we have a good many printed processionals belonging to different churches of France, England, and Germany. ZACCARIA, *Bibliotheca ritualis*, I (Rome, 1776), 159.

HERBERT THURSTON.

Procession of the Holy Ghost. See HOLY GHOST.

Processions, an element in all ceremonial, are to be found, as we should expect, in almost every form of religious worship. The example of the processions with the Ark in the Old Testament (cf. espec., II Kings, vi, and III Kings, viii) and the triumphant entry of our Saviour into Jerusalem in the New were probably not without influence upon the ritual of later ages. Even before the age of Constantine, the funeral processions of the Christians seem to have been carried out with a certain amount of solemnity, and the use of the word by Tertullian (*De Præscriptio*, xliii) may possibly have reference to some formal progress or movement of the faithful churchwards, which led afterwards to the assembly itself or the service being called *processio* as well as *synaxis* and *collecta* (Probst, "Sakramentarien und Ord.", 205).

About the time of St. Gregory the Great, and possibly earlier, two forms of procession played a great part in papal ceremonial. The one was the procession to the "Station", the other the solemn entry of the celebrant from the *secretarium*, or sacristy, to the altar. A good description of the stational procession is given in the St. Amand Ordo, n. 6 (Duchesne, "Christian Worship", 474). The pontiff, the clergy, and the people assembled in the appointed church, where the clergy vested and the office was begun. The poor people of the hospital went first with a painted wooden cross; the seven stationary crosses, with three candles each and a retinue, followed, and then the bishops, priests, and subdeacons; finally came the pope surrounded by his deacons, with two crosses borne before him and the *schola cantorum* or choir following behind him. As the procession moved along to the stational church where Mass was to be offered the Kyrie Eleison and the litanies were sung, from which the procession itself was often called *litania*. The solemn entrance of the celebrant as he proceeded from the sacristy to the altar was of course a procession on a smaller scale, but this also is minutely described in the first "Ordo". The pontiff was again surrounded by his deacons and preceded by the subdeacons, one of whom swung a thurible, and a conspicuous feature was the group of seven acolytes carrying tapers, which make us think of the seven candles now lighted on the altar at a pontifical High Mass. In this procession to the altar the antiphon of the introit was sung. On certain special occasions, notably St. Mark's Day (25 April), which coincided with the old Roman festival of the *Robigalia*, and in Gaul on the three Rogation Days before the feast of the Ascension, there were processions of exceptional solemnity (see LITANY).

Although not now formally recognized as a procession in the liturgical books, we may say that the sprinkling of the congregation with holy water at the beginning of the parochial Mass on Sundays preserves for us the memory of the most familiar procession of the early Middle Ages. The rite is prescribed in the Capitularies of Charlemagne and of Louis the Pious, as well as in other ninth-century documents. For example a Council of Nantes before the year 900 enjoins that "every Sunday before Mass, each priest is to bless water in a vessel which is clean and suitable for so great a mystery, for the people to be sprinkled with when they enter the church, and let him make the round of the yard [*atrium*] of the said church with the [processional] crosses, sprinkling it with the holy water, and let him pray for the souls of them that rest therein" (Mansi, "Concilia", XVIII, 173). In the monastic ceremonials of the same period this holy water procession on the Sunday morning was usually described in much detail. After the sprinkling of the high altar and of the other altars of the church in order, the whole body of the monks, after being sprinkled themselves, went in procession through the cloister, making stations there, while the celebrant assisted by two lay brothers blessed the different portions of the monastery (see Martène, "De antiq. eccles. rit.", IV, 46-9). At the present day the Roman Missal, which is the primary liturgical authority for this "Blessing of the people with holy water to be imparted on Sundays" (*Benedictio populi cum aqua benedicta diebus dominicis impertienda*), says nothing about a procession, though some such progress of the celebrant and assistant clerks around the church very commonly takes place. The rubric only directs that the priest having intoned the antiphon "Asperges me" is to sprinkle the altar and then himself and his assistants. After which he is to sprinkle the clergy and the people, while he recites the Miserere with his assistants in a low voice. The other ordinary processions, as opposed to the extraordinary processions, which the bishop may enjoin or permit as circumstances may call for such a form of public supplication, are

specified in the Roman Ritual to be the Procession of Candles on the Purification of our Lady (2 February), that of Palms or Palm Sunday, the greater litanies on the feast of St. Mark (25 April), the Rogation processions on the three days before the Ascension, and the procession of the Blessed Sacrament on the feast of Corpus Christi. The prescriptions to be observed on all these occasions are duly set down in the Roman Ritual. For their history etc., see CANDLEMAS; CORPUS CHRISTI; HOLY WEEK; LITANY, etc. We might also add to these "ordinary" processions the carrying of the Blessed Sacrament to the altar of

PROCESSIONAL BANNERS OF SATIN EMBROIDERED IN
GOLD AND SILK
Bologna, XVII Century

repose on Maundy Thursday and the return on Good Friday, as well as the visit to the font on Holy Saturday and the procession which forms part of the rite of the consecration of the holy oils in cathedral churches on Maundy Thursday. This latter function is described in full in the Roman Pontifical. In earlier times a series of processions were usually made to the font after Vespers upon every day of Easter week (Morin in "Rev. benedict.", VI, 150). Traces of this rite lingered on in many local churches down to the eighteenth and nineteenth centuries, but it finds no official recognition in the Roman service books.

Under the heading of "extraordinary" processions the Roman Ritual makes provision for the following emergencies: a procession to ask for rain, another to beg for fine weather, a third to drive away storms, three others assigned respectively to seasons of famine, plague, and war, one more general on occasion of any calamity (*pro quacunque tribulatione*), one rather lengthy form (in which a number of the Jubilate and Laudate psalms are indicated for recitation) by way of solemn thanksgiving, and finally a form for the translation of important relics (*reliquiarum insignium*). In the majority of these extraordinary processions it is directed that the Litany of the Saints be chanted as in the Rogation processions, a supplication special to the occasion being usually added and repeated, for example in the procession "to ask for rain" the peti-

tion is inserted: "Ut congruentem pluviam fidelibus tuis concedere digneris. Te rogamus audi nos". In the medieval rituals and processions a large variety of such exceptional forms may be found, connected especially with supplications for the produce of the earth. A common feature in many of these was to make a station towards the four points of the compass and to read at each the beginning of one of the four Gospels with other prayers. The practice of carrying the Blessed Sacrament upon such occasions is frequently condemned in medieval synods. In England the perambulation of the parishes on the "Gang days", as the Rogation days were called, lasted far into the seventeenth century. Aubrey, for example, declares in a pencil note to his "Remaines": "On Rogation Days the Gospels were read in the cornfields here in England untill the Civill wars" (Hazlitt, "Faiths and Folklore", II, 478). The custom of making these processions was kept up seemingly with a view to its utility in impressing upon the memory the boundaries of the parish, and in some places boys were flogged at the boundaries that they might remember the spot in old age. In the Greek and some other Oriental liturgies the two processions known as the great and little entrances form a very imposing feature of the rite. At the "little entrance" the Book of the Gospels is carried in by the deacon accompanied by acolytes bearing torches and two fans. The "great entrance" takes place when the holy gifts, i. e. the bread and wine, are solemnly brought to the altar while the choir sing the famous "cherubic hymn". Similar features seem to have existed in the early Gallican Liturgy; even in the Roman high Mass the procession which heralds the singing of the Gospel is probably the survival of a more imposing ceremony of earlier date.

HERBERT THURSTON.

PROCESSIONAL CROSS.—A processional cross is simply a crucifix which is carried at the head of a procession, and which, that it may be more easily seen, is usually mounted upon a long staff or handle. From an archaeological point of view this subject has already been briefly dealt with under Cross. It will suffice to note here that the processional cross does not essentially differ from what may be called the cross of jurisdiction which is borne before the pope, his legates, and metropolitans or archbishops. The pope is entitled to have the cross borne before him wherever he may be; a legate's cross is used only in the territory for which he has been appointed, and that of an archbishop within the limits of his province. All these crosses, including that of the pope, have in practice only one bar. The double-barred cross is a sort of heraldic fiction which is unknown in the ceremonial of the Church. It is supposed that every

parish possesses a cross of its own and that behind this, as a sort of standard, the parishioners are marshalled when they take part in some general procession. It is usual also for cathedral chapters and similar collegiate bodies to possess a processional cross which precedes them in their corporate capacity; and the same is true of religious, for whom usage prescribes that in case of the monastic orders the staff of the cross should be of silver or metal, but for the mendicant orders, of wood. In the case of these crosses of religious orders, confraternities, etc. it is usual in Italy to attach streamers to a sort of penthouse over the crucifix, or to the knob underneath

it. When these crosses are carried in procession the figure of Christ faces the direction in which the procession is moving, but in the case of the papal, legatine, and archiepiscopal crosses the figure of our Saviour is always turned towards the prelate to whom it belongs. In England, during the Middle Ages, a special processional cross was used during Lent. It was of wood, painted red and had no figure of Christ upon it. It seems probable that this is identical with the "vexillum cinerium" of which we read in the Sarum processional.

PROCESSIONAL CANOPIES.—As, according to the requirements of the *Cæremoniale Episcoporum*, the altars of a church and especially the high altar should be covered by a baldacchino and the bishop's throne etc. should be honoured with the same mark of respect, so canopies are used in processions and solemn receptions not only for the Blessed Sacrament but also under certain circumstances for bishops, legates, and princes of the blood royal. The principal occasions on which a bishop has

the right to use a canopy are at his solemn reception in his own cathedral city, and when he makes his first pastoral visitation to any town or parish within his jurisdiction the *Cæremoniale Episcoporum* (I, ii, 4) directs that in these receptions the bishop is to ride on horseback wearing his mitre, and under a canopy which is in the first instance to be carried by some of the principal magistrates of the town. Excepting in the rare case of separate portions of the True Cross or of the instruments of the Passion, relics borne in procession are not to be carried under a canopy. In processions of the Blessed Sacrament the colour of the canopy must always be white. For transporting the Blessed Sacrament from one altar to another or for taking the Holy Viaticum to the sick, it is customary in many places, e. g. in Rome, to use an *umbella*, or *ombrellino*, as it is called in Italian, which is simply a small canopy with a single staff.

PROCESSIONAL BANNERS.—Processional banners have also been in common use in the Church since mediæval times. In England before the Reformation they are frequently referred to, though it does not seem clear that these *vexilla* were floating draperies, such as we are now accustomed to understand by the name. The woodcuts which appear in some early editions of the Sarum Processional rather suggest a rigid frame of wood or metal. In the Rogation processions and some others two special *vexilla* were

PROCESSIONAL CROSS
XV Century

carried, representing the one a lion, the other a dragon (Rock, "The Church of Our Fathers", 1904, IV, 292). The use of a number of richly embroidered banners in religious processions of all kinds is now customary in most parts of the Church, but the *Rituale Romanum* (tit. IX, cap. i, 4, 5) seems to contemplate only a single banner. "At the head of the procession let a cross be carried, and where the custom obtains a banner adorned with sacred devices (*sacris imaginibus insignitum*), but not made in a military or triangular shape".

PROCESSIONAL HYMNS.—We may recognize a particular class of hymns which in the early Middle Ages were specially composed to be sung in processions, as distinct from the breviary hymns. These processional hymns were nearly always provided with a refrain. England was specially rich in such hymns, and several are to be found in the Sarum Processional. In the Roman liturgy we still retain the "Gloria, laus et honor" sung in the procession on Palm Sunday, and in the ceremony of the consecration of the oils on Maundy Thursday we have the hymn "O Redemptor, sume carmen temet concinentium". Both these have a refrain, as has also the Easter hymn "Salve festa dies", which in different forms appears in the Processionals of both Sarum and York. The hymns "Vexilla Regis" and "Pange lingua", though sung in processions, lack a refrain and are less properly processional hymns.

HERBERT THURSTON.

Process of Canonization. See **BEATIFICATION AND CANONIZATION**.

Processus and Martinian, **SAINTS**, martyrs whose dates are unknown. The "Martyrologium Hieronymianum" (ed. De Rossi-Duchesne, 85) gives under 2 July their names. The Berne manuscript of the Martyrology also gives their burial-place, viz. at the second milestone of the Via Aurelia. The old catalogues of the burial places of the Roman martyrs likewise mention the graves of both these saints on this road (De Rossi, "Roma sotterranea", I, 182-3). They were publicly venerated in Rome from the fourth or perhaps the third century, although nothing further is known. A legend makes them the keepers of the prison of Sts. Peter and Paul (Lipsius, "Apokryphe Apostelgeschich. u. Apostellegenden", II, Brunswick, 1887, 92, 105 sqq., 110 sq.). It cannot be shown how the legend came to give them this identification. Pope Paschal I (817-24) translated the bones of the two martyrs to a chapel in the old basilica of St. Peter; they still rest under the altar dedicated to them in the right transept of the present St. Peter's. Their feast is celebrated on 2 July.

J. P. KIRSCH.

Proclus, **SAINT**, Patriarch of Constantinople, d. 446 or 447. Proclus came to the fore in the time of Atticus, the Patriarch of Constantinople who succeeded (406) Arsacius who had been intruded upon the patriarchal throne after the violent deposition of St. John Chrysostom (404). "Proclus was a Lector at a very early age, and, assiduously frequenting the Schools, became devoted to the study of rhetoric. On attaining manhood he was in the habit of constant intercourse with Atticus, having been constituted his secretary" (Socrates, "H. E.", VII, xl). From Atticus he received the diaconate and priesthood (ibid.). When Atticus died (425), there was a strong party in favour of Proclus, but Sissinius was eventually chosen as his successor. Sissinius appointed him Archbishop of Cyzicus; but the Cyzicans chose a

bishop of their own, and no attempt was made to force Proclus upon a reluctant people. Sissinius died at the end of 427, and again Proclus was likely to be appointed to the patriarchate, but eventually Nestorius was chosen. Nestorius was deposed at the Council of Ephesus (431) and Proclus was on the point of being made patriarch, but "some influential persons interfered on the ground of its being forbidden by the ecclesiastical canon that a person nominated to one bishopric should be translated to another" (Soc., VII, xxxv). In consequence a priest, Maximian, was appointed, upon whose death (424) Proclus succeeded. "The Emperor Theodosius wishing to prevent the disturbances which usually attend the election of a bishop, directed the bishops who were then in the city to place Proclus in the episcopal chair before the body of Maximian was interred, for he had received letters from Celestine, Bishop of Rome, approving of this election" (Soc., VII, xl). In 438 Proclus brought the body of St. John Chrysostom to Constantinople and placed it in the church of the Apostles. In 436 some bishops of Armenia consulted him about some propositions attributed to Theodore of Mopsuestia which were being put forward by the Nestorians. Proclus replied in an epistle (often called the "Tome of St. Proclus"), in which he required the propositions to be condemned. Here a difficulty arose. People were ready to condemn the propositions but not the memory of Theodore. Proclus met this difficulty by disclaiming any intention of attributing the propositions to Theodore. Volusianus, the uncle of Melania the Younger, was converted and baptized by him. The writings of Proclus, consisting chiefly of homilies and epistles, were first printed by Ricardus (Rome, 1630), reprinted in Gallandi, IX; also in P. G., LXV, 651. For Proclus and the Trisagion, see **TRISAGION**.

Proclus, **NEO-PLATONIST**. See **NEO-PLATONISM**.

Proconnesus (**PRÆCONNESUS**), titular see in Hellespont. Proconnesus was the name of an island situated in the eastern part of the Propontis, between Priapus (now Kara Bogha) and Cyzicus. It was also the name of the capital of this island colonized by Milesians or Samians and the country of the poet Aristæas. In 493 B. C. it was burned by a Phœnician fleet in the service of Darius. In 410 the Athenian vessels commanded by Alcibiades subjected it, like Cyzicus, to the domination of Athens. Later it was conquered by Cyzicus. Coins of the Roman epoch can still be seen. Proconnesus was renowned for its quarry of white marble, used in constructing the adjoining towns, particularly that of Cyzicus, and the tomb of Mausoleus at Halicarnassus, later of Constantinople. The latter still uses the quarry. It has given to the island its modern name of Marmora, which was given also to the Propontis. The ancient capital seems to be the present village of Palatia. The island forms to-day a *nahié* of the vilayet of Brousse. The island contains about seventy-seven square miles and 9000 inhabitants, nearly all Greek. During the Byzantine epoch exiles were frequently sent there, among whom may be mentioned the monk Stephen the Young, and the patriarch, Saint Nicephorus; Saint Gregory the Decapolite, Saint Nicholas the Studite, and Saint Ignatius the patriarch also so-journed there. In 1399 a battle took place between the Turks and Venetians. The island and the neighbouring isles form a suffragan see for the schismatic Greeks. In the Middle Ages it was an autocephalous archdiocese, originally dependent on Cyzicus. Le Quien (*Oriens christ.*, I, 783) names six of its bishops; the first known, John, assisted at the Council of

Ephesus, 431. He does not mention a Saint Timothy, who must have lived in the sixth century and who is venerated as the patron of the island.

Procopius. See HUS AND HUSSITES.

Procopius of Cæsarea, Byzantine historian, b. in the latter years of the fifth century at Cæsarea in Palestine, d. not earlier than A. D. 562. We have no account of his parentage or education, except that by legal and literary training he qualified himself for the civil service. As early as A. D. 527, before Justin's death, he became counsellor, assessor, and secretary to Belisarius, whose fortunes and campaigns he followed for the next twelve or fifteen years. He was raised to the dignity of an *illustris*. He is reckoned the greatest of the later Greek historians. We owe to him an eyewitness's description of Belisarius's wars, in eight books. Of these, two deal with the Persian War, two with the Vandalic, three with the Gothic; Book VIII concludes with a general survey of events down to A. D. 554. The scope of the work is more than military; he is the best authority for the history of Justinian's reign, and Gibbon eloquently expresses his regret at reaching a date where he must exchange Procopius for less intelligent guides. In style he imitates Thucydides chiefly; perhaps also in casting his work into eight books. His range of reading included all the greatest of the Greek historians and geographers, and he was well schooled in the poets and the orators. But his unique value lies in his personal as well as official familiarity with the people, the places, and the events of which he writes. His tone in this work is critical and independent. His account of "Justinian's Buildings" (*περὶ κτισμάτων*) was completed in A. D. 558 or 559. It is composed in the manner of the courtly panegyrics for which Pliny's encomium of Trajan had cast the model; and he is thought to have written it either by imperial command or at least in order to vindicate himself from suspicions of disaffection. But the very extravagance which prompts him to credit Justinian with all the public works executed in the entire Eastern Empire during his reign gives the work an exhaustive scope and a peculiar value for the archaeologist. The third of his books has gained a scandalous celebrity and aroused much question both as to its authenticity and motives. This is the "Anecdota", which Suidas characterizes as "a satirical attack on Justinian", but which is most commonly known by the title of "Arcana historia" (the secret history). It is a supplement to the other history, carrying the narrative down to the year 558-9, where it breaks off. Into it, as into the pages of a private journal, Procopius pours his detestation of Justinian and Theodora; even Belisarius and his wife are not spared. It is a bitter, malignant, and often obscene invective against all the powers of the Byzantine Church and State, apparently the tardy revenge of an ill-conditioned man of letters for a lifetime of obsequiousness. The indiscriminate violence of the pamphlet betrays the writer's passionate indignation, but spoils his case. The authenticity is now generally allowed, after a great deal of not unbiased discussion in the seventeenth and eighteenth centuries. (The "Anecdota" was first published in 1623.)

S.*, IX (1881), 109-112, 149-54, 160-4.

J. S. PHILLIMORE.

Procter, ADELAIDE ANNE, poetess and philanthropist, b. in London, England, 30 October, 1825; d. in

London, 2 February, 1864. She was the eldest daughter of the poet Bryan Waller Procter ("Barry Cornwall") and Anne Benson Skepper. As a child Adelaide showed precocious intelligence. She attained considerable proficiency in French, German, and Italian, as well as in music and drawing, and she was a great reader. Brought up in surroundings favourable to the development of literary leanings, she began to write verses at an early age, and at eighteen contributed to the "Book of Beauty". In 1851 she and two of her sisters became Catholics without, apparently, any disturbance of the harmonious relations of the domestic circle. In 1853, under the pseudonym of "Mary Berwick" she sent to "Household Words" a short poem, which so pleased the editor, Charles Dickens, that he not only accepted it but also invited further contributions. It was not till late in the following year that Dickens learned that his unknown correspondent was the daughter of his old friend, Barry Cornwall. To "Household Words" and "All the Year Round" nearly all her poetry was in the first instance contributed. In 1858-60 her poems were collected and published in two series under the title of "Legends and Lyrics". They had a great success, reaching the tenth edition in 1866. In that year a new issue, with introduction by Dickens, was printed, and there have been several reprints since.

ADELAIDE PROCTER

Miss Procter was of a charitable disposition: she visited the sick, befriended the destitute and homeless, taught the ignorant, and endeavoured to raise up the fallen ones of her own sex. She was generous yet practical with the income derived from her works. In 1859 she served on a committee to consider fresh ways and means of providing employment for women; in 1861 she edited a miscellany, entitled "Victoria Regia", which had some of the leading litterateurs of the time as contributors and which was set up in type by women compositors; and in 1862 she published a slender volume of her own poems, "A Chaplet of Verses", mostly of a religious turn, for the benefit of the Providence Row night refuge for homeless women and children, which, as the first Catholic Refuge in the United Kingdom, had been opened on 7 October, 1860, and placed under the care of the Sisters of Mercy. In her charitable zeal she appears to have unduly taxed her strength, and her health, never robust, gave way under the strain. The cure at Malvern was tried in vain; and, after an illness of fifteen months, she died calmly, and was buried in Kensal Green Cemetery.

Dickens has given a characteristic testimony to her worth. "She was", he says, "a friend who inspired the strongest attachments; she was a finely sympathetic woman with a great accordant heart and a sterling noble nature." Modest and cheerful, unconstrained and unaffected, and quick in repartee, she had the gift of humour herself and of appreciating humour in others. Her works were very popular; they were published in America and also translated into German. In 1877 her poems were in greater

demand in England than those of any living writer except Tennyson. If her verses are unambitious, dealing with simple emotional themes, they have the merit of originality and give evidence of much culture. She appears perhaps to greatest advantage in her narrative poems, several of which, such as "The Angel's Story", "A Legend of Bregenz", "The Story of the Faithful Soul", and "A Legend of Provence", are well known in anthologies; but some of her lyrics, like "Cleansing Fires" and "A Lost Chord", have made a very wide appeal. Some of her poems, for example, "Per Pacem ad Lucem" and "Thankfulness" are so devotional that they are in use as hymns.

P. J. LENNOX.

Procurator, a person who manages the affairs of another by virtue of a charge received from him. There are different kinds of procurators: general, or particular, according as he is authorized to manage all the affairs of another, or only some of them; again a procurator may represent another in judicial matters (*ad lites*), or in matters not requiring court proceedings (*ad negotia*); special procurators are the *syndicus*, a general agent of a university or corporation and the fiscal procurator, appointed by public authority as guardian of the law in civil, and especially in criminal proceedings.

Everybody, unless expressly forbidden by the law, has the right to appoint a procurator in affairs of which he has the free management. In selecting a procurator, a person is free, provided the choice does not fall on someone debarred by law, as excommunicated persons, notorious criminals, regulars without the consent of their superiors, clerics in cases for which they cannot act as lawyers, and finally, for judicial cases, persons under twenty-five, for non-judicial cases, persons under seventeen years of age.

A procurator has the right and duty to act according to the terms of the charge committed, but a general mandate does not include cases for which the law requires a special commission. He is also allowed to elect a substitute, except in cases of marriages, and in general whenever, owing to the serious character of the affair, the procurator is supposed to have been chosen with the understanding that he should transact the business in person.

The power to act as procurator ceases: (a) as soon as he has fulfilled his office; (b) if with a sufficient reason he resigns; (c) if the principal or appointer revokes his mandate; but he must do this in due time, that is, while the affair still remains untouched (*re integra*); this revocation must be brought to the notice of the procurator before the latter completes the transaction; one of the chief exceptions to these rules is when there is question of a procurement to contract a marriage, in which case the revocation holds good, as long as it was made before the procurator contracted in the principal's name.

Unless the procurator acted beyond his powers, the principal must accept whatever the latter did in his name.

Profession, RELIGIOUS. HISTORICAL VIEW.—Profession may be considered either as a declaration openly made, or as a state of life publicly embraced. The origins of religious profession date from the time when Christians were recognized in the Church as followers after perfection in the practice of religious life. We meet them in the third century, under the name of ascetics, called in Greek *ἀσκηταί*, and in Latin *confessores*. Eusebius (Hist. eccl., III, xxxvii) numbers among the ascetics the most illustrious pontiffs of the first ages, St. Clement of Rome, St. Ignatius of Antioch, St. Polycarp, and others. After these, in the fourth century, come the hermits and monks, followed in the eleventh century by the canons regular, in the thirteenth century by the mendicant orders, in the sixteenth by the clerks regular, and lastly by the members of religious congregations. Profession for a long time was made by clothing with the religious habit: the aspirant could personally put on the habit or receive it, with or without ceremony, from the abbot or from the bishop. This clothing laid upon him the obligation of poverty and chastity more as a natural consequence of a donation or consecration to God than as arising from formal vows, which did not exist at that time (cf. St. Basil, *Regulæ fusius tractatæ* resp. ad 14 interrogat. in P. G., XXXI, 949-52).

The community life, established under Schenoudi, the great disciple of St. Pachomius, added an explicit promise of fidelity to certain precepts. St. Benedict added an express promise of stability, and obedience to the superior. These last promises denoted obligations created in addition to those implied by taking the habit. The first formula, which expressly mentions poverty and chastity, is that of the Constitutions of Narbonne, promulgated in 1260 by St. Bonaventure for the Friars Minor; then the constitutions of the Minims and clerks regular expressly mention the three essential vows of the religious life, as well as those which were superadded on account of the special ends of their orders. This discipline is common to religious orders and congregations. Finally the regulations (*Normæ*) of 1901, published in explanation of the present practice of the Holy See, do not permit in new congregations any but the three essential vows of poverty, chastity, and obedience.

In the Decretal, "*Quod votum*," unic. De voto et voti redemptione (iii, 15) in 6°, Boniface VIII declared authoritatively that the vow of chastity, consecrated by the reception of major orders, or by religious profession in an approved institute, created a diriment impediment to marriage. Some communities of tertiarys not belonging to an approved order were the first to introduce profession accompanied by simple vows, which is now the ordinary practice in the more recent congregations.

The Annals of the Order of St. Benedict (vol. I, p. 74) in the year 537 recognized among the Greeks three classes of religious: the novices, who wore the simple tunic; the perfect, clothed with the pallium; and the more perfect invested with the *cuculla*, or hood attached to a short cloak, covering the shoulders, which was considered the special emblem of the religious life. In certain monasteries of the East, a distinction was made between persons wearing the short habit, *μικρόσχημοι*, and those wearing the long habit, *μεγάλοςχημοι*, a distinction against which St. Theodorus the Studite protested in his epistles (I, ep. x, in P. G., XCIX, 941-2) and which is still found among the Schismatic Coptic monks (see Kathol. Missionen, 1 Oct., 1910, p. 7 sqq.). St. Ignatius of Loyola laid down that in his order there should be a simple profession, followed by more or less frequent renewal of vows until such time as the candidate should be prepared for the solemn or definitive profession; this

under Pius IX and Leo XIII has become the common law of all religious orders.

EXISTING LAW.—Definition.—According to the existing law, religious profession denotes the act of embracing the religious state by the three vows of poverty, chastity, and obedience according to the rule of an order canonically approved; it involves then a triple vow made to God, and binding oneself to the rule of a certain order. Very often the rules or constitutions of an order or congregation (approved before the *Normæ* of 1901) add to these essential vows certain special vows inspired by the purpose of the order: thus the Friars Minor make a vow of special obedience to the pope and the Roman Church; the Poor Clares, a vow of enclosure; the Mercedarians, a vow of devoting themselves to the redemption of Christian captives, even giving themselves as hostages; the Minims, a vow of strict abstinence; the Carmelite Sisters and discalced Augustinians, a vow of humility; the first profession in the Society of Jesus implies a vow of indifference in regard to final vows, i. e. whether they be solemn or simple; the solemn profession adds a vow of obedience to the pope for missions, and five simple vows in order the better to ensure the observance of poverty, and the eschewal of ambition; the Brothers of St. John of God make a vow to serve the sick; the Clerks Regular of the Pious Schools, a solemn vow to educate children, and also three simple vows relating to poverty and the shunning of ambition; the religious of Penitence (Scalzettii), a vow to defend the doctrine of the Immaculate Conception; the Passionists, to promote devotion to the Passion of Our Lord; the Brothers of the Christian Schools, vows of stability and of gratuitous education of children; the Little Sisters of the Poor, a vow of hospitality.

Division.—Profession was express, when made with the usual ceremonies; tacit, or implied, when the reciprocal engagement between the order and the religious was proved by outward acts; it was sufficient for this purpose to wear the habit of the professed members for some time openly and without objection being made in any one. Pius IX abolished the tacit solemn profession for religious orders (11 June, 1858) and it has fallen into disuse altogether.

Profession is either simple or solemn. Solemn profession exists at present only in the institutes approved by the Holy See as religious orders. It is always perpetual, and dispensation from it is difficult to obtain; a religious who has been dismissed from his order is still bound by the obligations of the religious life; the same is the case with one who obtains from the Holy See the indulgence of perpetual secularization; professed who have left their order owe to the bishop of the diocese in which they reside the obedience which they formerly owed to their religious superior. Solemn profession implies a reciprocal engagement between the religious and his order, which undertakes to maintain him, and treat him as a member of its household; except in case of special privilege, it can dismiss a professed religious in canonical form only for incorrigible persistence in some grave public fault. The professed religious who is dismissed is *ipso facto* suspended, and the suspension is reserved to the Holy See (see the recent decree "*Cum singulæ*" of 16 May, 1911). According to existing law, solemn profession annuls a marriage previously contracted, but not yet consummated, and creates a diriment impediment to any future marriage; and also renders the professed religious incapable, without the permission of the Holy See, of acquiring or of possessing and disposing of property. In Belgium, and probably in Holland, profession no longer involves this disability.

Simple profession is sometimes perpetual and sometimes temporary, and therefore imperfect. At the end of a term of temporary profession, a religious is free to go back to the world, and the order has power to

dismiss one who has not shown himself worthy to renew his profession, or to make a subsequent profession; but a physical infirmity which was caused after the vows, or the cause of which was known at the time of the vows, does not justify the dismissal of a religious against his will. In congregations which have no solemn vows, the Holy See ordinarily prescribes a term of temporary vows, varying from three to six years, before the perpetual vows. There are however some congregations, such as the Nuns of the Sacred Heart, in which all the vows are perpetual; and pious societies without perpetual vows, such as the Sisters of Charity of St. Vincent de Paul; or even without vows, like the Missionaries of Africa, or White Fathers, who have only an oath of obedience. The Holy See insists that on the expiration of temporal vows, these should be either renewed or converted into perpetual vows, as the case may be, without allowing any interval of time, during which the religious would be free from his obligations.

Simple profession sometimes is a preparation for solemn profession, and sometimes has a distinct character of its own. In all religious orders, three years at least of simple profession are a necessary condition for the validity of solemn profession (see *NUNS*), and for lay brothers, six years of simple profession and an age of at least thirty years are required (Decree of 1 Jan., 1911). This time of simple profession may be considered as a second term of probation; it is not difficult for the religious to obtain a dispensation from his vows, and, on the other hand, the order may dismiss him for any grave cause of dissatisfaction, the sufficiency of which is left to the judgment of the superior. The dismissal of nuns, however, requires the consent of the Holy See; religious with simple or even temporary vows, who have received major orders in their institute, are in the same position, in regard to dismissal, as those who have made their final profession. Generally speaking, simple profession does not prevent a religious from retaining or acquiring property; the administration and disposition of property alone are forbidden. Except in the Society of Jesus it is no longer a diriment impediment to marriage, and it never annuls a marriage already contracted.

Conditions of Validity and Form.—It is essential in all cases for the validity of a religious profession that the candidate should be at least sixteen years of age and have passed one year in the novitiate. Persons who, under the provisions of the Decree "*Ecclesia Christi*" of 7 September, 1909, cannot be validly admitted to the novitiate without the consent of the Holy See, cannot without the same consent make a valid profession. Admission to profession, especially to the first, is generally decided by the chapter. Profession made or permitted under duress is null and void; and the Council of Trent passes sentence of excommunication on all persons who compel a young girl to enter a monastery by solemn profession, or who forcibly prevent her from doing so. Although tacit profession, which has been expressly abolished for religious orders, has fallen into disuse everywhere, no particular rite or formula of profession is essential, unless distinctly required by the constitutions. A general Decree of the Sacred Congregation of Rites of 14-27 August, 1874, indicates the manner in which profession should be made during Mass. Since the Decree "*Auctis admodum*", simple but perpetual profession creates the same bond between the religious and the congregation as solemn profession does in a religious order. Such a religious can be dismissed only for incorrigible persistence in some grave public fault. Even when congregations with simple vows have the power to dismiss a religious, they have not the power to dispense him from his vows: this is strictly reserved to the Holy See.

Common Effects of Profession.—Every perpetual

profession admits one to the religious state and consequently creates an obligation to aspire after perfection. This obligation is sufficiently fulfilled by observing the vows and rules, so far as they bind the conscience. All previous vows, provided they do not prejudice the right of a third party, may be changed into religious profession, as into something of a distinctly higher character; and this may be done by the religious himself, or by some person who has power to commute the vows. If the profession be solemn, these previous vows are annulled by canon law. Theologians generally teach that, when made in a state of grace, this absolute surrender of self procures for the religious a remission of all the penalties due to past sins. The generally accepted opinion, by which religious profession was compared to a new baptism, induced St. Pius V to permit novices in houses of Dominican nuns to make their profession when in danger of death even before completing their years of novitiate (Constitution "Summi sacerdotii", 23 August, 1570). This has since been extended to all religious orders; but restoration to health deprives the profession made under such circumstances of all canonical effects.

Profession of Faith. See CREED.

Promise, DIVINE, in SCRIPTURE.—The term promise in Holy Writ both in its nominal and verbal form embraces not only promises made by man to his fellow-man, and by man to God in the form of vows (e. g. Deut., xxiii, 21-3), but also God's promises to man. A complete study of this phase of the subject would require a review of the whole question of Old-Testament prophecy and also a discussion of several points pertaining to the subject of Divine grace and election. For God's every word of grace is a promise; man's willingness to obey His commandments brings him many assurances of grace. When the children of Israel were commanded to go in and "possess the land", it was practically already theirs. He had "lifted up His hand to give it them"; their disobedience, however, rendered of no effect the promise implied in the command. There are, moreover, many examples of promises of which the Patriarchs themselves did not receive the outward fullness. Among these may be mentioned, the full possession of Canaan, the growth of the nation, universal blessing through the race. For: "All these died according to faith, not having received the promises, but beholding them afar off" (Heb., xi, 13). On the one hand we find that Abraham, "patiently enduring . . . obtained the promise" (Heb., vi, 15), because the birth of Isaac was the beginning of its fulfilment. On the other hand, he is one of the fathers who "received not the promise", yet with a true faith looked for a fulfilment of the promises which was not granted to them. The New-Testament phrase "inherit the promises" (Heb., vi, 12; cf. xi, 9; Gal., iii, 29) is found in the apocryphal Psalms of Solomon, xiii, 8 (70 B. C. to 40 B. C.). It is

believed that this passage is the first instance in extant Jewish literature where the expression "the promises of the Lord" sums up the assurances of the Messianic redemption. The word "promise" is used in this technical sense in the Gospels only in Luke, xxiv, 49, where we find that the promise of the Father refers to the coming of the Holy Ghost. In passages which make mention of promises of which Christ is the fulfilment, the Epistle to the Hebrews especially abounds. St. Paul indeed both in his speeches and in his Epistles looks at the Christian Gospel from the same point of view. And we see that it was by a contemplation of Christ that men ultimately discovered what the "promise" meant.

The New-Testament teaching on the subject might be summed up under three heads: that which the promise contained, those who were to inherit it, and the conditions affecting its fulfilment. The contents of the "promise" are always intimately concerned with Christ, in Whom it has found its perfect fulfilment. In the preaching of St. Peter it is the risen Jesus, "both Lord and Christ", in whom the "promise" has been fulfilled. The forgiveness of sins, the gift of the Holy Ghost, the partaking of the Divine nature through grace (II Peter, i, 4), all the Divinely bestowed possessions of the Christian Church, may be said to be its contents. Passing to St. Paul we find a general conception of the same character. Christ and the "promise" are practically synonymous terms. The promises of God are all summed up in Christ. A conception of the "promise" which was distinctively common to the early Christians is set forth in I John, ii, 25—"And this is the promise which he hath promised us, life everlasting." Concerning the inheritors of the "promise", it was given at first to Abraham and his seed. In Hebrews, xi, 9, we find Isaac and Jacob referred to as "co-heirs of the same promise". A controversy existed in the primitive Church over the interpretation of the expression "the seed of Abraham". St. Paul speaks frankly concerning the prerogatives of Israel, "to whom belongeth . . . the promises" (Rom., ix, 4). Of the Gentile Church before admission to Christianity, he says its members had been "strangers to the covenants of the promise", consequently cut off from all hope. It was his work, however, to show that no physical or historical accident, such as Jewish birth, could entitle one to a claim as of right against God for its fulfilment. It is his teaching in one instance that all who are Christ's by faith are Abraham's seed, and heirs according to promise. He is concerned, however, with the fact that the promise is not being fulfilled to the seed of Abraham (referring to the Jews); yet his heart is evidently on the side of those against whom he argues. For to the last the Jew was to St. Paul "the root, the first fruits, the original and proper heirs". The echoes of this conflict die away in later writings: as instinctively Christ is felt to be the Lord of all, the scope of the promise is universalized.

Spontaneity on the part of the promiser is among the primary conditions on which the promise is fulfilled (e. g. Acts, ii, 39). As the promise is of grace, St. Paul shows that it is subject to no pre-existing merit on the part of the Mosaic law, or of works of the law. The promise was given to Abraham and to his faith four hundred and thirty years before the law was heard of. It is fulfilled not in works of law, but in a living faith in Jesus Christ together with the love and works that are the fruits of such a faith. Having God's promise to go upon, it is part of the function of faith to maintain a strong conviction that the promise objectively is "the substance of things to be hoped for, the evidence of things that appear not" (Heb., xi, 1). But if the first grace leading to the fulfilment of the promise is gratuitous, a supernatural gift bestowed without regard to merit in the natural order, co-operation with this and ulterior graces is required for the

realization of the fulfilment. Through lack of the co-operation no less than from lack of faith have the Divine promises often proved of no avail in the Old Testament as well as in the New (see GRACE).

JAMES F. DRISCOLL.

Promotio per Saltum. See ORDERS, HOLY.

Promotor Fidei (PROMOTER OF THE FAITH), an official of the Roman Congregation of Rites. The office was created by Clement XI, 7 April, 1708. In earlier times the work now undertaken by the Promotor Fidei was entrusted to the Promotor Fiscalis or some consistorial advocate. The Promotor Fidei is also an official of the Congregation of Indulgences and Sacred Relics, but his main duty is performed in the processes of beatification and canonization, which are conducted by the Congregation of Rites. It is the special care of the Promoter of the Faith to prevent any rash decisions concerning miracles or virtues of the candidates for the honours of the altar. All documents of beatification and canonization processes must be submitted to his examination, and the difficulties and doubts he raises over the virtues and miracles are laid before the congregation and must be satisfactorily answered before any further steps can be taken in the processes. It is his duty to suggest natural explanations for alleged miracles, and even to bring forward human and selfish motives for deeds that have been accounted heroic virtues. For the examination of witnesses outside of Rome, the promoter formulates the questions and he has the power to appoint sub-promoters to assist him. All the processes for beatification and canonization must be submitted to the promoter under pain of nullity. Owing to his peculiar duty of antagonizing the proofs put forward on behalf of persons proposed for saintly honours, the Promoter of the Faith is commonly referred to, half jocosely, as the devil's advocate.

WILLIAM H. W. FANNING.

Promulgation (Lat. *promulgare*, to make known, to post in public).

I. PROMULGATION IN GENERAL.—This is the act by which the legislative power makes legislative enactments known to the authorities entrusted with their execution and to the subjects bound to observe them. Philosophically it is a matter of dispute whether promulgation is of the essence of a law. It seems indisputable that the essential element of a law is the will of the legislator, but it is clear that the legislator should make known his will and intention in one way or another. This manifestation is the promulgation of the law, which is not necessarily distinct from the very elaboration of the law, provided that this takes place by external acts—such as the vote of a legislative assembly or by royal sanction. Such is the practice observed in England and in most of the states of the American Union, but, as it was thought too severe, the legislation of various countries requires the promulgation of laws by a special formal act, through which the text of the law is made known to the community, e. g. by publication of this text in an official journal or bulletin of the Government. Previous to this publication the law does not take effect. The promulgation of a law must not be confounded with its publication, the object of the first being to make known the will of the legislator, of the second to spread the knowledge of legislative enactments among subjects bound to observe them.

II. PROMULGATION IN CANON LAW.—The Church has long exacted the promulgation of a law by a special act of the authorities: "Leges instituuntur quum pro-

mulgantur", a law is not really a law until it has been made known, says Gratian (*Decretum Gratiani*, pt. I, c. 3, dist. VII). However, no special form is prescribed for acts of ecclesiastical authorities inferior to the pope, even synodal decrees being considered sufficiently promulgated by being read in the synod. The Constitution "Promulgandi" of Pius X (29 September, 1908) determined the ordinary method of promulgating pontifical laws, namely by the insertion of the text of the law in the "Acta Apostolicæ Sedis" (the official publication of the Holy See), after this insertion has been ordered by the secretary or the supreme authority of the congregation or the office through the medium of which the pope has passed the law. A regulation of 5 January, 1910, divides the official bulletin of the Holy See into two parts: in the first or official part should be inserted all documents requiring promulgation to have the force of law; the second merely serves to illustrate and supplement the first (*Acta Apost. Sedis*, 1910, p. 37). However, the pope explicitly reserves the right to determine in exceptional cases another method of promulgation. Prior to this law two systems had been chiefly in use in the Church—provincial promulgation, until the end of the thirteenth century, and Roman promulgation. During the first period promulgation often took place in the different ecclesiastical provinces either through special envoys or through the bishops. Nevertheless it is also a fact that laws binding in one province were also binding in others. During the second period the custom, which became exclusive during the fifteenth century, developed of having the new laws read and posted up by *cursores* at Rome only, at the doors of the great basilicas, the Palazzo Cancellaria, the Campo de' fiori, and sometimes at the Capitol. The value of this means of promulgation was disputed in modern times: some claimed that the Church had admitted the arrangements of Novels lxvi and cxvi of Justinian, which required provincial promulgation for some laws; others maintained that in theory publication at Rome was sufficient, but that the popes did not wish to bind the faithful before the laws were made known to them by the bishops; while others appealed to ancient customs, to which the pope should conform. This last theory, made use of by the Gallicans and Febronianists, furnished the State with a pretext for preventing the promulgation of laws which it did not like. A special method of promulgation was also introduced with the express or tacit consent of the Holy See for the decrees of congregations; they were published at the secretariate of the dicasteries from which they emanated.

A. VAN HOVE.

Pro Nuncio. See NUNCIO.

Proof, the establishment of a disputed or controverted matter by lawful means or arguments. Proof is the result of evidence; evidence is the medium of proof. There is no proof without evidence, but there may be evidence without proof. Proof is judicial, if offered in court; otherwise it is extra-judicial. Proof is perfect, or complete, when it produces full conviction, and enables the judge without further investigation to pronounce sentence: imperfect, or incomplete, if it begets probability only. Canonists enumerate six kinds of perfect proof: the unshaken deposition of two witnesses, who are above all suspicion; a public document, or other instrument having the force of a public document, as, for instance, a certified copy of a public instrument; conclusive presumption

of law; the decisive oath; judicial confession; evidence or notoriety of the fact. Imperfect or semi-proof is derived from the testimony of one witness only, or of several singular witnesses, or of two witnesses not entirely unshaken in their testimony or not beyond all suspicion; writings or instruments of a private character; a document admitted as authentic only on the strength of the handwriting; the necessary oath; presumption which is only probable, not conclusive; public report when legally proved. Two imperfect proofs cannot constitute perfect proof in criminal cases, in which proof must be clearer than the noonday sun; in matrimonial cases, when there is question of the validity of a marriage already contracted; or in civil actions of a grave character. With these exceptions two incomplete proofs tending to establish the same point may constitute full proof or conviction. Judicial proofs must as a rule be full and conclusive. There are, however, some exceptions. Thus the testimony of but one witness will suffice when it is beneficial to another person and hurts no one. Likewise in summary causes of little moment and not prejudicial to any one, half proof is sufficient; also when the judge is commissioned to proceed, having merely examined into the truth of the fact (*sola facti veritate inspecta*).

Confession, the acknowledgment by a person that what is charged or asserted by his opponent is true, is judicial or extra-judicial. Judicial confession is the best of proofs. It must be made in clear and definite terms, in court, that is, before the judge in his official capacity, during the trial, with certain knowledge of the fact and also of the consequences of said confession, by a person not under twenty-five years of age, acting with full liberty and not through fear. Such a confession makes further proof unnecessary; renders valid any previous defective proceedings; and, if made after the defendant has already been convicted, deprives him of the right of appeal. The confession may be revoked during the same session of court in which it was made; after an interruption the only remedy available is to show, if possible, that the confession was illegal, because wanting in some requisite quality, as above. Ordinarily a confession does not militate against accomplices or others, but only against the one confessing. Extra-judicial confession, if properly proved, constitutes in criminal cases a grave presumption, but not perfect proof; in civil cases it is sufficient for the pronouncing of sentence, if made in the presence of the plaintiff or his representative and if it specifically states the cause or origin of the obligation.

Instruments or Documentary Evidence.—A public instrument is one drawn up by a public official with the required formalities. If a document be the work of a private person, or of an official who does not observe the prescribed formalities, it is a private instrument. Instruments to possess weight must be genuine and authentic. Public instruments consequently must bear the name, title, and seal of the official issuing them. Private documents should be written in the presence of witnesses and attested by them.

Presumptions.—Circumstantial, presumptive, or indirect evidence, strong enough to establish a moral certainty, is admitted also in canon law, but it must be accepted with caution, and sentence modified in accordance with the degree of evidence. The rational basis of such evidence lies in the connexion of the facts or circumstances, known and proved, with the fact at issue. A presumption consequently is more or less strong, according as the fact presumed is a necessary (vehement, very strong presumption), or usual (strong presumption), or infrequent (rash, unreasonable presumption), consequence of the fact or facts seen, known, or proven. A presumption is legal, if the law itself draw the inference. This is of two kinds: rebuttable (*juris simpliciter*), which may be set aside by contrary proof; conclusive (*juris et de jure*), against which

no direct proof is admitted. A presumption is natural (*hominis*) when the law permits the judge to draw whatever inference he considers warranted by the facts proved; such presumptions are sometimes called presumptions of facts. The general effect of presumption is to place the burden of proof on him against whom the presumption militates. A rash presumption is little more than mere suspicion; a grave or sound presumption constitutes imperfect proof, while a vehement presumption suffices in civil cases of not too great importance. Legal presumptions or presumptions of law are of course stronger than natural presumptions or presumptions of facts; while specific presumptions have more weight than those of a general character. Presumptions that favour the accused or the validity of an act already performed are preferred.

OATHS.—Oaths, as proof, are decisive (*litis decisorium*) or necessary. The decisive oath is given by the judge, when private interests are in question, to one of the litigants at the instance of the other. The case is decided in favour of the one taking the oath; if he refuse to swear, sentence is pronounced against him. The necessary oath is given by the judge on his own initiative, not at the request of one of the litigants, to complete imperfect proof, and is called supplementary; or to destroy the force of circumstantial evidence, arising especially from current rumour, against the accused, and is called purgative. This latter is permitted only when there is not at least semi-perfect proof. The supplementary oath is permissible only when there is at least imperfect and yet not full proof. It is not allowed in criminal actions or in important civil cases, as, for example, when the validity of a marriage or a religious profession is in question.

Public Report.—Witnesses testify as to the existence or non-existence, the origin, extent, and nature of a public report. Their testimony does not concern the truth or falsehood of the report. It is for the judge to trace the report to its source and accept it at its proper value. Since, however, it is to be presumed that public opinion is founded on fact, in civil matters it furnishes semi-perfect proof, when its existence is properly established. In criminal matters it has less weight still, being sufficient only for an investigation.

Evidence of the Fact.—Evidence or notoriety of the fact, viz., when it is so open and evident that it cannot be concealed or denied, needs no proof. Hence a judicial inspection or visitation of the *corpus delicti* is often of advantage. Under this head might be mentioned the opinion of experts, who are appointed by the judge to examine certain matters and to give their expert testimony concerning the same.

Rules.—Proof must be clear, specific, and in keeping with the charge or point at issue; otherwise confusion and obscurity will arise. To establish a point other than the one in question will avail nothing. Whether the evidence offered be relevant or not, the judge will determine. The issue must be established substantially, not necessarily in all its details. The burden of proof lies with the plaintiff, though the defendant must offer proof in support of his allegations, exceptions etc. What is evident needs no proof: in criminal cases this axiom applies only to what is evident in law, i. e. he who has the presumption of all in his favour is exempt from the necessity of proving his contention.

Time to Introduce Evidence.—Judicial evidence must be introduced during the trial. Ordinarily, therefore, evidence may not be presented before the hearing of the petition or charge and the answer of the defendant to the same (*contestatio litis*). This rule, however, does not apply when the judge proceeds summarily or by inquiry; and likewise in certain cases where there is danger of the testimony being lost through death or other cause. Again, as a rule, no

evidence will be admitted after the judge has closed the case. This general rule is not applied when the validity of a marriage is in question; in criminal cases, in which every opportunity of defence is given the accused; and occasionally in other trials, where further testimony is considered necessary or new evidence has been discovered.

Entry of Evidence.—Evidence must be presented to the judge or other person commissioned to receive it. It must be written down by the clerk in the acts or minutes of the trial: date of presentation of documents is noted on the documents themselves and attested by the signature of the clerk. Evidence in rebuttal, effected by witnesses, documents, or otherwise, must be admitted, the final word in criminal actions being given to the defendant.

Comparison of Proofs.—It belongs to the judge to sift the depositions of witnesses or other proof and to determine the relative value of conflicting evidence. He must consider not merely the respective number of witnesses but their qualifications, intellectual and moral, their knowledge of the facts at issue, and so on. The stronger proof must prevail, and when proof is equally divided, the accused or possessor must be favoured, except in privileged cases (see EXAMINATION, *Examination of Witnesses*).

ANDREW B. MEEHAN.

Propaganda, SACRED CONGREGATION OF.—The Sacred Congregation *de Propaganda Fide*, whose official title is "sacra Congregatio christiano nomini propagando" is the department of the pontifical administration charged with the spread of Catholicism and with the regulation of ecclesiastical affairs in non-Catholic countries. The intrinsic importance of its duties and the extraordinary extent of its authority and of the territory under its jurisdiction have caused the cardinal prefect of Propaganda to be known as the "red pope".

I. HISTORY.—**A. First Period.**—Its establishment at Rome in the seventeenth century was owing partly to the necessity of communicating with new countries then recently discovered, and partly to the new system of government by congregations adopted during the Counter-Reformation. It is well known that, during this period, the defence and propagation of Catholicism suggested to the Holy See the establishment of a complete system of administrative departments, to each of which was assigned some special branch of Catholic interests. The propagation of the Faith was a matter of such vital importance as to demand for its work an entire congregation. The reconquest for the Church of the lands severed from it was not of greater importance than the evangelization of the vast regions then being explored by courageous adventures. America, Africa, the Far East, opened up new lands, new peoples, new conquests; the Church, conscious of her natural mission to evangelize the world, felt obliged to act and to act quickly, especially as Holland and England, while striving eagerly for commerce and colonial expansion, were also bent upon spreading everywhere the doctrines of Protestantism.

The origin of the Sacred Congregation of Propaganda has been variously accounted for; in reality it is the result of slow evolution. It is certain that it passed through two distinct periods, one formative and the other constitutive. The first period is that of the cardinalitial commission *de propaganda fide* (before it had been constituted a definite pontifical department or ministry). This lasted from the time of Gregory XIII (1572–85) to 1622, when Gregory XV established the congregation properly so-called. Gregory XIII instituted a primary commission composed of the three cardinals, Caraffa, Medici, and

Santorio, who were especially charged to promote the union with Rome of the Oriental Christians (Slavs, Greeks, Syrians, Egyptians, and Abyssinians). Their meetings, held under the presidency of Cardinal Santorio, known as the Cardinal of Santa Severina, revealed certain urgent practical needs—e. g. the foundation of foreign seminaries, the printing of catechisms and similar works in many languages. Its efforts were successful among the Ruthenians, the Armenians, Syrians, both Western (as those of the Lebanon) and Eastern (as those of Malabar). After the death of Gregory XIII the rapid succession of four popes in seven years arrested the progress of the commission's work. Clement VIII (1592–1605), a pontiff of large and bold aims, was deeply interested in the commission, and caused its first meeting after his election to be held in his presence. He retained Santorio as its president: weekly meetings were held in that cardinal's palace, and every fifteen days the decisions and recommendations of the commission were referred to the pontiff. To this period belongs a very notable triumph, the union with Rome of the Ruthenian nation (the Little Russia of Poland) called the Union of Brest (1598).

B. Second Period.—The death of Clement VIII revealed an essential weakness of the institution. It was a personal commission, depending for its very existence on the energy of its few members. Eventually the meetings of the three cardinals ceased; at the same time an active propagation of the Catholic Faith was kept up among both Protestants and non-Christians. The practical demise of the commission made evident the necessity of providing for its permanence. The honour of accomplishing this belongs to Gregory XV (1621–23). On 6 Jan., 1622, the pope summoned thirteen cardinals and two prelates, to whom he announced his intention of constituting a permanent and well-organized congregation for the propagation of Catholicism, and his hearers were appointed members of the congregation. The preliminaries of organization were diligently carried on; on 22 June of the same year appeared the Bull "Inscrutabili Divinæ", by which the Sacred Congregation *de propaganda fide* was instituted, composed of thirteen cardinals and two prelates, to whom were added a secretary and a consultor. Its first presidents were Cardinal Sauli, dean of the Sacred College, and Cardinal Ludovisi, nephew of the pope and founder of the Irish College at Rome. On the same day provision was made for the support of the congregation by the Constitution "Romanum Decet". It assigned to Propaganda the *tassa dell' anello* (ring-tax) assessed on each newly appointed cardinal (500 gold scudi, later 600 silver scudi). On 14 Dec. of the same year was published the Constitution "Cum Inter Multiplices", and on 13 June, 1623, another Constitution, "Cum Nuper", both of which conferred on the congregation ample privileges and immunities in order to facilitate and accelerate its labours. When the financial management increased in importance, the pope ordered that each of the thirteen cardinals should direct it in turn; at a later date a single cardinal was placed at the head of the financial department. The death of Gregory XV (1624) prevented the founder of the congregation from completing its organization; happily, his successor, Urban VIII (1623–44), was Cardinal Barberini, one of the original thirteen members of the congregation.

After the death of Cardinals Sauli and Ludovisi, Urban VIII directed that there should be but one prefect general of the congregation, and nominated to the office his brother, Cardinal Antonio Barberini (29 Dec., 1632). At the same time he appointed his nephew, a second Cardinal Antonio Barberini, the auxiliary of the preceding, and later made him his successor. These two open the series of prefects

general of Propaganda. It was clear to Urban VIII that the impulse given to the establishment of ecclesiastical seminaries by the Council of Trent had already produced excellent results, even in the vast province of the Propaganda, through the agency of the numerous national colleges then founded, e. g. at Rome, the German, English, Greek, Maronite, Scots, and other colleges. But he also saw that it was necessary to establish a central seminary for the missions where young ecclesiastics could be educated, not only for countries which had no national college but also for such as were endowed with such institutions. It seemed very desirable to have, in every country, priests educated in an international college where they could acquire a larger personal acquaintance, and establish in youth relations that might be mutually helpful in after life. Thus arose the seminary of the Propaganda known as the Collegium Urbanum, from the name of its founder, Urban VIII. It was established by the Bull "Immortalis Dei", of 1 Aug., 1627, and placed under the immediate direction of the Congregation of Propaganda. The congregation itself developed so rapidly that it became eventually necessary to divide its immense domain into various secretariates and commissions. This continuous increase of its labours dates from its very earliest years. In the beginning the meetings of the congregation were held in the presence of the pope; soon, however, the pressure of business grew to be so great that the general prefect and the general secretary were authorized to transact all current business, with the obligation of placing before the pope, at stated intervals, the more important matters, which is still the custom. In extent of territory, in external and internal organization, and in jurisdiction, the congregation has undergone modifications according to the needs of the times; but it may be said that its definite organization dates from about 1650.

II. TERRITORIAL JURISDICTION.—As a general principle, it was understood that the territory of Propaganda was (apart from the Catholics of all the Oriental rites) coterminous with those countries that were non-Catholic in government. Naturally there were, and are, exceptions: for example, Russia depends, ecclesiastically, upon the Congregation of Extraordinary Ecclesiastical Affairs, since it is necessary to treat all Russian affairs through governmental channels. The territorial jurisdiction of Propaganda was before the promulgation of the Constitution "Sapienti Consilio" as follows: in Europe, Great Britain and Gibraltar, Sweden and Norway, Denmark, Germany (Saxony, Anhalt, Mecklenburg, Schaumburg, Oldenburg, Lauenburg, Hamburg, Bremen, Lübeck, Schleswig-Holstein), Holland, Luxemburg, some places in Switzerland (Mesolcina and Calanca in the Grisons, St. Maurice in the Canton of Valais), the Balkan peninsula (Bosnia, Herzegovina, and Greece); in the New World, the United States, Canada, Lower California, the Lesser Antilles (British and Danish), Jamaica and Honduras, some missions in Peru, Patagonia; all Oceanica except the Philippines; all Asia except the Russian possessions; all Africa. As to the Catholics of the Oriental rites, they are subject personally (that is, wherever they may be) to Propaganda. Their division by rites generally corresponds to their nationality. These rites are: the Armenian, frequent (besides, of course, in Armenia) in Austria, Persia, and Egypt; the pure Coptic Rite (in Egypt); the Abyssinian Coptic Rite, to which belong a few faithful in Abyssinia and in the Italian colony of Eritrea; the pure Greek Rite, including some communities in Southern Italy and a very few in Turkey; the Rumanian Greek Rite, with adherents among the Rumanians of Hungary and Transylvania; the Ruthenian Greek Rite, or that of the Little Russians in Austria and Russia; the Bulgarian Greek

Rite, in Bulgaria and in Macedonia; the Melchite Greek Rite (Græco-Syrian), which includes the Catholics of Greece, also hellenized natives of Syria and Palestine; the unmixed Syrian Rite (Western Syrian), or that of the Syrians of the plain of Syria and Palestine; the Syro-Maronite Rite (Western Syrian) or the (Syrian) Maronites of Mount Lebanon; the Syro-Chaldean Rite (Eastern Syrian) i. e. Syria in the Persian Empire; the Malabar Rite (Eastern Syrian), i. e. the Catholics of Malabar in South-western India. Among most of these peoples there has set in a remarkable tide of emigration to the New World, especially to North America, whither the Ruthenians and Maronites emigrate in large numbers.

In the Constitution "Sapienti Consilio" of Pius X (29 June, 1908), the plan was followed of entrusting to Propaganda those countries of Europe and America where the ecclesiastical hierarchy is not established. Great Britain, Holland, Luxemburg, Canada, and the United States were therefore removed from its jurisdiction; on the other hand, all the vicariates and prefectures Apostolic of America and the Philippines, which were formerly subject to the Congregation of Extraordinary Ecclesiastical Affairs, were placed under Propaganda. A departure from the general plan was in leaving Australia under the jurisdiction of the latter congregation, with the addition of St. Pierre, in Martinique, and Guadeloupe. Another restriction of the powers of Propaganda effected by the new legislation was, that all matters appertaining to faith, the sacraments (particularly matrimony), rites, and religious congregations—as such, even though they were exclusively devoted to the work of the missions—were assigned to the care of the respective congregations: those of the Holy Office, the Sacraments, Rites, and Regulars.

III. EXTERNAL ORGANIZATION.—The organization of Propaganda is developed externally by means of delegations, dioceses, vicariates, prefectures, simple missions, and colleges. The Apostolic delegations are established to maintain immediate representatives of the Holy See in places where they seem to be needed by reason of the growth of the Church in organization and in numbers. Their personnel is composed of an Apostolic delegate and an auditor, subject to Propaganda. They are as follows: in Europe, those of Constantinople and of Greece (Athens); in Asia, those of the East Indies (Kandy in Ceylon), of Mesopotamia, Kurdistan, and Armenia Minor (Mosul), of Persia (Urumiah), of Syria (Beirut); in Africa, that of Egypt and Arabia (Alexandria). The dioceses as a rule consist of a bishop, who holds the title to the see and administers the local government with the aid of a cathedral chapter and a parochial clergy. A diocesan organization (Latin Rite) exists in the following Propaganda countries: in Europe, Bosnia and Herzegovina, Rumania, Bulgaria, Abyssinia, Greece; in America, Guadeloupe and St. Pierre, Martinique; in Oceania, Australia and New Zealand; in Asia, Smyrna, India, and Japan; in Africa, the Mauritius and the Seychelles. The Oriental Catholics (Uniate), except those of the Abyssinian-Coptic, the Unmixed Greek, and the Græco-Bulgarian Rites, are also organized in dio-

SEAL OF THE SACRED CONGREGATION OF PROPAGANDA

ceses. The vicariates Apostolic are missions at the head of each of which is placed a bishop who acts as representative of the pope in the local government. The prefectures Apostolic are missions of minor importance, each of which has at its head an ecclesiastical, not a bishop, with the title of prefect Apostolic. Those territories of Propaganda which are not organized as dioceses are either vicariates or prefectures; their number increases rapidly, since every year some vicariate Apostolic is divided, or some prefecture is raised to the dignity of a vicariate or some new prefecture is created. The simple missions are few and mostly in Africa. They represent an uncertain or transitory condition that may be readily strengthened by the establishment of an Apostolic prefecture.

The colleges are institutions for the education of the clergy, intended either to supply clergy for missions that have no native clergy or to give a better education to the native clergy for the apostolate in their own country. The central seminary of Propaganda is, as has been said, the Urban College, established in the palace of the congregation at Rome. The immediate superiors are two prelates, one the general secretary of the congregation, and the other the rector. In this college may be found students from all the territories subject to Propaganda, but from nowhere else. The average number of its resident students is about one hundred and ten. It has its own schools, which are attended by many other students not subject to Propaganda—e. g. the Bohemian College. Besides the preparatory training, these schools offer courses of philosophy and theology, and confer the academic degrees of Bachelor, Licentiate, and Doctor of Theology. The number of students in these schools exceeds five hundred. In Rome the College of the Holy Apostles Peter and Paul, for Italian missionaries (Lower California and China), and the College of St. Anthony, for Franciscan missionaries (especially in China), are subject to Propaganda, which also exercises jurisdiction over the following missionary colleges outside of Rome: St. Calocerus, at Milan, for Italian missionaries to China and India; St. Charles, at Parma (China); Brignole-Sale, at Genoa (without local designation of mission); Istituto per la Nigizia (for negroes of the Sudan), at Verona; College for African Missions, at Lyons, especially for French missionaries to Africa; Seminary of Foreign Missions, at Paris (India, Indo-China, China, Japan); Mill Hill Seminary, near London, for the missionaries of the Society of St. Joseph (India, Central Africa, Malay Peninsula); House of St. Joseph, Rozendaal (for Dutch students of the Mill Hill Society); House of St. Joseph, Brixen in the Tyrol (for German students of the same society); four colleges of the Society of the Divine Word, at Steyl (Holland), at Heiligenkreuz (Germany), and at St. Gabriel, near Vienna, for the students of the same society whose missionary fields are in the United States, South America, Oceania, China, and Africa; College of All Hallows, Dublin, for Irish missionaries; American College at Louvain, for missionaries to the United States. The national colleges at Rome subject to the Propaganda are: the Greek, Ruthenian, Armenian, and Maronite colleges. It also exercises jurisdiction over the Albanian College at Scutari, the College of Pulo-Penang (Prince of Wales Island) in Indo-China, belonging to the Society of Foreign Missions at Paris for the native Indo-Chinese clergy. Before the appearance of the Constitution "Sapienti Consilio", the American, Canadian, English, Irish, and Scots Colleges at Rome, the English College at Lisbon, the English and the Scots College at Valladolid, and the Irish College at Paris were all subject to Propaganda.

The auxiliaries of this vast organization are all

religious orders and regular congregations of men and women to which foreign missions are confided. Their number is very great. The principal orders (Benedictine, Franciscan, Dominican, Carmelite, Jesuit etc.) have charge of numerous missions. During the nineteenth century many regular societies of missionary priests and missionary sisters entered actively, and with great success, on missionary labours under the direction of the congregation. The principal colleges of these auxiliary bodies (not directly subject to Propaganda) are: at Rome, the Colleges of St. Fidelis (Capuchin) and St. Isidore (Irish Franciscans), and the Irish Augustinian College; outside of Rome, the college at Schooten near Brussels (Missionaries of the Immaculate Heart of Mary), the seminary of the African Missions at Lyons (White Fathers) etc.

IV. INTERNAL ORGANIZATION.—The internal organization of Propaganda is the result of almost three centuries of experience. All its works are carried on by means of a general cardinalitial congregation, two cardinalitial prefectures, and several permanent commissions. The general congregation is composed of all the cardinals of Propaganda chosen by the Pope "Eminentissimi Patres Consilii Christiano nomini Propagando". The chief authority of Propaganda resides in this body. The creation and division of dioceses, vicariates, and prefectures, the selection of bishops and other ordinary superiors of missions, matrimonial causes, ecclesiastical appeals, and the like, all come under its jurisdiction. It holds a regular meeting twice a month and deals alternately with the affairs of the Latin and the Oriental rites. Only the cardinal-members of Propaganda are present, together with two prelates, the general secretary, and the secretary of the Oriental rites. To the general prefect of Propaganda, a cardinal, belongs the duty of despatching all current business and all matters pertaining to the General Congregation. He is the ordinary head of Propaganda. The General Prefecture has subject to it two secretariates: the General Secretariate and the Secretariate of Oriental rites. The general secretary (always a prelate, Monsignor) is the chief assistant of the cardinal prefect, and the immediate head of the General Secretariate. He countersigns all letters addressed by the cardinal prefect to persons outside of Rome, and signs all letters from the prefecture destined to points in Rome (except to cardinals and ambassadors, letters for whom are signed by the cardinal prefect alone). An under-secretary has been added by the Constitution "Sapienti Consilio". The Secretary of the Oriental rites is the head of his secretariate, and is charged with duties analogous to those of the general secretary, of whom he is independent.

Each of the secretariates has its *minutanti*, *scrittori*, and *protocollisti*. There are also the General Archives, and a Despatch Office. The *minutanti* (so called because one of their duties is to prepare the minutes of decrees and letters which are afterwards re-copied by the *scrittori*) are officials occupied with the subordinate affairs of certain regions. We may note here the simplicity and the industry of the Propaganda secretariate: only six *minutanti* attend to the affairs of the countries of the Latin Rite subject to the congregation. Apropos of the authority of Propaganda we shall see what a vast deal of work is involved in the ordinary despatch of this work. The *minutanti*, in addition to making minutes of the ordinary acts of the secretariate, prepare the *ponenze*, i. e. the printed copies of the propositions or cases destined to come before the general cardinalitial congregation. Every week each of the two secretariates holds a meeting (*congresso*) in the presence of the cardinal prefect, of its own secretary, and of the head of the other secretariate. At this meeting each *minutante* reports on all matters for the settle-

ment of which reference to the pertinent set of documents may be necessary, he gives oral informations etc. After hearing the report of the *minutante* and the opinion of the Secretary concerned, sometimes of all others present, the cardinal prefect issues an order to reply, or to defer the case, or to send it up to the general congregation. The *scrittori* copy all documents that are to be despatched, while the *protocolлисти* stamp, number, and register all papers received and sent out. Records of the earliest proceedings of the congregation, dating from its first establishment, are preserved in the General Archives, or Record Office. Finally, there is the Despatch Office (*ufficio di spedizione*), which keeps its own register of all documents issuing from Propaganda, and sees to their actual forwarding. The office of consultant is filled gratuitously by a number of prelates, to whom the secretaries send such of the *ponenze*

as are of litigious nature—matrimonial causes, diocesan difficulties, etc. These consultants are requested to express their opinions, which are then attached to the *ponenze* and presented therewith to the cardinals at the General Congregation. The Oriental Secretariate employs interpreters—ecclesiastics who translate all current correspondence in Arabic, Armenian, etc., and who are sworn to perform their work faithfully.

The method of treatment applied by Propaganda to an ordinary case may be described as follows: A letter addressed to the congregation is opened by the cardinal prefect who annotates it with some terse official formula in Latin, embodying his first instructions (e.g. that a *précis* of the antecedent correspondence relating to this matter is to be made). Then the letter goes to the *Protocollo*, where it is stamped and registered, and its object noted on the outside. The chief *minutante* reports on its object and on the note made by the cardinal to the secretary concerned, and writes the corresponding order of the secretary. Supposing the order should be to write a letter, the folio is given to the *minutante*, who draws up his minute according to the instructions of the cardinal prefect and of the secretary, he then passes it on to the *scrittore*, who copies it, and verifies the copy. This copy, with all the correspondence in the case, is returned (supposing it to be matter to be sent away from Rome) to the cardinal prefect, who signs it and remits it to the secretary. The secretary countersigns it and passes it on to the Despatch Office, which, after returning to the *protocollo* (for preservation) the other correspondence of the case under consideration, registers it, encloses all matter to be forwarded in an envelope, writes thereon the postal weight, and sends it on to the Accounting Office. Here the postal weight is verified, the stamps affixed, and the letter forwarded to the Post Office. By this system everything is under control, from the subject-matter of the correspondence to the cost of postage. The whole routine is completed

with rapidity and regularity under the immediate responsibility of the several persons who have charge of the matter in its various stages.

Before the Constitution "Sapienti Consilio" the second cardinalitial Prefecture of Propaganda was that of the cardinal prefect of finance, to whom are entrusted the finances of Propaganda, the expenses, subsidies etc. Decisions regarding subsidies pertained either to the cardinal prefect or to the General Congregation, or to the Board of Finance (*congresso economico*), which met as an executive committee for the transaction of the most important ordinary business with which the General Congregation was entrusted. This Prefecture of Finance was composed of the general prefect, the cardinal prefect of finance, and of some other cardinal of the General Congregation. Pius X, however, by the above mentioned Constitution, suppressed the

Prefecture of Finance, and its functions are now discharged by the General Prefecture. With the Prefecture of Finance was joined the executive office of the Reverend Chamber of Chattels (*Azienda della Reverenda Camera degli Spogli*), i. e. the effective administration of the revenues collected from vacant benefices (*spogli*), one of the sources of revenue of Propaganda.

The two permanent commissions of Propaganda are: one for the revision of Synodal Decrees (provincial or diocesan) in countries subject to Propaganda and one for the revision of liturgical books of the

PALACE OF PROPAGANDA, PIAZZA DI SPAGNA, ROME

Oriental rites. Each of these Commissions is presided over by a cardinal, has for secretary a prelate, and is always in close communication with its own secretariate.

V. FACULTIES.—The faculties (authority) of the Congregation of Propaganda are very extensive. To the other pontifical congregations are assigned quite specific matters: the only restriction on Propaganda is that of territory, i. e. while one congregation is concerned with rites, a second with bishops and regulars, a third with marriage, a fourth with subsidies etc., Propaganda deals with all such matters, in a practical way, for all the countries subject to it. Thus, the nomination of a bishop, the settlement of a matrimonial case, the granting of an indulgence, are within the jurisdiction of Propaganda. The limits of its jurisdiction are practical rather than theoretical; in general, it may be said that Propaganda is authorized to deal with matters peculiar to the other congregations, when such matters are presented as practical cases, i. e. when they do not raise questions of a technical character, or of general bearing, or are not of a class specifically reserved to some other department of the pontifical administration. This is more particularly true of the Congregation of the Holy Office. Matrimonial cases are very frequently brought before Propaganda, especially those in which the marriage is alleged to be invalid, either as null

from the beginning or because it was never consummated. The procedure in such cases is as simple as it is practical: Propaganda having been appealed to by one party, directs the local episcopal court to hold a canonical trial and to report its results to the congregation, it being understood that both parties, defendant and plaintiff, may protect themselves by legal counsel at their own expense. When the congregation has received the record of the local court, it transmits the same to a consultor with a request for his opinion on the objective status of the question at issue (*pro rei veritate*). If the opinion be in favour of the nullity or of the non-consummation of the marriage, then the record, together with the opinion of the consultor, is sent on to a second consultor (*pro vinculi defensione*), whose duty it is to set forth the grounds, more or less conclusive, that can be adduced in favour of the validity, or consummation, of the marriage, and therefore of its indissolubility. The local record and the opinions of the consultors (*ponenza*) are then printed in as many copies as there are cardinal-judges in the congregation. This printed *ponenza* is sent to each of these cardinals (the printed document is held to be secret, being looked on as manuscript) that they may examine the matter. One of them (*cardinale ponente*) is selected to summarize the entire case, and to him are finally turned over the local record and the opinions of the consultors, with the obligation of reporting on the case at the next General Congregation. At this meeting, the cardinals, after mature discussion, pronounce judgment. Their decision is immediately submitted to the pope, who ratifies it, if he sees fit, and orders the proper decree to be issued.

It should be added that all these proceedings are absolutely without expense to the litigants (*gratis quocumque titulo*), i. e. no one is ever called on for any payment to the congregation because or on account of any favour or decision. Thus, the wealthiest Catholic in America, Great Britain, Holland, or Germany, who has brought a matrimonial case before Propaganda, pays literally nothing, whatever the judgment may be. There are no chancery expenses, and nothing is collected even for the printing of the diocesan records, consultors' opinions, etc. This fact shows how absurd are certain calumnies uttered against the Holy See, especially in connexion with matrimonial cases, as though the annulment of a marriage could be procured at Rome by the use of money. Were such the purpose of the Roman Curia, it would not exempt the richest countries of the world—those precisely in which it is easiest for persons of opulence to institute legal proceedings—from any expense, great or small, direct or indirect.

VI. INCIDENTAL FEATURES.—Propaganda formerly possessed a valuable museum, the Museo Borgia (situated in the palace), so called because it was given by Cardinal Stefano Borgia, who was general prefect early in the eighteenth century. It once contained precious Oriental codices, especially Sahidic (Coptic of the Thebaid) now preserved with other Coptic codices in the Vatican Library, for the greater convenience of students. It possesses at the present time an important cabinet of medals and many ethnological curiosities sent as gifts by missionaries in far distant lands, and scattered through the Palace of Propaganda are many valuable paintings of the old masters. Propaganda also conducted, until within recent years, the famous Polyglot printing press whence, for some centuries, issued liturgical and catechetical books, printed in a multitude of alphabets. Among its most noteworthy curios is a Japanese alphabet in wooden blocks, one of the first seen in Europe. The Propaganda Press issued, among other publications, an official statistical annual of the missions conducted

by the congregation (Missiones Catholicae cura S. Congreg. de Propaganda Fide descriptae), as well as the "Collectanea", a serial record of pontifical acts relating to the business of the congregation. In 1884 the Italian Government liquidated the real estate of Propaganda, leaving it only its palace, the neighbouring Mignanelli palace for the use of its schools, its printing press, and two villas used as summer resorts for the students of the Urban College.

One of the customs of Propaganda, worthy of special mention, is the gift of a fan to all employees at the beginning of the summer. This custom appears to have arisen in the early days, when fans were sent from China by the missionaries. It is customary for the Urban College to hold, at Epiphany, a solemn "Accademia Polyglotta", to symbolize the world-wide unity of the Catholic Church. At this *accademia* the Propaganda students recite poems in their respective mother tongues. Invited guests always find it very interesting to listen to this medley of the strangest languages and dialects. Another custom of the Urban College is that every graduate student (*alumno*), wherever he may be in the pursuit of his ministry, is bound to write every year a letter to the cardinal prefect, to let him know how the writer's work is progressing and how he fares himself. The cardinal answers immediately, in a letter of paternal encouragement and counsel. By this means there is maintained a bond of affection and of mutual goodwill between the "great mother"—as the "Propagandists", or the alumni of Propaganda, designate the congregation—and her most distant sons.

The names of many distinguished persons appear in the records of Propaganda, notably in the catalogue of its cardinals, prelates, and officials. Among the cardinal prefects entitled to special mention are the following: Giuseppe Sagripanti (d. 1727), a meritorious reformer of Roman judicial procedure; the very learned Barnabite Sigismondo Gerdil (d. 1802); Stefano Borgia, patron of Oriental studies, protector of the savant Zoega (d. 1804); Ercole Consalvi (d. 1824), the great diplomatist, Secretary of State to Pius VII, at whose death he was made prefect general of Propaganda by Leo XII; Mauro Cappellari, later Gregory XVI, who was prefect general from 1826 to his election as pope (1831). Among the General Secretaries (who usually become cardinals) the following are particularly worthy of special mention: Domenico Passionei, created cardinal in 1738; Niccolò Fortiguerra, a distinguished man of letters (d. 1739); the erudite Angelo Mai, secretary from 1833 to 1838. The list of missionaries sent forth by Propaganda has been long and glorious, containing the names of many martyrs. The protomartyr of Propaganda is St. Fidelis of Sigmaringen, a German Capuchin missionary in Grisons, Switzerland. The Calvinists killed him in the village of Sereis, 24 April, 1622. He was canonized by Benedict XIV in 1746. Propaganda holds at all times a grateful memory of the Discalced Carmelites. It was they who vigorously urged the Holy See to found the congregation, foremost among them being Domenico di Gesù e Maria, general of the order. In the original act of its foundation he appears as a member. Tommaso da Gesù, another Carmelite, opportunely published in 1613, at Antwerp, a Latin work on the obligation of preaching the Gospel to all nations.

Many authors have treated of Propaganda very inaccurately, and have confused the ancient and recent systems of administration. The most reliable of the earlier writers are: DE LUCA, *Il Cardinale Pratico*; CORNELIUS, *Informazioni intorno al Cardinalato* (Rome, 1653); BEYER AND MENZEL, *Breve compendium hist. S. Congr. de Prop. Fide* (Königsberg, 1721); POLLARD, *Les ministres ecclésiastiques du S. Siège* (Lyons, 1878); LEGA, *Praelectiones in textum juris canonici* (Rome, 1898); ANON., *La Propaganda e la conversione de' suoi beni immobili* (Rome, 1884); HUMPHREY, *Urbs et Orbis* (London, 1899), 380-386. Cf. also MEYER, *Die Propaganda, ihre Provinzen und ihr Recht*; BANGEN, *Die römische Curie* (Münster, 1854); PEIPER in

Römische Quartalschrift, I (1889), for the Archives. For the most important Coptic codices formerly preserved by Propaganda see ZOEGA, *Catalogus Codic. Copt. MSS. Musæi Borgiani* (Rome, 1810); MEIER, *Die Propaganda* (Göttingen, 1852); LEITNER, *De Curia Romana* (1909).

U. BENIGNI.

Propagation of the Faith, THE SOCIETY FOR THE, is an international association for the assistance by prayers and alms of Catholic missionary priests, brothers, and nuns engaged in preaching the Gospel in heathen and non-Catholic countries.

I. ORIGIN AND DEVELOPMENT.—It was founded in Lyons, France, in 1822, as a result of the distress of missions in both East and West. In 1815, Bishop Dubourg of New Orleans was in Lyons collecting alms for his diocese, which was in a precarious condition. To a Mrs. Petit, whom he had known in the United States, he expressed the idea of founding a charitable association for the support of Louisiana missions, which suggestion she cordially embraced, but could procure only small alms among her friends and acquaintances. In 1820, Pauline Jaricot of Lyons received a letter from her brother, a student at the Seminary of St-Sulpice, in which he described the extreme poverty of the members of the Foreign Missions of Paris. She conceived the idea of forming an association whose members would contribute one cent a week for the missions. The membership rose to a thousand and the offerings were sent to Asia. In 1822, Father Inglesi, Vicar-General of New Orleans, was sent to Lyons by Bishop Dubourg to visit his benefactors and reanimate their zeal. Seeing the success of Miss Jaricot, they thought at first of establishing a similar society for American missions, but decided to unite, instead of dividing, efforts.

A meeting of the friends of the missions called by Father Inglesi was attended by twelve ecclesiastics and laymen, and on 3 May, 1822, the Society for the Propagation of the Faith was formally established. Its object was declared to be to help Catholic missionaries by prayers and alms. It was understood that the new association should be catholic, that is, endeavour to enlist the sympathy of all Catholics, and assist all missions, without regard to situation and nationality. However, it is not the aim of the society to help "Catholic countries", no matter how great their needs may be, for that reason France, Italy, Austria, Spain, Portugal, etc. have never received help from it. For the same reason, as soon as missions are able to exist by their own efforts the society withdraws its aid, because demands are many and resources inadequate. In 1823, a delegate was sent to Rome and Pius VII heartily approved the new undertaking and granted the indulgences and other spiritual privileges that permanently enrich the society, which judgment has been ratified by all his successors. In 1840, Gregory XVI placed the society in the rank of Universal Catholic institutions, and on 25 March, 1904, in the first year of his pontificate, Pius X recommended it to the charity of all the faithful, praising its work, confirming its privileges, and raising the feast of its patron, St. Francis Xavier, to a higher rite. A large number of provincial and national councils (especially the III Council of Baltimore, 1884), as well as thousands of bishops from all parts of the world, have likewise enacted decrees and published letters in favour of its development. It receives contributions from all parts of the Christian world.

ORGANIZATION.—The organization is extremely simple. To become a member it is necessary to recite daily a prayer for the missions, and contribute at least five cents monthly to the general fund. As the society is ordinarily organized in the parishes, the usual method for gathering the contributions is to form the associates into bands of ten, of whom one acts as a promoter. These offerings are turned over to some local or diocesan director and finally forwarded to the

general committee. Besides the ordinary members, there are special members who contribute personally six dollars a year, and perpetual members who contribute at one time a sum of at least forty dollars. The official organ of the society is the "Annals of the Propagation of the Faith", the first number of which appeared in France in 1822. At present 350,000 copies of that publication are printed bi-monthly in French, English, German, Italian, Spanish, Portuguese, Dutch, Polish, Flemish, Basque, Maltese, and the dialects of Brittany. The "Annals" contains letters from missionaries, news of the missions, and reports of all money received and apportioned by the society. An illustrated magazine, "Catholic Missions", is also published by the society in Italy, France, England, Germany, Holland, Spain, Poland, Hungary, and the United States.

ADMINISTRATION.—The Society for the Propagation of the Faith takes no part in selecting missionaries, appointing them to their field of work, or training them for it, and does not concern itself with the administration of the missions. Its aim is merely to assist missionaries chosen, trained, and sent forth by the usual authorities of the Church. The society is administered by two central councils, each composed of twelve clergymen and laymen of recognized ability and knowledge of business affairs, and distinguished for zeal and piety. These councils, one of which is in Lyons and the other in Paris, are self-recruiting, and the work performed by their members is entirely gratuitous. They keep in close touch with the missions, serve as headquarters for the distribution of the alms received from the delegates of the society, to whom they pass successively from the diocesan and parochial directors, and the promoters of bands of ten. Every year, at the end of January, the offerings of the members of the society all over the world are forwarded to these central bureaux, and the total amount is divided among all the missions of the earth. With conscientious care and impartiality the reports of the superiors of the missions, bishops, vicars and prefects Apostolic are studied and all allotments recommended, in accordance with the extent and necessities of each mission, and in consideration of the desires of the pope and the data furnished by the Congregation of the Propaganda. The Lyons Central Council first goes over this work. The result of its labours is revised by the Paris Central Council, which, with close attention and solicitude, approves, augments, or reduces the sum recommended as it considers necessary or advisable. Then both councils agree upon the allotments which are sent to each mission. It is a law of the society to make its affairs public, and each year an integral account of all money received, all appropriations made, and all expenditures is published in the "Annals". The society does not deal in investments and has no permanent fund. At the beginning of each year the total sum collected during the past year is distributed, and the missions are always at the mercy of the faithful.

RESULTS OBTAINED.—In 1822, the society collected a little more than \$4000.00. The sum was divided in three parts, of which one was assigned to the Eastern missions, the other two to Louisiana and Kentucky. At present about three hundred dioceses, vicariates and prefectures Apostolic receive assistance and the total amount collected up to 1910, inclusively, is \$78,846,872.51. The following will show the part each country has taken in furnishing this sum. and in what year the society was established there:

Society established:—	
1822, France.....	\$48,829,632.53
1825, Belgium.....	4,421,992.00
1827, Germany and Austria-Hungary.....	7,393,275.52
1827, Italy.....	5,814,294.95
1827, Switzerland.....	970,494.03

1827, Balkan States.....	\$364,835.95
1833, Canada, Mexico, West Indies...	1,384,418.59
1837, Great Britain and Ireland....	2,593,644.88
1837, Holland.....	1,325,100.98
1837, Portugal.....	502,619.84
1837, Russia and Poland.....	72,353.50
1839, Spain.....	866,570.50
1840, United States.....	2,749,436.11
1840, South America.....	1,029,972.39
1843, Oceanica.....	103,737.52
1848, Asia.....	88,140.14
1857, Africa.....	310,573.68
Countries not mentioned.....	25,779.40

\$78,846,872.51

The foregoing sum has been distributed as follows:

To missions in America.....	\$10,747,397.45
To missions in Europe.....	11,066,975.88
To missions in Asia.....	32,061,680.43
To missions in Africa.....	11,552,228.26
To missions in Oceanica.....	7,309,152.81
Special donations, transportation of missionaries, publications, management.....	6,109,437.68

On 25 March, 1904, Pius X addressed an encyclical letter to the Catholic world recommending the Propagation of the Faith to the charity of all the faithful, in which he says: "If the messengers of the Catholic doctrine are able to reach out to the most distant lands, and the most barbarous peoples, it is to the Society for the Propagation of the Faith that credit must be given. Through that Society salvation began for numberless peoples . . . , through it there has been gathered a harvest of souls" In 1884, His Eminence Cardinal Gibbons, writing to the directors of the society in the name of the American hierarchy assembled at Baltimore for the third national Council, said: "If the grain of mustard seed planted in the virgin soil of America has struck deep roots and grown into a gigantic tree, with branches stretching from the shores of the Atlantic ocean to the coasts of the Pacific, it is mainly to the assistance rendered by your admirable Society that we are indebted for this blessing."

JOSEPH FRERI.

Property.—I. NOTION OF PROPERTY.—The proprietor or owner of a thing, in the current acceptance of the word, is the person who enjoys the full right to dispose of it in so far as is not forbidden by law. The thing or object of this right of disposal is called property, and the right of disposal itself, ownership. Taken in its strict sense, this definition applies to absolute ownership only. As long as the absolute owner does not exceed the limits set by law, he may dispose of his property in any manner whatsoever; he may use it, alienate it, lease it etc. But there is also a qualified ownership. It may happen that several persons have different rights to the same thing, one subordinate to the other: one has the right to the substance, another to its use, a third to its usufruct, etc. Of all these persons he alone is called the proprietor who has the highest right, viz., the right to the substance; the others, whose rights are subordinate, are not called proprietors. The tenant, for example, is not said to be the proprietor of the land he tills, nor the lessee proprietor of the house in which he dwells; for though both have the right of use or usufruct, they have not the highest right, namely the right to the substance. There are two reasons why

he to whom the substance of a thing belongs is called its proprietor: first, because the right to the substance is the highest right; secondly, because this right naturally tends to grow into absolute ownership. The tenant, for instance, enjoys the usufruct of a thing only through a cause which lies outside the thing itself, i. e. through a contract. If this cause is removed, then he loses his right, and the thing reverts to him to whom the substance belongs. The right to the substance necessarily implies the absolute right of disposal as soon as any accidental, external limitations are removed. This is probably the reason why law-makers, when establishing the definition of property, take into consideration only absolute ownership. Thus the French civil code (544) defines ownership as "the right to make use and dispose of a corporeal thing absolutely provided it be not forbidden by law or statute"; the code of the German Empire (903) says: "The proprietor of a thing may use it as he likes and exclude from it all outside interference, as long as the law or the rights of others are not violated" and in Blackstone (Comm. I, 138) we read that the right of property "consists in the free use, enjoyment and disposal of all acquisitions, without any control or diminution, save only by the laws of the land".

The statement has been made that the Roman law set up a definition of property which is absolute and excludes all legal restrictions. This is not correct. The Roman jurists were too vividly conscious of the principle *Salus publica suprema lex* to exempt private property from all legal restrictions. No clearer proof is needed than the numerous easements to which the Roman law subjected property (cf. Puchta, "Kursus der Institutionen", II, 1842, 551 sqq.). Precisely in order to exclude this erroneous conception, the Roman jurists, following the example of Bartolus, generally define perfect ownership as the right to dispose perfectly of a material thing in so far as is not forbidden by law (*Jus perfecte disponendi de re corporali nisi lege prohibeatur*). Again, man is essentially a social being. Consequently, all rights granted him are subject to the necessary restrictions which are demanded by the common welfare and more accurately determined by law. This right of disposal which the civil power exercises over property has been called *dominium altum*, but the term is misleading and should be avoided. Ownership gives to a person the right to dispose of a thing for his private interests as he sees fit. The Government has no right to dispose of the property of its subjects for its private interests, but only as far as the common weal requires.

II. CLASSES OF PROPERTY.—If the holder of the right of ownership is considered, property is either individual or collective, according as the owner is an individual (a physical person) or a community (a moral person). Individual property is also called private property. Again, collective property differs as the community. Those estates are not collective property which have for ever been set aside for a fixed purpose and are, by a sort of fiction, considered as a person (*persona juridica, ficta*), for example, endowments for pious purposes or for the public benefit: hospitals orphanages etc. For the actual administrators or usufructuaries are not to be regarded as proprietors of the endowment. Furthermore, property may be either public or private. Public property is the property of a public community, namely, the State and the Church. Everything else is private property. However, the distinction between private and public property arises not only from difference in ownership, but also from difference in purpose. Public property is intended to serve the interests of the community at large; private property, the interests of a limited circle. Family property is private property, even if it belongs to

the family as a whole. Not all collective property is public property. The property of a community remains private as long as that community is able to exclude outsiders from participating in its enjoyment. But when a community can no longer prevent outsiders from settling down in its midst and, like the rest, sharing in its property, that property ceases to be private. If we consider the object of ownership, property may be movable or immovable. Immovable property consists in land (real estate), and in everything so attached to the land that, as a rule, it cannot be transferred from one place to another without undergoing a change in its nature. All the rest is movable property. Lastly, the purpose distinguishes property into goods of consumption and goods of production, according as the goods are directly intended either for production, i. e. for producing new goods, or for consumption.

III. POSSESSION differs essentially from property. At times, possession denotes the thing possessed, but generally it means the state of possessing something. He possesses a thing who has actual control over it and intends to keep it. Possession may be unjust, as is the case with the thief who has knowingly taken the property of another. Since such possession is manifestly unjust, it gives the possessor no right whatever. On the other hand, it may happen that one is *bona fide* possessor of another's property. Such possession implies certain rights. It is incumbent on the owner to prove that the thing does not belong to the possessor. If he is unable to furnish this evidence, the law protects the actual possessor of the thing under dispute. The basic reason why possession must not be neglected when ownership is disputed is that under normal conditions possession is the result of ownership. For, generally speaking, the possessor is the owner of a thing. This being the normal state of affairs, the law favours the presumption that the actual possessor is also the legal possessor and consequently holds that nobody has the right to evict him unless the illegality be proved. He who seeks to overturn existing conditions as being unjust must bear the burden of proof. Should this principle be denied, the security of property would be greatly endangered.

IV. OPPONENTS OF PRIVATE PROPERTY.—The present order of society is largely based on the private property of individuals, families, and communities. Now there are many communists and socialists who condemn this kind of ownership as unjust and injurious, and who aim at abolishing either all private property or at least the private ownership of productive goods, which they wish to replace by a community of goods. Their intention may be good, but it proceeds from a total misunderstanding of human nature as it is, and, if carried out, would result in disastrous failure (cf. COMMUNISM and SOCIALISM). The so-called agrarian socialists, among whom must be numbered the single-taxists, do not propose to abolish private ownership of all productive goods, but maintain only that the land with the natural bounties which it holds out to mankind essentially belongs to the whole nation. As a logical conclusion they propose that ground rent be confiscated for the community. This theory, too, starts from false premises and arrives at conclusions which are impracticable. (See AGRARIANISM.)

V. INSUFFICIENT JUSTIFICATION OF PRIVATE PROPERTY.—Outside the communistic and socialistic circles all concede that private property is justified; but in regard to its foundation opinions differ widely. Some derive the justice of private property from personality (personality theory). They look upon private property as a necessary supplement and expansion of personality. Thus H. Ahrens ("Naturrecht", 6th ed., 1871, §68) thinks that the "individuality of every human mind, in choosing and

attaining its ends, requires property, i. e. the free contract and disposal of holdings, whereby the entire personality is brought into action. Similar views are held by Bluntschli, Stahle, and others. This theory admits of a correct explanation, but is in itself too indefinite and vague. If it is understood to mean only that, as a rule, private property is necessary for the free development of the human personality and for the accomplishment of its tasks, then it is correct, as will appear in the course of our discussion. But if these theorists remain within the pure notion of personality, then they cannot derive from it the necessity of private property, at least of productive goods or land. At most they might prove that everybody is entitled to the necessary means of subsistence. But this is possible without private property strictly so called. Those who are either voluntarily or involuntarily poor and live at the expense of others possess no property and yet do not cease to be persons. Though the children of a family are without property during the lifetime of their parents, still they are true persons. Others derive private property from a primitive contract, express or tacit (contract theory), as Grotius (*De jure belli et pacis*, II, c. 2, § 2), Pufendorf, and others. This theory is founded on the supposition, which has never been and never can be proved, that such a contract ever has or must have taken place. And even supposing the contract was actually made, what obliges us to-day to abide by it? To this question the theory is unable to give a satisfactory answer.

Others again derive the justice of private property from the laws of the State (legal theory). The first to advance this hypothesis was Hobbes (*Leviathan*, c. 2). He considers the laws of the State as the fountain-head of all the rights which the subjects have, and consequently also as the source of private ownership. The same view is taken by Montesquieu, Trendelenburg, Wagner, and others, as far as ownership is concerned. Kant (*Rechtslehre*, p. 1, §§ 8, 9) grants indeed a provisory proprietorship in the condition of nature prior to the formation of the State; but definite and peremptory ownership arises only through the civil laws and under the protection of the coercive power of Government. Most of the partisans of this theory, like Hobbes, proceed from the wrong supposition that there is no natural right properly so called, but that every genuine right is a concession of the civil power. Besides, their appreciation of actual facts is superficial. It is true that the laws everywhere protect private property. But why? A fact, like private property, which we meet in one form or another with all nations, ancient or modern, cannot have its last and true reason in the civil laws which vary with time and clime. A universal, constant effect supposes a universal, constant cause, and the civil laws cannot be this cause. If they were the only basis of private property, then we might abolish it by a new law and introduce communism. But this is impossible. Just as the individual and the family existed prior to the State, so the rights necessary for both, to which belongs the right of property, existed prior to the State. It is the duty of the State to bring these rights into harmony with the interests of the community at large and to watch over them, but it does not create them.

John Locke saw the real foundation of private property in the right which every man has to the products of his labour (labour theory). This theory was loudly applauded by the political economists, especially by Adam Smith, Ricardo, Say, and others. But it is untenable. There is no doubt that labour is a powerful factor in the acquisition of property, but the right to the products of one's labour cannot be the ultimate source and basis of the right of property. The labourer can call the product of his work his own only when the material on which he

works is his property, and then the question arises how he came to be the owner of the material. Suppose, for instance, that a number of workmen have been engaged to cultivate a vineyard; after the work is done, they may indeed claim their wages, but the products of their labour, the grapes and the wine, do not belong to them, but to the owner of the vineyard. Then the further question may be asked: How did the owner of the vineyard acquire his property? The final answer cannot be the right to the product of his labour. There were some who asserted that the Roman law derived private property solely from the right of first occupation (*jus primi occupantis*), ■ for instance Wagner (*Grundlegung* 1, c. §102). But they confound two things. Though the Roman jurists regarded occupation the original title of acquisition, they supposed as self-evident the right of private property and the right to acquire it.

VI. THE DOCTRINE OF THE CATHOLIC CHURCH.—The Catholic Church has always regarded private property as justified, even though there may have existed personal abuses. Far from abolishing the commandments of the Old Law (Thou shalt not steal; thou shalt not covet thy neighbour's house, nor anything that is his) Christ inculcated them anew (Matt., xix, 18-19; Mark, x, 19; Rom., xiii, 9). And though the Catholic Church, following in the footsteps of her Founder, has always recommended voluntary poverty ■ an evangelical counsel, yet she has at the same time asserted the justice and, as a rule, the necessity of private property and rejected the contrary theories of the Circumcellions, Waldenses, Anabaptists etc. Moreover, theologians and canonists have at all times taught that private ownership is just. Leo XIII, especially in several encyclicals, strongly insisted on the necessity and justice of private ownership. Thus the encyclical "*Rerum novarum*" expressly condemns as unjust and pernicious the design of the socialists to abolish private property. The right of acquiring private property has been granted by nature, and consequently he who would seek a solution of the social question must start with the principle that private property is to be preserved inviolate (*privatas possessiones inviolate servandas*). And Pius X, in his *Motu Proprio* of 18 Dec., 1903, laid down the following two principles for the guidance of all Catholics: (1) "Unlike the beast, man has on earth not only the right of use, but a permanent right of ownership; and this is true not only of those things which are consumed in their use, but also of those which are not consumed by their use"; (2) "Private property is under all circumstances, be it the fruit of labour or acquired by conveyance or donation, a natural right, and everybody may make such reasonable disposal of it as he thinks fit."

VII. ECONOMIC THEORY BASED ON THE NATURAL LAW.—The doctrine of the Church as here explained points out the right way to a philosophical justification of private property. It is derived from the natural law, since the present order in general demands it for the individual as well as for the family and the community at large; hence it is a postulate of reason and everybody receives by nature the right to acquire private property. This justification of private property, which is outlined by Aristotle (*Polit.*, 2, c. 2), may be called the "economical theory based on the natural law". The necessity of private ownership arises partly from the external conditions of life under which the human race actually exists, partly and especially from human nature as we know it by experience, with all its needs and faculties, inclinations both good and bad, which the average man reveals at all times and in all places. This theory does not assert that there should be nothing else than private property, much less that there should be private property of individuals only. Families, private corporations, communities, and states, ■ well

as the Church, may own property. Its distribution is not something settled by nature uniformly and immutably for all times and circumstances, but full play is given to human liberty. Generally speaking, what is necessary is that private property should also exist. The boundaries between private and public property may vary from age to age; but, as a rule, private ownership becomes the more necessary and the more prevalent the farther the civilization of a people progresses.

In order to gain a clear insight into the basis of property, we must carefully distinguish three things: (1) The institution of private property, i. e. the actual existence of private property with all its essential rights. In general, it is necessary that private property should exist, at least to a certain extent, or, in other words, the natural law demands the existence of private property. From the necessity of private property follows immediately (2) every man's right to acquire property. The institution of private property supposes this right; for the former cannot rightly exist unless everybody has the right to acquire private property. Nature, or rather the Author of nature, requires the institution of private property; hence He must also will the means necessary for it, namely, the right of everyone to acquire private property. This right refers to no object in particular; it is merely the general capacity of acquiring property by licit means, just as one may say that owing to the freedom of trade everybody has the right to engage in any legitimate business. The right to acquire property belongs to every man from the first moment of his existence; even the child of the poorest beggar has this right. (3) From the right of acquisition arises the right of owning a certain concrete object through the medium of some fact. Nobody, basing his claim on his existence alone, can say: this field or this house is mine. God did not distribute immediately the goods of this earth among men. He left this distribution to man's activity and to historical development. But since private property and consequently the acquisition of a definite object by a definite person is necessary, there must also be some facts on which such acquisition may be based. Among these facts the first in time and by nature is simple occupation. Originally the goods of this earth were without a definite owner, i. e. there was nobody who could call them his exclusive property. But since they had been given to man and since everybody had the right of acquiring property, the first men could take as much of these goods by simple occupation as seemed useful to them. Later generations, too, could make their own such goods as were still without a master. As time went on and the earth was populated, its goods passed more and more into the hands of individuals, families, or whole tribes. Now in order to acquire or occupy something, the mere will to possess it as private property is not sufficient; the object must, by some exterior fact, be brought under our control and must be permanently marked as our own. These marks may be of various kinds and depend on custom, agreement etc.

Philosophical Explanation.—We shall prove first of all that, generally speaking, the institution of private property is necessary for human society and that it is consequently a postulate of the natural law; this established, it follows at once that the right of acquiring property is a natural right. The first reason for the necessity of private property is the moral impossibility of any other disposition of property. If all goods remained without a master and were common to all, so that anybody might dispose of them as he saw fit, then peace and order would be impossible and there would be no sufficient incentive to work. Who indeed would care to cultivate ■ field or build a house, if everybody else were allowed to harvest the crop or occupy the building? Con-

sequently, the right of ownership must rest either wholly with communities, as the communists and socialists maintain, or with private persons. It is impossible to reduce the doctrines of communism and socialism to practice. All attempts hitherto made have ended in failure. Of longest duration were the experiments of some sects which were founded on a religious basis. But it is manifest that communities based on religious fanaticism cannot become the general rule. History, too, testifies to the necessity of private property. An institution which meets us everywhere and at all times with only a few negligible exceptions, which develops more and more among the nations as their civilization advances, which has always been recognized and protected as just cannot be an arbitrary invention, but must be the necessary outcome of the tendencies and needs of human nature. For a universal and permanent phenomenon supposes a universal and permanent cause, and this cause in the present question can only be human nature with its wants and inclinations, which remain essentially the same. Besides, only private property is a sufficient stimulus for man to work. The earth does not furnish the products and fruits which man needs for the sustenance and development of soul and body, except at the expense of hard, continued labour. Now men will not undertake this labour unless they have a guarantee that they can freely dispose of its fruits for their own benefit and can exclude all others from their enjoyment. This argument, however, does not bind us to the labour theory refuted above. This theory maintains that each one can call his property all that and only that which is the product of his labour. This is wrong. The correct theory on the other hand says, if man had not the right to acquire private property, the necessary stimulus to work would be wanting; and the fruit of labour in this theory signifies private property in the widest sense, for instance, wages.

Private ownership alone is able to harmonize order and freedom in the social life. If no one could exclude others from using his property, order would be impossible. Nobody could lay down in advance a plan of his life and activity, or procure in advance the means and the material for his livelihood. If on the other hand productive goods were the property of the community and subject to its administration, liberty would be impossible. Man is not really free unless he can, at least to a certain degree, dispose of external goods at will, not only of goods of consumption but also of productive goods. The largest portion of human activity, directly or indirectly, aims at procuring external, useful goods; without private property, all would lapse into abject dependence on the community, which would be obliged to assign to each man his office and his share of the work. But with private property, both freedom and order can exist as far as the imperfection of all human conditions allows it. This is proved by history and by daily experience. Thus also the peace of society is best guaranteed. True it is that in spite of private property many disputes arise about "mine and thine." But these are settled by the law courts and do not disturb the essential order of society. In any other disposition of property among free men, the disputes would be far more numerous and violent, and this would necessarily lead to quarrels and feuds. Just as for the individual, so private property is necessary for the family. The family cannot exist as an independent organism unless it can freely manage its internal affairs, and unless the parents have to provide for the maintenance and education of their children, and this without any external interference. All this demands property, the exclusive use of a dwelling, food, clothes, and other things, which frequently must be procured in advance so that a well-regulated and secure family life may be made possible.

Like the individual, the family, when deprived of all property, easily falls into a vagabond life or becomes wholly dependent on the will of others. The duty to care for the preservation and education of the family urges the father and mother to work unceasingly, while the consciousness that they are responsible for their children before God and men is a powerful stay and support of their moral lives. On the other hand, the consciousness of the children that they are wholly dependent on their parents for their maintenance and start in life is a very important element in their education. The socialists are quite logical in seeking to transfer not only the possession of productive goods, but also the care of the education of children to the community at large. But it is obvious that such a scheme would end in the total destruction of the family, and hence that socialism is an enemy of all genuine civilization.

Private property is also indispensable for human society in general. Progress in civilization is possible only when many co-operate in large and far-reaching enterprises; but this co-operation is out of the question unless there are many who possess more than is required for their ample maintenance and at the same time have an interest in devoting the surplus to such enterprises. Private interest and public welfare here meet each other half way. Private owners, if they consult their own interest, will use their property for public enterprises because these alone are permanently paying investments. The advances and discoveries of the last century would not have been accomplished, at least the greater part of them, without private property. If we but recall the extensive net-work of railroads, steamship lines, telegraphs, and telephones, which is spread around the world, the gigantic tunnels and canals, the progress made in electricity, aerial navigation, aviation, automobiles etc., we must confess that private property is a powerful and necessary factor in civilization. Not only economic conditions, but also the higher fields of culture are bettered by the existence of wealthy proprietors. Though they themselves do not become artists and scholars, still they are indirectly the occasion for the progress of the arts and sciences. Only the rich can order works of art on a large scale, only they have the means that frequently are necessary for the education of artists and scholars. On the other hand, poverty and want are the reason why many become eminent artists and scholars. Their advance in life and their social position depend on their education. How many brilliant geniuses would have been crippled at their birth if fortune had granted them every comfort. Lastly, we must not overlook the moral importance of private property. It urges man to labour, to save, to be orderly, and affords both rich and poor frequent opportunity for the exercise of virtue.

Though private property is a necessity, still the use of earthly goods should in a manner be general, as Aristotle intimated (*Polit.*, I, 2, c. 5) and as Christian philosophy has proved in detail (St. Thomas, "*Summa*" II-II, Q. lxvi, a. 2; Leo XIII's encycl., "*De conditione opificum*"). This end is obtained when the rich not only observe the laws of justice, by not taking unjust advantage, but also, out of charity and liberality, share their abundance with the needy. Earthly goods are meant to be, in a certain manner, useful to all men, since they have been created for all men, and consequently the rich are strictly obliged to share their superfluities with the poor. True Christian charity will even go beyond this strict obligation. A wide and fertile field is thus opened up to its activity, through the existence of poverty. For the poor themselves, poverty is a hard, but beneficial, school of trust in God, humility, renunciation. It is of course self-evident that poverty should not degenerate into wretchedness, which

is no less an abundant source of moral dangers than is excessive wealth. It is the function of a wise Government so to direct the laws and administration that a moderate well-being may be shared by as many as possible. The civil power cannot reach this end by taking away from the rich in order to give to the poor, for "this would be at bottom a denial of private property"; but by regulating the titles of income in strict accordance with the demands of public welfare.

Thus far we have spoken of the necessity of private property and the right to acquire it. It remains only to discuss the title of acquisition by which one becomes the proprietor of a certain concrete thing: a piece of land, a house, a tool etc. As explained above, the primitive title is occupation. The first who took possession of a piece of land became its proprietor. After a whole country has thus been turned into property, occupation loses its significance as conferring a title to real estate. But for movable goods it still remains important. It is sufficient to recall fishing and hunting on unclaimed ground, searching and digging for gold or diamonds in regions which have not yet passed over into private ownership. Many regard labour as the primitive title of acquisition, that is, labour which is different from mere occupation. But in this they are wrong. If one works at an object, then the product belongs to him only when he is proprietor of the object, the material; if not, then the product belongs to another, though the workman has the right to demand his reward in money or other goods. Now the question again recurs: How did this other man obtain possession of these goods? Finally we shall arrive at a primitive title different from labour, and this is occupation. Besides occupation there are other titles of acquisition, which are called subordinate or derived titles, as, for instance, accession, fructification, conveyance by various kinds of contracts, prescription, and especially the right of inheritance. By occupation an ownerless thing passes into the possession of a person, by accession it is extended, by the other derivative titles it passes from one possessor to another. Though all the titles mentioned, with the exception of prescription, are valid by the law of nature, and hence cannot be abolished by human laws, still they are not precisely and universally applied by natural law. To define them in individual cases in accordance with the demands of the public weal and with due regard to all concrete circumstances is the task of legislation.

V. CATHREIN.

Property Ecclesiastical.—Abstract Right of Ownership.—That the Church has the right to acquire and possess temporal goods is a proposition which may now probably be considered an established principle. But though almost self-evident and uni-

versally acted upon in practice, this truth has met with many contradictors. Scandalized by frequent examples of greed, or misled by an impossible ideal of a clergy entirely spiritualized and raised above human needs, Arnold of Brescia, the Waldenses, then somewhat later Marsilius of Padua, and finally the Wycliffites, formulated various extreme views regarding the lack of temporal resources which befitted ministers of the Gospel. Under John XXII the doctrine of Marsilius and his forerunners had provoked the two Decrees "Cum inter nonnullos" (13 Nov., 1323) and "Licet juxta doctrinam" (23 Oct., 1323) by which it was affirmed that our Lord and His Apostles held true ownership in the temporal things which they possessed, and that the goods of the Church were not rightfully at the disposition of the emperor (see Denzinger-Bannwart, nn. 494-5). Somewhat less than a century later the errors of Wyclif and Hus were condemned at the Council of Constance (Denzinger-Bannwart, nn. 586, 598, 612, 684-6, etc.) and it was equivalently defined that ecclesiastical persons might without sin hold temporal possessions, that the civil authorities had no right to appropriate ecclesiastical property, and that if they did so they might be punished as guilty of sacrilege. In later times these positions have been still more explicitly reaffirmed and in particular by Pius IX, who in the Encyclical "Quanta cura" (1864) condemned the opinion that the claims advanced by the civil Government to the ownership of all Church property could be reconciled with the principles of sound theology and the canon law (Denzinger-Bannwart, n. 1697, and the appended Syllabus, props. 26 and 27).

But apart from these and other similar pronouncements the right of the Church to the complete control of such temporal possessions as have been bestowed upon her is grounded both on reason and tradition. In the first place the Church as an organized and visible society, performing public duties whether of worship or administration, requires material resources for the orderly discharge of these duties. Neither could this end be sufficiently attained if the resources were entirely precarious or if the Church were hampered in her use of them by the constant interference of the civil authority. In the second place Old Testament analogy (see, e. g., Num., xviii, 8-25), the practice of the Apostles (John, xii, 6; Acts, iv, 34-5) with certain explicit utterances of St. Paul, for example, the argument in I Cor., ix, 3 sq., and finally the interpretation of the doctors and pastors of the Church at all periods, recognize no dependence upon the State, but show plainly that the principle of absolute ownership and free administration of ecclesiastical property has always been maintained. It may be further noted that in some of the sternest of her disciplinary enactments the Church has proved that she takes for granted her dominion over the goods bestowed upon her by the charity of the faithful. The twelfth canon of the Œcumenical Council of Lyons (1274) pronounces excommunication *ipso facto* against those lay persons who seize and detain the temporal possessions of the Church (see Friedberg, "Corpus Juris", II, 953 and 1059) and the Council of Trent followed suit in its Sess. XXII (De ref., C. xi) by launching excommunications *late sententiæ* against those who usurped many different kinds of ecclesiastical property.

Subject of Rights of Property.—But while the abstract right of the Church and her representatives to hold property is clear enough, there has been in past ages much vagueness and diversity of view as to the precise subject in whom this right was vested. The idea of a corporate body, as that of an organized group of men (*universitas*) which has rights and duties other than the rights and duties of all or any of its

members, existed, no doubt, at least obscurely in the early centuries of the Roman Empire. Before the time of Justinian it was pretty clearly apprehended that the members of such a group formed legally but a single unit and might be regarded as a "fictitious person", though this conception of the *persona ficta*, dear to the medieval legists and perpetuated by men like Savigny, is not perhaps quite so much in vogue among modern students of Roman law (cf. Gierke, "Das deutsche Genossenschaftsrecht", III, 129-36). It was at any rate recognized that this "fictitious person", or "group-person", was not subject to death like the individuals of which it was composed, and on the other hand that it could not be called into existence by private agreement. It required a *senatus consultum* or something of the sort to be legally constituted.

These well-understood principles, we might suppose, could easily have been invoked to regulate the ownership of property in the case of the Christian communities established in the Roman Empire, but the question in point of fact was complicated by a survival of the ideas which attached to what were called *res sacre* in the old days of paganism. This title of "sacred things" was given to all property or utensils consecrated to the gods, though it was required that there should be some authoritative recognition of such consecration. As *res sacre* these things were regarded as in a sense withdrawn from the exercise of ordinary ownership, and formed a category apart. The truth seems to be that the gods themselves in pagan times were often conceived of as the owners. This is suggested by the fact that while it was ruled that the gods, i. e., their temples, could not inherit at law, still certain deities were explicitly exempted from this inhibition and were allowed to inherit as any private individual inherited. Such deities were, for example, Jupiter Tarpeius at Rome, Apollo Didymæus of Miletus, Diana of the Ephesians, and others (Ulpian, "Frag.", 22, 6). In similar wise when Christianity became the established faith of the empire, "Jesus Christ" was often appointed heir, and Justinian construed such an appointment as a gift to the Church of the place of the testator's domicile (Codex 1, 2, 25). The same principles were followed when an archangel or a martyr was appointed heir, and this, Justinian tells us, was sometimes done by educated people. The gift was understood to be made to some shrine or church bearing that dedication which the circumstances indicated, and, failing such indication, to the church of the testator's domicile (Cod. 1, 2, 25). The civil power in any case seems to have assumed a certain protective control over *res sacre* probably with the view of safeguarding their inviolability. "Sacred things", we read, "are things that have been duly, that is by the priests (*pontifices*), consecrated to God—sacred buildings, for instance, and gifts duly dedicated to the service of God. And these we by our constitution have forbidden to be alienated or burdened (*obligari*) except only in order to ransom captives. But if a man by his own authority establish a would-be sacred thing for himself, it is not sacred, but profane. A place, however, in which sacred buildings have been erected, even if the buildings be pulled down, remains still sacred, as Papinian too wrote" (Institutes, II, i, 8). As regards alienation, however, we may compare Cod. 1, 2, 21, which allowed the sale of church property to sustain the lives of men during a famine, and "Novel.", cxx, 10, permitting the sale, in case of debt, of a church's superfluous vessels but not of its immovables or things really necessary.

These and similar provisions have been invoked to support very divergent theories as to the ownership of church property under the empire. The real fact seems to be that among the jurists of the early centuries no clear conception as to the precise subject of

these rights was ever adopted. In later times many canonists, like Phillips and Lammer, have maintained that the property was vested in the Church (*ecclesia catholica*) as a whole. Others like Seitz and Thomasinus favour a supernatural ownership by which God Himself was regarded as the true proprietor. To others again, and notably to Savigny, the theory has commended itself that the Church held property as a community, while many still more modern authorities, with Friedberg, Sägmüller, and Meurer, defend the view that each separate local church was regarded as an institution with proprietary rights and was identified, at least popularly, with its patron saint. According to this conception the saints were the successors of the pagan gods, and whereas previously Jupiter Tarpeius, or Diana of the Ephesians, had owned land and revenues and sacred vessels, so now under the Christian dispensation St. Michael or St. Mary or St. Peter were regarded as the proprietors of all that belonged to the churches that were respectively dedicated to them.

No doubt this view obtains some apparent support from the fact that almost everywhere, and notably in England, at the dawn of the Middle Ages we find testators bequeathing property to saints. In the oldest Kentish charter of which the text is preserved the newly-converted Ethelbert says: "To thee St. Andrew, and to thy church at Rochester where Justus the bishop presides, do I give a portion of my land." Even as late as the Domesday inquisition the saint is often depicted as the landowner. "St. Paul holds land, St. Constantine holds land, the Count of Mortain holds lands of St. Petroc—the church of Worcester, an episcopal church, has lands, and St. Mary of Worcester holds them" (Pollock and Maitland, "Hist. of English Law", I, 501). But the most recent authorities, and amongst others Professor Maitland himself in his second edition, are inclined to regard such phrases as mere popular locutions, a personification which must not be pressed as if it involved any serious theory as to the ownership of ecclesiastical goods. The truth seems to be, as Knecht has shown (*System des Justinianischen Kirchenvermögensrechts*, pp. 5 sq.), that the Christian Church was a unique institution which it was impossible for the traditional conceptions of Roman law to assimilate successfully. The Church had in the end to build up its own system of jurisprudence. In the meantime the rights of ecclesiastical property were protected efficiently enough in practice and the questions of legal theory did not occur, or at any rate did not press for a solution.

From the time of the Edict of Milan, issued by Constantine and Licinius in 313, we hear of the restoration of the property of Christians "known to belong to their community, that is to say their churches, and not to the individuals" ("ad jus corporis eorum, id est ecclesiarum, non hominum singulorum pertinentia"—Lactantius, "De morte pers.", xlviii), while a few years later by the Edict of 321 the right of bequeathing property by will "to the most holy and venerable community (*concilio*) of the Catholic faith" was guaranteed. Practically speaking there can be little doubt that this Christian "concilium", "collegium", "corpus" or "conventiculum" (the words principally used to indicate the body of true believers) denoted primarily the local Christian assemblies represented by their bishop and that it was to the bishop that the administration of such property was committed. What stands out most clearly from the enactments of the time of Justinian was the recognition of the right of individual Churches to hold property. Despite the recent attempt of Bon-droit (*De capacitate possidendi ecclesiæ*, 123-36) to revive the old conception of a *dominium eminens* vested in the universal Church Catholic, there is not much evidence to show that such a view was current

among the jurists of that age though it undoubtedly grew up later (see Gierke, "Genossenschaftsrecht", III, 8). So far as property went, Justinian busied himself with the rights of particular *ἐκκλησίαι*, not with those of the general *ἐκκλησία*, but at the same time he did encourage a centralizing tendency which left a supreme jurisdiction in the bishop's hands within the limits of the *civitas*, his own sphere of authority.

There can be no reasonable doubt that, with the exception of the monasteries which possessed their goods as independent institutions, though even then under the superintendence of the bishop (see authorities in Knecht, op. cit., p. 58), the whole ecclesiastical property of the diocese was subject to the bishop's control and at his disposal. His powers were very large, and his subordinates, the diocesan clergy, received only the stipends which he allowed them, while not only the support of his ecclesiastical assistants, who generally shared a common table in the bishop's house, but also the sums devoted to the relief of the sick and the poor, to the ransom of captives, as well as to the upkeep and repair of churches, all depended immediately upon him. No doubt custom regulated in some measure the distribution of the resources available. Popes Simplicius in 475, Gelasius in 494 (Jaffé-Wattenbach, "Regesta", 636), and Gregory the Great in his answer to Augustine (Bede, "Hist. eccl.", I, xxvii) quote as traditional the rule "that all emoluments that accrue are to be divided into four portions—one for the bishop and his household because of hospitality and entertainments, another for the clergy, a third for the poor, and a fourth for the repair of churches", and then texts naturally were incorporated at a later date in the "Decretum" of Gratian.

Church Property in the Middle Ages.—Centralization of this kind, however, leaving everything, as it did, in the bishop's hands, was adapted only to peculiar local conditions and to an age which was far advanced in commerce and orderly government. For the sparsely settled and barbarous regions occupied by the Teutonic invaders changes would sooner or later become necessary. But at first the Franks, Angles, and others, who accepted Christianity took over the system already existing in the Roman Empire. The Council of Orléans in 511 enacted in its fifteenth decree that every kind of contribution or rent offered by the faithful was in accordance with the ancient canons to remain entirely at the disposition of the bishop, though of the gifts actually presented at the altar he was to receive only a third part. So with regard to the Church's right of ownership, her freedom to receive legacies and the inviolability of her property, the pages of Gregory of Tours bear ample evidence to the generosity with which religion was treated during the early Merovingian period (cf. Hauck, "Kirchengeschichte Deutschlands", I, 134-7)—so much so that Chilperic (c. 580) complained that the royal treasury was exhausted because all the wealth of the kingdom had been transferred to the churches.

Almost everywhere the respect due to the rights of the clergy was put in the foremost place. As Maitland has remarked (Hist. of Eng. Law, I, 499), "God's property and the Church's, twelvefold" are the first written words of English law. The consciousness of all that was involved in this code of King Ethelbert of Kent (c. 610) had evidently made a deep impression upon the mind of Bede. "Among other benefits", he says, "which he [Ethelbert] conferred upon the nation, he also, by the advice of wise persons, introduced judicial decrees, after the Roman model, which, being written in English, are still kept and observed by them. Among which he in the first place set down what satisfaction should be given by those who should steal anything belonging to the Church,

the bishop or the other clergy, resolving to give protection to those whose doctrine he had embraced" (Hist. eccl., II, 5). Even more explicit is the famous privilege of Wihtred, King of Kent, a hundred years later (c. 696): "I, Wihtred, an earthly king, stimulated by the heavenly King and kindled with the zeal of righteousness, have learned from the institutes of our forefathers that no layman ought with right to appropriate to himself a church or any of the things which to a church belong. And therefore strongly and faithfully we appoint and decree, and in the name of Almighty God and of all saints we forbid to all Kings our successors, and to all earldom, and to all laymen, ever any lordship over churches, and over any of their possessions which I or my predecessors in days of old have given for the glory of Christ, and our lady St. Mary and the holy Apostles" (Hadden and Stubbs, "Councils", III, 244).

This touches no doubt upon a difficulty which had just begun to be felt and which for many centuries to come was to be a menace to the religious peace and well being of Christendom. As already suggested, the primitive idea of a single church in each *civitas*, governed by a bishop, who was assisted by *presbiterium* of subordinate clergy, was unworkable in rude and sparsely populated districts. In those more northerly regions of Europe which now began to embrace Christianity, village churches remote from one another had to be provided, and though many no doubt were founded and maintained by the bishops themselves (cf. Fustel de Coulanges, "La monarchie franque", 517) the religious centres, which became the parishes of a later date, developed in most cases out of the private oratories of the landowners and thegns. The great man built his church and then set himself to find a clerk who the bishop might ordain to serve it. It was not altogether surprising if he looked upon the church as his church seeing that it was built upon his land. But the bishop's consent was also needed. It was for him to consecrate the altar and from him that the ordination of the destined incumbent had to be sought. He will not act unless a sufficient provision of worldly goods is secured for the priest. Here we see the origin of patronage. This "advowson" (*advocatio*), or right to present to the benefice, is in origin an ownership of the soil upon which the church stands and an ownership of the land or goods set apart for the sustenance of the priest who serves it. Obviously the sense of proprietorship engendered by this relation was very dangerous to peace and to ecclesiastical liberty. Where such advowsons rested in the hands of the clergy or monastic institutions, there was nothing very unseemly in the idea of the patron "owning" the church, its lands, and its resources. In point of fact a large and ever-increasing number of parish churches were made over to religious houses. The monks provided a "vicar" to discharge the duties of parish-priest, but absorbed the revenues and tithes, spending them no doubt for the most part in works of utility and charity. But while the idea of a bishop of Paderborn for example presenting a parish church to a monastery "*proprietary jure possidendum*", "to be held in absolute ownership", excites no protest, the case was different when laymen took back to their own use the revenues which their fathers had allocated to the parish-priest, or when kings began to assert a patronage over ancient cathedrals, or again when the emperor wanted to treat the Church Catholic as a sort of fief and private possession of his own.

In any case it is plain that the general tendency of the parochial movement, more especially when the churches originated in the private oratories of the landowners, was to take much of the control of church property out of the hands of the bishops. A canon of the Third Council of Toledo (589), re-enacted subsequently elsewhere, speaks very significantly in this connexion. "There are many", it says, "who against

the canonical rule, seek to get their own churches consecrated upon such terms as to withdraw their endowment (*dotem*) from the bishop's power of disposition. This we disapprove in the past and for the future forbid" (cf. Chalons in Mansi, X, 119). On the other hand many ordinances, for example that of the Council of Carpentras in 527 (Mansi, VIII, 707), make it quite clear that while the bishop's right was maintained in theory, the practice prevailed of leaving the offerings of the faithful to the church in which they were made so long as they were there needed. The payment of tithes, which seems first to have been put forward as a contribution of general obligation by certain bishops and synods in the sixth century (see Selborne, "Ancient facts and fiction", cap. xi), must have told in the same direction. It seems tolerably plain that this collection must always have been undertaken locally, and the threefold partition of tithes which is spoken of in the so-called "Capitulare episcoporum" and which reappears in the "Egbertine Excerptions" takes no account of any bishop's share. The tithes are to be devoted first to the upkeep of the church, secondly to the relief of the poor and of pilgrims, and thirdly to the support of the clergy themselves. Even if, according to the celebrated ordinance of Charlemagne in 778-9, the tithes which everyone was bound to give "were to be dispensed according to the bishop's commandment", local custom and tradition were everywhere placing checks upon any arbitrary apportionment. Usage varied considerably, but in almost all cases the resources so provided seem to have been expended parochially and not upon the general needs of the diocese.

It was in the ninth century particularly that not only in the matter of tithes but in the revenues of bishoprics and monasteries a general apportionment began to be arrived at. Both bishop and abbot had now become great personages, maintaining a certain state which could not be kept up without considerable expenditure. The common expenses of the diocese and the monastery tended more and more to become the private property of the bishop and the abbot. Disputes naturally arose, and before long there came a division of these resources. The bishop shared the revenues with the chapter and separate establishments, or *mensæ*, were created. Similarly the abbot lived apart from his monks and in a large measure the two systems became mutually independent. Naturally in the case of cathedral chapters the process of division went further and although the chapters still held property in common and administered it through a steward, or "oeconomus", each of the canons in the course of time acquired a separate prebend, the administration of which was left entirely in his hands. The same freedom was gradually conceded to parish-priests and other members of the clergy, once they had duly been put in possession of their benefices. To all intents and purposes it might be said that in the later Middle Ages the parish-priest, whether rector or vicar, had succeeded, so far as concerned the limits of his own jurisdiction, to the administrative duties formerly exercised by the bishop.

Still the old idea that all church property was "the patrimony of the poor" was not lost sight of. In theory always, and most commonly in practice, the rector collected the revenues of his benefice, his tithes and other dues and offerings in trust for the poor of the parish, reserving only what was necessary for his own reasonable support and for the maintenance of the church and its services. In England there was a general and well-understood rule that the rector of the parish kept the chancel of the church in repair, while the parishioners were bound to see that the nave and the rest of the fabric was maintained in proper condition (see Bishop Quivil's "Exeter Decrees", cap. ix; Wilkins, "Concilia", II, 138).

The long-protracted process of division and adjustment which led up to the comparatively stable and well-defined ownership of church property in the later Middle Ages was also, as might be expected, fertile in abuses. The impropriation of tithes by the monasteries set an example which unscrupulous and powerful laymen were not slow to follow, with more or less pretence of respecting the forms of law. Great landowners assuming patronal rights over the monasteries situated within their domains named themselves or other secular persons to be abbots and seized the revenues which the abbot separately enjoyed, while the patrons, or *advocati*, of individual parish churches were continually attempting to make simoniacal compacts with those whom they proposed to present to such benefices. But there can be no doubt that from the eleventh century onwards the more centralized government of the Church, as well as the marked progress made in the study of canon law, did much to check these abuses even during the worst times of the Great Schism.

Acquisition.—Turning from early history to questions of principle we find it laid down by the canonists that as regards the acquisition of property the Church stands on the same footing as any corporation or any private individual. There is nothing in the nature of things to prevent her from receiving legacies or gifts either of movable or immovable goods, and she may also allow her possessions to grow by investments, by occupation, by prescription, or by the emoluments resulting from any legitimate form of contract. Indeed if the civil power interferes substantially with the freedom of collecting alms and receiving donations the rights of the Church are thereby invaded. The laws which were enacted in the latter part of the thirteenth century both in England and in France to check the passing of property into "mortmain", were for this reason always regarded as wrong in principle, though the loss occasioned to the feudal lord by the cessation of reliefs, escheats, wardships, marriages, etc., when the land was made over to ecclesiastical uses could not be denied. No doubt this legislation of the civil power was in practice acquiesced in while licenses to acquire land in mortmain were obtainable without great difficulty upon adequate compensation being made (this was known in France as the *droit d'amortissement*, see Viollet, "Institutions politiques", II, 398-413), but the restrictions thus imposed were never accepted in principle. Such papal pronouncements as the "Clericis laicos" of Boniface VIII claimed that the Church possessed the right to acquire property by the donations of the faithful independently of any interference on the part of the State and that if compensation was made it should be done through the free action of the Holy See, in whom the dominion of all church goods ultimately rested, acting in willing response to any reasonable representations that might be addressed to it.

Later on and especially since the Reformation in countries where no state provision or endowment exists for the maintenance of the clergy, custom, generally endorsed by the enactments of provincial synods and the sanction of the Holy See, has introduced besides certain traditional *jura*, or rights, for spiritual services various exceptional methods of adding to the slender resources of the missions or stations: Such are for example bench-rents or charges for more advantageous seats, collections, charity sermons, and out-door collections made from house to house. At the same time the dangers of abuse in this direction are jealously watched. It is particularly insisted upon that there should be a sufficiency of free seats to allow the poor readily to discharge the obligation of attending Sunday Mass. The bishops are charged to see that bazaars and entertainments got up for church purposes are not

occasion of scandal. In particular any refusal of the sacraments to the sick and dying on the ground of a neglect to contribute to the support of the mission is severely condemned. So also are certain unseemly methods of soliciting alms, as for example when the priest quits the altar during the celebration of Mass to go round the church to make the collection himself or when promises of Masses and other spiritual favours in return for contributions are conspicuously made in the advertisement sheets of public journals or when the names of particular singers are placarded as soloists in the music performed at liturgical functions (cf. Laurentius, "Juris eccles. inst.", 640). In the past certain definite forms of alms were recognized as the ordinary sources through which the possessions of the Church were acquired. A word may be said upon some of the more noteworthy of these.

(1) *Firstfruits*.—The offering of firstfruits which we meet in the Old Testament (Ex., xxiii, 16; xxxiv, 22; Deut., xxvi, 1–11) seems to have been taken over as a traditional means of contributing to the support of the pastors of the Church by the early Christians. It is mentioned in the "Didache", the "Didascalia", "Apostolic Constitutions", etc., but though for a while it was customary to make some similar contributions in kind at the Offertory of the Mass (a late mention may be found in the Council of Trullo in Mansi, "Concilia", XI, 956) still the practice gradually fell into disuse or took some other form, e. g. that of tithes, more particularly perhaps the "small tithes", sometimes known as "altalage".

(2) *Tithes*.—This also was an Old-Testament ordinance (see Deut., xiv, 22–7) which many believe to have been identical in origin with firstfruits. Like the latter due, tithes were probably taken over by the early Christian Church at least in some districts, e. g. Syria. They are mentioned in the "Didascalia" and the "Apostolic Constitutions", but there is very little to show that the payment was at first regarded as of strict obligation. Still less can we be certain that there was continuity between the usage referred to in the Eastern Church of the fourth century and the institution which, as already mentioned above, we find described by the Council of Mâcon in 585. (See TITHES.)

(3) *Dues*, rather ill-defined and still imperfectly understood, which were known to the Anglo-Saxons as "church-shot". We meet them first in the laws of King Ine in 693, but they continued throughout all the Anglo-Saxon period and later. This is commonly considered to have been a contribution not paid according to the wealth and quality of the person paying it, but according to the value of the house in which he was living in the winter and identical with the see dues (*cathedraicum*) of a later age (see Kemble, "Saxons in England", II, 559 sq.). Other dues equally difficult to identify with exactness were the "light-shot" and the "soul-shot". Thus we find among the canons passed at Eynsham in 1009 such an ordinance as the following: "Let God's rights be paid every year duly and carefully, i. e. plough-alms 15 nights after Easter, tithe of young by Pentecost and of all fruits of the earth by All Hallows Mass (Nov. 1). And the Rome-fee by Peter's Mass (Aug. 1). And the Church-shot at St. Martins Mass (Nov. 11) and light-shot thrice a year, and it is most just that the men pay the soul-shot at the open grave."

(4) *Funeral Dues*.—The last-mentioned contribution of "soul-shot", the precise signification of which is imperfectly understood, is typical of a form of offering which at many different epochs has been a recognized source of income to the Church. Even if we look upon the payments to certain clerks prescribed by Justinian (Novel., lix) as a fee for a material service rendered, rather than an offering to the Church, still from the time of the Council of Braga

(can. xxi in Mansi, IX, 779) in 563, such money contributions though quite voluntary were constantly made in connexion with funerals. In medieval England the mortuary in the case of a person of knightly dignity commonly took the form of his war-horse with all its trappings. The horse was led up the church at the Offertory and presented at the altar rails. No doubt it was afterwards sold or redeemed for a money payment.

(5) *Ordination Dues and other Offerings in connexion with the Sacraments*.—Just as it is recognized that Mass stipends, supposing the conditions to be observed which custom and ecclesiastical authority prescribe, may be accepted without simony, so at almost all periods of the Church's history offerings have been made in connexion with the administration of the sacraments. One of the commonest of these was the payment made to a bishop by the newly-ordained at the time of ordination. Though in the end prohibited by the Council of Trent (Sess. XXI, de ref., cap. i), such offerings had been customary from quite early ages. In some localities a payment was made at the time of the annual confession, but the dangers of abuse in this case were obvious and many synods condemned the practice. Less difficulty was felt in the case of baptism and matrimony and the exaction of such dues from those who can afford it may almost be described as general in the Church.

(6) *Investments and Landed Property*.—But the most substantial source of revenue, and one that in view of the precarious nature of all other offerings may be considered as necessary to the Church's well-being, is land, or in more modern times investments bearing interest. Even before the toleration edict of Milan (313), it is clear from the restitution there spoken of that the Church must have owned considerable landed possessions, and from that time forward donations and legacies of property yielding annual revenues naturally multiplied. As already pointed out, the Church's right to receive such donations whether by will or *inter vivos* was repeatedly acknowledged and confirmed. In medieval England it was usual by way of symbolical investiture, by which possession was given to the Church, to lay some material object upon the altar, for example a book, or parchment deed, or a ring, or most frequently of all a knife. This knife was often broken by the donor before it was laid upon the altar (see Reichel, "Church and Church Endowments" in "Transactions of the Devonshire Association", XXXIX, 1907, 377–81).

The modern exponents of the canon law, basing their teaching on the pronouncements of the Holy See and the decrees of provincial synods, lay great stress upon the principle that the offerings of the faithful are to be expended according to the intention of the donors. They also insist that where that intention is not clearly made known certain reasonable presumptions must be followed; for example in missionary centres where a church has not yet been built and organized donations are presumed to be made in view of the ultimate erection of such a church. So again money given at the Offertory in any quasi-parochial church, or collected by the faithful from house to house is not to be considered as a personal gift to the priest in charge but as intended for the support of the mission. Certain difficult questions which arise with regard to such contributions of the faithful in places where parochial duties are undertaken by the religious orders are legislated for in the Constitution "Romanos pontifices" (q. v.) of Leo XIII, 8 May, 1881.

Foundations.—By these are understood a transference of property to the Church or to some particular ecclesiastical institute in view of some service or work to be done either perpetually or for a long time. They are not valid until they are formally accepted, and for

that purpose they have to be approved by the bishops and for all institutions under their jurisdiction. It is for the bishop to decide whether the endowment is sufficient for the charge, but the foundation once made, especially when the interests of a third party are involved, the conditions cannot ordinarily be changed, at least without appeal to the Holy See. In particular where a charge of Masses to be said has been accepted, and the foundation no longer meets that charge, application must be made to the Holy See before the number can be reduced.

Alienation.—That the Church herself has the right to alienate ecclesiastical property follows as a consequence of the complete ownership by which she holds it, and for the same reason in the exercise of this right she is entirely independent of the civil authority. Still as the Church is only a *persona moralis*, she is in the position of a minor, and disposes of her property through her prelates and administrators. No one of these, not even the pope, has the power to alienate ecclesiastical property validly, without some proportionate reason (Wernz, "Jus Decret.", III, i, 179). Further, the alienation, which in accordance with numberless decrees and canons of synods (see the second part of the Decret., C. xii, q. 2, canons 20, 41, 52) is thus forbidden, comprehends not only the transference of the ownership of church goods but also all proceedings by which the property is burdened, e. g., by mortgages, or lessened in value or exposed to the risk of loss, or by which its revenues are for any notable time diverted from their proper uses. It is to this inalienability of all the possessions of the Church, which like the "hand of a dead man" never loosens its grip of what it once has clutched, that the prejudice already referred to against property held in "mortmain" grew up in the thirteenth century.

Still the prohibition of alienation is not absolute. It is prohibited only when done without just reason and without the requisite formalities. As "just reasons" the canonists recognize: (1) urgent necessity, for example, when a church is in debt and has no other means of raising the money needed; (2) manifest utility, such as may occur when an opportunity presents itself of acquiring a much-desired piece of land on exceptionally advantageous terms; (3) piety, e. g., if church goods are sold to ransom captives or to feed the starving poor; and (4) convenience, as in the case when the upkeep of certain possessions involves more trouble than they are worth. Besides a just reason, there is required, for the alienation of immovable goods (such as lands, houses, stock and other titles and rent-bearing investments) and movable goods of value, the observance of certain formalities. We may enumerate: (1) the preliminary discussion (*tractatus*), e. g., between the bishop and the chapter; (2) the consent of the bishop in those matters in which it is required; (3) a formal mandate for the act of alienation issued by competent authority, e. g., the vicar-general if he is empowered to do this; (4) the formal consent of interested parties and in many cases of the cathedral chapter.

Finally the important constitution "Ambitosæ" of Paul II, confirmed by Urban VIII, 7 Sept., 1624, and by Pius IX in the Constitution "Apostolicæ Sedis", 12 Oct., 1869, requires under penalty of excommunication the consent of the Holy See for the alienation of immovable property of great value. At one time it was contended that the Constitution "Ambitosæ" had fallen into desuetude, but most canonists hold that in the face of the "Apostolicæ Sedis" this cannot now be maintained (see e. g., Wernz, III, n. 165, Sägmüller, 879). Still the requirements of the "Ambitosæ" are much mitigated in practice by the faculties commonly conceded to bishops by the Holy See for ten years at a time to authorize the alienation of church property up to a not inconsiderable amount. In the United States the Third Plenary Council of

Baltimore (1884) laid down that all acts of alienation or any equivalent disposition of property involving a sum greater than \$5000 required papal permission, the consent of the diocesan consultors having been previously obtained. But, as the Plenary Council of Latin-America in 1899 (n. 870) also points out, "much depends on circumstances of time and place in deciding what ought to be regarded as property of small value [*valor exiguus*], hence in this matter a decision to meet the case ought to be obtained by each country separately from the Apostolic See."

It will be readily understood that all forms of hypothecation or the raising of money upon the security of church property must be regarded as subject to the same conditions as alienation. In cap. iii, X, de pign. iii, 21, the "Corpus Juris" has preserved a decretal of Alexander III addressed to the Bishop of Exeter and deciding that in a case where the parish-priest had pawned a silver chalice and a Breviary and had died before redeeming them, his heirs were to be compelled under pain of excommunication to recover and restore the property to the church to which it belonged.

Prescription.—With regard to prescription, also, ecclesiastical property has special privileges. Amongst private individuals the canon law recognized that possession with an unchallenged title for ten, twenty, or at most thirty years suffices to confer ownership, but in the case of immovable church property forty years are required, and against the Holy See one hundred years. As to the much controverted question regarding the true owner (*subjectum domini*) of ecclesiastical property, the more approved view at the present day looks upon each institution as the proprietor of the goods belonging to it, but always in subordination to the supreme jurisdiction vested in the Holy See (Wernz, "Jus Decretalium", III, n. 138). As Wernz forcibly argues, if the Universal Church were itself the proprietor it would also be bound by all the debts by which any and every ecclesiastical institution was burdened. But neither the Universal Church nor the Holy See have ever admitted such an obligation, neither have they ever declared that one institution was liable for the debts incurred by another. At the same time, if the aim and purpose of any particular ecclesiastical institution comes to an end, and its moral personality is destroyed, its property passes by right to the ownership of the Universal Church, of which the institution in question was by supposition a member or part. Further, since it is in virtue of its connexion with the Universal Church that the right of acquiring and owning property belongs to any ecclesiastical organization, it is commonly held that if it revolt from the obedience of the Church and apostatize from the Catholic Church it has no longer any claims to the property which it originally acquired for Catholic purposes as a member of the Church.

Upon the principle that the civil power, as such, has neither the supreme dominion nor any just control over the administration of ecclesiastical property, except in so far as the Church by concordats or other agreements may freely concede certain powers to the State, all approved writers within the Church are agreed. Neither can there be any question that the Decree of the Council of Trent (Sess. XXII, de ref., cap. ii), upheld by the Constitution "Apostolicæ Sedis" of Pius IX, which pronounces an excommunication and other censures against the usurpers of church goods, is still in full vigour. It must be plain, then, that the recent wholesale confiscations in Italy, France, and other countries, have given rise to a vast number of very difficult questions as to the extent to which those who in various ways have participated in these confiscations are subject to the censures pronounced against the usurpers of the Church's goods. The position of those who participate in the act of spoliation by aid, counsel, or favour, in the case of the

ecclesiastical property of the Papal States, is different from those who co-operate in the same way elsewhere. The Encyclical "Rescriptum" of 1 Nov., 1870, dealing with the former class clearly extends the excommunication to all who co-operate, whereas in France and elsewhere offenders fall only under the common law of the Church, and by this, those who merely take part in the liquidation of property, or act as clerks, for instance, in the proceedings, do not seem to incur the censures, but only those who are the actual spoliators and usurpers of the property or those who order and plan it; the law affects, in other words, the principals and not those who are merely accessories. The question of the application of these censures is very fully discussed, amongst other recent authorities, by Card. Gennari (Consultations, I) and by the Abbé Boudinhon in the "Canoniste Contemporain" (March, 1909-Oct., 1910).

Apart from such determined acts of spoliation as those which followed the occupation of Rome (1870) and the recent Associations and Separation Laws in France, the clergy are generally instructed to comply, as far as may be possible without sacrifice of principle, with the requirements of the civil law, if only in the interest of the property of which they are the administrators. These and similar points are dwelt upon in the Decrees of the Second Plenary Council of Westminster (1885), which dealt at some length with the question of ecclesiastical property. For example, the Fathers of the Council direct that "no administrator of a mission should draw up any legal document concerning church property, without the express authority of the bishop, who will not fail to consult lawyers most skilled in these matters, and subject everything to the most careful revision". So, too, it directs that "all buildings belonging to a mission should be most carefully insured against fire", and lays down rules as to the destination of Mass offerings, stole fees (*jura stolæ*), etc.

For Ireland some similar regulations were made in the Maynooth Synod of 1875, and we may note how the synod, after directing that a two-fold inventory of church property should be made, one copy to be kept by the bishop in the diocesan archives and the other to be kept among the parish records, lays down the following wise rules respecting the requirements of the civil law: "Lest ecclesiastical property fall into other hands on account of the defects of the law, the bishop will take heed that the titles or deeds may be accurately drawn up according to the civil law and in the name of three or four trustees (*curatorum*). The trustees are to be the bishop of the diocese, the parish-priest or other whose property is concerned, the vicar-general or other person, prudent, well known for uprightness, and for being versed in matters of this sort. These trustees should meet once a year, so as to provide for the security of the aforesaid goods. And if one of them die the others are bound to appoint another in his place. All bishops or priests having possession or administration in any way of such property are bound to make their wills, and these wills are to be kept by the bishop; and to no one in extremis will the last sacraments be given unless he makes his will or promises to do so."

The great and classical work dealing with the whole question of church property is THOMASSIN, *Vetus et nova ecclesiæ disciplina circa beneficia et beneficiarios*, of which several editions have been published, including one at least in French. All the more copious treatises upon canon law, such as those of PHILLIPS, VERNING, SCHMALZGRÜBER, necessarily deal with the matter at some length, and among modern authorities special mention should be made of WERNZ, *Jus Decretalium*, III (Rome, 1908); SÄGMÜLLER, *Kirchenrecht* (Freiburg, 1909); LAURENTIUS, *Instit. juris eccl.* (Freiburg, 1908); also MAMACHI, *Del diritto libero della chiesa di acquistare e possedere beni temporali* (Venice, 1766); MEURER, *Der Begriff und Eigentümer der heiligen Sachen* (Düsseldorf, 1885); BONDRIT, *De capacitate possidendi ecclesiæ* (Louvain, 1900); SCHEYS, *De jure ecclesiæ acquirendi* (Louvain, 1892); KNECHT, *System des justinianischen Kirchenvermögensrechts* (Stuttgart, 1905); MOUTART, *L'église et l'état* (Paris, 1902); GENNARI, *Consultations de morale, de droit canonique et de liturgie*

(1907-9); BOUDINHON, *Biens d'église et peines canoniques, in Canoniste contemporain* (April, 1909-Oct., 1910); FOURNERET in *Dict. de théol. Cath.*, s. v. *Biens ecclésiastiques*; TAUNTON, *Law of the Church* (London, 1905).

HERBERT THURSTON.

Property Ecclesiastical, IN THE UNITED STATES.—The Third Plenary Council of Baltimore decreed (tit. IX, cap. i, n. 264): "We must hold, holily and inviolably, that the complete right of ownership and dominion over ecclesiastical goods resides in the Church." In English-speaking countries, however, the State as a rule does not recognize this inherent right of the Church, but claims for itself the supreme dominion over temporal possessions. "The State refuses to recognize the Church as an actual corporation with the power of holding property in her own name; hence the civil power deals only with specific individuals" (Taunton, op. cit. infra, p. 310). The fathers of the Third Plenary Council of Baltimore say on this subject: "On account of the grave dangers to which temporal goods are often exposed when bishops are not allowed to control them according to the prescriptions of the Church, it is much to be regretted that in many parts of the United States the civil laws concerning the possession and administration of temporal goods rest upon principles which the Church cannot admit without departing from the rule which she has always held from the time when she first became free to put her religious principles into practice" (tit. IX, cap. ii, n. 266). The many painful incidents arising in the United States from insecure methods of holding ecclesiastical property (schism, usurpation of church goods, etc.) caused the bishops to make stringent rules for safeguarding ecclesiastical possessions. Dissensions frequently arose owing to the abuse of power by lay trustees (see TRUSTEE SYSTEM), in whose name the property was often held.

The various councils of Baltimore endeavoured to find a remedy for this deplorable state of things. The First Provincial Council (n. 5) declared that no church should be erected or consecrated unless (where possible) it had first been deeded to the bishop (*instrumento scripto assignata*). Administrators of temporal goods were exhorted to observe the prescriptions of the Council of Trent concerning church property. The Third Provincial Council (n. 43) says: "We admonish bishops, priests and all others who have care of movable or immovable property given for ecclesiastical uses, to take measures as soon as possible to secure the carrying out of the intentions of the donors, according to the safest method prescribed by the civil laws in the various States." The Fourth Council adds (n. 56): "that if this security can be obtained in no other way, then the property is to be handed on by means of last wills and testaments, drawn up according to the provisions of the civil law". In 1840 Propaganda issued a decree that each bishop should make some fellow-bishop his heir, and that, on the death or resignation of the former, the latter should then hand over the property to the new bishop. This condition was not, however, to be expressed in the testament, but signified in writing to the chosen heir, who was then to burn the letter. The fathers of the Fifth Provincial Council asked for a modification of this decree, as the laws of various states would make it difficult of execution; they desired that each bishop, within three months after his consecration, should make a will and deposit a duplicate of it with the archbishop (n. 59). The First Plenary Council of Baltimore occupied itself with the vexed question of church property, decreeing: "We warn priests who administer churches, the title to which has been given to the bishop, not to constitute lay-trustees without episcopal sanction, or permit them to be elected by the faithful, lest an impediment arise to their free administration" (n. 94). In like manner, the Second Plenary Council made new de-

crees concerning church property. The Fathers of this council seem to have been hopeful that the prescriptions of canon law would find free play in the United States. They say: "In these United States it is the right of all citizens to live freely according to the precepts of their religion, and as the civil laws recognize and declare the same, it seems that there is no obstacle to the exact observance of the laws decreed by councils and popes for the legitimate acquisition and preservation of ecclesiastical property, the Fathers desire, therefore, that the right of the Church be vindicated in the eyes of all and publicly before the State, so that Catholics may be allowed to observe the laws of the Catholic Church in acquiring, holding and preserving ecclesiastical goods, such as lands for church edifices, presbyteries, schools, cemeteries etc. This complete liberty, however, can be said to exist only when the laws and ordinances of the Church are recognized by the civil tribunals and thus receive civil effect. By such provisions the rights of all will be preserved, possible abuses will be obviated, and the power of the bishops, instead of being increased, will rather be diminished by the regulations made by the Church herself. For, at present, in order to obtain protection from the improper interference of lay tribunals, which in practice scarcely acknowledge the ecclesiastical laws, nothing now remains to the bishops for carrying out ecclesiastical decrees but to claim for themselves the fullest administration of property before the civil power. As, however, church regulations are not acknowledged as yet in some States, it is our duty to see that in those places where no provision has been made by the civil law, the impediments to the liberty of the Church and to the security of ecclesiastical property be removed or diminished" (tit. IV, cap. i, nn. 199, 200). The council then lays down regulations regarding lay trustees.

The Third Plenary Council (tit. IX, cap. ii, nn. 267-8) defined more exactly what was meant by secure methods of ownership according to civil law, directing that: (1) The bishop himself be constituted a corporation sole for possessing and administering the goods of the whole diocese; or (2) that the bishop hold the goods in trust in the name of the diocese; or (3) that the bishop hold and administer the church property in his own name (in fee simple) by an absolute and full legal title. In the last case, the bishop is to remember that, though before the civil law he is the absolute owner, yet by the sacred canons he is only procurator. By whichever title the bishop holds the property, he is to keep inventories, carefully distinguishing between the church property and his own personal property. Since the Third Plenary Council the question of holding church property has more than once been discussed by the American bishops, and at the present time, in addition to the fee simple and the corporation sole methods, a modified system of the trustee method has found considerable favour. Concerning this, the "St. Paul Catholic Bulletin", says (I, no. 20): "Not only is it not true that the archbishops (at their meeting in 1911) discouraged the holding of church property by local churches, but on the contrary, they declared it to be the very best solution of the problem under consideration. And while in some States, owing to peculiar legislative enactments, other methods of holding church property are in vogue, yet it was admitted by the assembled prelates that the holding of church property by local parish corporations was by far the safest method. In the Archdiocese of St. Paul, each church is incorporated separately and independently of all others. Members of this corporation are ex-officio the Ordinary of the Diocese, his vicar-general, and the pastor of the parish, who select two laymen from the parish to represent the congregation. In addition to these separate parochial corporations, there is a general

diocesan corporation known as 'The Diocese of St. Paul', in which is invested the control of all the property belonging to the diocese, not directly controlled by the aforesaid parish corporations." The laws of the Church are fully observed, as the bishop of the diocese exercises sufficient control over all the property; without him, the other members of the corporation can take no action binding in law, and he assumes no unreasonable obligations inasmuch as he himself is powerless to act without the consent and co-operation of the others. Dr. P. A. Baart ("Catholic Fortnightly Review", XIV, no. 4) says: "The Church, through the Sacred Congregation of Propaganda, whose decision and decree were approved by the Pope, has declared that the corporation system which recognizes the rights of the hierarchy is preferable to the fee simple tenure by the bishops as individuals before the civil law."

WILLIAM H. W. FANNING.

Prophecy.—MEANING.—As the term is used in mystical theology, it applies both to the prophecies of canonical Scripture and to private prophecies. Understood in its strict sense, it means the foreknowledge and foretelling of future events, though it may sometimes apply to past events of which there is no memory, and to present hidden things which cannot be known by the natural light of reason. St. Paul, speaking of prophecy in I Cor., xiv, does not confine its meaning to predictions of future events, but includes under it Divine inspirations concerning what is secret, whether future or not. As, however, the manifestation of hidden present mysteries or past events comes under revelation, we have here to understand by prophecy what it is in its strict and proper sense, namely, the revelation of future events. Prophecy consists in knowledge and in the manifestation of what is known. The knowledge must be supernatural and infused by God because it concerns things beyond the natural power of created intelligence; and the knowledge must be manifested either by words or signs, because the gift of prophecy is given primarily for the good of others, and hence needs to be manifested. It is a Divine light by which God reveals things concerning the unknown future and by which these things are in some way represented to the mind of the prophet, whose duty it is to manifest them afterwards to others.

DIVISION.—Writers on mystical theology consider prophecies with reference to the illumination of the mind, to the objects revealed, and to the means by which the knowledge is conveyed to the human mind. By reason of the illumination of the mind prophecy may be either perfect or imperfect. It is called perfect when not only the thing revealed, but the revelation itself is made known, that is, when the prophet knows that it is God who speaks. The prophecy is imperfect when the recipient does not know clearly or sufficiently from whom the revelation proceeds, or whether it is the prophetic or individual spirit that speaks. This is called the prophetic instinct, wherein it is possible that a man may be deceived, as it happened in the case of Nathan who said to David when he was thinking of building the Temple of God: "Go, do all that is in thy heart, because the Lord is with thee" (II Kings, vii, 3). But that very night the Lord commanded the Prophet to return to the king and say that the glory of the building of the temple was reserved, not for him, but for his son. St. Gregory, as quoted by Benedict XIV, explains that some holy prophets, through the frequent practice of prophesying, have of themselves predicted some things, believing that therein they were influenced by the spirit of prophecy.

By reason of the object there are three kinds of

prophecy according to St. Thomas (Summa, II-II, Q. clxxiv, a. 1): prophecy of denunciation, of foreknowledge, and of predestination. In the first kind God reveals future events according to the order of secondary causes, which may be hindered from taking effect by other causes which would require a miraculous power to prevent, and these may or may not happen, though the prophets do not express it but seem to speak absolutely. Isaias spoke thus when he said to Ezechias: "Take order with thy house, for thou shalt die, and not live" (Is., xxxviii, 1). To this kind belongs the prophecy of promise, as that mentioned in I Kings, ii, 30: "I said indeed that thy house, and the house of thy father should minister in my sight, for ever", which was not fulfilled. It was a conditional promise made to Heli which was dependent upon other causes which prevented its fulfilment. The second kind, that of foreknowledge, takes place when God reveals future events which depend upon created free will and which He sees present from eternity. They have reference to life and death, to wars and dynasties, to the affairs of Church and State, as well as to the affairs of individual life. The third kind, the prophecy of predestination, takes place when God reveals what He alone will do, and what He sees present in eternity and in His absolute decree. This includes not only the secret of predestination to grace and to glory, but also those things which God has absolutely decreed to do by His own supreme power, and which will infallibly come to pass.

The objects of prophecy may also be viewed in respect to human knowledge: (1) when an event may be beyond the possible natural knowledge of the prophet, but may be within the range of human knowledge and known to others who witness the occurrence, as, for instance, the result of the battle of Lepanto revealed to St. Pius V; (2) when the object surpasses the knowledge of all men, not that it is unknowable but that the human mind cannot naturally receive the knowledge, such as the mystery of the Holy Trinity, or the mystery of predestination; (3) when the things that are beyond the power of the human mind to know are not in themselves knowable because their truth is not yet determined, such as future contingent things which depend upon free will. This is regarded as the most perfect object of prophecy, because it is the most general and embraces all events that are in themselves unknowable.

God can enlighten the human mind in any way He pleases. He often makes use of angelic ministry in prophetic communications, or He Himself may speak to the prophet and illuminate his mind. Again the supernatural light of prophecy may be conveyed to the intellect directly or through the senses or the imagination. Prophecy may take place even when the senses are suspended as in ecstasy, but this in mystical terminology is called rapture. St. Thomas teaches that there is no suspension of the sense activities when anything is presented to the mind of the prophet through impressions of the senses, nor is it necessary when the mind is immediately enlightened that activity of the senses should be suspended; but it is necessary that this should be the case when the manifestation is made by imaginative forms, at least at the moment of the vision or of the hearing of the revelation, because the mind is then abstracted from external things in order to fix itself entirely on the object manifested to the imagination. In such a case a perfect judgment cannot be formed of the prophetic vision during the transport of the soul, because then the senses which are necessary for a right understanding of things cannot act, and it is only when a man comes to himself and awakens from the ecstasy that he can properly know and discern the nature of his vision.

RECIPIENT OF PROPHECY.—The gift of prophecy is an extraordinary grace bestowed by God. It has never been confined to any particular tribe, family, or class

of persons. There is no distinct faculty in human nature by which any normal or abnormal person can prophesy, neither is any special preparation required beforehand for the reception of this gift. Hence Cornely remarks: "Modern authors speak inaccurately of 'schools of prophets', an expression never found in the Scriptures or the Fathers" (Comp. Introduct. in N. T., n. 463). Neither was there ever any external rite by which the office of prophet was inaugurated; its exercise was always extraordinary and depended on the immediate call of God. The prophetic light, according to St. Thomas, is in the soul of the prophet not as a permanent form or habit, but after the manner of a passion or passing impression (Summa, II-II, Q. clxxi, a. 2). Hence the ancient prophets by their prayers petitioned for this Divine light (I Kings, viii, 6; Jer., xxxii, 16; xxiii, 2 sq.; xlii, 4 sq.), and they were liable to error if they gave an answer before invoking God (II Kings, vii, 2, 3).

Writing on the recipients of prophecy, Benedict XIV (Heroic Virtue, III, 144, 150) says: "The recipients of prophecy may be angels, devils, men, women, children, heathens, or gentiles; nor is it necessary that a man should be gifted with any particular disposition in order to receive the light of prophecy provided his intellect and senses be adapted for making manifest the things which God reveals to him. Though moral goodness is most profitable to a prophet, yet it is not necessary in order to obtain the gift of prophecy." He also tells us that the angels by their own natural penetration cannot know future events which are undetermined and contingent or uncertain, neither can they know the secrets of the heart of another, whether man or angel. When therefore God reveals to an angel as the medium through which the future is made known to man, the angel also becomes a prophet. As to the Devil, the same author tells us that he cannot of his own natural knowledge foretell future events which are the proper objects of prophecy, yet God may make use of him for this purpose. Thus we read in the Gospel of St. Luke that when the Devil saw Jesus he fell down before Him and, crying out with a loud voice, said: "What have I to do with thee, Jesus, Son of the most high God?" (Luke, viii, 28). There are instances of women and children prophesying in Holy Scripture. Mary, the sister of Moses, is called a prophetess; Anna, the mother of Samuel, prophesied; Elizabeth, the mother of John the Baptist, by a Divine revelation recognized and confessed Mary as the Mother of God. Samuel and Daniel as boys prophesied; Balaam, a Gentile, foretold the advent of the Messiah and the devastation of Assyria and Palestine. St. Thomas, in order to prove that the heathens were capable of prophecy, refers to the instance of the Sibyls, who make clear mention of the mysteries of the Trinity, of the Incarnation of the Word, of the Life, Passion, and Resurrection of Christ. It is true that the Sibylline poems now extant became in course of time interpolated; but, as Benedict XIV remarks, this does not hinder much of them, especially what the early Fathers referred to, from being genuine and in no wise apocryphal.

That the gift of private prophecy exists in the Church is clear from Scripture and the acts of canonization of the saints in every age. To the question, what credence is to be given to these private prophecies, Cardinal Cajetan answers, as stated by Benedict XIV: "Human actions are of two kinds, one of which relates to public duties, and especially to ecclesiastical affairs, such as preaching, celebrating Mass, pronouncing judicial decisions, and the like; with respect to these the question is settled in the canon law, where it is said that no credence is to be publicly given to him who says he has privately received a mission from God, unless he confirms it by a miracle or a special testimony of Holy Scripture. The other class of human actions consists of those of private

persons, and speaking of these, he distinguishes between a prophet who enjoins or advises them, according to the universal laws of the Church, and a prophet who does the same without reference to those laws. In the first case every man may abound in his own sense whether or not to direct his actions according to the will of the prophet; in the second case the prophet is not to be listened to" (Heroic Virtue, III, 192).

It is also important that those who have to teach and direct others should have rules for their guidance to enable them to distinguish true from false prophets. A summary of those prescribed by theologians for our guidance may be useful to show practically how the doctrine is to be applied to devout souls in order to save them from errors or diabolical delusions: (1) the recipient of the gift of prophecy should, as a rule, be good and virtuous, for all mystical writers agree that for the most part this gift is granted by God to holy persons. The disposition or temperament of the person should also be considered, as well as the state of health and of the brain; (2) the prophecy must be conformable to Christian truth and piety, because if it propose anything against faith or morals it cannot proceed from the Spirit of Truth; (3) the prediction should concern things outside the reach of all natural knowledge, and have for its object future contingent things or those things which God only knows; (4) it should also concern something of a grave and important nature, that is something for the good of the Church or the good of souls. This and the preceding rule will help to distinguish true prophecies from the puerile, senseless, and useless predictions of fortune-tellers, crystal-gazers, spiritualists, and charlatans. These may tell things beyond human knowledge and yet within the scope of the natural knowledge of demons, but not those things that are strictly speaking the objects of prophecy; (5) prophecies or revelations which make known the sins of others, or which announce the predestination or reprobation of souls are to be suspected. Three special secrets of God have always to be deeply respected as they are very rarely revealed, namely: the state of conscience in this life, the state of souls after death unless canonized by the Church, and the mystery of predestination. The secret of predestination has been revealed only in exceptional cases, but that of reprobation has never been revealed, because so long as the soul is in this life, its salvation is possible. The day of General Judgment is also a secret which has never been revealed; (6) we have afterwards to ascertain whether the prophecy has been fulfilled in the way foretold. There are some limitations to this rule: (a) if the prophecy was not absolute, but containing threats only, and tempered by conditions expressed or understood, as exemplified in the prophecy of Jonas to the Ninivites, and that of Isaias to King Ezechias; (b) it may sometimes happen that the prophecy is true and from God, and the human interpretation of it false, as men may interpret it otherwise than God intended. It is by these limitations we have to explain the prophecy of St. Bernard regarding the success of the Second Crusade, and that of St. Vincent Ferrer regarding the near approach of the General Judgment in his day.

CHIEF PARTICULAR PROPHECIES.—The last prophetic work which the Church acknowledges as Divinely inspired is the Apocalypse. The prophetic spirit did not disappear with the Apostolic times, but the Church has not pronounced any work prophetic since then, though she has canonized numberless saints who were more or less endowed with the gift of prophecy. The Church allows freedom in accepting or rejecting particular or private prophecies according to the evidence for or against them. We should be slow to admit and slow to reject them, and in either case treat them with respect when they come to us from trustworthy sources, and are in accordance with Catholic doctrine and the rules of Christian morality.

The real test of these predictions is their fulfilment; they may be only pious anticipations of the ways of Providence, and they may sometimes be fulfilled in part and in part contradicted by events. The minatory prophecies which announce calamities, being for the most part conditional, may or may not be fulfilled. Many private prophecies have been verified by subsequent events, some have not; others have given rise to a good deal of discussion as to their genuineness. Most of the private prophecies of the saints and servants of God were concerned with individuals, their death, recovery from illness, or vocations. Some foretold things which would affect the fate of nations, as France, England, and Ireland. A great number have reference to popes and to the papacy; and finally we have many such prophecies relating to the end of the world and the approach of the Day of Judgment.

The more noteworthy of the prophecies bearing upon "latter times" seem to have one common end, to announce great calamities impending over mankind, the triumph of the Church, and the renovation of the world. All the seers agree in two leading features as outlined by E. H. Thompson in his "Life of Anna Maria Taigi" (ch. xviii): "First they all point to some terrible convulsion, to a revolution springing from most deep-rooted impiety, consisting in a formal opposition to God and His truth, and resulting in the most formidable persecution to which the Church has ever been subject. Secondly, they all promise for the Church a victory more splendid and complete than she has ever achieved here below. We may add another point in which there is a remarkable agreement in the *catena* of modern prophecies, and that is the peculiar connection between the fortunes of France and those of the Church and the Holy See, and also the large part which that country has still to play in the history of the Church and of the world, and will continue to play to the end of time."

Some prophetic spirits were prolific in the forecasts of the future. The biographer of St. Philip Neri states that if all the prophecies attributed to this saint were narrated, they alone would fill entire volumes. It is sufficient to give the following as examples of private prophecies.

(1) *Prophecy of St. Edward the Confessor.*—Ambrose Lisle Philipps in a letter to the Earl of Shrewsbury dated 28 October, 1850, in giving a sketch of English Catholic history, relates the following vision or prophecy made by St. Edward: "During the month of January, 1066, the holy King of England St. Edward the Confessor was confined to his bed by his last illness in his royal Westminster Palace. St. Ælred, Abbott of Recraux, in Yorkshire, relates that a short time before his happy death, this holy King was wrapt in ecstasy, when two pious Benedictine monks of Normandy, whom he had known in his youth, during his exile in that country, appeared to him, and revealed to him what was to happen in England in future centuries, and the cause of the terrible punishment. They said: 'The extreme corruption and wickedness of the English nation has provoked the just anger of God. When malice shall have reached the fulness of its measure, God will, in His wrath, send to the English people wicked spirits, who will punish and afflict them with great severity, by separating the green tree from its parent stem the length of three furlongs. But at last this same tree, through the compassionate mercy of God, and without any national (governmental) assistance, shall return to its original root, reflower and bear abundant fruit.' After having heard these prophetic words, the saintly King Edward opened his eyes, returned to his senses, and the vision vanished. He immediately related all he had seen and heard to his virgin spouse, Edgitha, to Stigand, Archbishop of Canterbury, and to Harold, his successor to the throne, who were in his chamber praying around his bed." (See "Vita beati Edwardi regis et

confessoris", from MS. Selden 55 in Bodleian Library, Oxford.)

The interpretation given to this prophecy is remarkable when applied to the events which have happened. The spirits mentioned in it were the Protestant innovators who pretended, in the sixteenth century, to reform the Catholic Church in England. The severance of the green tree from its trunk signifies the separation of the English Church from the root of the Catholic Church, from the Holy Roman See. This tree, however, was to be separated from its life-giving root the distance of "three furlongs". These three furlongs are understood to signify three centuries, at the end of which England would again be reunited to the Catholic Church, and bring forth flowers of virtue and fruits of sanctity. The prophecy was quoted by Ambrose Lisle Philipps on the occasion of the re-establishment of the Catholic hierarchy in England by Pope Pius IX in 1850.

(2) *Prophecies of St. Malachy*.—Concerning Ireland.—This prophecy, which is distinct from the prophecies attributed to St. Malachy concerning the popes, is to the effect that his beloved native isle would undergo at the hands of England oppression, persecution, and calamities of every kind, during a week of centuries; but that she would preserve her fidelity to God and to His Church amidst all her trials. At the end of seven centuries she would be delivered from her oppressors (or oppressions), who in their turn would be subjected to dreadful chastisements, and Catholic Ireland would be instrumental in bringing back the British nation to that Divine Faith which Protestant England had, during three hundred years, so rudely endeavoured to wrest from her. This prophecy is said to have been copied by the learned Benedictine Dom Mabillon from an ancient MS. preserved at Clairvaux, and transmitted by him to the martyred successor of Oliver Plunkett.

Concerning the Popes.—The most famous and best known prophecies about the popes are those attributed to St. Malachy (q. v.). In 1139 he went to Rome to give an account of the affairs of his diocese to the pope, Innocent II, who promised him two palliums for the metropolitan Sees of Armagh and Cashel. While at Rome, he received (according to the Abbé Cucherat) the strange vision of the future wherein was unfolded before his mind the long list of illustrious pontiffs who were to rule the Church until the end of time. The same author tells us that St. Malachy gave his MS. to Innocent II to console him in the midst of his tribulations, and that the document remained unknown in the Roman Archives until its discovery in 1590 (Cucherat, "Prop. de la succession des papes", ch. xv). They were first published by Arnold de Wyon, and ever since there has been much discussion as to whether they are genuine predictions of St. Malachy or forgeries. The silence of 400 years on the part of so many learned authors who had written about the popes, and the silence of St. Bernard especially, who wrote the "Life of St. Malachy", is a strong argument against their authenticity, but it is not conclusive if we adopt Cucherat's theory that they were hidden in the Archives during those 400 years.

These short prophetic announcements, in number 112, indicate some noticeable trait of all the future popes from Celestine II, who was elected in the year 1130, until the end of the world. They are enunciated under mystical titles. Those who have undertaken to interpret and explain these symbolical prophecies have succeeded in discovering some trait, allusion, point, or similitude in their application to the individual popes, either as to their country, their name, their coat of arms or insignia, their birth-place, their talent or learning, the title of their cardinalate, the dignities which they held etc. For example, the prophecy concerning Urban VIII is *Lilium et rosa* (the lily and the

rose); he was a native of Florence and on the arms of Florence figured a *fleur-de-lis*; he had three bees emblazoned on his escutcheon, and the bees gather honey from the lilies and roses. Again, the name accords often with some remarkable and rare circumstance in the pope's career: thus *Peregrinus apostolicus* (pilgrim pope), which designates Pius VI, appears to be verified by his journey when pope into Germany, by his long career as pope, and by his expatriation from Rome at the end of his pontificate. Those who have lived and followed the course of events in an intelligent manner during the pontificates of Pius IX, Leo XIII, and Pius X cannot fail to be impressed with the titles given to each by the prophecies of St. Malachy and their wonderful appropriateness: *Crux de cruce* (Cross from a Cross) Pius IX; *Lumen in caelo* (Light in the Sky) Leo XIII; *Ignis ardens* (Burning Fire) Pius X. There is something more than a coincidence in the designations given to these three popes so many hundred years before their time. We need not have recourse either to the family-names, armorial bearings or cardinalitial titles, to see the fitness of their designations as given in the prophecies. The afflictions and crosses of Pius IX were more than fell to the lot of his predecessors; and the more aggravating of these crosses were brought on by the House of Savoy whose emblem was a cross. Leo XIII was a veritable luminary of the papacy. The present pope is truly a burning fire of zeal for the restoration of all things in Christ.

The last of these prophecies concerns the end of the world and is as follows: "In the final persecution of the Holy Roman Church there will reign Peter the Roman, who will feed his flock amid many tribulations, after which the seven-hilled city will be destroyed and the dreadful Judge will judge the people. The End." It has been noticed concerning *Petrus Romanus*, who according to St. Malachy's list is to be the last pope, that the prophecy does not say that no popes shall intervene between him and his predecessor designated *Gloria olivæ*. It merely says that he is to be the last, so that we may suppose as many popes as we please before "Peter the Roman". Cornelius a Lapide refers to this prophecy in his commentary "On the Gospel of St. John" (C. xvi) and "On the Apocalypse" (cc. xvii-xx), and he endeavours to calculate according to it the remaining years of time.

(3) *Prophecy of St. Paul of the Cross*.—During more than fifty years this saint was accustomed to pray for the return of England to the Catholic Faith, and on several occasions had visions and revelations about its re-conversion. In spirit he saw the Passionists established in England and labouring there for the conversion and sanctification of souls. It is well known that several of the leaders of the Oxford Movement, including Cardinal Newman, and thousands of converts have been received into the Church in England by the Passionist missionaries.

There are many other private prophecies concerning the remote and proximate signs which will precede the General Judgment and concerning Antichrist, such as those attributed to St. Hildegard, St. Bridget of Sweden, Venerable Anna Maria Taigi, the Curé d'Ars, and many others. These do not enlighten us any more than do the Scriptural prophecies as to the day and the hour of that judgment, which still remains a Divine secret.

ARTHUR DEVINE.

Prophecy, Prophet, and Prophetess.—I. IN THE OLD TESTAMENT. A. *Introduction.*—Jahve had forbidden Israel all kinds of oracles in vogue among the pagans. If, for a time, he consented to reply by Urim and Thummim (apparently a species of sacred lots which the high-priest carried in the cincture of his ephod, and consulted at the request of the public authorities in matters of graver moment), yet He always abominated those who had recourse to divination and magic, practiced augury and enchantment, trusted in charms, consulted soothsayers or wizards, or interrogated the spirits of the dead (Deut., xviii, 9 sqq.). Speaking of orthodox Jahveism, Balaam could truthfully say "There is no soothsaying in Jacob, nor divination in Israel. In their times it shall be told to Jacob and to Israel what God hath wrought" (Num., xxiii, 23). For the absence of other oracles, the Chosen People were indeed more than compensated by a gift unique in the annals of mankind, to wit, the gift of prophecy and the prophetic office.

B. *General Idea and the Hebrew Names.* (1) *General Idea.*—The Hebrew Prophet was not merely, as the word commonly implies, a man enlightened by God to foretell events, he was the interpreter and supernaturally enlightened herald sent by Jahve to communicate His will and designs to Israel. His mission consisted in preaching as well as in foretelling. He had to maintain and develop the knowledge and practice of the Old Law among the Chosen People, lead them back when they strayed, and gradually prepare the way for the new kingdom of God, which the Messiah was to establish on earth. Prophecy, in general, signifies the supernatural message of the Prophet, and more especially, from custom, the predictive element of the prophetic message.

(2) *The Hebrew Names.*—The ordinary Hebrew word for prophet is *nābī'*. Its etymology is uncertain. According to many recent critics, the root *nābī'*, not employed in Hebrew, signified to speak enthusiastically, "to utter cries, and make more or less wild gestures", like the pagan mantics. Judging from a comparative examination of the cognate words in Hebrew and the other Semitic tongues, it is at least equally probable that the original meaning was merely: to speak, to utter words (cf. Laur, "Die Prophetennamen des A. T.", Fribourg, 1903, 14-38). The historic meaning of *nābī'* established by biblical usage is "interpreter and mouthpiece of God". This is forcibly illustrated by the passage, where Moses, excusing himself from speaking to Pharaoh on account of his embarrassment of speech, was answered by Jahve: "Behold I have appointed thee the God of Pharaoh: and Aaron thy brother shall be thy prophet. Thou shalt speak to him all that I command thee; and he shall speak to Pharaoh, that he let the children of Israel go out of his land" (Ex., vii, 1-2). Moses plays towards the King of Egypt the rôle of God, inspiring what is to be uttered, and Aaron is the Prophet, his mouthpiece, transmitting the inspired message he shall receive. The Greek *προφήτης* (from *πρό-φάναι*, to speak for, or in the name of some one) translates the Hebrew word accurately. The Greek prophet was the revealer of the future, and the interpreter of divine things, especially of the obscure oracles of the pythonesse. Poets were the prophets of the muses: Inspire me, muse, thy prophet I shall be" (Pindar, Bergk, Fragm. 127).

The word *nābī'* expresses more especially a function. The two most usual synonyms *rō'eh* and *hōzeh* emphasize more clearly the special source of the prophetic knowledge, the vision, that is, the Divine revelation or inspiration. Both have almost the

same meaning; *hōzeh* is employed, however, much more frequently in poetical language and almost always in connexion with a supernatural vision, whereas *rā'ah*, of which *rō'eh* is the participle, is the usual word for to see in any manner. The compiler of the first Book of Kings (ix, 9) informs us that before his time *rō'eh* was used where *nābī'* was then employed. *Hōzeh* is found much more frequently from the days of Amos. There were other less specific or more unusual terms employed, the meaning of which is clear, such as, messenger of God, man of God, servant of God, man of the spirit, or inspired man, etc. It is only rarely, and at a later period, that prophecy is called *nēbū'ah*, a cognate of *nābī'*;

THE GOODLY FELLOWSHIP OF THE PROPHETS
Fra Angelico and Signorelli, Cathedral of Orvieto

more ordinarily we find *hāzôn*, vision, or word of God, oracle (*ne'um*) of Jahve, etc.

C. *Brief Sketch of the History of Prophecy.*—

(1) The first person entitled *nābī'* in the Old Testament is Abraham, father of the elect, the friend of God, favoured with his personal communications (Gen., xx, 7). The next is Moses, the founder and lawgiver of the theocratic nation, the mediator of the Old Covenant holding a degree of authority unequalled till the coming of Jesus Christ. "And there arose no more a prophet in Israel like unto Moses, whom the Lord knew face to face, in all the signs and wonders, which he sent by him, to do in the land of Egypt to Pharaoh, and to all his servants, and to his whole land, and all the mighty hand, and great miracles, which Moses did before all Israel" (Deut., xxxiv, 10 sqq.). There were other Prophets with him, but only of the second rank, such as Aaron and Maria, Eldad and Medad, to whom Jahve manifested himself in dreams and vision, but not in the audible speech with which He favoured him, who was most faithful in all His house (Num., xii, 7).

Of the four institutions concerning which Moses enacted laws, according to Deuteronomy (xiv, 18-xviii), one was prophecy (xviii, 9-22; cf. xiii, 1-5, and Ex., iv, 1 sqq.). Israel was to listen to the true Prophets, and not to heed the false but rather to

extirpate them, even had they the appearance of miracle-workers. The former would speak in the name of Jahve, the one God; and foretell things that would be accomplished or be confirmed by miracles. The latter were to come in the name of the false gods, or teach a doctrine evidently erroneous, or vainly endeavour to foretell events. Later prophetic writers added as other signs of the false Prophets, cupidity, flattery of the people or the nobles, or the promise of Divine favour for the nation weighed down with crime. Balaam is both a Prophet and a soothsayer; a professional soothsayer it would seem, of whom Jahve makes use to proclaim even in Moab the glorious destiny of the Chosen People, when He was about to lead them into the Promised Land (Num., xxii-xxiv).

In the time of the Judges, in addition to an unnamed Prophet (Judges, vi, 8-10), we meet with Debhora (Judges iv-v), "a mother in Israel", judging the people, and communicating the Divine orders concerning the War of Independence to Barac and the tribes. The word of God was rare in those days of anarchy and semi-apostasy, when Jahve partly abandoned Israel to render it conscious of its feebleness and its sins. In the days of Samuel, on the contrary, prophecy became a permanent institution. Samuel was a new but lesser Moses, whose Divine mission it was to restore the code of the elder, and to supervise the beginning of the royalty. Under his guidance, or at least closely united to him, we find for the first time the *nebi'im* (I Sam., x; xix) grouped together to sing the praises of God to the accompaniment of musical instruments. They are not Prophets in the strict sense of the word, nor are they disciples of the Prophets destined to become masters in their turn (the so-called "schools of Prophets"). Did they wander about spreading the oracles of Samuel among the people? Possibly; at all events, in order to waken the faith of Israel and increase the dignity of Divine worship, they seem to have received charismata similar to those bestowed upon the early Christians in the Apostolic days. They may not ineptly be compared with the families of singers gathered around David, under the direction of their three leaders, Asaph, Heman, and Idithum (I Par., xxv, 1-8). Doubtless the *benê-nebi'im* of the days of Elias, and Eliseus the "disciples of the Prophets", or "members of the confraternities of the Prophets", forming at least three communities, domiciled respectively at Gilgal, Bethel, and Jericho, must be regarded as their successors. St. Jerome seems to have understood their character aright, when he saw in them the germ of the monastic life (P. L., XXII, 583, 1076).

Are we to consider as their degenerate and faithless successors those false Prophets of Jahve whom we meet at the Court of Achab, numbering four hundred, and later very numerous, also fighting against Isaias and Micheas and especially against Jeremias and Ezechiel? A definite answer cannot as yet be given, but it is wrong to consider them, as certain critics do, as authentic as the true Prophets, differing from them only by a more retrograde spirit, and less brilliant intellectual gifts. After Samuel the first Prophets properly so called who are explicitly mentioned are Nathan and Gad. They assist David by their counsels, and, when necessary, confront him with energetic protests. Nathan's parable of the little sheep of the poor man is one of the most beautiful passages in prophetic history (II Kings, xii, 1 sqq.). The Books of Kings and Paralipomenon mention a number of other "men of the spirit" exercising their ministry in Israel or in Juda. We may mention at least Ahias of Silo, who announced to Jeroboam his elevation to the throne of the Ten Tribes, and the ephemeral character of his dynasty, and Micheas, the son of Jemla, who pre-

dicted to Achab, in presence of the four hundred flattering court Prophets, that he would be defeated and killed in his war against the Syrians (III Kings, xxii).

But the two greatest figures of prophecy between Samuel and Isaias are Elias and Eliseus. Jahveism was again endangered, especially by the Tyrian Jezabel, wife of Achab, who had introduced into Samaria the worship of her Phœnician gods, and Israel's faith was tottering, as it divided its worship between Baal and Jahve. In Juda the danger was not less menacing, King Joram had married Athalia, a worthy daughter of Jezabel. At that moment Elias appeared like a mysterious giant, and by his preaching and his miracles led Israel back to the true God and suppressed, or at least moderated, their leaning towards the gods of Chanaan. At Carmel he won a magnificent and terrible victory over the Prophets of Baal; then he proceeded to Horeb to renew within him the spirit of the Covenant and to be present at a marvellous theophany; thence he returned to Samaria to proclaim to Achab the voice of justice calling out for vengeance for the murder of Naboth. When he disappeared in the fiery chariot, he left to his disciple Eliseus, with his mantle, a double share of his spirit. Eliseus continued the master's work against the Chanaanite idolatry with great success, and became such a bulwark to the Kingdom of the North, that King Joas wept for his death and took his farewell with these words: "My father! my father! chariot of Israel and its horsemen"! Not all the Prophets left their oracles in writing. Several of them, however, have written the history of their times. Gad and Nathan, for instance, the history of David; and Nathan that of Solomon; also Semeias and Addo the annals of Roboam; Jehu, son of Hanani those of Josaphat. . . . Is it possible that the historical books of Josue, Judges, Samuel, and Kings were called in the Jewish canon the "earlier Prophets" because of the belief that they were written by the Prophets or at least based on their writing? To this query there can be no solution.

(2) *Prophetic Writers*.—The prophetic books were entitled in the same canon the "later Prophets". Gradually the custom of calling their authors the prophetic writers crept in. There are four Greater Prophets, that is those whose works are of considerable length. Isaias, Jeremias, Ezechiel, and Daniel, and twelve Minor Prophets, whose works are briefer—Osee, Joel, Amos, Abdias, Jonas, Micheas, Nahum, Habacuc, Sophonias, Aggeus, Zacharias, and Malachias. The Book of Baruch, which is not included in the Hebrew canon, is united in our Bibles to the Book of Jeremias. The ministry of Amos, the most ancient perhaps of the prophetic writers, is placed about the years 760-50. Osee follows him immediately. Next come Isaias (about 740-700), and his contemporary Micheas. Sophonias, Nahum, and Habacuc prophesied towards the last quarter of the seventh century. Jeremias about 626-586; Ezechiel between 592-70. The prophecy of Aggeus and in part that of Zacharias are dated exactly in 520 and 520-18. Malachias belongs to the middle of the fifth century. As for Daniel, Abdias, Joel, Baruch, as well as portions of Isaias, Jeremias, Zacharias, their dates being disputed, it is necessary to refer the reader to the special articles treating of them.

(3) *The Prophetesses*.—The Old Testament gives the name *nebi'ah*, to three women gifted with prophetic charismata: Mary, the sister of Moses; Debhora; and Holda, a contemporary of Jeremias (IV Kings, xxii, 14); also to the wife of Isaias meaning the spouse of a *nabi'*; finally to Noadia, a false Prophetess if the Hebrew text is accurate, for the Septuagint and Vulgate speak of a false Prophet (Neh., vi, 14).

(4) *Cessation of Israelitic Prophecy.*—The prophetic institution had ceased to exist in the time of the Machabees. Israel clearly recognized this, and was awaiting its reappearance. Its necessity had ceased. Religious revelation and the moral code expressed in Holy Writ were full and clear. The people were being instructed by the scribes and doctors—a living magistracy, fallible, it is true, and bound overmuch by letter of the law, but withal zealous and learned. There was a feeling that the promises were about to be fulfilled and the consequent apocalypse increased and intensified this feeling. It was not unfitting, therefore, for God to allow an interval to elapse between the prophets of the Old Covenant and Jesus Christ, who was to be the crown and consummation of their prophecies.

D. *Vocation and Supernatural Knowledge of the Prophets.*—(1) *The Prophetic Vocation.*—"For prophecy came not by the will of man at any time: but the holy men of God spoke, inspired by the Holy Ghost" (II Pet., i, 21). The Prophets were ever conscious of this Divine mission. I am not a professional or a voluntary Prophet, Amos practically said to Amasias, who wished to prevent him from prophesying at Bethel. "I am a herdsman plucking wild figs. And the Lord took me when I followed the flock, and the Lord said to me: Go, prophesy to my people Israel" (vii, 14 sq.). Again "the lion shall roar, who will not fear? The Lord God hath spoken, who shall not prophesy?" (iii, 8). Isaiah saw Jahve seated on a throne of glory, and when a seraph had purified his lips he heard the command: "Go!" and he received his mission of preaching to the people the terrible judgments of God. God made known to Jeremiah that he had consecrated him from his mother's womb and appointed him the Prophet of nations; He touched his lips to show that He made them His instrument for proclaiming His just and merciful judgments (i, 10), a duty so painful, that the Prophet endeavoured to be excused and to conceal the oracles entrusted to him. Impossible; his heart was consumed by a flame, which forced from him that touching complaint: "Thou hast deceived me, O Lord, and I am deceived: thou hast been stronger than I, and thou hast prevailed" (xx, 7). Ezekiel sees the glory of God borne on a fiery chariot drawn by celestial beings. He hears a voice commanding him to go and find the children of Israel, that rebellious nation, with hardened heart and brazen face, and without prevarication deliver to them the warnings he was to receive.

The other Prophets are silent on the subject of their vocation; doubtless they also received it as clearly and irresistibly. To the preaching and predictions of the false Prophets uttering the fancies of their hearts and saying "the word of Jahve" when Jahve spoke to them not, they fearlessly oppose their own oracles as coming from heaven and compelling acceptance under penalty of revolt against God. And the manifest sanctity of their lives, the miracles wrought, the prophecies accomplished demonstrate to their contemporaries the truth of their claims. We also separated from them by thousands of years should be convinced by two irrefragable proofs among others: the great phenomenon of Messianism culminating in Christ and the Church, and the excellence of the religious and moral teaching of the Prophets.

(2) *Supernatural knowledge: inspiration and revelation.*—(a) *The fact of revelation.*—The Prophet did not receive merely a general mission of preaching or predicting in Jahve's name: each of his words is Divine, all his teaching is from above, that is, it comes to him by revelation or at least by inspiration. Among the truths he preaches, there are some which he knows naturally by the light of reason or experience. It is not necessary for him to learn them

from God, just as if he had been entirely ignorant of them. It suffices if the Divine illumination places them in a new light, strengthens his judgment and preserves it from error concerning these facts, and if a supernatural impulse determines his will to make them the object of his message. This oral inspiration of the Prophets bears an analogy to the Scriptural inspiration, in virtue of which the Prophets and hagiographers composed our canonical books.

The entire contents of the prophetic message is not, therefore, within the compass of the natural faculties of the Divine messenger. The object of all strictly so-called prediction requires a new manifestation and illumination; unaided the Prophet would remain in more or less absolute obscurity. This, then, is revelation in the full sense of the term.

(b) *Manner of the revelatory communications; Canons for the interpretation of the prophecies and their fulfilment.*—In the words of St. John of the Cross—and the doctors of mysticism have a special right to be heard in this matter—"God multiplies the means of transmitting these revelations; at one time he makes use of words, at another of signs, figures, images, similitudes; and, again, of both words and symbols together" (The Ascent of Carmel, II, xxvii): To grasp accurately the meaning of the Prophets and judge of the fulfilment of their predictions, these words must be remembered and completed: The material element perceived in the vision may have a strictly literal meaning and simply signify itself. When Micheas, the son of Jemla, beholds "all Israel scattered upon the hills, like sheep that have no shepherd", and hears Jahve say, "These have no master; let every man of them return to his house in peace" (III Kings, xxii, 17), he sees exactly what will be the outcome of Achab's expedition against the Syrians at Ramoth of Galaad. Again, the meaning may be entirely symbolic. The almond branch shown to Jeremiah (i, 11 sq.) is not shown for itself; it is intended solely to represent by its name *שִׁקְרָה* (vigilant), the Divine watchfulness, which will not allow the word of God to be unfulfilled. Between these two extremes there exists a whole series of intermediary possibilities, of significations imbued with varying degrees of reality or symbolism. The son promised to David in Nathan's prophecy (II Kings, vii) is at once Solomon and the Messianic king. In the last verse of Aggeus Zorobabel signifies himself and also the Messias.

Neither the Prophets nor their clear-sighted, sensible hearers were ever misled. It is wronging Isaiah to say he believed that at the end of time the hill of Sion would physically surpass all the mountains and hills on the earth (ii, 2). Examples might be multiplied indefinitely. Yet we are not forced to believe that the Prophets were always able to distinguish between the literal and the symbolical significations of their visions. It was sufficient for them not to give, and to be unable to give, in the name of God any erroneous interpretation. It has likewise been long known that the vision very frequently disregards distance of time and place, and that the Messias or the Messianic era almost always appears on the immediate horizon of contemporary history. If to this we add the frequently conditional character of the oracles (cf. Jer., xviii; xxiv, 17 sqq. etc.), and remember moreover that the Prophets convey their message in words of eloquence, expressed in Oriental poetry, so rich in striking colours and bold figures, the pretended distinction between realized and unrealized prophecies, predictions substantially accurate but erroneous in detail, will disappear.

(c) *State of the Prophet during the Vision.*—Ordinarily the vision occurred when the Prophet was awake. Dreams, of which the false Prophets made ill use, are scarcely ever mentioned in the case of the true Prophets. Much has been said about the

ecstatic state of the latter. Possibly the soul of the Prophet may have been at times, as happened to the mystics, so absorbed by the activity of the spiritual faculties that the activity of the senses was suspended, though no definite instance can be cited. In any case, we must remember what St. Jerome (In Isaiam, Prolog. in P. L., XXIV, 19) and St. John Chrysostom (In I Cor. homil. XXIX in P. G., LXI, 240 sqq.) remarked that the Prophets always retained their self-consciousness and were never subject to the disordered and degrading psychic conditions of the pagan soothsayers and pythias; and, instead of enigmatical and puerile sibylline oracles, their pronouncements were often sublime and always worthy of God.

E. The Teaching of the Prophets.—(1) The exterior form.—They usually taught orally. To this they often added symbolical acts which accorded with Oriental tastes and caught the attention of their hearers. Jeremias, for instance, wandered through Jerusalem under a wooden yoke, symbolizing the approaching subjugation of the nations by the King of Babylon. The false Prophet Hananias, having taken this yoke and broken it on the ground, receives this answer, in the name of Jahve "Thou hast broken chains of wood, and thou shalt make for them chains of iron" (xxviii, 13). Jeremias and Ezechiel make frequent use of this method of instruction. Amos was probably the first who was inspired to unite the written to the spoken word. His example was followed. The Prophets thus exercised wider and more lasting influence, and left moreover an indisputable proof that God had spoken by them (cf. Isaias, viii, 16). Some prophecies seem to have been made exclusively in writing, for instance, probably the second part of Isaias and all Daniel. The greater part of the prophetic books is couched in rhythmic language perfectly adapted to the popular and, at the same time, sublime character of the oracles. Hardly any kind of Hebrew poesy is absent; epithalamia and lamentations; little satirical songs; odes of wonderful lyricism etc. The fundamental law of Hebrew poetry, the parallelism of the stichs, is usually observed. The metric seems to be based essentially on the number of accents marking a raised intonation. Most exhaustive researches upon the construction of the strophes have been made, but without many definitely accepted conclusions.

(2) The Teaching.—(a) Preaching: religion and morals, in general.—Samuel and Elias sketch out the programme of the religious and moral preaching of the later Prophets. Samuel teaches that the idols are vanity and nothingness (I Kings, xii, 21); that Jahve alone is essentially true, and immutable (xv, 29); that He prefers obedience to sacrifice (xv, 22). For Elias also Jahve alone is God, Baal is nothing. Jahve chastises all iniquity and punishes the injustice of the powerful for the feeble. These are the fundamental points emphasized more and more by the prophetic writers. Their doctrine is based on the existence of one God alone, possessing all the attributes of the true Divinity—sanctity and justice, mercy and fidelity, supreme dominion over the material and moral world, the control of the cosmic phenomena and of the course of history. The worship desired by God does not consist in the profusion of sacrifices and offerings. They are nauseous to Jahve unless accompanied by adoration in spirit and in truth. With what greater indignation and disgust will He not turn away from the cruel or unclean practice of human sacrifice and the prostitution of sacred things so common among the neighbouring nations. On being asked with what one should approach and kneel before the Most High God, He replies by the mouth of Micheas: "I will show thee, O man, what is good, and what the Lord requireth of thee; Verily to do judgment, and

to love mercy, and to walk solicitous with thy God" (vi, 8). So religion joins morality, and formulates and imposes its dictates. Jahve will call the nations to account for violating the natural law, and Israel, in addition, for not observing the Mosaic legislation (cf. Amos, i-ii, etc.). And He will do this, so as to conciliate in a Divine manner the rights of justice with the realization of the promises made to Israel and mankind.

(b) Prophetic predictions. The Day of Jahve; the Saved; Messianism; Eschatology.—The constant subjects of the great prophetic predictions of Israel, the punishment of the guilty nations, and the realization for all of the ancient promises. Directly or indirectly all the prophecies are concerned with the obstacles to be removed before the coming of the new kingdom or with the preparation of the New and final Covenant. From the days of Amos, and clearly it was not even then a new expectation, Israel was awaiting a great day of Jahve, a day, which it deemed one of extraordinary triumph for it and its God. The Prophets do not deny, but rather declare with absolute certainty that the day must come. They dispel the illusions concerning its nature. For Israel, faithless and burdened with crimes, the day of Jahve will be "darkness and not light" (Amos, v, 18 sqq.). The time is approaching when the house of Jacob will be sifted among the nations as wheat is shaken in the sieve and not a good seed drops to the ground (ix, 9). Alas! the good seed is rare here. The bulk will perish. A remnant alone will be saved, a holy germ from which the Messianic kingdom will arise. The pagan nations will serve as sieves for Israel. But as they have wandered still further from the right path, the day of Jahve will come for them in turn; finally the remnant of Israel and the converts of the nations will unite to form a single people under the great king, the Son of David. The remnant of Ephraim or of Juda remaining in Palestine at the time of the Exile, the remnant returning from the Captivity to form the post-Exilic community, the Messianic kingdom in its militant state and its final consummation—all these stages of the history of salvation are mingled here and there in one prophetic view. The future life looms up but little, the oracles being addressed principally to the body of the nation, for which there is no future life. However, Ezechiel (xxxvii) alludes to the resurrection of the dead; the apocalypse of Isaias (xxvi, 19 sqq.) mentions it explicitly; Daniel speaks of a resurrection unto life everlasting and a resurrection unto eternal reproach (xii, 2 sq.). The broad daylight of the Christian Revelation is coming.

II. IN THE NEW TESTAMENT.—When this dawn is about to break, prophecy then long silent finds voices anew to tell the good tidings. Zachary and Elizabeth, Mary the Virgin-Mother, the old man Simeon and Anna the Prophetess are enlightened by the Holy Ghost and unfold the future. Soon the Precursor appears, filled with the spirit and power of Elias. He finds anew the accents of olden prophecy to preach penance and announce the coming of the kingdom. Then it is the Messiah in person who, long foretold and awaited as a Prophet (Deut., xviii, 15, 18; Is., xlix, etc.), does not disdain to accept this title and to fulfil its signification. His preaching and His predictions are much closer to the prophetic models than are the teachings of the rabbis. His great predecessors are far below Him as the servants are below the only Son. Unlike them He does not receive from without the truth which He preaches. Its source is within Him. He promulgates it with an authority thereunto unknown. His revelation is the definite message of the Father. To understand its meaning more and more clearly the Church which He is about to establish will have throughout all ages the infallible assistance of the Holy Ghost. However, during the Apostolic times,

God continues to select certain instruments like unto the Prophets of the Old Law to make known His will in an extraordinary manner and to foretell coming events: such, for instance, are the Prophets of Antioch (Acts, xiii, 1, 8), Agabus, the daughters of the Evangelist Philip, etc. And among the charismata (cf. Prat, "La théologie de Saint Paul", 1 pt., note H, p. 180-4) conferred so abundantly to hasten and fortify the incipient progress of the faith, one of the principal, next after the Apostolic, is the gift of prophecy. It is granted "unto edification, and exhortation, and comfort" (I Cor., xiv, 3). The writer of the "Didache" informs us that in his day it was fairly frequent and widespread, and he indicates the signs by which it may be recognized (xi, 7-12). Finally the Canon of the Scriptures closes with a prophetic book, the Apocalypse of St. John, which describes the struggles and the victories of the new kingdom while awaiting the return of its Chief at the consummation of all things.

Propositions Condemned. See CENSURES, THEOLOGICAL; EXCOMMUNICATION.

Proprium.—The *Proprium de tempore* and the *Proprium Sanctorum* form in the present liturgy the two principal portions of our Breviary and Missals; the first comprises the parts appointed for the days of the year having special Masses or Offices (introits, prayers, lessons, responses, versicles, antiphons, etc.); the second is devoted to the Offices of the Saints. The *Proprium de tempore* begins with the first Sunday of Advent and ends with the last Sunday after Pentecost. It includes, after Advent, the parts assigned for the Christmas season (six Sundays); Septuagesima, three weeks; Lent, six weeks; Paschal time, fifty days; Pentecost, and the twenty-four Sundays after. Most of the Sundays comprising this cycle, and often weekdays, have special Offices which composed the *Proprium de tempore*.

The *Proprium Sanctorum* comprises all the saints' days with special Offices, from St. Andrew on 30 November. The Offices of the saints, like those *de tempore*, are composed of lessons, antiphons, responses, hymns, or other liturgical passages special to these saints' feasts. It is unnecessary to remark that this arrangement is not primitive. Ages passed before the present liturgical cycle was evolved. In the Liturgical Books before the ninth or eighth century, the Sundays after Pentecost form groups, called after some solemn festival, St. John the Baptist, the Apostles, or St. Michael; the season of Septuagesima did not yet exist, at least in its entirety. A century or two later the Christmas season had not been evolved, even the weeks of Advent had practically no special Offices. In the first ages of the Church, except for the Feast of Easter, Christmas Day, and Sundays, the liturgical cycle did not exist. The Divine Office and the Liturgy of the Mass were performed with the help of the books of the Old and the New Testaments, and consisted in the chanting of psalms or canticles, readings, exhortations, and impromptu prayers. The liturgical cycle, that is, the feasts of the year or of the martyrs exerted hardly any influence on the Liturgy, and in this sense it may be said that in the beginning there was neither a *Proprium de tempore* nor a *Proprium Sanctorum*. Probst (op. cit. infra) thinks that it was at Rome, in the fourth century under Pope Damasus, that this liturgical "reform" took place, especially in arranging the liturgical prayers to suit the season and the feasts of the saints. This may be accepted with some reservations, as it is indisputable that even then the cycle had exerted its influence on the liturgy, in certain special circumstances. It seems certain that the origin of the Common of the Saints is the same as that of the *Propria*, and that it was at

first a *Proprium*; for instance, the Common of the Apostles was originally the *Proprium* of the Apostles St. Peter and St. Paul; and the Common of a Martyr was originally the *Proprium* of St. Stephen and St. Lawrence.

F. CABROL.

Proschko, FRANZ ISIDOR, well-known Austrian author, b. at Hohenfurt, Bohemia, 2 April, 1816; d. at Vienna, 6 February, 1891. Throughout his life he was engaged in various departments of the public service. A monument was erected on his grave [in his honour (1906).] Of his numerous writings, always characterized by a Catholic spirit, the most important are: "Leuchtkäferchen" (1849) and "Feierstunden" (1854), books for the young; "Höllenmaschine" (2 vols., 1854), "Der Jesuit" (2 vols., 1857), "Die Nadel" (2 vols., 1858), and "Pugatschew" (2 vols., 1860), historical romances; "Ausgewählte Erzählungen und Gedichte" (1873). His complete works were edited in six volumes ("Franz Isidor Proschko, Gesammelte Schriften", 1901-09) by his daughter, Hermione (b. at Linz, 29 July, 1851), who is also a distinguished Catholic writer, and whose works include: "Heimatlänge" (poems, 2nd ed., 1879); "Unter Tannen und Palmen" (1880); "Aus Oesterreichs Lorbeerhain" (1891); "In Freud und Not" (1893); "Gott lenkt" (1895).

THOMAS KENNEDY.

Proselyte (προσῆλυτος; ἄλλοθι, stranger, or new-comer; Vulgate, *advena*).—The English term "proselyte" occurs only in the New Testament where it signifies a convert to the Jewish religion (Matt., xxiii, 15; Acts, ii, 11; vi, 5; etc.), though the same Greek word is commonly used in the Septuagint to designate a foreign sojourner in Palestine. Thus the term seems to have passed from an original local and chiefly political sense, in which it was used as early as 300 B. C., to a technical and religious meaning in the Judaism of the N. T. epoch. Besides the proselytes in the strict sense who underwent the rite of circumcision and conformed to the precepts of the Jewish Law, there was another class often referred to in the Acts as "fearers of God" (Acts, x, 2, 22; xiii, 16, 26), "worshippers of God" (Acts, xvi, 14), "servers of God" (Acts, xiii, 43; xvii, 4, 17). These were sympathetic adherents attracted by the Monotheism and higher ideals of the Jewish religion. St. Paul addressed himself especially to them in his missionary journeys, and from them he formed the beginning of many of his Churches.

JAMES F. DRISCOLL.

Prose or Sequence.—I. DEFINITION AND GENERAL DESCRIPTION.—The Sequence (*Sequentia*)—or, more accurately as will be seen further on, the Prose (*Prosa*)—is the liturgical hymn of the Mass, in which it occurs on festivals between the Gradual and the Gospel, while the hymn, properly so called, belongs to the Breviary. The Sequence differs also in structure and melody from the hymn; for whilst all the strophes of a hymn are always constructed according to the same metre and rhythm and are sung to the same melody as the first strophe, it is the peculiarity of the Sequence, due to its origin, that (at least in those of the first epoch) each strophe or pair of strophes is constructed on a different plan. A sequence usually begins with an independent introductory sentence or an Alleluia (an intonation with its own melody); then follow several pairs of strophes, each pair with its own melody; in the earlier periods

the conclusion is uniformly an independent sentence of shorter or longer form. Each pair of strophes is composed of strophe and antistrophe, which exactly agree in their length and the number of their syllables (later also in rhythm and rhyme). The execution was entrusted to two choirs (usually of men and boys, respectively), the strophe being sung by one and the antistrophe by the other to the same melody. Thus, in contrast with the monotony of the hymn, the Sequence shows manifold diversity in outward construction, in melody, and in method of execution. The various transformations which this original plan underwent in the course of the centuries, and according to which we divide sequences into those of the first, the transitional, and the second periods, will be considered in the next paragraph.

II. ORIGIN, DEVELOPMENT, AND CLASSIFICATION. —That the Sequence started from the Alleluia is generally admitted, and may be considered as certain; but the manner of its origin and the various phases of its development before we get to what are termed the “versus ad sequentias” (which are the immediate predecessors of the Sequence), are still shrouded in obscurity and cannot now be determined with certainty, as the oldest documents are not contemporary, and from those which we possess no sufficiently definite conclusions can be drawn. With the aid of the “*Analecta hymnica medii ævi*”—especially the material of the last volume (LIII) edited by the Rev. H. M. Bannister and the writer of the present article—and with the assistance of the material gathered by Bannister for his forthcoming work on the Sequence melodies of all Western countries, we may trace the most probable development of the Sequence as below:

(1) The starting-point of the Sequence is the Alleluia with its melisma (i. e. a more or less long melodious succession of notes on its concluding *a*); in other words, the Alleluia which precedes the *versus alleluaticus*. This succession of notes was called *sequentia* (or *sequela*, “that which follows”); synonymous terms are *jubilus*, *jubilatio*, *neuma*, *melodia*, as was later explained by Abbot Gerbert of Saint-Blasien: “*Nomen sequentiarum antea jubilationibus ejusmodi proprium fuit, haud dubie, quia soni illi ultimam verbi syllabam seu vocalem sequebantur. ‘Sequitur jubilatio’, ut habetur in Ordine Romano II, ‘quam sequentiam vocant’. . . . In citatis his locis agitur de Alleluia, in cujus ultima syllaba hujusmodi neumæ haud raro satis longæ comparant in veteribus codicibus. . . . Ipsa illa repetitio a a a cum modulatione sequentia dicebatur. ‘Post Alleluia quædam melodia neumatum cantatur, quod sequentiam quidam appellant’, ait S. Udalricus lib. I consuet. Cluniac. cap. II. Beletus idem affirmat: ‘Moris enim fuit, ut post Alleluia cantaretur neuma; nominatur autem neuma cantus qui sequebatur Alleluia.’ Quod tamen ita intelligi debet, ut ipsi ultimæ vocali A conjungeretur” (Gerbertus, “*De cantu et musica sacra*”, Typis St. Blasianis, I, 1774, pp. 338 sq.; cf. “*Analecta hymnica*”, XLVII, 11 sqq.; XLIX, 266 sqq.). Hence *sequentia* is originally only a musical term; etymologically it is the same as the Greek *ἀκολουθία*, although the latter word actually means something else (cf. Christ and Parankas, “*Anthologia græca*”, Leipzig, 1871, p. lvii). How far, however, we are justified in supposing Græco-Oriental influence from the similarity of the terms *sequentia* and *ἀκολουθία* must be left undecided, especially as the Hymn too, though borrowed from the Greek *ὑμνος*, must be regarded as a genuine Western product without traces of anything essentially Eastern.*

(2) It was the length of the melisma or jubilus over the ending *a* (when and how this length arose is not here in question) which probably led to its being divided into several parts (*incisa*, musical

phrases). Each division was then called *sequentia*, and the whole, as comprising several such divisions, *sequentia*. The reason for this division was a purely practical one, viz. to allow the singers time to take breath, and to effect this the more easily the practice was introduced, so it would seem, of having these divisions of the melody (or *sequentia*) sung by alternate choirs, each musical phrase being sung twice; exception was made in the case of a few jubili, apparently the shorter ones, which have no such repetition. This is the origin of the alternate choirs, and of the consequent repetition of all or nearly all the divisions of the melody. In the old musical manuscripts the repetition is indicated by a *d* (= *denuo* or *duplex* or *dis* for *bis*; cf. *discantus* for *biscantus*).

(3) A much more important advance was made when some of the divisions of the melody or *sequentia*—for it did not as yet apply to all of them—were provided with a text; this text, consisting of short versicles, was appropriately termed in the “*Proœmium*” of Notker “*versus ad aliquot sequentias*” (i. e. the verses or text to some of the divisions of the melody), in which expression the proper meaning of *sequentia* is preserved. When we reach these *versus ad sequentias* we are on safer historical ground. In the “*Analecta hymnica*”, XLIX, nn. 515–30, we have examples of them preserved in some old French and English tropers; not a single example comes from Germany. For the purpose of illustration we may give the first paragraphs of the jubilus “*Fulgens præclara*” from the Winchester Troper:

“*Fulgens præclara*”

The first three divisions of the jubilus are here without any text; they are pure melody sung to the vowel *a*: a text is then provided for the fifth division and its repeat; this is again followed by *a* on which the melody was sung; a text has been composed for the eighth and twelfth divisions as for the fifth; the ending is three divisions of the melody without any text.

(4) From these “*versus ad sequentias*” to the real Sequence was no great step; a text was now set to all the *sequentia* or divisions of the melody without exception, and we thus have what we call a sequence. The proper and natural title of such a melody with its text (a text which has neither rhythm, metre, nor rhyme) is doubtless “*sequentia cum prosa*” (melody with its text), a title found in old French sources. As this text (*prosa*) gradually became more prominent, and as it had to be marked before the melody, the use of the term “*Prosa*” for both melody and verse was only natural. France adopted and retained this term; on the other hand, Germany, whether from imperfect knowledge of the development or because the original meaning of *sequentia* was lost, or from opposition to France which is frequently evinced in the language of the sequences, or from whatever other reason, employed almost exclusively the title *Sequentia*. In

this connexion it is interesting to quote the remark of William of Hirschau in his "Consuetudines": "... pro signo prosæ, quam quidam sequentiam vocant". From the single title "Sequentia cum prosa" developed the two titles, "Prosa" and "Sequentia" (Prose and Sequence), which are now used promiscuously; the first is the older and more accurate, the second the more usual. (As a matter of curiosity we may mention that there have been people who took in earnest the interpretation of *prosa* as = *pro sâ*, i. e. *pro sequentia*.)

This sketch of the development of the Prose or Sequence explains many peculiarities in the oldest sequences. Originally the text was adapted to a melody which already existed; as the divisions of this melody (*clausule*), with the exception of the introductory and closing ones, were usually repeated by alternative choirs (cf. above II, 2), there arose double strophes of the same length and sung to the same melody—in other words, symmetrically constructed parallel strophes. These somewhat long pieces of melody (a musical division corresponding to the strophe of the text) were further subdivided into smaller divisions, shorter musical phrases with short half-pauses, so that the whole of the melody was divided into a number of short musical phrases of different lengths. As the text had to follow this peculiarity, the strophe was divided into different verses of different lengths. Under these circumstances it was natural that at the beginning neither rhythm nor metre (still less rhyme, which is of relatively late origin) was taken into practical account, and the whole presented an appearance and form very different from what we usually understand by a poem. On the whole then the *Prosa* was true to its name in being prose, except that the fact that the antistrophe had to be as long as the strophe and that the end of the verse had, so far as possible, to correspond with the end of the word imposed a certain restraint. Moreover, as it seems, the first writers of sequences felt themselves especially bound by another law (frequently observed also in later times), which, it is important to note, prevailed without exception in the *versus ad sequentias*, the predecessors of the Sequence, and which, therefore, may not be considered the product of a later date; the jubilus of the Alleluia was built on its concluding *a*, and is thus the melody of the *a*. This *a*, the original text of the jubilus, ought therefore naturally to be prominent in the text which was introduced to replace it. As a matter of fact, in all *versus ad sequentias* and in many old sequences (especially the earliest), not only the strophes but often all the verses end in *a*. But we must not overlook the fact that in those of German origin this law is seldom observed or, more properly speaking, is still only occasionally used (cf. *Analecta Hymnica*, LIII, nn. 150, 160, 161, 185, 186), and even then it is not the verses but only the strophes which end in *a*. As an example of these peculiarities we may quote the first strophes of the sequence "Eia recolamus" (*Anal. Hymn.*, LIII, 16), once a favourite Christmas sequence in all countries:—

1. Eia, recolamus laudibus piis digna

- | | |
|--|--|
| 2a. Huius diei carmina,
in qua nobis lux
oritur gratissima; | 2b. Noctis interit nebula,
pereunt nostri
criminis umbracula. |
| 3a. Hodie sæculo
maris stella
est enixa
novæ salutis gaudia; | 3b. Quem tremunt barathra,
mors cruenta
pavet ipsa,
■ quo peribit mortua. |
| 4a. Gemit capta
pestis antiqua
coluber lividus perdit
spolia; | 4b. Homo lapsus
ovis abducta
revocatur ad æterna
gaudia, etc. |

Some few sequences of the older period do not show the strophes in pairs, their strophes lacking antistrophes. A short example is the following Advent-sequence (*Anal. Hymn.*, LIII, n. 3):—

2. Qui regis sceptrâ
forti dextra
solus cuncta,
3. Tu plebi tuam
ostende magnam
excitando potentiam;

1. Alleluia;

4. Præsta dona illi salutaria.
5. Quem prædixerunt prophetica
vaticinia,
a clara poli regia
in nostra,
Jesu, veni, Domine, arva.

All unpaired and unsymmetrical sequences of this sort are thus short, and their origin is probably to be explained by the fact that a few relatively short Alleluia-jubili were left without repeats. As the divisions of the melody have no repeat, the strophes set to them are also not repeated (i. e. they have no antistrophe or parallel strophe). If this explanation is right, there is no ground for the suggestion that sequences without parallel strophes are older than those with them; they may date from the same period, but they had a very short life, as sequences without symmetrical pairs of strophes soon became so unusual that antistrophes were added to those earlier without them. With the sequence developed in the way thus indicated, viz. by adapting a text to an already existing melody, it became natural in time to have sequences composed with a melody of their own. The text in this case had no need to follow the Alleluia-jubili; text and melody would be composed at the same time, and, if need be, the melody might be accommodated to the text. This led to a freer treatment of the text, which otherwise would have to follow syllable by syllable the notes of the melody, and so gradually more attention was paid to rhythm and symmetry in the construction of the verse, as is required by the exigencies of poetry.

Even when the text was set to a melody already in use, care was soon taken to observe a certain rhythm in the words. In this connexion rhythm does not depend on the quantity of the syllables (with which the sequence has practically no concern), but simply on the accent of the word. In many sequences we find in a few of their verses and strophes this type of symmetrical rhythm (i. e. a rhythm which occurs regularly in a verse and its correspondent); in other sequences we find it in almost all the verses (e. g. in two sequences, for St. Stephen's Day and the feast of Sts. Peter and Paul, ascribed to Notker Balbulus). In the St. Stephen sequence "Hanc concordi famulatu" (*Anal. Hymn.*, LIII, n. 215) the rhythm in the first two pairs of strophes which follow the introductory verse is of this kind; the acute accent placed above the words represents the natural intonation of the words:—

- | | |
|--|--|
| 2a. Auctôris illûs
exémplô
dôcti benîgno | 2b. Pro pèrsecutôrum
præcâtis
frâude suôrum. |
| 3a. O Stéphane,
signifer régis
sûmme bônî, nôs exaûdi, | 3b. Proffice
quî es pro tûis
exaûditus inimîcis. |

Exactly the same rhythm in strophe and antistrophe, in the verse and its parallel, can be seen in the Apostles' sequence which follows the same plan:—

- | | |
|---|--|
| 2a. Ecclésiâ vèstris
doctrînis
illuminâtam | 2b. Per circûlum terræ
præcâtus
âduvet vèster. |
| 3a. Nam Dôminus,
Pêtre, cælôrum,
tibi clâves dôno dedit | 3b. Armîgerum
Béniamin, Christum
té scit sũm vâsqûe elêctum. |

In both these sequences the end of all the strophes is paroxytone.

Like rhythm, assonance, the precursor of rhyme, was also gradually introduced; now a single verse, now several verses, began to end with the same or equivalent vowel (e and i, o and u). This was the beginning of that process which gradually led to the development of sequences characterized by regular rhythm and rhyme and complete uniformity in the construction of the verses (frequently also of the strophes), and thus revealing in structure and technique a strong contrast to the older types, in which

the text had almost exclusively the character of prose, the strophes being dissimilar and the verses of unequal length, of different structure, and without rhyme or regular rhythm. These latter are therefore called the sequences of the first epoch; none have been preserved in the liturgy of to-day.

(5) The transition from the sequences of the first to those of the second epoch occupied more than a century, viz. from the end of the tenth, when the change made itself visible here and there, to the beginning of the twelfth, when the new style reached its perfection. Sequences with more or less numerous traces of the transition process are so numerous that they may be placed in a class by themselves. While maintaining the structure of sequences of the first epoch, these sequences add a greater or less degree of the element of rhyme (although not yet pure rhyme) and greater uniformity of rhythm. They may be entitled sequences of the transitional style, not of the transitional period; for many sequences of the transitional period still bear the distinct stamp of the older ones, and moreover, when sequences of the second period were in highest favour, some writers of proses utilized the structure of the early period, while employing rhyme according to the style of the second period. It should also be observed that not a few sequences are so very akin to those of the first, whilst others on the contrary are so nearly related to those of the second epoch, that it is very difficult to decide to what group they should be referred. A sharp line of division cannot be drawn, since the development from the older to later forms (sometimes in strong contrast with the first) was not only slow but steady, revealing no abrupt transition or change. A good example of the transition style is the Easter sequence which is still used, but now a little altered in the "Misale Romanum", and which probably was composed by Wipo the Burgundian (d. after 1048):—

1. Victimæ paschali laudes immolent Christiani.

- | | |
|---|--|
| 2a. Agnus redemit oves,
Christus innocens Patri
reconciliavit
peccatores. | 2b. Mors et vita duello
confixere mirando.
dux vitæ mortuus
regnavit vivus. |
| 3a. Dic nobis, Maria,
quid vidisti in via?
Sepulcrum Christi viventis
et gloriam vidi resurgentis. | 3b. Angelicos testes,
sudarium et vestes.
Surrexit Christus spes mea;
præcedet suos in Galilæa. |
| 4a. Credendum est
magis soli
Mariæ veraci,
quam Judæorum
turbæ fallaci. | 4b. Scimus Christum
surrexisse
a mortuis vere;
tu nobis, victor,
Rex, miserere. |

(6) The final phase of the development is seen in the sequences of the second epoch already described, in which uniformity of rhythm, purity of rhyme, and strict regularity in structure characterize the verses, though the strophes still evince manifold variety. Not infrequently most (sometimes even all) of the pairs of strophes are composed of verses so uniform that the outward difference between these sequences and hymns, though not completely removed, is considerably lessened. The present sequence for Corpus Christi, composed by St. Thomas Aquinas in 1263, may serve as an example:—

- | | |
|---|---|
| 1a. Lauda Sion salvatorem,
Lauda ducem et pastorem
In hymnis et canticis. | 1b. Quantum potes, tantum
aude,
Quia major omni laude,
Nec laudare sufficit. |
|---|---|

If we institute a comparison between this and a strophe of a sequence of the first epoch and a strophe of the following hymn:—

Pange lingua gloriosi
Corporis mysterium
Sanguisque pretiosi,
Quem in mundi pretium
Fructus ventris generosi
Rex effudit gentium

—it is at once evident how far the sequence strophe given above differs structurally from one of the first

epoch, and how nearly it approaches the form of the hymn strophe. With the latter, it has the same kind of verse with its masculine and feminine rhymes and a similar rhythm, the only difference being that the order of the catalectic and acatalectic verses is dissimilar. Moreover, in the Corpus Christi sequence all the pairs of strophes are like the first, except that the third pair consists of a strophe and antistrophe each composed of six verses, of which the fourth and fifth introduce another rhythm, and the last two pairs of strophes increase the number of verses by one and two verses respectively. The three other sequences which remain in the liturgy—viz. the "Veni sancte Spiritus", "Stabat mater dolorosa", and "Dies iræ dies illa", of which the last two were originally rhymed prayers—show even greater, and in fact complete, symmetry in all the strophes—the sequences for Whitsuntide and the requiem Mass show uniformity even in all the verses. In other respects, however, many sequences of the second epoch, despite their uniformity, evince such variety in the structure of the pairs of strophes that, in contrast with the monotony of the hymn, they present considerable diversity. But the element which is wanting in all of them is the connexion with the Alleluia-jubilus and its melody, and it is only in the repetition of the melody in the antistrophe and in the change of melody in the individual strophes that its origin from the jubilus can still be observed.

Of the above-mentioned six phases in the development of the sequence the first and second are very obscure in two respects, as regards (1) the appearance of the Alleluia-jubilus without the text and (2) its relation to the so-called Gregorian Alleluia. To answer the first question, we are naturally tempted to point to the fact that in some of the earliest tropers (e. g. Cod. Sangallen., 484), the Alleluia-jubilus has no text. It is quite true that melodies without text are found there, but the earlier opinion that these are melodies to which texts were subsequently added is not true: they are melodies to previous sequence-texts, as is shown in the introduction to "Anal. hymn.", LIII, pp. xxii sq. The expression "melodies without text" is liable to be, and in fact has been, misunderstood, and should be replaced by "melodies to an existing but unwritten text". No one has as yet found a single Alleluia jubilus without text, whence might have been deduced the existence of jubili in this form before the text and independent of it. The prior existence of such jubili must indeed be admitted, but no example has as yet been discovered, nor is the discovery of such jubili hereafter probable. For, in spite of long and careful research, no liturgical MS. with neums or melodies has been discovered of a date earlier than the ninth century, with the one exception of a Pontifical of Poitiers (Cod. Parisin. Arsen., 227), which is either eighth- or ninth-century; even of the ninth century we have only one certain and three or four probable ones. One might hazard the opinion that it was only in the ninth century that the melodies, which were previously known by heart, came to be inserted in the choir-books. In the ninth century, however, the textless Alleluia-jubili were already replaced by the *versus ad sequentias* and many sequences; the form of the textless jubilus can be only provisionally conjectured on the basis of the jubili with the *versus ad sequentias* (see above, II, 3).

For this reason it is still more difficult to give a decided answer to the second question as to the connexion between the jubilus, which forms the basis of the sequence-melodies, and the Gregorian Alleluia. If we take it for granted that the latter have been handed on unaltered and retain the original form in the oldest known sources (though these do not go further back than the ninth century), in other words,

that the Alleluia before the Alleluia-verse had in the time of St. Gregory the Great the form which the Benedictines of Solesmes have established for it in their valuable publications, then we must admit that the melismata of the Gregorian Alleluia, even the longest of them, are much shorter than, and are different in kind from, the melismata of the jubilus to which the *versus ad sequentias* and the sequences proper were attached. According to the "Proœmium of Notker", the text of the sequences is so set to the *melodiæ longissimæ* of the Alleluia-jubilus that practically one syllable of the text corresponds to one note of the jubilus. What then was the origin of this comparatively long melisma? Was it developed from the Gregorian Alleluia by similar melismatic interpolations and musical embellishments, just as responsories of the Breviary with their final melisma grew into the tropes and verbeta with their more extensive text and music? This view cannot be accepted; for we always straightway recognize the original melisma of the responsory as the basis or *leitmotiv* of the melody of the verbeta, which at the end of each division and at the conclusion regularly returns to the shorter original melody. Quite different is the case with respect to the sequences of the first epoch. The introduction, it is true, follows the melody of its Alleluia; a few words which follow are frequently adapted to the first notes of the melisma to the Gregorian Alleluia, but the melody of the sequence then entirely deserts the melisma of the Alleluia and never returns to it. Various modern liturgiologists have believed that the long jubilus may be referred to Byzantine influence during the eighth century; however, no direct positive evidence has hitherto been forthcoming, and no example of Byzantine music, which might have served as a model for the long Alleluia jubilus, has come to light. Moreover, assuming a Byzantine model, it is more than enigmatical why writers of proses often adhered so conscientiously to the melody of the Alleluia proper and to the first notes of its concluding α ; assuming that the verses were written to fit foreign melodies, we are at a loss to explain why a part is not foreign. Perhaps the difficulty may be explained if we assume that Gregory the Great found a long Alleluia, presumably derived from the Greeks, and gave it the short form preserved in the choir-books of the West. We know that he shortened many parts of the Sacramentary. If this surmise be true, the long jubili may have continued to exist in some places alongside of the shorter ones, and may have served later as the basis of the sequence text. While this attempt at a solution of the great riddle has much in its favour, it is still only an attempt.

III. MELODY AND TITLE OF THE MELODY.—From what has been said it will be seen that there are two classes of sequence melodies: (1) those which originally formed the Alleluia-jubilus. These are the melodies to which a sequence text was later composed; (2) those which originated simultaneously with the text, both being composed by the same person, or those which were composed by a musician for a text written by a prosator. Not every sequence has its own melody; often several sequences were written to one and the same melody, and, if this were very popular, many sequences were written to it. Hence many sequences have the same plan and the same melody. In such sequences the obvious thing was to identify the melody by some distinctive word; this word was and is called the *title* of the melody. About 300 titles of sequences of the first and transitional period are found in the old MSS.; this does not imply that only 300 old melodies are known, for many melodies have come down to us without title.

It was natural that the title should be chosen from the initial word of the original sequence, to the melody

of which later sequences were adapted; as examples we may cite such titles as "Almiphona", "Creator poli", "Digna cultu", "Exsultet elegantis", "Fulgens præclara", etc.

It was also natural, if indeed not even more appropriate, to provide as the title of a sequence melody the beginning of the Alleluia-verse whose Alleluia-jubilus gave the melody for the sequence. Hence we explain such titles as "Ostende", "Lætatus sum", "Excita", "Veni Domine", "Dominus regnavit", "Dies sanctificatus", "Multifarie", and several others. Thus the Alleluia-verse of the Gradual for the first Sunday in Advent is "Ostende nobis Domine misericordiam tuam etc."; for the second Sunday, "Lætatus sum in his etc."; for the third, "Excita Domine potentiam tuam etc.", and so on. In the further development of the Sequence, as the list of titles increased, as the sense of the connexion of the Sequence with the Alleluia and its versicle gradually disappeared, and as for some reason or other the desire for novelty arose, titles were adopted which seem to us rather far-fetched. Important words from the beginning or middle of a sequence were taken as titles. In the sequence "Quid tu virgo mater ploras" (Anal. hymn., LIII, n. 239), the words "virgo" and "ploras" gave the title "Virgo plorans"; from "Hanc concordi famulatu" (Anal. hymn., LIII, n. 215) was taken the title "Concordia"; in the sequence "Virginis venerandæ" (Anal. hymn., LIII, n. 246), the second strophe commences "Filiæ matris", whence was taken the title "Filiæ matris"; the sequence "Summi triumphum regis" (Anal. hymn., LIII, n. 67) belongs to the alleluia-versicle, "Dominus in Sina in sancto ascendens in altum captivam duxit captivitatem", and the conspicuous words "captivam . . . captivitatem" produced the title "Captiva"; the same is the case with other titles, e. g. "Amcena", "Mater", "Maris stella", "Planctus cygni", etc. Several titles are evidently formed on the principle of analogy; from the beginning of the sequences "Lyra pulchra regem" (Anal. hymn., LIII, n. 52) and "Nostra tuba nunc tua" (ibid. n. 14), titles (namely "Lyra" and "Nostra tuba") which indicated musical instruments were introduced; analogous to these are such titles as "Bucca", "Cithara", "Fidicula", "Fistula", "Organa", "Tuba", "Tympanum". Perhaps "Symphonia" is founded on the analogy of "Concordia", and the title "Chorus" related to it. Of somewhat less obvious origin, although they indicate the actual or supposed origin of the melody, are such titles as "Græca", "Romana", "Metensis", "Occidentana". Far-fetched and now scarcely explicable are the titles "Cignea", "Frigdola", "Planctus sterilis", "Duo tres", "Hypodiaconissa", "Vitellia", etc. If the conjecture be accurate that the title of a melody is simpler and more natural the nearer it is to its origin, then the titles, taken in connexion with other facts, provide the means of explaining the question as to the original home of the various sequences. France preferably chose titles from the *Incipit* of the Sequence or Alleluia-verse; St. Gall and Germany on the contrary never chose titles from the *Incipit* of the Sequence, but used many unusual titles which to us have little or no meaning.

IV. HISTORY OF THE SEQUENCE.—Formerly the origin of the Sequence was always sought at St. Gall, and Notker Balbulus was universally accredited as its inventor. The basis for this supposition was furnished by the so-called "Proœmium of Notker", in which Notker tells us that it was the "Antiphonarium" of a monk of Jumièges (in which "aliqui versus ad sequentias erant modulati"), which had suggested to him to place the words of a text under the *melodiæ longissimæ* of the Alleluia-jubilus in such a way that each word of the text corresponded to a note of the melody. But does this prove that Notker was the

first person who did this? In St. Gall, certainly; but elsewhere this might have taken place long beforehand. Besides it is very doubtful on other grounds whether the "Prooemium of Notker" is genuine and authentic. Until the last two decades our knowledge of sequence material was entirely inadequate. The older sequences, and especially their melodies, were only known to us through the St. Gall tropers, whose importance was enhanced by their number; other old tropers from Germany, of which scarcely six were known, were treated as copies of those of St. Gall. What France, England, or Italy had done in the production of sequences was scarcely suspected, and one had no idea at all of the relation which their melodies had to the St. Gall melodies. Subsequently it became plain that the St. Gall composer was more than once influenced by an older French exemplar; what has been said above as to the development of the Sequence—it was based on the most extensive collection of original material—undoubtedly goes to prove that all the peculiarities of the sequences in their early stage are found in those of France, whilst those of St. Gall (i. e. the German ones) show signs of a relatively later period and of a phase of greater development, even in the matter of the name of the sequence and of titles of melodies. Further proofs cannot be given here, and we must content ourselves with referring to the discussion in "Analecta hymnica", LIII, the results of which may be summed up in three sentences: (1) proses or sequences did not originate in St. Gall. Notker Balbulus was not their first inventor, although he was their first and most prominent exponent in Germany. Their origin goes further back, probably to the eighth century; (2) failing more definite evidence, it is difficult to say exactly what sequences are to be attributed to Notker Balbulus; meanwhile, we cannot determine what sequences of the first epoch and clearly of German origin come from St. Gall and what from other German abbeys or dioceses; (3) all that has hitherto been discovered as to the origin and development of sequences shows France to have been the original home of the "versus ad sequentias" and of the "sequentia cum prosa". As to the precise locality of that home in France—whether it was Luxeuil, or Fleury-sur-Loire, or Moissac, or St-Martial, must be a matter for conjecture.

In what countries and to what extent France made its influence felt in the composition of sequences cannot yet be decided with accuracy. At the end of the tenth and especially in the eleventh century sequences were certainly very widely spread and popular in all countries of the West—even in Italy, which until lately has been overlooked as having scarcely any share in this branch of composition. Not only in Northern but also in Southern Italy, in the neighbourhood of Benevento and Monte Cassino, were schools for sequences, as the discoveries of Bannister at Benevento have proved. Of all these sequences of the first epoch there were some in the eleventh century which were found only in a given country and were therefore local products; others (but they were relatively few) were the common liturgical property of all countries of the West. Besides these, there are two particular groups to be distinguished, viz. such as were used only in France, England, and Spain, and such as were used only in Germany, Italy, and the Netherlands. This being the case, we may classify sequences as Gallo-Anglican or Germano-Italian: to the first class belong the Spanish; to the second those of Holland and Belgium. Between the countries which belong to one class, there existed a more or less free exchange of sequences, whilst sequences which belong to the other class were as a whole excluded and only rarely introduced. Thus, between France and Italy, as well as between England and Germany, there existed sometimes a friendly

exchange, but scarcely ever between France and Germany. This fact probably played some rôle in the development of sequences in various countries and in the influence which one country exercised upon another. Of the composers of sequences unfortunately only a few names have been preserved; after the great Notker Balbulus of St. Gall (d. 912), the first rank is taken by Ekkehard I of St. Gall (d. 973), Abbot Berno of Reichenau (d. 1048), Hermann Contractus (d. 1054), and Gottschalk of Limburg (d. 1098). If the honour of the invention of sequences belongs to France, the honour of bringing sequences to perfection during the first epoch belongs to Germany.

During the second epoch the picture changes: in the abbey of the Canons Regular of St. Victor in Paris the Sequence with rhythm and rhyme reached artistic perfection, combining splendour of form with depth and seriousness of conception. This was the case with Adam of St. Victor (d. 1192); it is unfortunately uncertain whether many of the sequences ascribed to him are really his or belong to his predecessors or imitators. The new style met with an enthusiastic reception. The sequences of Adam of St. Victor came into liturgical use almost everywhere, and found eager and frequently even successful imitation. In French Graduals almost all the sequences of the first epoch were supplanted by the later ones, whereas in Germany, together with the new ones, a considerable number of those which are supposed to be Notker's remained in use as late as the fifteenth century. Some precious contributions were furnished by England. Italy on the other hand falls quite behind during the second epoch. However, the two noble sequences still in use, the "Stabat mater" and the "Dies iræ", are the works of two Italian Franciscans, their composition being with some probability assigned to Jacopone da Todi (d. 1305) and Thomas of Celano (d. about 1250); both these works, however, were originally written as rhymed prayers for private use and were only afterwards used as sequences. St. Thomas of Aquinas too (d. 1274) has bequeathed to us the immortal sequence, "Lauda Sion salvatorem", but that is the only one he wrote. Sequences like hymns declined in the fifteenth century, and reached their lowest stage of decadence where they had most flourished in the twelfth and thirteenth (viz. in France). 5000 sequences of the most varying value have already come to light; they are a testimony to the Christian literary activity in the West during seven centuries, and are especially significant for the influence they exercised on the development of poetry and music. For the Gregorian melodies were taken over by them and preserved with fidelity and conservatism; with the admission of sequences and tropes into the liturgy, ecclesiastical music found its opportunity for further development and glorious growth.

TRENCH, *Sacred Latin Poetry chiefly Lyrical* (London, 1849, 1864, and 1874); NEALE, *Sequentia ex missalibus . . . collecta* (London, 1852); FRERE, *The Winchester Troper* (London, 1894); WEALE and MISSET, *Analecta liturg.* (London and Lille, 1888-92); JULIAN, *Dict. of Hymnology* (2nd ed., London, 1907); BARTSCH, *Die latein. Sequenzen des Mittelalters* (Rostock, 1868); SCHUBIGER, *Die Sängerschule St. Gallens* (Einsiedeln and New York, 1858); KEHREIN, *Latein. Sequenzen des Mittelalters* (Mainz, 1873); WERNER, *Notkers Sequenzen* (Aarau, 1901); MARKER, *Zur spätmittelaltl. Choralgesch. St. Gallens* (St. Gall, 1908); MISSET and AUBREY, *Les proses d'Adam de Saint-Victor* (Paris, 1900); BLUME and DREVEB, *Analecta hymnica medii aevi*, VII-X, XXXIV, XXXVII, XXXIX, XL, XLII, XLIV, LIII (Leipzig, 1889-1911); vols VII-X were edited by DREVEB, XL by BANNISTER, LIII by BLUME and BANNISTER, and the others by BLUME; vols LIV and LV will conclude the collection of all proses or sequences. CLEMENS BLUME.

Proske, KARL, b. at Grobing in Upper Silesia, 11 Feb., 1794; d. 20 Dec., 1861. He took his degree as Doctor of Medicine at Halle, after which he became court physician at Oppeln. From 1813 to 1820 he followed the profession of medicine, and was army

surgeon in the campaign of 1813-5. He was also an enthusiastic lover of ecclesiastical chant. At length in 1821 he determined to become a priest, and was ordained at Ratisbon, 11 April, 1826. Henceforward he devoted himself to the acquisition of ancient church music, and spent the whole of his private income as well as the emoluments from his church preferments, searching through Italian and other musical archives. In 1830 he was made Canon and Kappelmeister of Ratisbon cathedral, of which he had been vicar choral since 1827. With unwearied patience he collected and transcribed hundreds of musical scores, and in 1853 started the publication of his invaluable "*Musica Divina*", the fourth volume of which appeared in 1862; this was followed by a "*Selectus Novus Missarum*", in two volumes (1857-61).

GROVE, *Dict. of Music and Musicians*, new ed., III (London, 1907); *Kirchenmusik Jahrbuch* (Ratisbon, 1894); WEINMANN, *Karl Proske* (Ratisbon, 1906); private correspondence.

W. H. GRATTAN-FLOOD.

Prosper of Aquitaine, TIRO.—The first sure date in the life of Prosper is that of his letter to St. Augustine written under the following circumstances. In 428 or 429 a certain Hilary wrote to St. Augustine in reference to difficulties raised against his doctrine in Marseilles and the neighbourhood. Hilary distrusted his own ability to give St. Augustine a proper grasp of the situation, so he prevailed with a friend whom he described as a man distinguished *tum moribus, tum eloquio et studio* (for morals, eloquence and zeal) to write also. This friend was Prosper who, though he had never met St. Augustine, had corresponded with him. The two letters were despatched at the same time, and may be said to have opened the semi-Pelagian controversy. St. Augustine replied to the appeal made to him with the two treatises, "*De Prædestinatione*" and "*De Dono Perseverantiæ*." It was about this time that Prosper wrote what was really a short treatise on grace and free will, under the form of a letter to a certain Rufinus, and his great dogmatic poem of over a thousand hexameter lines, "*De Ingratis*", on the semi-Pelagians, who were enemies of grace and are represented as reviving the errors of Pelagianism. Two epigrams of twelve and fourteen lines respectively against an "obtrectator" of St. Augustine seem also to have been composed in the lifetime of the saint. Three opuscles belong to the time immediately after the death of St. Augustine (430): (1) "*Responsiones ad capitula Gallorum*". These capitula were a series of fifteen propositions attributed to St. Augustine by his opponents, e. g. "the Saviour was not crucified for the whole world." To each Prosper appended a brief *responsio*, and concluded the treatise with fifteen corresponding *sententiæ*, setting forth what he held to be the true doctrine. (2) "*Ad capitula objectionum Vincentianarum responsiones*". The Vincentian objections were like the "capitula Gallorum", but more violent, and they attacked Prosper as well as St. Augustine. Prosper replied to them one by one. The Vincent who drew them up was probably Vincent of Lerins (Bardenhewer, Hauck, Valentin), but some writers have contested this point. (3) "*Pro Augustino responsiones ad excerpta Genuensium*". This is an explanation of certain passages in St. Augustine's treatises, "*De prædest*" and "*De dono persev.*", which presented difficulties to some priests at Genoa who asked Prosper for an explanation of them. These three opuscula are placed by Bardenhewer after Prosper's visit to Rome.

In 431 Prosper and a friend went to Rome to invoke the aid of St. Celestine. The pope responded with the Letter, "*Apostolici Verba*", addressed to the bishops of Gaul, in which he blamed their remissness with regard to the enemies of grace, and eulogized St. Augustine. On returning to Gaul, Prosper again took up the controversy in his "*De Gratia Dei et libero*

arbitrio; liber contra collatorem". The "Collator" was Cassian who in his "Conferences" had put forward semi-Pelagian doctrine. The date of this, the most important of Prosper's prose writings, can be fixed at about 433, for the author speaks of twenty years and more having elapsed since the beginning of the Pelagian heresy, viz., according to his "Chronicle", A. D. 413. An ironical epitaph on the Nestorian and Pelagian heresies was probably composed shortly after the Council of Ephesus. The "*Expositio psalmonum*" is substantially an abridgment of the "*Enarrationes*" of St. Augustine. It probably comprised the whole psalter, but as it has come down to us it only comments on the last fifty. The "*Sententiæ ex Augustine delibatae*" are a collection of sayings extracted from the writings of St. Augustine. In framing them Prosper as a rule dealt rather freely with the text of St. Augustine, chiefly in the interests of rhythmic prose. Canons 9, 14, 15, 16, 18 of the second Council of Orange were taken from *sentences* 22, 222, 226, 160, 297. The epigrams are a number of the *sentences* turned into verse. Both these works must have been composed about the time of the Council of Chalcedon, and probably, therefore, in Rome, whither Prosper was summoned about A. D. 440 by Leo the Great. According to Gennadius (*De vir. ill.*, 84), he was said to have drawn up the letters written by this pope against Eutyches.

The "Chronicle" of Prosper, from the creation to A. D. 378, was an abridgment of St. Jerome's, with, however, some additional matter, e. g. the consuls for each year from the date of the Passion. There seem to have been three editions: the first continued up to 433, the second to 445, the third to 455. This chronicle is sometimes called the "Consular Chronicle", to distinguish it from another ascribed to Prosper where the years are reckoned according to the regnal years of the emperors and which is accordingly called the "Imperial Chronicle". This is certainly not the work of Prosper. It was compiled by a man whose sympathies were not with St. Augustine, and who was formerly supposed to be Tiro Prosper and not Prosper of Aquitaine, but this theory has broken down, for Prosper of Aquitaine in some MSS. of the "Consular Chronicle" is called Tiro Prosper. With regard to the writings of Prosper not yet mentioned, Valentin pronounces the poem "*De providentia*" to be genuine; the "*Confessio S. Prosperi*", and "*De vocatione gentium*" to be probably genuine; the "*Epistola ad Demetriadem*", the "*Præteritorum sedis Apostolicæ auctoritates de Gratia Dei*, etc." appended to the Epistle of St. Celestine, and the "*Poema mariti ad conjugem*" to be very likely genuine. The "*De vita contemplativa*" and "*De promissionibus* etc." are not by Prosper, according to Valentin and Hauck. Hauck agrees with Valentin with regard to the "*Poema mariti*" and the "*Confessio*", but pronounces against the "*De vocatione*", the "*De providentia*", and on the other doubtful works expresses no view.

The story that Prosper was Bishop of Reggio in Italy was exploded by Sirmondi and others in the seventeenth century. For the origin of this legend see Dom Morin in "*Révue bénédictine*", XII, 241 sqq. Prosper was neither bishop nor priest. The question whether he mitigated the severity of St. Augustine's doctrine has been much debated. The difference of opinion probably arises more from different views regarding St. Augustine's doctrine than from different interpretations of Prosper's. The general trend of opinion among Catholic writers seems to be in favour of the affirmative view, e. g. Kraus, Funk, Bardenhewer, Valentin, and others.

VALENTIN, *Saint Prosper d'Aquitaine* (Toulouse, 1900); BARDENHEWER, *Patrologie*. The best edition of Prosper is the one published by the Benedictines LE BRUN and MANGEANT (Paris, 1711). Many of the more important works are included in the Benedictine edition of St. AUGUSTINE. The *De ingratiss* and some other treatises are contained in HURTER, *SS. Patr. opusc.* MOMM-

published a critical edition of the *Chronicle* in *Mon. Germ. Hist.*, IX (Berlin, 1892). Prosper was a favourite at Port-Royal. SACY published a verse translation of the *De ingratia* in 1646, a prose translation in 1650. Another prose translation was published by LEQUEUX in 1761, who also translated some of the other works. VALENTIN, S. *Prosper d'Aquitaine* (Toulouse, 1900).

F. J. BACCHUS.

Protasius, SAINT. See GERVASIUS AND PROTASIIUS, SAINTS.

Protectorate of Missions, the right of protection exercised by a Christian power in an infidel country with regard to the persons and establishments of the missionaries. The term does not apply to all protection of missions, but only to that permanently exercised in virtue of an acquired right, usually established by a treaty or convention (either explicit or tacit), voluntarily consented to or accepted after more or less compulsion by the infidel power. The object of the protectorate may be more or less extensive, according as it embraces only the missionaries who are subjects of the protecting power, or applies to the missionaries of all nations or even to their neophytes, the native Christians. To comprehend fully the nature of the protectorate of missions, it has been in times past and as it is to-day, it will be necessary to study separately the Protectorate of the Levant and that of the Far East.

PROTECTORATE OF THE LEVANT.—This comprises the missions of the countries under Turkish rule, especially Constantinople, the Archipelago, Syria, Palestine, Egypt, Barbary, etc. It is French in origin, and was, until near the end of the nineteenth century, the almost exclusive privilege of France. It was inaugurated in the Holy Land by Charlemagne, who secured from the celebrated Caliph Haroun al-Raschid a sort of share in his sovereignty over the Holy Places of Jerusalem. Charlemagne and his successors made use of this concession to make pious and charitable foundations in the Holy City, to protect the Christian inhabitants and pilgrims, and to insure the perpetuity of Christian worship. The destruction of the Arabian Empire by the Turks put an end to this first protectorate, but the persecutions to which the new Mussulman masters of Jerusalem subjected pious visitors and the clergy in charge of the Holy Sepulchre brought about the Crusades, a result of which Palestine was conquered from the infidels and became a French kingdom. The Christian rule was later replaced by that of Islam, but during the three centuries of Crusades, which had been undertaken and supported mainly by France, the Christians of the East had grown accustomed to look to that country for assistance in oppression, and the oppressors had learned to esteem and fear the valour of its warriors. In these facts we find the germ of the modern Protectorate of the Levant.

The Capitulations.—The protectorate began to assume a contractual form in the sixteenth century, in the treaties concluded between the kings of France and the sultans of Constantinople, which are historically known as *Capitulations*. At first this name designated the commercial agreement conceded by the *Porte* to Latin merchants (first to the Italians), and arose from the fact that the articles of these agreements were called *Capitoli* in the Italian redaction: the term has not, therefore, the same meaning as in military parlance. Francis I was the first king of France who sought an alliance with Turkey. To this he was urged, not by the spirit of the Crusaders, but entirely by the desire to break in Europe the dominating power of the House of Austria. By compelling Austria to spend its forces in defence against the Turks in the East, he hoped to weaken it and render it unable to increase or even to maintain its power in the West. His successors down to Louis XV followed the same policy, which, whatever criticism it merits, was a matter of fact favourable to Chris-

tianity in the Levant. The French kings sought, by their zeal in defending Christian interests at the *Porte*, to extenuate their alliance with infidels, which was a source of scandal even in France. As early as 1528, Francis I had appealed to Solymán II to restore to the Christians of Jerusalem a church which the Turks had converted into a mosque. The sultan refused on the plea that his religion would not permit alteration of the purpose of a mosque, but he promised to maintain the Christians in possession of all the other places occupied by them and to defend them against all oppression. However, religion was not the object of a formal convention between France and Turkey prior to 1604, when Henry IV secured from Ahmed I the insertion, in the capitulations of 20 May, of two clauses relative to the protection of pilgrims and of the religious in charge of the church of the Holy Sepulchre. The following are the clauses, which form articles IV and V of the treaty: "IV. We also desire and command that the subjects of the said Emperor of France, and those of the princes who are his friends and allies, may be free to visit the Holy Places of Jerusalem, and no one shall attempt to prevent them nor do them injury"; "V. Moreover, for the honour and friendship of this Emperor, we desire that the religious living in Jerusalem and serving the church of *Comane* [the Resurrection] may dwell there, come and go without let or hindrance, and be well received, protected, assisted, and helped in consideration of the above."

It is noteworthy that the same advantages are stipulated for the French and for the friends and allies of France, but for the latter in consideration of, and at the recommendation of, France. The fortunate result of this friendship was the development of the missions, which began to flourish through the assistance of Henry IV and Louis XIII and through the zeal of the French missionaries. Before the middle of the seventeenth century religious of various orders (Capuchin, Carmelite, Dominican, Franciscan, and Jesuit) were established, as chaplains of the French ambassadors and consuls, in the chief cities of the Levant (Constantinople, Alexandria, Smyrna, Aleppo, Damascus, etc.), Lebanon, and the islands of the Archipelago. Here they assembled the Catholics to instruct and confirm them in the Faith, opened schools to which flocked the children of all rites, relieved the spiritual and corporal miseries of the Christians languishing in the frightful Turkish prisons, and nursed the pest-stricken, which last office frequently made them martyrs of charity. During the reign of Louis XIV the missionaries multiplied and extended the field of their activities. This monarch gave them at once a material and a moral support, which the prestige of his victories and conquests rendered irresistible at the *Porte*. Thanks to him, the often precarious tolerance, on which the existence of the missions had previously depended, was officially recognized in 1673, when on 5 June, Mohammed IV not only confirmed the earlier capitulations guaranteeing the safety of pilgrims and the religious guardians of the Holy Sepulchre, but signed four new articles, all beneficial to the missionaries. The first decrees in a general manner "that all bishops or other religious of the Latin sect who are subjects of France, whatever their condition, shall be throughout our empire as they have been hitherto, and [may] there perform their functions, and no one shall trouble or hinder them"; the others secure the tranquil possession of their churches, explicitly to the Jesuits and Capuchins, and in general "to the French at Smyrna, Saïd, Alexandria, and in all other ports of the Ottoman Empire".

The reign of Louis XIV marked the apogee of the French Protectorate in the East, for not only the Latin missionaries of all nationalities, but also the heads of all Catholic communities, regardless of rite or nationality, appealed to the *Grand Roi*, and, at the

recommendation of his ambassadors and consuls to the *Porte* and the pashas, obtained justice and protection from their enemies. Though the missionaries were sometimes on such amicable terms with the non-Catholic clergy that the latter authorized them to preach in their churches, they usually experienced a lively hostility from that quarter. On several occasions the Greek and Armenian schismatical patriarchs, displeased at seeing a great portion of their flocks abandon them for the Roman priests, on various pretexts persuaded the Turkish Government to forbid all propagandism by the latter. The representatives of Louis XIV successfully opposed this ill-will. At the beginning of the reign of Louis XV the preponderance of French influence with the *Porte* was also manifested in the authority granted the Franciscans, who were protégés of France, to repair the dome of the Holy Sepulchre: this meant the recognition of their right of proprietorship in the Holy Sepulchre as superior to the claims of the Greeks and the Armenians. In 1723 the schismatical patriarchs succeeded in obtaining from the Sultan a "command" forbidding his Christian subjects to embrace the Roman religion, and the Latin religious to hold any communication with the Greeks, Armenians, and Syrians, on the pretext of instructing them. For a long time French diplomacy sought in vain to have this disastrous measure revoked. At last, as a reward for the services rendered to Turkey during its wars with Russia and Austria (1736-9), the French succeeded in 1740 in securing the renewal of the capitulations, with additions which explicitly confirmed the right of the French Protectorate, and at least implicitly guaranteed the liberty of the Catholic apostolate. By the eighty-seventh of the articles signed, 28 May, 1740, Sultan Mahmud declares: "... The bishops and religious subject to the Emperor of France living in my empire shall be protected while they confine themselves to the exercise of their office, and no one may prevent them from practising their rite according to their custom in the churches in their possession, as well as in the other places they inhabit; and, when our tributary subjects and the French hold intercourse for purposes of selling, buying, and other business, no one may molest them for this sake in violation of the sacred laws." In subsequent treaties between France and Turkey the capitulations are not repeated verbatim, but they are recalled and confirmed (e. g. in 1802 and 1838). The various régimes which succeeded the monarchy of St. Louis and of Louis XIV all maintained in law, and in fact, the ancient privilege of France in the protection of the missionaries and Christian communities of the Orient. The expedition in 1860 sent by Napoleon III to put a stop to the massacre of the Maronites was in harmony with the ancient rôle of France, and would have been more so if its work of justice had been more complete. The decline in recent years of the French Protectorate in the Levant will be treated below.

PROTECTORATE OF THE FAR EAST.—*Portuguese Patronage.*—In the Far East—this refers especially to China—there was not, prior to the nineteenth century, any protectorate properly so called or based on a treaty. What is sometimes called the "Portuguese Protectorate of Missions" was only the "Portuguese Patronage" (*Padroado*). This was the privilege, granted by the popes to the Crown of Portugal, of designating candidates for the sees and ecclesiastical benefices in the vast domains acquired through the expeditions of its navigators and captains in Africa and the East Indies. This concession, which brought to the King of Portugal a certain portion of the ecclesiastical revenues of his kingdom, carried the condition that he should send good missionaries to his new subjects, and that he should provide with a fitting endowment such dioceses, parishes, and religious establishments as should be established in his acquired territories. At first Portugal's zeal and generosity for the spread of Christian-

ity corresponded to the liberality of the sovereign pontiffs manifested in the grant of the *padroado*; but in the course of time this patronage became the source of most unpleasant annoyances to the Holy See and one of the chief obstacles to the progress of the missions. The main cause of this regrettable change was the failure of Portugal to observe the conditions agreed upon at the time of the bestowal of the privilege: another reason was the disagreement between Portugal and the Holy See with regard to the extent of the patronage, for, while Rome maintained that it had never granted the privilege except for really conquered countries, Lisbon claimed the right for all the countries designated by the famous demarcation of Alexander VI as future possessions of Portugal. In virtue of this interpretation the Portuguese Government violently contested the papal right to appoint, without its consent, missionary bishops or vicars Apostolic in countries which were never subject to its dominion, such as the greater part of India, Tong-king, Cochinchina, Siam, and especially China. In the vast Chinese empire, where Portugal had never possessed more than Macao, the popes consented to end the strife by a sort of compromise. Besides the See of Macao they created in the two chief cities, Peking and Nanking, bishoprics in the appointment of the King of Portugal, to which were assigned five of the Chinese provinces; the other provinces were left to the vicars Apostolic named personally by the pope. This system lasted from 1696 to 1856, when Pius IX suppressed the titles of the sees of Peking and Nanking; thenceforth all the Christian settlements of China were administered only by vicars Apostolic.

Passing over the quarrels regarding the *padroado*, we must confess that the missions of the East owe much to the munificence of the kings of Portugal, although these were never accepted by the infidel sovereigns as the official protectors of the missionaries, much less of the native Christians. Portugal strove to play this honourable rôle in China, especially by dispatching formal embassies to Peking during the eighteenth century, for, besides their ostensible instructions, the ambassadors received orders to intervene as much as possible in behalf of the missionaries and native Christians, who were then being cruelly persecuted in the provinces. The first of these embassies (1727) almost had a disastrous ending, when the Portuguese envoy, Dom Metello de Souza, petitioned the Emperor Yung-ching to recognize the liberty of Christian preaching; the second (1753) avoided a similar danger by maintaining silence on this critical point. It is only just to add that these embassies, having flattered Chinese vanity, procured for the mission a measure of respite from, or moderation of, the persecution. Later, by expelling the Jesuits and other religious societies which had established for it such successful missions, Portugal excluded itself from subsequently occupying any position in a sphere in which it had earlier been foremost, and by its own act destroyed the basis of its patronage and its protectorate, such as it was.

French Protectorate in China.—The protectorate still exercised by France over the missions in the Chinese Empire dates, as far as a regular convention is concerned, only from the middle of the nineteenth century, but the way was prepared by the protection which French statesmen had accorded the missionaries for almost two centuries. The zeal and liberality of Louis XIV permitted the foundation of the great French Jesuit mission, which in less than fifteen years (1687-1701) more than doubled the number of apostolic workers in China, and which never ceased to produce most capable workers. The first official relations were formed between France and China when the missionaries brought thither by the "Amphitrite", the first French vessel seen in Chinese waters (1699), presented gifts from Louis XIV to Emperor K'ang-hi. The two monarchs shared the expense of erecting the

first French church at Peking: the emperor donated the ground, within the limits of the imperial city, and the building materials, while the French king supplied the money to pay for the labour, the decoration, and the magnificent liturgical ornaments. Several other churches erected in the provinces through the munificence of Louis XIV increased the prestige of France throughout the empire. Under Louis XV the mission in China, like many other things, was somewhat overlooked, but the government did not wholly neglect it. It found a zealous protector in Louis XVI's minister, Bertin, but it felt keenly the suppression of the Society of Jesus and the French Revolution with all its consequences, which dried up the source of the apostolate in Europe. It was a handful of French missionaries (Lazarists or members of the Society of Foreign Missions), assisted by some Chinese priests, who preserved the Faith throughout the persecutions of the early nineteenth century, during which several of them were martyred.

Treaties of T'ien-tsin.—When the English, after the so-called Opium War, imposed on China the Treaty of Nanking (1842), they did not at first ask for religious liberty, but the murder of the Lazarist John Gabriel Perboyre (11 Sept., 1840) becoming known, they added an article stipulating that thenceforth a missionary taken in the interior of the country should not be tried by the Chinese authorities, but should be delivered to the nearest consul of his country. On 24 Oct., 1844, Théodose de Lagrené, French ambassador, secured further concessions which inaugurated a new era. The treaty properly so-called, which was signed on that date at Wampoa (near Canton), speaks only of liberty for the French to settle in certain territory in the open ports, but, at the request of the ambassador, an imperial edict was sent to the mandarins and at least partially promulgated, which praised the Christian religion and removed the prohibition for Chinese to practise it. However, the murder of the missionary Chapdeleine (1856) and other facts showed the insufficiency of the guarantees accorded to Europeans; to obtain others, England and France had recourse to arms. The war (1858–60), which showed China its weakness, was ended by the treaties of T'ien-tsin (24–25 Oct., 1860). They contained an article which stipulated freedom for the missionaries to preach and for the Chinese to embrace Christianity. This article was included in the treaties which other powers a little later concluded with China. To the treaty with France was also added a supplementary article, which reads as follows: "An imperial edict conformable to the imperial edict of 20 Feb., 1846 [that secured by M. de Lagrené], will inform the people of the whole empire that soldiers and civilians be permitted to propagate and practise the religion of the Lord of Heaven [Catholic], to assemble for explanation of doctrine, to build churches wherein to celebrate their ceremonies. Those [the mandarins] who henceforth make searches or arbitrary arrests must be punished. Furthermore, the temples of the Lord of Heaven, together with the schools, cemeteries, lands, buildings etc., which were confiscated formerly when the followers of the religion of the Lord of Heaven were persecuted, shall be either restored or compensated for. Restoration is to be made to the French ambassador residing at Peking, who will transfer the property to the Christians of the localities concerned. In all the provinces also the missionaries shall be permitted to rent or purchase lands and erect buildings at will". The general and exclusive right of protection granted to the French over all the Catholic missions in China could not be more explicitly recognized than it was by this agreement, which made the French ambassador the indispensable intermediary in the matter of all restitutions. And the representatives of France never ceased to make full use of this right in favour of the missionaries,

whom from the middle of the nineteenth century a revival of Apostolic zeal drew from all countries to China. From them the passports necessary to penetrate into the interior of the country were regularly sought, and to them were addressed complaints and claims, which it was their duty to lay before the Chinese Government. The French ministers also secured, not without difficulty, the necessary additions to the Treaty of T'ien-tsin—such, for instance, as the Berthemy Convention (1865) with the Gerard addition (1895), regulating the important question of the purchase of lands and buildings in the interior.

Rivals of the French Protectorate.—The foregoing historical sketch shows that the ancient French right of protection over the missions, in both Turkey and China, was established as much by constant exercise and by services rendered as by treaties. Furthermore, it was based on the fundamental right of the Church, derived from God Himself, to preach the Gospel everywhere and to receive from Christian powers the assistance necessary to enable her to perform her task untrammelled. The desire to further the Church's mission, which always guided the French monarchs to a greater or less extent, does not influence the present government. The latter endeavours, however, to preserve the prerogative of its predecessors, and continues to lend protection, though much diminished, to the Catholic missionary undertakings—even to those directed by religious who are proscribed in France (e. g. it subsidizes the Jesuit schools in Syria). The advantages of the protectorate are too obvious even to the least clerical of the ministers for them not to attempt to retain them, whatever the resulting contradictions in their policy. It is very evident that France owes to this protectorate throughout the Levant and in the Far East a prestige and a moral influence which no commerce or conquest could ever have given her. Thanks to the protectorate, the treasures of respect, gratitude, and affection won by the Catholic missionaries have to a certain extent become the property of France; and, if the French entertained doubts as to the utility of this time-honoured privilege (a few anti-clericals attempt to obscure the evidence on this point), the efforts of rival nations to secure a share of it would prove enlightening. These efforts have been frequent, especially since 1870, and have been to a large extent successful.

As early as 1875, at the time of the negotiations between France and Egypt with regard to judiciary reform, the German Government declared "that it recognized no exclusive right of protection of any power in behalf of Catholic establishments in the East, and that it reserved its rights with regard to German subjects belonging to any of these establishments." In Germany and Italy a paragraph of article sixty-two of the Treaty of Berlin, which had been signed by all the European powers in 1878, was used as a weapon against the exclusive protectorate of France: "Ecclesiastics, pilgrims, and monks of all nationalities travelling in Turkey in Europe or Turkey in Asia shall enjoy the same rights, advantages, and privileges. The official right of protection of the diplomatic and consular agents of the Powers in Turkey is recognized, with regard both to the above-mentioned persons and to their religious, charitable, and other establishments in the Holy Places and elsewhere." The passage immediately following this paragraph in the article was overlooked: "The acquired rights of France are explicitly reserved, and there shall be no interference with the *statu quo* in the Holy Places." Thus the protection guaranteed to all ecclesiastics, etc., no matter what their nationality or religion, as well as the generally recognized right of all the powers to watch over this protection, should be understood with the reservation of the "acquired rights" of France i. e. of its ancient protectorate in behalf of

Catholics. This protectorate is, therefore, really confirmed by the Treaty of Berlin.

But, as a matter of fact, the influence of Russia, which has assumed the protectorate of Christians of the Greek Rite, has already greatly affected the standing which the ancient French Protectorate had assured to Catholics in Palestine and especially in Jerusalem. Moreover, Emperor William II of Germany has installed Protestantism with a magnificent church beside the Holy Sepulchre (1898). As a sort of compensation he has indeed ceded to German Catholics the site of the Dormition of the Blessed Virgin, which he obtained from the sultan; here a church and a monastery have been erected and, together with the other German establishments, have been placed under the protection of the German Empire, without the slightest deference to the ancient prerogative of France. A similar situation prevails in China. First, in 1888, Germany obtained from the Chinese Government that German passports should insure the same advantages to the missionaries as those secured at the French legation. At the same time the German Catholic missionaries of Shan-tung, who had much to endure from the infidels, were on several occasions offered the powerful protection of the German Empire. Mgr Anzer, the vicar Apostolic, decided to accept it, after having, as he declares, several times sought unsuccessfully the aid of the French minister. In 1896 the German ambassador at Peking received from Berlin the command not only to support energetically the claims of the Catholic missionaries, but even to declare that the German Empire would pledge itself to defend against all unjust oppression the persons and property of the mission of Shan-tung, together with freedom of preaching, in the same measure in which such had been formerly guaranteed by the French Protectorate. The murder of two of the Shan-tung missionaries in Nov., 1897, afforded the occasion for a more solemn affirmation of the new protectorate, while it furnished a long-sought pretext for the occupation of Kiao-chow.

Austria had a better foundation for claiming a share in the Catholic protectorate, as, in various treaties concluded with the *Porte* (1699, 1718, and 1739), it had secured a right of protection over "the religious" in the Turkish Empire and even at Jerusalem. Whatever the meaning of this concession (apparently it did not include liberty of worship), it was never confirmed by usage, except in the countries bordering on Austria (notably Albania and Macedonia). In 1848 the Austrian Protectorate was extended to the mission of the Sudan and Nigritia, which was in the care of Austrian priests; apparently for this reason, when the Coptic Catholic hierarchy was restored in Egypt by Leo XIII (1895), the new patriarch and his suffragans placed themselves under the protection of Austria.

Italy also has been very active in seeking to acquire a protectorate of missions, by patronizing societies for the assistance of the missionaries and by legislative measures intended to prove its benevolence to the Italian missionaries and persuade them to accept its protection. It even attempted by attractive promises to win over the Propaganda, but the Sacred Congregation discouraged it by a circular addressed to the Italian missionaries of the Levant and the Far East on 22 May, 1888. This not only forbade the missionaries to adopt towards official representatives of Italy any attitude which might be interpreted as favouring the Piedmontese usurpations in Italy, but once more affirmed the privilege of France in the most formal manner: "They [the missionaries] know that the Protectorate of the French Nation in the countries of the East has been established for centuries and sanctioned even by treaties between the empires. Therefore, there must be absolutely no innovation in this matter; this protectorate, wherever it is in force, is to be religiously preserved, and the missionaries

are warned that, if they have need of any help, they are to have recourse to the consuls and other ministers of France."

THE PROTECTORATE AND THE HOLY SEE.—The instance just mentioned was not the only occasion on which the Holy See undertook the defence of the French Protectorate. Whenever missionaries sought protection other than that of France, French diplomacy complained to Rome, and the Propaganda was always careful to reprimand the missionaries and to remind them that it appertained to France alone to protect them against infidel powers. Two such instances, relating to the years 1744 and 1844 and selected from many others, are cited by the author of the study of the French Protectorate in the "*Civiltà Cattolica*" (5 November, 1904). To these may be added Leo XIII's confirmation of the Decree of 1888 in his reply to Cardinal Langénieux, Archbishop of Reims, dated 1 August, 1898: "France has a special mission in the East confided to her by Providence—a noble mission consecrated not alone by ancient usage, but also by international treaties, as has been recognized recently by Our Congregation of the Propaganda in its deliberation of 22 May, 1888. The Holy See does not wish to interfere with the glorious patrimony which France has received from its ancestors, and which beyond a doubt it means to deserve by always showing itself equal to its task." This attitude of the Holy See is the best defence of the French Protectorate, and is in fact its only defence against the manoeuvres of its rivals as regards missions not under the direction of French subjects. The latter would have difficulty in resisting the pressing invitations extended to them from other quarters, if the Holy See left them free to accept. Rome gives still another proof of respect for the acquired rights of France by refusing, as it has hitherto done, to accredit permanent legates or ministers to Constantinople and Peking. For a time the idea, supported by the official agents of the Turkish and Chinese governments, attracted Leo XIII, but he dismissed it at the instance of French diplomats, who represented to him that the object was less to establish amicable relations between the Holy See and Turkey or China than to evade the tutelage of the lay protectorate. Pius X has done nothing to alter the protectorate, although some action in this direction would perhaps have been but a just reprisal for the disloyal separation.

Some Objections.—The protectorate of missions is, however, open to some criticism both in theory and in practice. This article will not deal with attacks based solely on hatred of religion; the following are the most plausible objections which have influenced even friends of the apostolate to the extent of making them sometimes doubtful of the usefulness of the institution, even for the missions. The protectorate, it is said, is unwillingly tolerated by the authorities of infidel countries; it embitters the antipathy and hatred excited by the Christians in those countries, and causes the missionaries, who rely on its support, to be insufficiently mindful of the sensibilities of the natives and on their guard against excessive zeal. The modicum of truth contained in these objections shows that the exercise of the protectorate requires great wisdom and discretion. Naturally, the infidel powers chafe somewhat under it as a yoke and an uncomfortable and even humiliating servitude, but, so long as they do not assure to the missionaries and their works the security and guarantees of justice which are found in Christian countries (and experience has shown how little this is the case in Turkey and China), the protectorate remains the best means of providing them. But, to obviate as much as possible the odium attached to the meddling of one foreign power in the affairs of another, this intervention is reduced to what is absolutely necessary. The solution of the delicate problem lies in the cordial union and prudent collaboration

of the agents of the protectorate and the heads of the mission, and these things it is not impossible to realize in practice. When it is learned that the superior of the mission of south-east Chi-li during the difficult period from 1862 to 1884 had recourse to the French legation only three times and arranged all other difficulties directly with the local Chinese authorities (Em. Becker, "Le R. P. Joseph Gonnet", Ho-kien-fou, 1907, p. 275), it will be understood that the French Protectorate is not necessarily a heavy burden, either for those who exercise it or for those bound by it. The abuses which may arise are due to the men, not to the system; for, after all, the missionaries, though not faultless, are most anxious that it should not be abused. Perhaps the abuse most to be feared is that the protectors should seek payment for their services by trammelling the spiritual direction of the mission or by demanding political services in exchange: a complete history of the protectorate would show, we believe, such abuses and others to be insignificant when compared with the benefits conferred by this institution on religion and civilization.

CONCERNING THE LEVANT.—CHARRIÈRE, *Négociations de la France dans le Levant* (4 vols., Paris, 1848); SCHOPOFF, *Les réformes et la protection des chrétiens, 1673-1904, Firmans, décrets, . . . traités* (Paris, 1904); PÉLISSIEU DU RAUSAS, *Le régime des capitulations dans l'empire ottoman* (Paris, 1902-5), I, 190-202; II, 80-176; REY, *De la protection diplomatique et consulaire dans les échelles du Levant et de Barbarie* (Paris, 1899); DE SAINT-PIERRE, *Mémoires sur l'ambassade de France en Turquie . . . suivis du texte des traductions originales des capitulations et des traités conclus avec la Sublime Porte* (Paris, 1877); CHARMES, *Politique extérieure et coloniale* (Paris, 1885), 303-84, 387-428; *Le régime des capitulations par un ancien diplomate* (Paris, 1898); BURNICHON, *Les capitulations et les congrégations religieuses en Orient* in *Études*, LX (1893), 55; PRÉLOT, *Le protectorat de la France sur les chrétiens d'Orient* in *Études*, LXXVII (1898), 433, 651; LXXVIII, 38, 172; RABBATH, *Documents inéd. pour servir à l'hist. du Christianisme en Orient, XVI-XIX siècle* (Paris, 1907-10); CARAYON, *Relations inéd. des missions de la C. de J. à Constantinople et dans le Levant au XVII^e siècle* (Paris, 1864); *Lettres édifiantes et curieuses*.

CONCERNING THE FAR EAST.—CORDIER, *Hist. des relations de la Chine avec les puissances occidentales* (Paris, 1901-2); COUVREUR, *Choix de documents, lettres officielles, proclamations, édits . . . Texte chinois avec traduction en français et en latin* (Ho-kien-fu, 1894); WIEGER, *Rudiments de parler et de style chinois*, XI, *Textes historiques* (Ho-kien-fu, 1905), 2070-38; COGORDAN, *Les missions cathol. en Chine et le protectorat de la France in Revue des deux mondes*, LXXVIII (15 December, 1886), 765-98; FAUVEL, *Les Allemands en Chine* in *Le Correspondant*, CXCI (1898), 538-58, 758-74; LAUNAY in PIOLET, *Les missions cathol.*, III, 270-75; DE LANESSAN, *Les missions et leur protectorat* (Paris, 1907), written against the protectorate and very unfriendly towards the missionaries.

JOSEPH BRUCKER.

Protectories, institutions for the shelter and training of the young, designed to afford neglected or abandoned children shelter, food, raiment, and the rudiments of an education in religion, morals, science, and manual training or industrial pursuits. Institutions of this character are to be found in most of the dioceses of the United States. They are usually open to the reception of juvenile delinquents, who, under the better ideas now obtaining in criminal procedure, are committed by the courts, especially by Juvenile Courts (q. v.), to educational rather than to penal institutions. San Michèle, the first protectority for youth, was founded at Rome in 1704 by Clement XI. When John Howard, the English prison reformer (1726-90), visited the institution, he read above the entrance this inscription: "Clement XI, Supreme Pontiff, for the reformation and education of criminal youths, to the end that those who when idle had been injurious to the State, might, when better instructed and trained, become useful to it. In the Year of Grace 1704; of the Pontiff, the fourth". On a marble slab inserted in one of the interior walls he read further: "It is of little use to restrain criminals by punishment, unless you reform them by education". This has become the key-note of modern

penology. The inmates worked together by day in a large hall where was hung up in large letters, visible to all, the word *silentium*, indicating that the work must go on in silence. At night they slept in separate cells. This system of associated or congregate labour in silence by day and cellular separation at night, for which, under the name of the Auburn System, so much excellence has been claimed in American penology, was thus inaugurated at Rome in the beginning of the eighteenth century, more than a hundred years prior to the introduction of the method into use here. The same wise pontiff established in connexion with this foundation of San Michèle a special court for the trial of offenders under twenty years of age, a plan that has re-appeared in the last decade in the Juvenile Courts established in America for the trial of delinquents under seventeen years of age.

Secular protectories or reform schools, now termed "training schools", were instituted in America during the initial quarter of the nineteenth century. On 1 Jan., 1825, the House of Refuge was opened with appropriate exercises on what is now Madison Square, New York City. Nine children, just gathered from the streets, were present and formed the nucleus of the new establishment that has since grown to vast proportions in its present location on Randall's Island. Boston followed with a similar institution in 1826; Philadelphia in 1828; and in 1855 a girls' reformatory was founded at Lancaster in Massachusetts on the family or cottage plan, dividing the institution into three separate houses of thirty girls each, with their three matrons, all under the general supervision of a superintendent. In 1904, according to the U. S. Census Reports, there were thirty-nine states and territories with institutions for juvenile delinquents, and these had ninety-three institutions, exclusively for such children, reporting a population, between seven and twenty-one years of age, of 23,034 as against 14,846 population in such institutions on 1 June, 1890. It is stated that these figures do not include children placed in these institutions by parents or guardians without the sanction or order of a magistrate or other lawful committing authority. Nor do these figures include persons under twenty-one years of age committed to institutions that are not exclusively for juveniles, as, for instance, jails and workhouses. Inquiry at the Census Office in Washington shows there were one hundred and three institutions for juvenile delinquents (1910); eighty-seven of these institutions reported 22,096 inmates on 1 January, 1910.

In the great majority of cases the institutions are public. But the report of the Census entitled "Prisoners and Juvenile Delinquents in Institutions: 1904" observes that in several states the reformation and correction of delinquents are entrusted in whole or in part to private or religious agencies, and distinguishes as the most notable among these the Catholic Protectory at Westchester, New York, the largest institution of the kind in the country, which in 1904 contained 2566 delinquents and dependents. The actual number present in this institution on 31 December, 1909, was 2320, of whom 540 were girls accommodated in a department and buildings separate from the boys under the care of the Sisters of Charity. The boys are in charge of the Brothers of the Christian Schools, of the Institute founded by St. John Baptiste de la Salle (q. v.). Another large protectority is St. Mary's Industrial School for Boys in charge of the Xaverian Brothers at Baltimore, Md. It had a juvenile population of 748 on 1 December, 1909. Since 1866, St. Mary's has cared for 7593 boys. Similar institutions are: in the United States, at Chicago, Illinois; Arlington, New Jersey (Diocese of Newark); Philadelphia, Pennsylvania; and Utica, New York (Diocese of Syracuse). In

Canada, 4 in the Archdiocese of Montreal. In England: for boys, at Walthamstow, Essex; Farnworth, Lancashire; Birkdale, Lancashire; and Market Weighton, Yorkshire: for girls, at Bristol, Gloucestershire; and Liverpool, Lancashire. In Scotland, at Parkhead, Glasgow. In Ireland: for boys, at Glencree, Co. Wicklow and Philipstown, King's Co.; for girls, at Drumcondra, Co. Dublin.

Most of the juvenile delinquents sent to institutions in the United States are committed either during minority or for an indeterminate period. Statistics show that female delinquents are committed during minority more frequently than the males. On the other hand, commitment for an indeterminate period was more frequently imposed upon males than females. Most of these delinquents are literate. During 1904, of the male delinquents, 84.7 per cent could both read and write; the per cent of literate females was as high as 89.4. The length of stay in the institution is as a general rule not long. Under the system of parole and probation, the actual restraint is much shortened. The average duration of residence of 1508 boys discharged from the New York Catholic Protectory had been fifteen and two-thirds months; of two hundred and fifty girls, thirty-two and one-half months. The management of the Protectory claim that the girls' department cannot be considered a reformatory or even a home for delinquent children, and express their satisfaction with the recent amendment of the law in New York to prohibit the conviction of children under sixteen years of age of crime as such, restricting the complaint to delinquency.

At St-Yon, in France, in the first quarter of the eighteenth century, St. John Baptiste de la Salle undertook the training and correction of wayward youth. The methods which are now employed at the New York Catholic Protectory, which is under the care of the order established by him, may well be taken as indicative of the general plan of protectories or the ideals which they seek to attain. The Protectory aims to form the youth committed to its care by vigilance, good example, and instruction: vigilance, to remove from the children the many occasions of offending; example, that the teachers be exemplars of the virtues they inculcate, for example is much better than precept; instruction, that they may become intelligent scholars, not only in the secular sciences but in religion, which is the warmth that gives life and light to all other learning, without which there is danger that knowledge may but minister to evil. Many of the boys received have been truant players with a strong disinclination to study. To overcome this and to train and develop the receptive faculties in the usual school studies entails much labour upon the Brothers. Moreover, it is felt that for these children especially vocational studies should not be postponed until mature years, but should be commenced early, so as to accustom the boy to what may afterwards prove to be the means of earning his own livelihood when he shall have left the Protectory. Accordingly, the effective faculties are instructed in different industries, in printing in all its branches, photography, tailoring, shoemaking, laundry work, industrial and ornamental drawing, sign-painting, painting, wheel-wrighting, blacksmithing, plumbing, carpentry, bricklaying, stone-work, baking in its different branches, and in practical knowledge of boilers, engines, dynamos, and electric wiring.

At the Lincoln Agricultural School, a subsidiary institution, the boys, moreover, receive a training in dairy-farming and other agriculture. It is felt that if these children should not acquire a taste for the farm and for husbandry, but should return later to the city, they will have passed the trying period of their lives under conditions that will help them to be

good men and assist them in health and in many other ways in after-life. While the productivity of these protectories is sometimes considerable, this is not the aim, but simply incidental to their primary object, which is the development of an industrious boy of good character for the glory of God and the good of the country. Protectories are always desirous of allowing their inmates to go out into the world, if they are prepared for it. They are impressed with the truth in the statement of Archbishop Hughes in his letter of 19 June, 1863, to Dr. Ives: "Let the children be in their house of protection just as short as possible. Their lot is, and is to be, in one sense, a sufficiently hard one under any circumstances, but the sooner they know what it is to be the better they will be prepared for encountering its trials and difficulties". These protectories have established working boys' homes, like St. Philip's of New York City, St. James' of Baltimore, the Working Boys' Home of Chicago, and other places, where the children may be safely housed and fed, taught manners, trained in the amenities of life, and somewhat accustomed to the use of money and economic conditions before they become incorporated in the great mass of citizenship.

WILLIAM H. DELACY.

Protestant Episcopal Church in the United States of America.—The history of this religious organization divides itself naturally into two portions: the period of its dependence upon the Church of England and that of its separate existence with a hierarchy of its own.

The Church of England was planted permanently in Virginia in 1607, at the foundation of the Jamestown Colony. There had been sporadic attempts before this date—in 1585 and 1587, under the auspices of Walter Raleigh in the Carolinas, and in 1607, under the auspices of Chief Justice Popham and Sir Ferdinando Gorges in Maine. The attempt to found colonies had failed, and with it, of course, the attempt to plant the English ecclesiastical institutions. During the colonial period the Church of England achieved a quasi-establishment in Maryland and Virginia, and to a lesser extent in the other colonies, with the exception of New England, where for many years the few Episcopalians were bitterly persecuted and at best barely tolerated. In the Southern states, notably in Virginia and Maryland, in the latter of which the Church of England had dispossessed the Catholics not only of their political power, but even of religious liberty, the Church of England, although well provided for from a worldly point of view, was by no means in a strong state, either spiritually or intellectually. The appointment to parishes was almost wholly in the hands of vestries who refused to induct ministers and so give them a title to the emoluments of their office, but preferred to pay chaplains whom they could dismiss at their pleasure. This naturally resulted in filling the ranks of the ministry with very unworthy candidates, and reduced the clergy to a position of contempt in the eyes of the laity.

As there were no bishops in America, the churches in the colonies were under the jurisdiction of the Bishop of London, who governed them by means of commissaries; but, although among the commissaries were men of such eminence as Dr. Bray, in Maryland, and Dr. Blair, the founder of William and Mary College in Virginia, the lay power was so strong

and the class of men willing to undertake the work of the ministry so inferior that very little could be done. Even the efforts of the Society for the Propagation of the Gospel proved of very little effect in the South, though in Pennsylvania, New York, and New Jersey it bore much better fruit. But, while the Anglican Church was sunk in spiritual and intellectual lethargy in the South, and while it had a rather attenuated existence in the Middle states, an event occurred in New England in 1722 which was of the greatest promise for the future of Anglicanism, and which shook Congregationalism in New England to its very foundations. Timothy Cutler, the rector of Yale College, with six other Congregational ministers, all men of learning and piety, announced to their brethren in the Congregational ministry of Connecticut that they could no longer remain out of visible communion with an Episcopal Church: that some of them doubted of the validity, while others were persuaded of the invalidity, of Presbyterian ordinations. Three of them were subsequently persuaded to remain in the Congregational ministry, the rest becoming Episcopalians, and three of them, Messrs. Cutler, Johnson, and Brown, were ordained to the ministry of the Anglican Church.

During the period of the Revolution the Church of England in America suffered greatly in the estimation of Americans by its strong attachment to the cause of the British Crown. But there were not wanting both clergymen and laymen most eminent in their loyalty to the cause of the colonies and in the patriotic sacrifices which they made to the cause of independence. Among the clergy two such men were Mr. White, an assistant of Christ Church, Philadelphia, and Mr. Provost, assistant of Trinity Church, New York. The rectors of these churches being Tories, these gentlemen subsequently succeeded them in the pastorate of their respective parishes. At the close of the war, Episcopalians, as they were already commonly called, realized that, if they were to play any part in the national life, their church must have a national organization. The greatest obstacle to this organization was the obtaining of bishops to carry on a national hierarchy. In Connecticut, where those who had gone into the Episcopal Church had not only read themselves into a belief in the necessity of Episcopacy, but had also adopted many other tenets of the Caroline divines, a bishop was considered of absolute necessity, and, accordingly, the clergy of that state elected the Rev. Samuel Seabury and requested him to go abroad and obtain the episcopal character.

It was found impossible to obtain the episcopate in England, owing to the fact that the bishops there could not by law consecrate any man who would not take the oath of allegiance, and, although during the War of the Revolution, Seabury had been widely known for his Tory sympathies, it would have been impossible for him to return to America if he had received consecration as a British subject. Upon the refusal of the English bishops to confer the episcopate, he proceeded to Scotland, where, after prolonged negotiations, the Nonjuring bishops consented to confer the episcopal character upon him. These bishops were the remnant of the Episcopal Church which the Stuarts had so ardently desired to set up in Scotland, and which had lost the protection of the State, together with all its endowments, by its fidelity to James II. Their religious principles were looked upon by Scotch Presbyterians as scarcely less obnoxious than those of Roman Catholics and politically they were considered quite as dangerous. They were indeed exceedingly High Churchmen, and had made such alterations in the liturgy as brought their doctrine of the Holy Eucharist very near to that of the Catholic Church. They had even been known to use chrism in confirmation, and they

were strong believers in the sacerdotal character of the Christian ministry and in the necessity of Apostolic succession and episcopal ordination. Dr. Seabury was consecrated by them in 1784, and, being of very similar theological opinions himself, he signed a concordat immediately after his consecration, whereby he agreed to do his utmost to introduce the liturgical and doctrinal peculiarities of the Nonjurors into Connecticut. Upon his return to his own state he proceeded to organize and govern his diocese very much as a Catholic bishop would do; he excluded the laity from all deliberations and ecclesiastical councils and, as much as he could, from all control of ecclesiastical affairs.

But if sacerdotalism was triumphant in Connecticut, a very different view was taken in New York, Pennsylvania, and Virginia. Dr. White, now rector of Christ Church, and a doctor of divinity, believed that if the Episcopal Church was ever to live and grow in America it must assent to, and adopt as far as possible the principle of representative government. He would have been willing to go on without the episcopate until such time as it could have been obtained from England, and in the meantime to ordain candidates to the ministry by means of Presbyterian ordination, with the proviso, however, that upon the obtaining of a bishop these gentlemen were to be conditionally re-ordained. This last suggestion, however, found little favour among Episcopalians, and at last, after considerable difficulty, an act was passed in Parliament whereby the English bishops were empowered to confer the episcopate upon men who were not subject to the British Crown. Accordingly, Dr. White, being elected Bishop of Pennsylvania, and Dr. Provost, Bishop of New York, proceeded to England and received consecration at the hands of the then Archbishop of Canterbury, Dr. Moore, on Septuagesima Sunday, 1787; but upon their return to America, although there were now three bishops in the United States, there were so many differences between the Connecticut churchmen and those of the Middle and Southern states, especially with regard to the presence of laymen in ecclesiastical councils, that it was not until 1789 that a union was effected. Even after that date, when Dr. Madison was elected by Virginia to be its bishop, he proceeded to England for his consecration because Bishop Provost, of New York, refused to act in conjunction with the Bishop of Connecticut. The union, however, was finally cemented in 1792, when Dr. Claggert being elected Bishop of Maryland, and there being three bishops in the country of the Anglican line exclusive of Dr. Seabury, the Bishop of New York withdrew his objections as far as to allow Dr. Seabury to make a fourth. If Dr. Seabury had not been invited to take part in the consecration of Dr. Claggert, a schism between Connecticut and the rest of the country would have been the immediate result.

Almost from the very beginning of its independent life the tendencies which have shown themselves in the three parties in the Episcopal Church of the present day were not only evident, but were even embodied in the members of the Episcopate. Bishop Provost, of New York, represented the rationalistic temper of the eighteenth century, which has eventuated in what is called the Broad Church Party. Bishop White represented the Evangelical Party, with its belief in the desirability rather than the necessity of Apostolic succession and its desire to fraternize as nearly as possible with the other progeny of the Reformation. Bishop Seabury, on the other hand, represented the traditional High Church position, intellectual rather than emotional, and laying more stress upon the outward ecclesiastical organization of the Church than upon emotional religion. This school has played a very important part in the his-

tory of the Protestant Episcopal Church in the United States; and, while it was undoubtedly influenced to a large extent by the Oxford Movement, it was existent and energetic long before 1833. Indeed, in the twenties Bishop Hobart was already presenting that type of evangelical piety, united with high sacramental ideas, which has been the principal characteristic of the party ever since. The Oxford Movement, however, was not without its influence, and as early as 1843 the disputes between the extreme High Churchmen and the rest of the Episcopal Church had reached a condition of such acerbity that when the Rev. Arthur Cary, in his examination for orders, avowed the principles of "Tract 90", and in spite of that fact was not refused ordination, the controversy broke out into an open war. The Bishop of Philadelphia, Dr. Onderdonk, was suspended from his office on a charge of drunkenness, the real reason being his sympathy with High Churchmen; and his dispossession was so unjust that it was declared by the famous legal authority, Horace Binney, to be absolutely illegal. He was not, however, restored to the exercise of his functions for more than ten years. His brother bishop of New York fared even worse. Charges of immorality were preferred against him, and he was suspended from his office for the rest of his life, despite the fact that the vast majority of his fellow-citizens, whether they belonged to his communion or not, firmly believed in his innocence. An attempt, however, to suspend a third bishop of High Church views, the father of the late Monsignor Doane, failed after he had been presented four times. Bishop Doane, not only by his unrivalled diplomatic skill, but by the goodness and probity of his life, made an ecclesiastical trial impossible.

In 1852 the Bishop of North Carolina, Dr. Ives, resigned his position in the Episcopal Church and submitted to the Apostolic See, and he was followed into the Catholic Church by a considerable number, both of clergymen and laymen. His secession drew out of the Episcopal Church all those of distinctly Roman sympathies, but the High Church Party lived on, growing, and in some degree prospering, in spite of hostile legislation, while in course of time a pro-Roman party sprang up again. Since the passing of the open-pulpit canon in the General Convention of 1907, some twenty clergymen and a large number of the laity have submitted to the Catholic Church. On the other hand, the extreme Evangelical Party, disturbed by the growth of ritualism, and unable to drive out High Churchmen in any large numbers, themselves seceded from the Protestant Episcopal Church in 1873, and formed what is known as the Reformed Episcopal Church. Unlike many of the Protestant bodies, the Episcopal Church was not permanently disrupted by the Civil War, for with the collapse of the Confederacy the separate organization of the Protestant Episcopal Church in the Confederate States ceased. The Broad Church party, however, have remained in the Protestant Episcopal Church, and of late years have seriously affected its attitude towards such subjects as higher criticism and the necessity of episcopal ordination. The most outspoken advocates of this school, who in their conclusions differed little or not at all from the extreme modernists, have not been able seriously to alter the teaching of the Episcopal Church upon such fundamental truths as the Trinity and Incarnation; and in a few cases the High Church Party and the Evangelical, by combining, have been strong enough to exclude them from the Episcopal Church. The party, however, is gaining strength; its clergymen are men of intellect and vigour, and the laity who support the party are in the main people of large means. To it the future of Anglicanism belongs more than to any other school of thought within the Anglican body.

The Protestant Episcopal Church in the United States of America possesses a hierarchy of 5413 clergy, 438 candidates for orders, and 946,252 communicants. These communicants should be multiplied at least three times in order to give an idea of the adherents of the Protestant Episcopal Church. It possesses nine colleges and universities and fifteen theological seminaries.

Protestantism.—The subject will be treated under the following heads, viz.: I. Origin of the Name. II. Characteristic Protestant Principles. III. Discussion of the Three Fundamental Principles of Protestantism: A. *The Supremacy of the Bible*; B. *Justification by Faith Alone*; C. *The Universal Priesthood of Believers*. IV. Private Judgment in Practice. V. "Justification by Faith Alone" in Practice. VI. Advent of a New Order: Cæsaropapism. VII. Rapidity of Protestant Progress Explained. VIII. Present-day Protestantism. IX. Popular Protestantism. X. Protestantism and Progress: A. *Prejudices*; B. *Progress in Church and Churches*; C. *Progress in Civil Society*; D. *Progress in Religious Toleration*; E. *The Test of Vitality*. XI. Conclusion.

I. ORIGIN OF THE NAME.—The Diet of the Holy Roman Empire, assembled at Speyer in April, 1529, resolved that, according to a decree promulgated at the Diet of Worms (1524), communities in which the new religion was so far established that it could not without great trouble be altered should be free to maintain it, but until the meeting of the council they should introduce no further innovations in religion, and should not forbid the Mass, or hinder Catholics from assisting thereat. Against this decree, and especially against the last article, the adherents of the new Evangel, the Elector Frederick of Saxony, the Landgrave of Hesse, the Margrave Albert of Brandenburg, the Dukes of Lüneburg, the Prince of Anhalt, together with the deputies of fourteen of the free and imperial cities, entered a solemn protest as unjust and impious. The meaning of the protest was that the dissentients did not intend to tolerate Catholicism within their borders. On that account they were called *Protestants*. In course of time the original connotation of "no toleration for Catholics" was lost sight of, and the term is now applied to, and accepted by, members of those Western Churches and sects which, in the sixteenth century, were set up by the Reformers in direct opposition to the Catholic Church. The same man may call himself Protestant or Reformed: the term Protestant lays more stress on antagonism to Rome; the term Reformed emphasizes adherence to any of the Reformers. Where religious indifference is prevalent, many will say they are Protestants, merely to signify that they are not Catholics. In some such vague, negative sense, the word stands in the new formula of the Declaration of Faith to be made by the King of England at his coronation; viz.: "I declare that I am a faithful Protestant". During the debates in Parliament it was observed that the proposed formula effectively debarred Catholics from the throne, whilst it committed the king to no particular creed, as no man knows what the creed of a faithful Protestant is or should be.

II. CHARACTERISTIC PROTESTANT PRINCIPLES.—However vague and indefinite the creed of individual Protestants may be, it always rests on a few standard rules, or principles, bearing on the sources of faith, the means of justification, and the constitution of the Church. An acknowledged Protestant authority,

Philip Schaff (in "The New Schaff-Herzog Encyclopedia of Religious Knowledge", s. v. Reformation), sums up the principles of Protestantism in the following words: "The Protestant goes directly to the Word of God for instruction, and to the throne of grace in his devotions; whilst the pious Roman Catholic consults the teaching of his church, and prefers to offer his prayers through the medium of the Virgin Mary and the saints.

"From this general principle of Evangelical freedom, and direct individual relationship of the believer to Christ, proceed the three fundamental doctrines of Protestantism—the absolute supremacy of (1) the Word, and of (2) the grace of Christ, and (3) the general priesthood of believers. . . . (1) The [first] objective [or formal] principle proclaims the canonical Scriptures, especially the New Testament, to be the only infallible source and rule of faith and practice, and asserts the right of private interpretation of the same, in distinction from the Roman Catholic view, which declares the Bible and tradition to be co-ordinate sources and rule of faith, and makes tradition, especially the decrees of popes and councils, the only legitimate and infallible interpreter of the Bible. In its extreme form Chillingworth expressed this principle of the Reformation in the well-known formula, 'The Bible, the whole Bible, and nothing but the Bible, is the religion of Protestants.' Protestantism, however, by no means despises or rejects church authority as such, but only subordinates it to, and measures its value by, the Bible, and believes in a progressive interpretation of the Bible through the expanding and deepening consciousness of Christendom. Hence, besides having its own symbols or standards of public doctrine, it retained all the articles of the ancient creeds and a large amount of disciplinary and ritual tradition, and rejected only those doctrines and ceremonies for which no clear warrant was found in the Bible and which seemed to contradict its letter or spirit. The Calvinistic branches of Protestantism went farther in their antagonism to the received traditions than the Lutheran and the Anglican; but all united in rejecting the authority of the pope [Melancthon for ■ while was willing to concede this, but only *jure humano*, or a limited disciplinary superintendency of the Church], the meritoriousness of good works, indulgences, the worship of the Virgin, saints, and relics, the sacraments (other than baptism and the Eucharist), the dogma of transubstantiation and the Sacrifice of the mass, purgatory, and prayers for the dead, auricular confession, celibacy of the clergy, the monastic system, and the use of the Latin tongue in public worship, for which the vernacular languages were substituted. (2) The subjective principle of the Reformation is justification by faith alone, or, rather, by free grace through faith operative in good works. It has reference to the personal appropriation of the Christian salvation, and aims to give all glory to Christ, by declaring that the sinner is justified before God (i. e. is acquitted of guilt, and declared righteous) solely on the ground of the all-sufficient merits of Christ as apprehended by a living faith, in opposition to the theory—then prevalent, and substantially sanctioned by the Council of Trent—which makes faith and good works co-ordinate sources of justification, laying the chief stress upon works. Protestantism does not depreciate good works; but it denies their value as sources or conditions of justification, and insists on them as the necessary fruits of faith, and evidence of justification. (3) The universal priesthood of believers implies the right and duty of the Christian laity not only to read the Bible in the vernacular, but also to take part in the government and all the public affairs of the Church. It is opposed to the hierarchical system, which puts the essence and authority of the Church

in an exclusive priesthood, and makes ordained priests the necessary mediators between God and the people". See also Schaff, "The Principle of Protestantism, German and English" (1845).

III. DISCUSSION OF THE THREE FUNDAMENTAL PRINCIPLES OF PROTESTANTISM.—A. *The Supremacy of the Bible* as source of faith is unhistorical, illogical, fatal to the virtue of faith, and destructive of unity. It is unhistorical. No one denies the fact that Christ and the Apostles founded the Church by preaching and exacting faith in their doctrines. No book told ■ yet of the Divinity of Christ, the redeeming value of His Passion, or of His coming to judge the world; these and all similar revelations had to be believed on the word of the Apostles, who were, as their powers showed, messengers from God. And those who received their word did so solely on authority. As immediate, implicit submission of the mind was in the lifetime of the Apostles the only necessary token of faith, there was no room whatever for what is now called private judgment. This is quite clear from the words of Scripture: "Therefore, we also give thanks to God without ceasing: because, that when you had received of us the word of the hearing of God, you received it not as the word of men, but (as it is indeed) the word of God" (I Thess., ii, 13). The word of hearing is received through a human teacher, and is believed on the authority of God, who is its first author (cf. Rom., x, 17). But, if in the time of the Apostles, faith consisted in submitting to authorized teaching, it does so now; for the essence of things never changes and the foundation of the Church and of our salvation is immovable. Again, it is illogical to base faith upon the private interpretation of a book. For faith consists in submitting; private interpretation consists in judging. In faith by hearing the last word rests with the teacher; in private judgment it rests with the reader, who submits the dead text of Scripture to a kind of post-mortem examination and delivers a verdict without appeal: he believes in himself rather than in any higher authority.

But such trust in one's own light is not faith. Private judgment is fatal to the theological virtue of faith. John Henry Newman says "I think I may assume that this virtue, which was exercised by the first Christians, is not known at all amongst Protestants now; or at least if there are instances of it, it is exercised toward those, I mean their teachers and divines, who expressly disclaim that they are objects of it, and exhort their people to judge for themselves" ("Discourses to Mixed Congregations", Faith and Private Judgment). And in proof he advances the instability of Protestant so-called faith: "They are as children tossed to and fro and carried along by every gale of doctrine. If they had faith they would not change. They look upon the simple faith of Catholics as if unworthy the dignity of human nature, as slavish and foolish".

Yet upon that simple, unquestioning faith the Church was built up and is held together to this day. Where absolute reliance on God's word, proclaimed by his accredited ambassadors, is wanting, i. e. where there is not the virtue of faith, there can be no unity of Church. It stands to reason, and Protestant history confirms it. The "unhappy divisions", not only between sect and sect but within the same sect, have become a byword. They are due to the pride of private intellect, and they can only be healed by humble submission to a Divine authority.

B. *Justification by Faith Alone*.—See article JUSTIFICATION.

C. *The Universal Priesthood of Believers* is a fond fancy which goes well with the other fundamental tenets of Protestantism. For, if every man is his own supreme teacher and is able to justify himself by an

easy act of faith, there is no further need of ordained teachers and ministers of sacrifice and sacraments. The sacraments themselves, in fact, become superfluous. The abolition of priests, sacrifices, and sacraments is the logical consequence of false premises, i. e. the right of private judgment and justification by faith alone; it is, therefore, as illusory as these. It is moreover contrary to Scripture, to tradition, to reason. The Protestant position is that the clergy had originally been representatives of the people, deriving all their power from them, and only doing, for the sake of order and convenience, what laymen might do also. But Scripture speaks of bishops, priests, deacons as invested with spiritual powers not possessed by the community at large, and transmitted by an external sign, the imposition of hands, thus creating a separate order, a hierarchy. (See HIERARCHY; PRIESTHOOD.) Scripture shows the Church starting with an ordained priesthood as its central element. History likewise shows this priesthood living on in unbroken succession to the present day in East and West, even in Churches separated from Rome. And reason requires such an institution; a society confessedly established to continue the saving work of Christ must possess and perpetuate His saving power; it must have a teaching and ministering order commissioned by Christ, as Christ was commissioned by God: "As the Father hath sent me, I also send you" (John, xx, 21). Sects which are at best shadows of Churches wax and wane with the priestly powers they subconsciously or instinctively attribute to their pastors, elders, ministers, preachers, and other leaders.

IV. PRIVATE JUDGMENT IN PRACTICE.—At first sight it seems that private judgment as a rule of faith would at once dissolve all creeds and confessions into individual opinions, thus making impossible any church life based upon a common faith. For *quot capita tot sensus*: no two men think exactly alike on any subject. Yet we are faced by the fact that Protestant churches have lived through several centuries and have moulded the character not only of individuals but of whole nations; that millions of souls have found and are finding in them the spiritual food which satisfies their spiritual cravings; that their missionary and charitable activity is covering wide fields at home and abroad. The apparent incongruity does not exist in reality, for private judgment is never and nowhere allowed full play in the framing of religions. The open Bible and the open mind on its interpretation are rather a lure to entice the masses, by flattering their pride and deceiving their ignorance, than a workable principle of faith.

The first limitation imposed on the application of private judgment is the incapacity of most men to judge for themselves on matters above their physical needs. How many Christians are made by the tons of Testaments distributed by missionaries to the heathen? What religion could even a well-schooled man extract from the Bible if he had nought but his brain and his book to guide him? The second limitation arises from environment and prejudices. The assumed right of private judgment is not exercised until the mind is already stocked with ideas and notions supplied by family and community, foremost among these being the current conceptions of religious dogmas and duties. People are said to be Catholics, Protestants, Mahomedans, Pagans "by birth", because the environment in which they are born invariably endows them with the local religion long before they are able to judge and choose for themselves. And the firm hold which this initial training gets on the mind is well illustrated by the fewness of changes in later life. Conversions from one belief to another are of comparatively rare occurrence. The number of converts in any denomination com-

pared to the number of stauncher adherents is a negligible quantity. Even where private judgment has led to the conviction that some other form of religion is preferable to the one professed, conversion is not always achieved. The convert, beside and beyond his knowledge, must have sufficient strength of will to break with old associations, old friendships, old habits, and to face the uncertainties of life in new surroundings. His sense of duty, in many cases, must be of heroic temper.

A third limitation put on the exercise of private judgment is the authority of Church and State. The Reformers took full advantage of their emancipation from papal authority, but they showed no inclination to allow their followers the same freedom. Luther, Zwingli, Calvin, and Knox were as intolerant of private judgment when it went against their own conceits as any pope in Rome was ever intolerant of heresy. Confessions of faith, symbols, and catechism were set up everywhere, and were invariably backed by the secular power. In fact, the secular power in the several parts of Germany, England, Scotland, and elsewhere has had more to do with the moulding of religious denominations than private judgment and justification by faith alone. Rulers were guided by political and material considerations in their adherence to particular forms of faith, and they usurped the right of imposing their own choice on their subjects, regardless of private opinions: *cujus regio hujus religio*.

The above considerations show that the first Protestant principle, free judgment, never influenced the Protestant masses at large. Its influence is limited to a few leaders of the movement, to the men who by dint of strong character were capable of creating separate sects. They indeed spurned the authority of the Old Church, but soon transferred it to their own persons and institutions, if not to secular princes. How mercilessly the new authority was exercised is matter of history. Moreover, in the course of time, private judgment has ripened into unbridled freethought, Rationalism, Modernism, now rampant in most universities, cultured society, and the Press. Planted by Luther and other reformers the seed took no root, or soon withered, among the half-educated masses who still clung to authority or were coerced by the secular arm; but it flourished and produced its full fruit chiefly in the schools and among the ranks of society which draw their intellectual life from that source. The modern Press is at infinite pains to spread free judgment and its latest results to the reading public.

It should be remarked that the first Protestants, without exception, pretended to be the true Church founded by Christ, and all retained the Apostles' Creed with the article "I believe in the Catholic Church". The fact of their Catholic origin and surroundings accounts both for their good intention and for the confessions of faith to which they bound themselves. Yet such confessions, if there be any truth in the assertion that private judgment and the open Bible are the only sources of Protestant faith, are directly antagonistic to the Protestant spirit. This is recognized, among others, by J. H. Blunt, who writes: "The mere existence of such confessions of faith as binding on all or any of the members of the Christian community is inconsistent with the great principles on which the Protestant bodies justified their separation from the Church, the right of private judgment. Has not any member as just a right to criticise and to reject them as his forefathers had a right to reject the Catholic creeds or the canons of general councils? They appear to violate another prominent doctrine of the Reformers, the sufficiency of Holy Scripture to salvation. If the Bible alone is enough, what need is there for adding articles? If it is rejoined that they are not additions to, but

merely explanations of, the Word of God, the further question arises, amid the many explanations, more or less at variance with each other given by the different sects of Protestantism, who is to decide which is the true one? Their professed object being to secure uniformity, the experience of three hundred years has proved to us what may not have been foreseen by their originators, that they have had a diametrically opposite result, and have been productive not of union but of variance" (Dict. of Sects, Heresies, etc., London, 1886, s. v. Protestant Confessions of Faith).

By pinning private judgment to the Bible the Reformers started a book religion, i. e. a religion of which, theoretically, the law of faith and conduct is contained in a written document without method, without authority, without an authorized interpreter. The collection of books called "the Bible" is not a methodical code of faith and morals; if it be separated from the stream of tradition which asserts its Divine inspiration, it has no special authority, and, in the hands of private interpreters, its meaning is easily twisted to suit every private mind. Our modern laws, elaborated by modern minds for modern requirements, are daily obscured and diverted from their object by interested pleaders: judges are an absolute necessity for their right interpretation and application, and unless we say that religion is but a personal concern, that coherent religious bodies or churches are superfluous, we must admit that judges of faith and morals are as necessary to them as judges of civil law are to States. And that is another reason why private judgment, though upheld in theory, has not been carried out in practice. As a matter of fact, all Protestant denominations are under constituted authorities, be they called priest or presbyters, elders or ministers, pastors or presidents. Notwithstanding the contradiction between the freedom they proclaim and the obedience they exact, their rule has often been tyrannical to a degree, especially in Calvinistic communities. Thus in the seventeenth and eighteenth centuries there was no more priest-ridden country in the world than Presbyterian Scotland. A book-religion has, moreover, another drawback. Its devotees can draw devotion from it only as fetish worshippers draw it from their idol, viz. by firmly believing in its hidden spirit. Remove belief in Divine inspiration from the sacred books, and what remains may be regarded as simply a human document of religious illusion or even of fraud. Now, in the course of centuries, private judgment has partly succeeded in taking the spirit out of the Bible, leaving little else than the letter, for critics, high and low, to discuss without any spiritual advantage.

V. "JUSTIFICATION BY FAITH ALONE" IN PRACTICE.—This principle bears upon conduct, unlike free judgment, which bears on faith. It is not subject to the same limitations, for its practical application requires less mental capacity; its working cannot be tested by anyone; it is strictly personal and internal, thus escaping such violent conflicts with community or state as would lead to repression. On the other hand, as it evades coercion, lends itself to practical application at every step in man's life, and favours man's inclination to evil by rendering a so-called "conversion" ludicrously easy, its baneful influence on morals is manifest. Add to justification by faith alone the doctrines of predestination to heaven or hell regardless of man's actions, and the slavery of the human will, and it seems inconceivable that any good action at all could result from such beliefs. As a matter of history, public morality did at once deteriorate to an appalling degree wherever Protestantism was introduced. Not to mention the robberies of Church goods, brutal treatment meted out to the clergy, secular and regular, who remained

faithful, and the horrors of so many wars of religion, we have Luther's own testimony as to the evil results of his teaching (see Janssen, "History of the German People", Eng. tr., vol. V, London and St. Louis, 1908, 274-83, where each quotation is documented by a reference to Luther's works as published by de Wette).

VI. ADVENT OF A NEW ORDER: CÆSAROPAPISM.—A similar picture of religious and moral degradation may easily be drawn from contemporary Protestant writers for all countries after the first introduction of Protestantism. It could not be otherwise. The immense fermentation caused by the introduction of subversive principles into the life of a people naturally brings to the surface and shows in its utmost ugliness all that is brutal in human nature. But only for a time. The ferment exhausts itself, the fermentation subsides, and order reappears, possibly under new forms. The new form of social and religious order, which is the residue of the great Protestant upheaval in Europe, is territorial or State Religion—an order based on the religious supremacy of the temporal ruler, in contradistinction to the old order in which the temporal ruler took an oath of obedience to the Church. For the right understanding of Protestantism it is necessary to describe the genesis of this far-reaching change.

Luther's first reformatory attempts were radically democratic. He sought to benefit the people at large by curtailing the powers of both Church and State. The German princes, to him, were "usually the biggest fools or the worst scoundrels on earth". In 1523 he wrote: "The people will not, cannot, shall not endure your tyranny and oppression any longer. The world is not now what it was formerly, when you could chase and drive the people like game". This manifesto, addressed to the poorer masses, was taken up by Franz von Sickingen, a Knight of the Empire, who entered the field in execution of its threats. His object was two-fold: to strengthen the political power of the knights—the inferior nobility—against the princes, and to open the road to the new Gospel by overthrowing the bishops. His enterprise had, however, the opposite result. The knights were beaten; they lost what influence they had possessed, and the princes were proportionately strengthened. The rising of the peasants likewise turned to the advantage of the princes: the fearful slaughter of Frankenhäusen (1525) left the princes without an enemy and the new Gospel without its natural defenders. The victorious princes used their augmented power entirely for their own advantage, in opposition to the authority of the emperor and the freedom of the nation; the new Gospel was also to be made subservient to this end, and this by the help of Luther himself.

After the failure of the revolution, Luther and Melancthon began to proclaim the doctrine of the rulers' unlimited power over their subjects. Their dissolving principles had, within less than ten years, destroyed the existing order, but were unable to knit together its debris into a new system. So the secular powers were called on for help; the Church was placed at the service of the State, its authority, its wealth, its institutions all passed into the hands of kings, princes, and town magistrates. The one discarded Pope of Rome was replaced by scores of popes at home. These, "to strengthen themselves by alliances for the promulgation of the Gospel", banded together within the limits of the German Empire and made common cause against the emperor. From this time forward the progress of Protestantism is on political rather than on religious lines; the people are not clamouring for innovations, but the rulers find their advantage in being supreme bishops, and by force, or cunning, or both impose the yoke of the new Gospel on their subjects. Denmark, Sweden, Norway, England, and all the small principalities and im-

perial towns in Germany are examples in point. The supreme heads and governors were well aware that the principles which had brought down the authority of Rome would equally bring down their own; hence the penal laws everywhere enacted against dissenters from the state religion decreed by the temporal ruler. England, under Henry VIII, Elizabeth, and the Puritans elaborated the most ferocious of all penal codes against Catholics and others unwilling to conform to the established religion.

To sum up: the much-vaunted Protestant principles only wrought disaster and confusion where they were allowed free play; order was only restored by reverting to something like the old system: symbols of faith imposed by an outside authority and enforced by the secular arm. No bond of union exists between the many national Churches, except their common hatred for "Rome", which is the birth-mark of all, and the trade-mark of many, even unto our day.

VII. RAPIDITY OF PROTESTANT PROGRESS EXPLAINED.—Before we pass on to the study of contemporary Protestantism, we will answer a question and solve a difficulty. How is the rapid spread of Protestantism accounted for? Is it not a proof that God was on the side of the Reformers, inspiring, fostering, and crowning their endeavours? Surely, as we consider the growth of early Christianity and its rapid conquest of the Roman Empire, as proofs of its Divine origin, so we should draw the same conclusion in favour of Protestantism from its rapid spread in Germany and the northern parts of Europe. In fact the Reformation spread much faster than the Apostolic Church. When the last of the Apostles died, no kingdoms, no vast tracts of lands, were entirely Christian; Christianity was still hiding in the catacombs and in out-of-the-way suburbs of heathen towns. Whereas, in a period of similar duration, say seventy years, Protestantism had taken hold of the better part of Germany, Scandinavia, Switzerland, England, and Scotland. A moment's consideration supplies the solution of this difficulty. Success is not invariably due to intrinsic goodness, nor is failure a certain proof of intrinsic badness. Both largely depend on circumstances: on the means employed, the obstacles in the way, the receptivity of the public. The success of Protestantism, therefore, must itself be tested before it can be used as a test of intrinsic goodness.

The reformatory movement of the sixteenth century found the ground well prepared for its reception. The cry for a thorough reformation of the Church in head and members had been ringing through Europe for a full century; it was justified by the worldly lives of many of the clergy, high and low, by abuses in church administration, by money extortions, by the neglect of religious duties reaching far and wide through the body of the faithful. Had Protestantism offered a reform in the sense of amendment, probably all the corrupt elements in the Church would have turned against it, as Jews and pagans turned against Christ and the Apostles. But what the Reformers aimed at was, at least in the first instance, the radical overthrow of the existing Church, and this overthrow was effected by pandering to all the worst instincts of man. A bait was tendered to the seven-headed concupiscence which dwells in every human heart; pride, covetousness, lust, anger, gluttony, envy, sloth, and all their offspring were covered and healed by easy trust in God. No good works were required: the immense fortune of the Church was the prize of apostasy: political and religious independence allured the kings and princes: the abolition of tithes, confession, fasting, and other irksome obligations attracted the masses. Many persons were deceived into the new religion by outward appearances of Catholicism which the innova-

tors carefully maintained, e. g. in England and the Scandinavian kingdoms. Evidently we need not look for Divine intervention to account for the rapid spread of Protestantism. It would be more plausible to see the finger of God in the stopping of its progress.

VIII. PRESENT-DAY PROTESTANTISM.—*Theology*.—After nearly four centuries of existence, Protestantism in Europe is still the religion of millions, but it is no more the original Protestantism. It has been, and is, in a perpetual flux: the principle of untrammelled free judgment, or, as it is now called, Subjectivism, has been swaying its adherents to and fro from orthodoxy to Pietism, from Rationalism to Indifferentism. The movement has been most pronounced in intellectual centres, in universities and among theologians generally, yet it has spread down to the lowest classes. The modern Ritschl-Harnack school, also called Modernism, has disciples everywhere and not only among Protestants. For an accurate and exhaustive survey of its main lines of thought we refer the reader to the Encyclical "Pascendi Dominici Gregis" (8 Sept., 1907), the professed aim of which is to defend the Catholic Church against Protestant infiltrations. In one point, indeed, the Modernist condemned by Pius X differs from his intellectual brothers: he remains, and wishes to remain, inside the Catholic Church, in order to leaven it with his ideas; the other stands frankly outside, an enemy or a supercilious student of religious evolution. It should also be noted that not every item of the Modernist programme need be traced to the Protestant Reformation; for the modern spirit is the distilled residue of many philosophies and many religions: the point is that Protestantism proclaims itself its standard-bearer, and claims credit for its achievements.

Moreover, Modernistic views in philosophy, theology, history, criticism, apologetics, church reform etc., are advocated in nine-tenths of the Protestant theological literature in Germany, France, and America, England only slightly lagging behind. Now, Modernism is at the antipodes of sixteenth-century Protestantism. To use Ritschl's terminology, it gives new "values" to the old beliefs. Scripture is still spoken of as inspired, but its inspiration is only the impassioned expression of human religious experiences; Christ is the Son of God, but His Sonship is like that of any other good man; the very ideas of God, religion, Church, sacraments, have lost their old values: they stand for nothing real outside the subject in whose religious life they form a kind of fool's paradise. The fundamental fact of Christ's Resurrection is an historical fact no longer; it is but another freak of the believing mind. Harnack puts the essence of Christianity, that is the whole teaching of Christ, into the Fatherhood of God and the Brotherhood of man: Christ Himself is no part of the Gospel! Such was not the teaching of the Reformers. Present-day Protestantism, therefore, may be compared with Gnosticism, Manichæism, the Renaissance, eighteenth-century Philosophism, in so far as these were virulent attacks on Christianity, aiming at nothing less than its destruction. It has achieved important victories in a kind of civil war between orthodoxy and unbelief within the Protestant pale; it is no mean enemy at the gate of the Catholic Church.

IX. POPULAR PROTESTANTISM.—In Germany, especially in the greater towns, Protestantism, as a positive guide in faith and morals, is rapidly dying out. It has lost all hold of the working classes. Its ministers, when not themselves infidels, fold their hands in helpless despair. The old faith is but little preached and with little profit. The ministerial energies are turned towards works of charity, foreign missions, polemics against Catholics. Among the English-speaking nations things seem just a little

better. Here the grip of Protestantism on the masses was much tighter than in Germany, the Wesleyan revival and the High Church party among Anglicans did much to keep some faith alive, and the deleterious teaching of English Deists and Rationalists did not penetrate into the heart of the people. Presbyterianism in Scotland and elsewhere has also shown more vitality than less well-organized sects. "England", says J. R. Green, "became the people of a book, and that book was the Bible. It was as yet the one English book which was familiar to every Englishman; it was read in the churches and read at home, and everywhere its words, as they fell on ears which custom had not deadened, kindled a startling enthusiasm. . . . So far as the nation at large was concerned, no history, no romance, hardly any poetry, save the little-known verse of Chaucer, existed in the English tongue when the Bible was ordered to be set up in churches. . . . The power of the book over the mass of Englishmen showed itself in a thousand superficial ways, and in none more conspicuously than in the influence exerted on ordinary speech. . . . But far greater than its effect on literature or social phrase was the effect of the Bible on the character of the people at large. . . . (Hist. of the English People, chap. viii, § 1).

X. PROTESTANTISM AND PROGRESS.—A. *Prejudices*.—The human mind is so constituted that it colours with its own previous conceptions any new notion that presents itself for acceptance. Though truth be objective and of its nature one and unchangeable, personal conditions are largely relative, dependent on preconceptions, and changeable. The arguments, for example, which three hundred years ago convinced our fathers of the existence of witches and sent millions of them to the torture and the stake, make no impression on our more enlightened minds. The same may be said of the whole theological controversy of the sixteenth century. To the modern man it is a dark body, of whose existence he is aware, but whose contact he avoids. With the controversies have gone the coarse, unscrupulous methods of attack. The adversaries are now facing each other like parliamentarians of opposite parties, with a common desire of polite fairness, no longer like armed troopers only intent on killing, by fair means or foul. Exceptions there are still, but only at low depths in the literary strata. Whence this change of behaviour, notwithstanding the identity of positions? Because we are more reasonable, more civilized; because we have evolved from medieval darkness to modern comparative light. And whence this progress? Here Protestantism puts in its claim, that, by freeing the mind from Roman thralldom, it opened the way for religious and political liberty; for untrammelled evolution on the basis of self-reliance; for a higher standard of morality; for the advancement of science—in short for every good thing that has come into the world since the Reformation. With the majority of non-Catholics, this notion has hardened into a prejudice which no reasoning can break up: the following discussion, therefore, shall not be a battle royal for final victory, but rather a peaceful review of facts and principles.

B. *Progress in Church and Churches*.—The Catholic Church of the twentieth century is vastly in advance of that of the sixteenth. She has made up her loss in political power and worldly wealth by increased spiritual influences and efficiency; her adherents are more widespread, more numerous, more fervent than at any time in her history, and they are bound to the central Government at Rome by a more filial affection and a clearer sense of duty. Religious education is abundantly provided for clergy and laity; religious practice, morality, and works of charity are flourishing; the Catholic mission-field is world-wide and rich in harvest. The hierarchy was never so united, never

so devoted to the pope. The Roman unity is successfully resisting the inroads of sects, of philosophies, of politics. Can our separated brethren tell a similar tale of their many Churches, even in lands where they are ruled and backed by the secular power? We do not rejoice at their disintegration, at their falling into religious indifference, or returning into political parties. No, for any shred of Christianity is better than blank worldliness. But we do draw this conclusion: that after four centuries the Catholic principle of authority is still working out the salvation of the Church, whereas among Protestants the principle of Subjectivism is destroying what remains of their former faith and driving multitudes into religious indifference and estrangement from the supernatural.

C. *Progress in Civil Society*.—The political and social organization of Europe has undergone greater changes than the Churches. Royal prerogatives, like that exercised, for instance, by the Tudor dynasty in England, are gone for ever. "The prerogative was absolute, both in theory and in practice. Government was identified with the will of the sovereign, his word was law for the conscience as well as the conduct of his subjects" (Brewer, "Letters and Papers, Foreign and Domestic etc.", II, pt. I, 1, p. cccxiv). Nowhere now is persecution for conscience' sake inscribed on the national statute-books, or left to the caprice of the rulers. Where still carried on it is the work of anti-religious passion temporarily in power, rather than the expression of the national will; at any rate it has lost much of its former barbarity. Education is placed within reach of the poorest and lowest. The punishment of crime is no longer an occasion for the spectacular display of human cruelty to human beings. Poverty is largely prevented and largely relieved. Wars diminish in number and are waged with humanity; atrocities like those of the Thirty Years War in Germany, the Huguenot wars in France, the Spanish wars in the Netherlands, and Cromwell's invasion of Ireland, are gone beyond the possibility of return. The witch-finder, the witchburner, the inquisitor, the disbanded mercenary soldier have ceased to plague the people. Science has been able to check the outbursts of pestilence, cholera, smallpox, and other epidemics; human life has been lengthened and its amenities increased a hundredfold. Steam and electricity in the service of industry, trade, and international communication, are even now drawing humanity together into one vast family, with many common interests and a tendency to uniform civilization. From the sixteenth to the twentieth century there has indeed been progress. Who have been its chief promoters? Catholics, or Protestants, or neither?

The civil wars and revolutions of the seventeenth century which put an end to the royal prerogatives in England, and set up a real government of the people by the people, were religious throughout and Protestant to the core. "Liberty of conscience" was the cry of the Puritans, which, however, meant liberty for themselves against established Episcopacy. Tyrannical abuse of their victory in oppressing the Episcopalians brought about their downfall, and they in turn were the victims of intolerance. James II, himself a Catholic, was the first to strive by all the means at his command, to secure for his subjects of all the denominations "liberty of conscience for all future time" (Declaration of Indulgence, 1688). His premature Liberalism was acquiesced in by many of the clergy and laity of the Established Church, which alone had nothing to gain by it, but excited the most violent opposition among the Protestant Non-conformists who, with the exception of the Quakers, preferred a continuance of bondage to emancipation if shared with the hated and dreaded "Papists". So strong was this feeling that it overcame all those principles of patriotism and respect for the law of

which the English people are wont to boast, leading them to welcome a foreign usurper and foreign troops for no other reason than to obtain their assistance against their Catholic fellow-subjects, in part to do precisely what the latter were falsely accused of doing in the time of Elizabeth.

The Stuart dynasty lost the throne, and their successors were reduced to mere figure-heads. Political freedom had been achieved, but the times were not yet ripe for the wider freedom of conscience. The penal laws against Catholics and Dissenters were aggravated instead of abolished. That the French Revolution of 1789 was largely influenced by the English events of the preceding century is beyond doubt; it is, however, equally certain that its moving spirit was not English Puritanism, for the men who set up a declaration of the Rights of Man against the Rights of God, and who enthroned the Goddess of Reason in the Cathedral Church of Paris, drew their ideals from Pagan Rome rather than from Protestant England.

D. Progress in Religious Toleration.—As regards Protestant influence on the general progress of civilization since the origin of Protestantism we must mark off at least two periods: the first from the beginning in 1517 to the end of the Thirty Years War (1648), the second from 1648 to the present day; the period of youthful expansion, and the period of maturity and decay. But before apportioning its influence on civilization the previous questions should be examined: in how far does Christianity contribute to the amelioration of man—intellectual, moral, material—in this world: for its salutary effects on man's soul after death cannot be tested, and consequently cannot be used as arguments in a purely scientific disquisition. There were highly-civilized nations in antiquity, Assyria, Egypt, Greece, Rome: and there are now China and Japan, whose culture owes nothing to Christianity. When Christ came to enlighten the world, the light of Roman and Greek culture was shining its brightest, and for at least three centuries longer the new religion added nothing to its lustre. The spirit of Christian charity, however, gradually leavened the heathen mass, softening the hearts of rulers and improving the condition of the ruled, especially of the poor, the slave, the prisoner. The close union of Church and State, begun with Constantine and continued under his successors, the Roman emperors of East and West, led to much good, but probably to more evil. The lay episcopacy which the princes assumed well-nigh reduced the medieval Church to a state of abject vassalage, the secular clergy to ignorance and worldliness, the peasant to bondage and often to misery.

Had it not been for the monasteries the Church of the Middle Ages would not have saved, as it did, the remnant of Roman and Greek culture which so powerfully helped to civilize Western Europe after the barbarian invasions. Dotted all over the West, the monks formed model societies, well-organized, justly ruled, and prospering by the work of their hands, true ideals of a superior civilization. It was still the ancient Roman civilization, permeated with Christianity, but shackled by the jarring interests of Church and State. Was Christian Europe, from a worldly point of view, better off at the beginning of the fifteenth century than pagan Europe at the beginning of the fourth? For the beginning of our distinctly modern progress we must go back to the Renaissance, the Humanistic or classical, i. e. pagan revival, following upon the conquest of Constantinople by the Turks (1453); upon the discovery of the new Indian trade route round the Cape of Good Hope by the Portuguese; upon the discovery of America by the Spaniards, and upon the development of all European interests, fostered or initiated at the end

of the fifteenth century, just before the birth of Protestantism. The opening of the New World was for Europe a new creation. Minds expanded with the vast spaces submitted to them for investigation; the study of astronomy, at first in the service of navigation, soon reaped its own reward by discoveries in its proper domain, the starry heavens; descriptive geography, botany, anthropology, and kindred sciences demanded study of those who would reap a share in the great harvest East and West. The new impulse and new direction given to commerce changed the political aspect of old Europe. Men and nations were brought into that close contact of common interests, which is the root of all civilization; wealth and the printing-press supplied the means for satisfying the awakened craving for art, science, literature, and more refined living. Amid this outburst of new life Protestantism appears on the scene, itself a child of the times. Did it help or hinder the forward movement?

The youth of Protestantism was, naturally enough, a period of turmoil, of disturbing confusion in all the spheres of life. No one nowadays can read without a sense of shame and sadness the history of those years of religious and political strife; of religion everywhere made the handmaid of politics; of wanton destruction of churches and shrines and treasures of sacred art; of wars between citizens of the same land, conducted with incredible ferocity; of territories laid waste, towns pillaged and levelled to the ground, poor people sent adrift to die of starvation in their barren fields; of commercial prosperity cut down at a stroke; of seats of learning reduced to ranting and loose living; of charity banished from social intercourse to give place to slander and abuse, of coarseness in speech and manners, of barbarous cruelty on the part of princes, nobles, and judges in their dealings with the "subject" and the prisoner, in short of the almost sudden drop of whole countries into worse than primitive savagery. "Greed, robbery, oppression, rebellion, repression, wars, devastation, degradation" would be a fitting inscription on the tombstone of early Protestantism.

But *violenta non durant*. Protestantism has now grown into a sedate something, difficult to define. In some form or other it is the official religion in many lands of Teutonic race, it also counts among its adherents an enormous number of independent religious bodies. These Protestant Teutons and semi-Teutons claim to be leaders in modern civilization: to possess the greatest wealth, the best education, the purest morals; in every respect they feel themselves superior to the Latin races who still profess the Catholic religion, and they ascribe their superiority to their Protestantism.

Man knows himself but imperfectly: the exact state of his health, the truth of his knowledge, the real motives of his actions, are all veiled in semi-obscurity; of his neighbour he knows even less than of himself, and his generalizations of national character, typified by nicknames, are worthless caricatures. Antipathies rooted in ancient quarrels—political or religious—enter largely into the judgments on nations and Churches. Opprobrious, and so far as sense goes, obsolete epithets applied in the heat and passion of battle still cling to the ancient foe and create prejudice against him. Conceptions formed three hundred years ago amid a state of things which has long ceased to be, still survive and distort our judgments. How slowly the terms Protestant, Papist, Romanist, Nonconformist, and others are losing their old unsavoury connotation. Again: Is there any of the greater nations that is purely Protestant? The richest provinces of the German Empire are Catholic, and contain fully one-third of its entire population. In the United States of America, according to the latest census, Catholics form the majority of the

church-going population in many of the largest cities: San Francisco (81.1 per cent); New Orleans (79.7 per cent); New York (76.9 per cent); St. Louis (69 per cent); Boston (68.7 per cent); Chicago (68.2 per cent); Philadelphia (51.8 per cent).

Great Britain and its colonies have a Catholic population of over twelve millions. Holland and Switzerland have powerful Catholic provinces and cantons; only the small Scandinavian kingdoms have succeeded in keeping down the old religion. A further question suggests itself: granting that some states are more prosperous than others, is their greater prosperity due to the particular form of Christianity they profess? The idea is absurd. For all Christian denominations have the same moral code—the Decalogue—and believe in the same rewards for the good and punishments for the wicked. We hear it asserted that Protestantism produces self-reliance, whereas Catholicism extinguishes it. Against this may be set the statement that Catholicism produces disciplined order—an equally good commercial asset. The truth of the matter is that self-reliance is best fostered by free political institutions and a decentralized government. These existed in England before the Reformation and have survived it; they likewise existed in Germany, but were crushed out by Protestant Cæsaropapism, never to revive with their primitive vigour. Medieval Italy, the Italy of the Renaissance, enjoyed free municipal government in its many towns and principalities: though the country was Catholic, it brought forth a crop of undisciplined self-reliant men, great in many walks of life, good and evil. And looking at history, we see Catholic France and Spain attaining the zenith of their national grandeur, whilst Germany was undermining and disintegrating that Holy Roman Empire vested in the German nation—an empire which was its glory, its strength, the source and mainstay of its culture and prosperity.

England's grandeur during the same epoch is due to the same cause as that of Spain: the impulse given to all national forces by the discovery of the New World. Both Spain and England began by securing religious unity. In Spain the Inquisition at a small cost of human life preserved the old faith; in England the infinitely more cruel penal laws stamped out all opposition to the innovations imported from Germany. Germany itself did not recover the prominent position it held in Europe under the Emperor Charles V until the constitution of the new empire during the Franco-German War (1871). Since then its advance in every direction, except that of religion, has been such as seriously to threaten the commercial and maritime supremacy of England. The truth of the whole matter is this: religious toleration has been placed on the statute books of modern nations; the civil power has severed itself from the ecclesiastical; the governing classes have grown alarmingly indifferent to things spiritual; the educated classes are largely Rationalistic; the working classes are widely infected with anti-religious socialism; a prolific press daily and periodically preaches the gospel of Naturalism overtly or covertly to countless eager readers; in many lands Christian teaching is banished from the public schools; and revealed religion is fast losing that power of fashioning politics, culture, home life, and personal character which it used to exercise for the benefit of Christian states. Amid this almost general flight from God to the creature, Catholicism alone makes a stand: its teaching is intact, its discipline stronger than ever, its confidence in final victory is unshaken.

E. *The Test of Vitality*.—A better standard for comparison than the glamour of worldly progress, at best an accidental result of a religious system, is the power of self-preservation and propagation, i. e. vital energy. What are the facts? "The anti-

Protestant movement in the Roman Church" says a Protestant writer, "which is generally called the Counter-Reformation, is really at least as remarkable as the Reformation itself. Probably it would be no exaggeration to call it the most remarkable single episode that has ever occurred in the history of the Christian Church. Its immediate success was greater than that of the Protestant movement, and its permanent results are fully as large at the present day. It called forth a burst of missionary enthusiasm such as has not been seen since the first day of Pentecost. So far as organization is concerned, there can be no question that the mantle of the men who made the Roman Empire has fallen upon the Roman Church; and it has never given more striking proof of its vitality and power than it did at this time, immediately after a large portion of Europe had been torn from its grasp. Printing-presses poured forth literature not only to meet the controversial needs of the moment but also admirable editions of the early Fathers to whom the Reformed Churches appealed—sometimes with more confidence than knowledge. Armies of devoted missionaries were scientifically marshalled. Regions of Europe which had seemed to be lost for ever [for example, the southern portion of Germany and parts of Austria-Hungary] were recovered to the Papacy, and the claims of the Vicar of Christ were carried far and wide through countries where they had never been heard before" (R. H. Malden, classical lecturer, Selwyn College, Cambridge, in "Foreign Missions", London, 1910, 119-20).

Dr. G. Warneck, a protagonist of the Evangelical Alliance in Germany, thus describes the result of the *Kulturkampf*: "The *Kulturkampf* [i. e. struggle for superiority of Protestantism against Catholicism in Prussia], which was inspired by political, national, and liberal-religious motives, ended with a complete victory for Rome. When it began, a few men, who knew Rome and the weapons used against her, foretold with certainty that a contest with Romanism on such lines would of necessity end in defeat for the State and in an increase of power for Romanism. . . . The enemy whom we met in battle has brilliantly conquered us, though we had all the arms civil power can supply. True, the victory is partly owing to the ability of the leaders of the Centre party, but it is truer still that the weapons used on our side were blunted tools, unfit for doing serious harm. The Roman Church is indeed, like the State, a political power, worldly to the core, but after all she is a Church, and therefore disposes of religious powers which she invariably brings into action when contending with civil powers for supremacy. The State has no equivalent power to oppose. You cannot hit a spirit, not even the Roman spirit. . . ." (*Der evangelische Bund und seine Gegner*", 13-14). The anti-religious Government of France is actually renewing the *Kulturkampf*; but no more than its German models does it succeed in "hitting the Roman spirit". Endowments, churches, schools, convents have been confiscated, yet the spirit lives.

The other mark of Catholic vitality—the power of propagation—is evident in missionary work. Long before the birth of Protestantism, Catholic missionaries had converted Europe and carried the Faith as far as China. After the Reformation they reconquered for the Church the Rhinelands, Bavaria, Austria, part of Hungary, and Poland; they established flourishing Christian communities all over North and South America and in the Portuguese colonies, wherever, in short, Catholic powers allowed them free play. For nearly three hundred years Protestants were too intent on self-preservation to think of foreign missionary work. At the present day, however, they develop great activity in all heathen countries, and not without a fair success. Malden, in the

work quoted above, compares Catholic with Protestant methods and results: although his sympathy is naturally with his own, his approbation is all for the other side.

XI. CONCLUSION.—Catholicism numbers some 270 millions of adherents, all professing the same Faith, using the same sacraments, living under the same discipline; Protestantism claims roundly 100 millions of Christians, products of the Gospel and the fancies of a hundred reformers, people constantly bewailing their "unhappy divisions" and vainly crying for a union which is only possible under that very central authority, protestation against which is their only common denominator.

For controversial matter see any Catholic or Protestant textbooks. The Catholic standard work is BELLARME, *Disputationes de Controversiis Christianæ fidei* etc. (4 vols., Rome, 1832-8); on the Protestant side: GERHARD, *Loci Theologici*, etc. (9 vols., Berlin, 1863-75). For the historical, political, and social history of Protestantism the best works are: DÖLLINGER, *Die Reformation* (3 vols., Ratisbon, 1843-51); *The Church and the Churches*, tr. MACCABE (1862); JANSSEN, *Hist. of the German People at the close of the Middle Ages*, tr. CHRISTIE (London, 1896-1910); PASTOR, *Hist. of the Popes from the close of the Middle Ages*, tr. ANTROBUS (London, 1891-1910); BALMES, *Protestantism and Catholicity in their effects on the civilization of Europe*, tr. HANFORD AND KERSHAW (1849); BAUDRILLART, *The Catholic Church, the Renaissance and Protestantism*, tr. GIBBS (London, 1908), these are illuminating lectures given at the Institut Catholique of Paris by its rector. On the Protestant side may be recommended the voluminous writings of CREIGHTON and GARDINER, both fair-minded.

J. WILHELM.

Prothonotary Apostolic, member of the highest college of prelates in the Roman Curia, and also of the honorary prelates on whom the pope has conferred this title and its special privileges. In later antiquity there were in Rome seven regional notaries, who, on the further development of the papal administration and the accompanying increase of the notaries, remained the supreme palace notaries of the papal chancery (*notarii apostolici* or *protonotarii*). In the Middle Ages the prothonotaries were very high papal officials, and were often raised directly from this office to the cardinalate. Sixtus V (1585-90) increased their number to twelve. Their importance gradually diminished, and at the time of the French Revolution the office had almost entirely disappeared. On 8 February, 1838, Gregory XVI re-established the college of real prothonotaries with seven members called "protonotarii de numero participantium", because they shared in the revenues.

Since the sixteenth century the popes had also appointed honorary prothonotaries, who enjoyed the same privileges as the seven real members of the college; and titular prothonotaries, who held a corresponding position in the administration of the episcopal ordinariate or in the collegiate chapter. By the *Motu Proprio* "Inter multiplices" of 21 February, 1905, Pius X exactly defined the position of the prothonotaries. These are divided into four classes: (1) the "Protonotarii apostolici de numero participantium" (members of the college of prelates), who exercise their office in connexion with the acts of consistories and canonizations, have a representative in the Congregation of the Propaganda, and, according to the reorganization of the Curia by the Constitution "Sapienti consilio" of 29 June, 1908, sign the papal Bulls instead of the earlier abbreviators (q. v.). They enjoy the use of pontificals and numerous privileges, and may also, after examining the candidates, name annually a fixed number of doctors of theology and of canon law; (2) the "Protonotarii apostolici supranumerarii", a dignity to which only the canons of the three Roman patriarchal churches (the Lateran, St. Peter's, and St. Mary Major), and of cathedral chapters outside of Rome to which the privilege has been granted, can be raised; (3) the "Protonotarii apostolici ad instar [sc. participantium]", who are appointed by the pope and have the same external insignia as the real prothonotaries; (4) the "Protonotarii titulares seu honorarii",

who are found outside of Rome, and who may receive this dignity from the nuncios or as a special privilege. The privileges, dress, and insignia of the members of these four classes are exactly defined by the above-mentioned *Motu Proprio*.

Protocanonical Books. See CANON OF THE HOLY SCRIPTURES.

Protocol, the formula used at the beginning of public acts drawn up by notaries, e. g., mention of the reign, time, place, etc. (Justinian, "Novels", 43); also, the compact register in which notaries register the acts drawn up by them, in order of date; finally, the first draft of these acts (called minutes, because they are written in small characters), which remain in care of the notary, and from which a copy or transcript (said to be engrossed, because written in larger characters) is made, and sent to the interested parties. In tribunals where the registrars have retained the name notary, the protocol is the register in which records of the proceedings are preserved and the office in which the originals of these documents are kept (cf. Regulation of the Rota, 4 August, 1910, art. 2). Public acts, official records, ought to be either the originals (engrossed) or authentic copies, i. e., certified to be faithful copies of the original preserved in the protocol, the notary who transcribes the document witnessing on the copy itself that it is exact; this is what is known as *fides instrumentorum*, or trustworthiness of the documents.

Protomartyr. See STEPHEN, SAINT.

Protopope, a priest of higher rank in the Orthodox and Byzantine Uniat Churches, corresponding in general to the Western archpriest or dean. The rights and duties of these dignitaries have varied to some extent at different times and in different local Churches.

Roughly the titles *archpriest* (ἀρχιερεύς), *protopriest* (πρωτοερεύς, πρωτοπρεσβύτερος), *protopope* (πρωτοπαπᾶς) may be taken as meaning the same thing, though they have occasionally been distinguished. The general idea is that the archpriest has the highest rank in his order; he comes immediately after the bishop. In the fifth century he appears as head of the college of priests, as the bishop's delegate for certain duties of visitation and judgment, as his representative in case of absence or death (*sede vacante*). So Liberatus: "Breviarium", XIV (P. L., LXVIII, 1016). He therefore combined the offices of our modern dean of the chapter, vicar-general, and vicar capitular. The title recurs constantly in the early Middle Ages (Bingham, op. cit., I, 292 sqq.). At Constantinople there was an elaborately organized court of ecclesiastical persons around the patriarch, whose various places in choir when the patriarch celebrated are given in the Euchologion together with a statement of their duties. Among these the protopope had the first place on the left. "The protopope stands above the left choir when the pontiff celebrates, he gives to him [the pontiff] Holy Communion and in the same way the pontiff to the protopope; and he has all first places (τὰ πρωτεῖα πάντα) in the church" (Goar, 225). Under him is the "second one" (ὁ δευτερεύων), who takes his place in his absence (ibid.). So also Leo Allatius's list, where it is said further that: "he holds the place [κρατῶν τόπον, as deputy] of the pontiff" (ibid., 229). He is promoted by presentation to the patriarch, who lays his hand on him with prayer, and the clergy cry "ἄξιος" three times (the rite from Allatius is given by Goar, 238). Goar notes that the protopope, at least to some ex-

tent, succeeded to the place of the chorepiscopus. He could ordain lectors; at concelebrations where no bishop is present he presided and said the *Ekphoneseis*. In the bishop's absence he took his place as president, and had jurisdiction over his fellow-clergy. George Kodinos (fourteenth century) says of the protopope: "he is first in the tribunal [τοῦ βήματος, in authority] holding the second place after the pontiff" (De Officiis, I, quoted by Goar, 237).

Distinct from the official of the patriarchal court, though bearing the same title, were the protopopes in the country parishes. They correspond to our rural deans, having delegate episcopal jurisdiction for minor cases, from which appeal may be made to the bishop. So Theodore Balsamon (twelfth century): "It is forbidden by the canons that there should be bishops in small towns and villages and because of this they ordain for these, priests who are protopopes and chorepiscopi" (Syntagma, III, 142). There are cases in which a protopope in a remote place has episcopal jurisdiction, but not orders, like some vicars Apostolic, or the archpriests in England from 1599 to 1621. In such cases they are distinguished from archpriests and have such officials under them (so the introduction to Nicholas Bulgaris's "Sacred Catechism", Venice, 1681).

In modern times the Orthodox (and Uniat) title of protopope often means hardly more than a complimentary title conveying a certain rank and precedence with sometimes a few unimportant rights. Often in a church that has several priests (as we should say a rector and curates) the first (rector) is called protopope. In Russia, Bulgaria, Rumania, and Austria the protopopes have authority over a district containing several parishes. They have to visit these occasionally and represent for the clergy the court of first instance. In Orthodox Hungary and Transylvania there are protopresbyterates (eparchies), in which the protopope is elected by clergy and people and rules under the bishop. In these cases he may be compared to our rural deans. Such an office is the highest to which a married Orthodox priest may aspire, since bishops are always monks. In Russia the protopope (protoierei) sometimes wears the Byzantine mitre and epigonation, but not the *omophorion* or *sakkos*.

ADRIAN FORTESCUE.

Prototype. See HERMENEUTICS.

Protus and Hyacinth, SAINTS, martyrs during the persecution of Valerian (c. 57-9). The day of their annual commemoration is mentioned in the "Depositio Martyrum" in the chronographia for 354 (Ruinart, "Acta martyrum", ed. Ratisbon, 632) under 11 September. The chronographia also mentions their graves, in the *Cæmeterium* of Basilla on the Via Salaria, later the Catacomb of St. Hermes. The Itineraries and other early authorities likewise give this place of burial (De Rossi, "Roma sotterranea", I, 176-7). In 1845 Father Marchi discovered the still undisturbed grave of St. Hyacinth in a crypt of the above-mentioned catacomb. It was a small square niche in which lay the ashes and pieces of burned bone wrapped in the remains of costly stuffs (Marchi, "Monumenti primitivi: I, Architettura della Roma sotterranea cristiana", Rome, 1844, 238 sqq., 264 sqq.). Evidently the saint had been burnt; most probably both martyrs had suffered death by fire. The niche was closed by a marble slab similar to that used to close a *loculus*, and bearing the original inscription that confirmed the date in the old Martyrology:

D P IIII IDUS SEPTEBR
YACINTHUS
MARTYR

(Buried on 11 September Hyacinthus Martyr). In the same chamber were found fragments of an architrave belonging to some later decoration, with the words:

... SEPULCRUM PROTI M(artyris) ...

(Grave of the Martyr Protus). Thus both martyrs were buried in the same crypt. Pope Damasus wrote an epitaph in honour of the two martyrs, part of which still exists (Ihm, "Damasi epigrammata", 52, 49). In the epitaph Damasus calls Protus and Hyacinth brothers. When Leo IV (847-55) translated the bones of a large number of Roman martyrs to the churches of Rome, the relics of these two saints were to be translated also; but, probably on account of the devastation of the burial chamber, only the grave of St. Protus was found. His bones were transferred to San Salvatore on the Palatine. The remains of St. Hyacinth were placed (1849) in the chapel of the Propaganda. Later the tombs of the two saints and a stairway built at the end of the fourth century were discovered and restored.

J. P. KIRSCH.

Prout, FATHER, the name by which the Rev. Francis Sylvester Mahony (O'Mahony), author of "The Bells of Shandon", is generally known, b. at Cork, 31 Dec., 1804; d. in Paris, 18 May, 1866. Educated at Clongowes Wood College, Ireland, and St-Acheul, France (1815-21), he entered the Jesuit novitiate in Paris in 1821, and in 1823 was sent to Rome for his course in philosophy. In 1825 he returned to Clongowes as disciplinarian and after a brief stay there, going subsequently to Freiburg and Florence, he left the Society of Jesus and entered the Irish College at Rome as a student for the priesthood. He did not

FATHER PROUT (FRANCIS MAHONY)

complete his course there, but in 1832 was ordained at Lucca—a step against which practically all his religious superiors had advised him. He returned to his native diocese and for a time served there as priest, being conspicuous for his heroism and devotion as chaplain to the Cork Cholera Hospital during the terrible epidemic that visited the city at that time. Developing some differences with his superiors, he went to London in 1834, and almost immediately commenced his literary career, joining "Fraser's Magazine", then under the editorship of his fellow-townsmen, Maginn. For three years he wrote in "Fraser's" (1834-7), then in "Bentley's Magazine", edited by Charles Dickens, and in 1846 was sent by Dickens to Rome as correspondent for the "Daily News". For twelve years he filled that post, then went to Paris (1858) as correspondent of the "Globe" and spent the rest of his life there. After his death his remains were brought to Cork and, after a public funeral, were interred in the family vault in Shandon churchyard. Although for thirty years Mahony did not exercise his priestly

duties, he never wavered in his deep loyalty to the Church, recited his Office daily, and received the last sacraments at the hands of his old friend, Abbé Rogerson, who has left abundant testimony of his excellent dispositions. Popularly best known as the author of the famous lyric, "The Bells of Shandon", Mahony's title to literary fame rests more securely upon the collection of writings known as the "Reliques of Father Prout". Dowered with a retentive memory, irrepressible humour, large powers of expression, and a strongly satiric turn of mind, an omnivorous reader, well trained in the Latin classics, thoroughly at home in the French and Italian languages, and a ready writer of rhythmic verse in English, Latin, and French, he produced in such articles as "An Apology for Lent", "Literature and the Jesuits", and "The Rogueries of Tom Moore", an extraordinary mixture of erudition, fancy, and wit, such as is practically without precise parallel in contemporary literature. The best of his work appeared in "Fraser's Magazine" during the first three years of his literary life. He translated largely from Horace and the poets of France and Italy, including a complete and free metrical rendering of Gresset's famous mock-heroic poem "Vert-Vert" and Jerome Vida's "Silkworm". But his newspaper correspondence from Rome and Paris is notable chiefly for the vigour of his criticisms upon men and measures, expressed, as these were, in most caustic language. Seven years before his death he edited the first authorized collection of the "Reliques", and in 1860 wrote the inaugural ode for the "Cornhill Magazine", then starting under Thackeray's editorship. No complete biography of "Father Prout" has yet been written and but fragmentary materials are now available.

THOMAS F. WOODLOCK.

Provancher, LÉON ABEL, naturalist, b. 10 March, 1820, in the parish of Bécancourt, Nicolet county, Province of Quebec; d. at Cap Rouge, P. Q., 23 March, 1892. He studied at the College and Seminary of Nicolet, was ordained 12 Sept., 1844, and for the next twenty-five years laboured zealously and fearlessly. He organized two pilgrimages to Jerusalem, one of which he conducted in person. In 1865 he established in his parish at Portneuf a confraternity of the Third Order of St. Francis, probably the first of its kind in Canada. From childhood he had a special love for the study of nature and all the time he could spare from his pastoral duties was devoted to the study and description of the fauna and flora of Canada; his extensive pioneer work in this domain won for him the appellation of the "Father of Natural History in Canada". In 1868 he founded the "Naturaliste Canadien", a monthly publication which he edited for twenty years, and from 1869 until his death he was engaged almost exclusively in scientific work. Among his chief writings are: "Traité élémentaire de Botanique" (Quebec, 1858); "Flore du Canada" (2 vols., Quebec, 1862); "Le Verger Canadien" (Quebec, 1862); "Le Verger, le Potager et le Parterre" (Quebec, 1874); "Faune entomologique du Canada" (3 vols., 1877-90); "De Québec à Jérusalem" (1884); "Une Excursion aux Climats tropicaux" (1890); "Les Mollusques de la Province de Québec".

Proverbs, Book OF, one of the Sapiential writings of the Old Testament placed in the Hebrew Bible among the Hagiographa, and found in the Vulgate after the books of Psalms and Job.

I. NAMES AND GENERAL OBJECT.—In the Massoretic Text, the Book of Proverbs has for its national heading the words מִשְׁלֵי שְׁלֹמֹה, *Mishlê Shelômoh* (Proverbs of Solomon), wherewith this sacred writing begins (cf. x). In the Talmud and in later Jewish works the Book of Proverbs is oftentimes designated by the single word *Mishlê*, and this abridged title is expressly mentioned in the superscription "Liber Proverbiorum, quem Hebræi *Misle* appellant", found in the official edition of the Vulgate. In the Septuagint MSS., the two Hebrew titles are rendered by παροιμίαι Σολομώντος and παροιμίαι, respectively. From these Greek titles again are immediately derived the Latin renderings, "Parabolæ Salomonis", "Parabolæ", a trace of which appears in the Tridentine "Decretum de Canon. Script.", wherein the Book of Proverbs is simply called "Parabolæ". The ordinary title "Proverbia Salomonis" was apparently taken from the Old Latin Version into the Vulgate, whence comes directly the usual English title of "Proverbs". In the Church's liturgy, the Book of Proverbs is, like the other Sapiential writings, designated by the common term "Wisdom". This is consonant to the practice, common in early Christian times, of designating such books by the word "Wisdom" or by some expression in which this word occurs, as "All-virtuous Wisdom", etc. Indeed, it is probable that the title חִכְמָה, "Wisdom", was common in Jewish circles at the beginning of Christianity, and that it passed from them to the early Fathers of the Church (cf. Eusebius, "Hist. Eccl.", IV, xxii, xxvi). Of the various names given to the Book of Proverbs, that of Wisdom best sets forth the ethical object of this inspired writing. However disconnected the pithy sayings or vivid descriptions which make up the book may appear, they, each and all, are bound by one and the same moral purpose: they aim at inculcating wisdom as understood by the Hebrews of old, that is perfection of knowledge showing itself in action, whether in the case of king or peasant, statesman or artisan, philosopher or unlearned. Differently from the term "Wisdom", the title *Mishlê* (St. Jerome, *Masloth*) has a distinct reference to the symbolic character and poetical form of the sayings which are gathered together in the Book of Proverbs. In general, the Hebrew word *Māshāl* (constr. plur. *Mishlê*) denotes a representative saying, that is, a statement which, however deduced from a single instance, is capable of application to other instances of a similar kind. Taken in this sense, it corresponds pretty well to the words proverb, parable, maxim etc., in our Western literatures. But besides, it has the meaning of sentences constructed in parallelism; and in point of fact, the contents of the Book of Proverbs exhibit, from beginning to end, this leading feature of Hebrew poetry. Hence, it appears that, as prefixed to this inspired writing, the word *Mishlê* describes the general character of the Book of Proverbs as a manual of practical rules which are set forth in a poetical form.

II. DIVISIONS AND CONTENTS.—As it stands at the present day, the Book of Proverbs begins with the general title, "Mishlê Shelômoh, the son of David, king of Israel", which is immediately followed by a prologue (i, 2-6), stating the aim and importance of the entire work: the whole collection aims at imparting wisdom and at enabling men to understand all kinds of *Mashals*. The first part of the book (i, 7-ix), itself a hortatory introduction to the collection of proverbs which follows, is a commendation of wisdom. After a deeply religious epigraph (i, 7), the writer, speaking like a father, gives a series of exhortations

and warnings to an imagined pupil or disciple. He warns him against evil company (i, 8-19); describes to him the advantages attending the pursuit of wisdom, and the evils to be avoided by such course (ii); exhorts him to obedience, to trust in God, to the payment of legal offerings, to patience under the Divine chastisements, and sets forth the priceless value of wisdom (iii, 1-26). After some miscellaneous precepts (iii, 27-35), he renews his pressing exhortation to wisdom and virtue (iv), and gives several warnings against unchaste women (v; vi, 20-35; vii), after the first of which are inserted warnings against suretyship, indolence, falsehood, and various vices (vi, 1-19). At several points (i, 20-33; viii; ix) Wisdom herself is introduced as speaking and as displaying her charms, origin, and power to men. The style of this first part is flowing, and the thoughts therein expressed are generally developed in the form of connected discourses. The second part of the book (x-xxii, 16) has for its distinct heading: "Mishlê Shelômoh", and is made up of disconnected sayings in couplet form, arranged in no particular order, so that it is impossible to give a summary of them. In many instances a saying is repeated within this large collection, usually in identical terms, at times with some slight changes of expression. Appended to this second part of the book are two minor collections (xxii, 17-xxiv, 22; xxiv, 23-34), chiefly made up of aphoristic quatrains. The opening verses (xxii, 17-21) of the first appendix request attention to the "words of the wise" which follow (xxii, 22-xxiv, 22), and which, in a consecutive form recalling that of the first part of the book, set forth warnings against various excesses. The second appendix has for its title: "These also are words of the wise", and the few proverbs it contains conclude with two verses (33, 34), apparently taken over from vi, 10, 11. The third part of the book (xxv-xxix) bears the inscription: "These are also Mishlê Shelômoh, which the men of Ezechias, king of Juda, copied out." By their miscellaneous character, their couplet form, etc., the proverbs of this third part resemble those of x-xxii, 16. Like them also, they are followed by two minor collections (xxx and xxxi, 1-9), each supplied with its respective title. The first of these minor collections has for its heading: "Words of Agur, the son of Takeh", and its principal contents are Agur's meditation on the Divine transcendence (xxx, 2-9), and groups of numerical proverbs. The second minor collection is inscribed: "The Words of Lamuel, a king: the oracle which his mother taught him." In it the queen-mother warns her son against sensuality, drunkenness, and injustice. Nothing is known of Agur and Lamuel; their names are possibly symbolical. The book concludes with an alphabetical poem descriptive of the virtuous woman (xxxii, 10-39).

III. HEBREW TEXT AND ANCIENT VERSIONS.—A close study of the present Hebrew Text of the Book of Proverbs proves that the primitive wording of the pithy sayings which make up this manual of Hebrew wisdom has experienced numerous alterations in the course of its transmission. Some of these imperfections have, with some probability, been assigned to the period during which the maxims of the "wise men" were preserved orally. Most of them belong undoubtedly to the time after these sententious or enigmatic sayings had been written down. The Book of Proverbs was numbered among the "Hagio-grapha" (writings held by the ancient Hebrews as less sacred and authoritative than either the "Law" or the "Prophets"), and, in consequence, copyists felt naturally less bound to transcribe its text with scrupulous accuracy. Again, the copyists of Proverbs knew, or at least thought they knew, by memory the exact words of the pithy sayings they had to write out; hence arose involuntary changes which, once introduced, were perpetuated or even added to by

subsequent transcribers. Finally, the obscure or enigmatic character of a certain number of maxims led to the deliberate insertion of glosses in the text, so that primitive distichs now wrongly appear in the form of tristichs, etc. (cf. Knabenbauer, "Comm. in Proverbia", Paris, 1910). Of the ancient versions of the Book of Proverbs, the Septuagint is the most valuable. It probably dates from the middle of the second century B. C., and exhibits very important differences from the Massoretic Text in point of omissions, transpositions, and additions. The translator was a Jew conversant indeed with the Greek language, but had at times to use paraphrases owing to the difficulty of rendering Hebrew pithy sayings into intelligible Greek. After full allowance has been made for the translator's freedom in rendering, and for the alterations introduced into the primitive wording of this version by later transcribers and revisers, two things remain quite certain: first, the Septuagint may occasionally be utilized for the discovery and the emendation of inaccurate readings in our present Hebrew Text; and next, the most important variations which this Greek Version presents, especially in the line of additions and transpositions, point to the fact that the translator rendered a Hebrew original which differed considerably from the one embodied in the Massoretic Bibles. It is well known that the Sahidic Version of Proverbs was made from the Septuagint, before the latter had been subjected to recensions, and hence this Coptic Version is useful for the control of the Greek Text. The present Peshito, or Syriac Version, of the Book of Proverbs was probably based on the Hebrew Text, with which it generally agrees with regard to material and arrangement. At the same time, it was most likely made with respect to the Septuagint, the peculiar readings of which it repeatedly adopts. The Latin Version of Proverbs, which is embodied in the Vulgate, goes back to St. Jerome, and for the most part closely agrees with the Massoretic Text. It is probable that many of its present deviations from the Hebrew in conformity with the Septuagint should be referred to later copyists anxious to complete St. Jerome's work by means of the "Vetus Italia", which had been closely made from the Greek.

IV. AUTHORSHIP AND DATE.—The vexed questions anent the authorship and date of the collections which make up the Book of Proverbs go back only to the sixteenth century of our era, when the Hebrew Text began to be studied more closely than previously. They were not even suspected by the early Fathers who, following implicitly the inscriptions in i, 1; x, 1; xxiv, 1 (which bear direct witness to the Solomonic authorship of large collections of proverbs), and being misled by the Greek rendering of the titles in xxx, 1; xxxi, 1 (which does away altogether with the references to Agur and Lamuel as authors distinct from Solomon), regarded King Solomon as the author of the whole Book of Proverbs. Nor were they real questions for the subsequent writers of the West, although these medieval authors had in the Vulgate a more faithful rendering of xxx, 1; xxxi, 1, which might have led them to reject the Solomonic origin of the sections ascribed to Agur and Lamuel respectively, for in their eyes the words Agur and Lamuel were but symbolical names of Solomon. At the present day, most Catholic scholars feel free to treat as non-Solomonic not only the short sections which are ascribed in the Hebrew Text to Agur and Lamuel, but also the minor collections which their titles attribute to "the wise" (xxii, 16-xxiv, 22; xxiv, 23-34), and the alphabetical poem concerning the virtuous woman which is appended to the whole book. With regard to the other parts of the work (i-ix; x-xxii, 16; xxv-xxix), Catholic writers are wellnigh unanimous in ascribing them to Solomon. Bearing distinctly in mind the statement in III (A. V. I.)

Kings, iv, 29-32, that, in his great wisdom, Solomon "spoke 3000 *Mashals*", they have no difficulty in admitting that this monarch may be the author of the much smaller number of proverbs included in the three collections in question. Guided by ancient Jewish and Christian tradition they feel constrained to abide by the explicit titles to the same collections, all the more so because the titles in the Book of Proverbs are manifestly discriminating with regard to authorship, and because the title, "These also are *Mishle Shelomoh*, which the men of Ezechias, King of Juda, copied out" (xxv, 1), in particular, bears the impress of definiteness and accuracy. Lastly, looking into the contents of these three large collections, they do not think that anything found therein with respect to style, ideas, historic background etc. should compel anyone to give up the traditional authorship, at whatever time—either under Ezechias, or as late as Esdras—all the collections embodied in the Book of Proverbs reached their present form and arrangement. A very different view concerning the authorship and date of the collections ascribed to Solomon by their titles is gaining favour among non-Catholic scholars. It treats the headings of these collections as no more reliable than the titles of the Psalms. It maintains that none of the collections comes from Solomon's own hand and that the general tenor of their contents bespeaks a late post-exilic date. The following are the principal arguments usually set forth in favour of this opinion. In these collections there is no challenge of idolatry, such as would naturally be expected if they were pre-exilic, and monogamy is everywhere presupposed. It is very remarkable, too, that throughout no mention is made of Israël or of any institution peculiar to Israel. Again, the subject of those collections is not the nation, which apparently no longer enjoys its independence, but the individual, to whom wisdom appeals in a merely ethical, and hence very late, manner. The personification of wisdom, in particular (chap. viii), is either the direct result of the influence of Greek upon Jewish thought, or, if independent of Greek philosophy, the product of late Jewish metaphysics. Finally, the close spiritual and intellectual relation of Proverbs to Ecclesiasticus shows that, however great and numerous are the differences in detail between them, the two works cannot be separated by an interval of several centuries. Despite the confidence with which some modern scholars urge these arguments against the traditional authorship of i-ix; x-xxii, 16; xxv-xxix, a close examination of their value leaves one unconvinced of their proving force.

V. CANONICITY.—The Book of Proverbs is justly numbered among the protocanonical writings of the Old Testament. In the first century of our era its canonical authority was certainly acknowledged in Jewish and Christian circles, for the Sacred Writers of the New Testament make a frequent use of its contents, quoting them at times explicitly as Holy Writ (cf. Rom., xii, 19, 20; Heb., xii, 5, 6; James, iv, 5, 6, etc.). It is true that certain doubts as to the inspiration of the Book of Proverbs, which had been entertained by ancient rabbis who belonged to the School of Shammai, reappeared in the Jewish assembly at Jamnia (about A. D. 100); but these were only theoretical difficulties which could not induce the Jewish leaders of the time to count this book out of the Canon, and which in fact were there and then set at rest for ever. The subsequent assaults of Theodore of Mopsuestia (d. 429), of Spinoza (d. 1677), and of Le Clerc (d. 1736) against the inspiration of that sacred book left likewise its canonical authority unshaken.

FRANCIS E. GIGOT.

Providence, CONGREGATIONS OF.—I. DAUGHTERS OF PROVIDENCE, founded at Paris, by Madame Polailion (Marie de Lumague), a devout widow. In 1643 Madame Polailion, having obtained letters patent from Louis XIII, opened a home to provide protection and instruction for young girls, whom beauty, poverty, or parental neglect exposed to the loss of Faith and other spiritual perils, placing it under the protection of Providence, with the name Seminary of Providence. Among the many who sought admission were some capable of instructing the rest, and of these, seven, who gave evidence of a religious vocation, were selected to form a religious community under rules drawn up for their use by St. Vincent de Paul at the direction of François de Gondy, Archbishop of Paris (1647). New letters patent were granted by Louis XIV, whose mother, Anne of Austria, gave the institute its first fixed abode, the Hospital de la Santé in Faubourg Saint-Marcel (1651), previously a home for convalescents from the Hôtel-Dieu, a grant confirmed by royal letters in 1667, bestowing on the religious all the privileges, rights, and exemptions accorded to hospitals of royal foundation. The Archbishop of Paris established other houses in various parts of the city, and foundations were made first at Metz and Sedan, where special attention was devoted to Jewish converts and the reclamation of heretics. After two years of probation candidates were admitted to the simple vows of chastity, obedience, the service of others, and perpetual stability. The superior, elected every three years, and the ecclesiastical superior, appointed by the Archbishop of Paris, were assisted in the temporal administration of the community by two pious matrons, chosen from among the principal benefactresses. In 1681 some members of the congregation joined the Sisters of Charitable Instruction of the Child Jesus of Saint-Maur, established by Nicolas Barré in 1678, thenceforth known as the Ladies of Saint-Maur and of Providence; the remaining members became canonesses of the Congregation of Our Lady, founded by St. Peter Fourier. The foregoing congregation became a model for others established to carry on a similar work in various dioceses of France, whose activities, however, came eventually to embrace the administration of elementary schools for girls, orphanages, and asylums for the blind and deaf mutes, and the care of the sick in hospitals and their own homes. In 1903 the number of Sisters of Providence in France exceeded 10,000. From the original seminary of Providence also came the religious who formed the nucleus of the Congregation of Christian Union subsequently established by M. le Vachet, a priest whose counsels had encouraged Madame Polailion.

FLORENCE RUDGE MCGAHAN.

II. SISTERS OF PROVIDENCE (St. Mary-of-the-Woods).—Among the teaching religious orders that originated in France at the close of the Revolution was the Congregation of the Sisters of Providence of Ruillé-sur-Loir, founded in 1806 by M. Jacques-François Dujarié, Curé of Ruillé (Sarthe). The society had a struggling existence for several years, but was finally established with the collaboration of Joséphine Zoé du Roscoät, the first superior general. Mother du Roscoät was of an ancient noble Breton family and was renowned for her piety, charity, and zeal. Many

followed her to Ruillé and the community prospered. Though the sisters devoted themselves to various works of mercy and charity, the instruction of youth was their primary object. They soon had schools not only throughout the diocese, but in distant countries also. In 1839 Rt. Rev. Simon-Gabriel Bruté, first Bishop of Vincennes, commissioned his vicar-general, Mgr de la Hailandière, to return to his native country to procure priests and religious teachers for his immense diocese. Scarcely had he arrived in France when the death of Bishop Bruté was announced, followed by the appointment of Mgr de la Hailandière as his successor. The newly-consecrated bishop obtained from Mother Mary a colony of religious for Indiana. Six sisters, under the leadership of Mother Theodore Guérin, a woman of exceptional qualifications and high spiritual attainments, reached their home in the New World, 22 Oct., 1840. Instead of being established in the episcopal city, as they had been led to expect, they were taken to a densely wooded country, where only the foundation of a building for them was completed; and they were obliged to find shelter in a neighbouring farmhouse, one room and a corn loft being at their disposal. After a few weeks the community obtained sole possession of this house, which then became the mother-house, called St. Mary-of-the-Woods. In the summer of 1841 the new building being completed, a boarding school was opened with seven pupils. In 1841 another member from the French mother-house arrived at St. Mary's, Irma Le Fer de la Motte, Sister St. Francis Xavier, who became mistress of novices.

The foundress showed her foresight and capacity for organization and administration, in an educational plan providing for the advanced studies and culture of the time. As early as 1846, a charter was granted by the State empowering the institution to confer academic honours and collegiate degrees. While the new foundation prospered, many sufferings and hardships were endured, arising from the rigours of the climate, poverty, isolation, a foreign language, troublesome subjects, and the like. The keenest trial of all was misunderstanding with the bishop. It lasted seven years. At the Seventh Council of Baltimore, the bishop placed his difficulties before the assembly and offered his resignation, at the same time strongly denouncing the Sisters of Providence. In 1847, just as he had informed Mother Theodore that he deposed her from her office as superior-general (in which she had, with his consent, been confirmed for life), released her from her vows, and dismissed her from her congregation, the Papal Brief appointing Bishop Bazin to the See of Vincennes was received from Rome. The death of Mother Theodore occurred 14 May, 1856, and so eminent was her holiness that preliminaries have been undertaken for introducing the cause of her beatification at Rome.

The sisters take simple vows. The postulanship, two months, is followed by a novitiate of two years, at the end of which vows are taken for three years, renewed then for five years, if the subject is satisfactory and desires to persevere. A year of second novitiate precedes the final and perpetual vows. This year, during which the nuns devote themselves entirely to the spiritual life, is passed at the mother-house. A course of normal training is carried on in connexion with the novitiate properly so called, and summer sessions are held during the vacation for all teachers who return to the mother-house for the annual retreat. The administrative faculty is an elective body comprising a superior-general and three assistants, a secretary, procuratrix, treasurer, and a general chapter. The rules and constitutions received final approval from the Holy See in 1887. Among prominent members of the order were: Sister St. Francis Xavier (Irma Le Fer de la Motte), b. at St. Servan, Brittany, 16 April, 1818; d. at St. Mary-of-

the-Woods, 30 January, 1856, whose life has been published under the title "An Apostolic Woman", and Sister M. Joseph (Elvire le Fer de la Motte), b. at St. Servan, 16 February, 1825; d. at St. Mary-of-the-Woods, 12 December, 1881, a sketch of whose life has been published in French. The sisters conduct parochial schools and academies in the Archdioceses of Baltimore, Boston, and Chicago; in the Dioceses of Indianapolis, Ft. Wayne, Peoria, and Grand Rapids; orphanages at Vincennes and Terre Haute; an industrial school at Indianapolis; a college four miles west of Terre Haute. Statistics for 1910 are: 937 sisters; 68 parochial schools; 15 academies; 2 orphan asylums; 1 industrial school; 20,000 children.

SISTER MARY THEODOSIA.

III. SISTERS OF PROVIDENCE OF CHARITY.—The Sisters of Providence, known also as Sisters of Charity, were founded in Montreal, Canada, 25 March, 1843, under the Rule of St. Vincent de Paul, by Rt. Rev. Ignace Bourget. In December, 1861, a branch of the order, with intention to form a mother-house, was established at Kingston, Ontario, under the protection of Rt. Rev. Edward J. Horan, then bishop of that diocese. From this establishment four sisters were sent in November, 1873, to open a mission in Holyoke, Massachusetts. In 1892 this branch of the order, with permission of the Holy See, became a diocesan establishment, with Rt. Rev. Thomas D. Beaven, Bishop of Springfield, Massachusetts, as ecclesiastical superior. There are no lay sisters in the order, and the members are devoted exclusively to the works of charity. Since they became diocesan their membership approximates three hundred, and the institutes of charity entrusted to their management have been multiplied. In the present year (1908) they have in charge four diocesan hospitals and one sanatorium, with an annual total of about five thousand patients treated therein. Connected with these hospitals is a training school for pupil nurses, and the sisters also receive a professional training and personally care for and supervise the treatment of their patients. They have two orphan asylums, caring for about three hundred children; an infant asylum of modern construction capable of sheltering one hundred and fifty little ones, ranging from infancy to six years. Their duties also extend to the aged of both sexes. They care for one hundred and forty aged and infirm women, and for eighty aged men, in three separate homes of recent construction. They have two homes for working girls, and the provisions of their rule permit them to undertake any work of charity which the bishop of the diocese may see fit to place in their keeping. (See CHARITY, SISTERS OF. *Sisters of Charity of Providence.*)

SISTER MARY OF PROVIDENCE.

IV. SISTERS OF PROVIDENCE OF SAINT ANNE, founded at Turin in 1834 by the Marchesa Julia Falletti de Barolo for the care of children and the sick. The order was approved by the Holy See 8 March, 1848. Its mother-house is at Florence, and there are daughter institutions at Bagnoria, Castelfidardo, and Assisi, where the sisters conduct the industrial school of San Francesco, founded in 1902. In Rome their two infant asylums of St. Anne (Via dei Gracchi) and the Sacred Heart (Via Conde) harbour three hundred children. At Secunderabad in the Diocese of Hyderabad, India, they have a convent where they educate European and Eurasian girls, and they also conduct a school at Kazipet in the same diocese. In Italian Eritrea they have a home for children redeemed from slavery.

HEIMBUCHER, *Orden u. Kongregationen*, III (Paderborn, 1908), 387.

BLANCHE M. KELLY.

V. SISTERS OF PROVIDENCE OF THE INSTITUTE OF CHARITY, an offshoot from the Sisters of Providence,

founded by Jean-Martin Moye in France in 1762 for teaching poor girls and tending the sick. Their present existence, constitution, and religious character are due to Antonio Rosmini, of whose institute they really form a part. In 1831, at the request of Abbé Löwenbruck, the French sisters received into their house at Portieux four pious but uneducated young women from the Val d' Ossola and neighbouring Swiss valleys. This priest, one of the moving spirits in the Institute of Charity then beginning at Domodossola, wished these young women to receive a religious training at Portieux and then to found a house in Italy. They returned in 1832 and joined a community already organized at Locarno in Ticino, and designed to be a novitiate as well as a school for the poor. He provided no funds, however, and though they opened a school, being but slenderly educated they could get no salaries as recognized teachers. This bad management induced Rosmini to intervene. He reformed their rule to suit it to its new conditions, and thenceforward had to assume entire responsibility for them. Thus they were from the first a distinct body, the "Rosminiane", as the Italians call them. A house for novices and school for the education of teaching sisters was formed at Domodossola in a former Ursuline convent. The Holy See in its solemn approval of the Institute of Charity in 1839 gave an indirect recognition of the sisters also, as adopted children of the institute. From that time they have steadily increased. The order is mainly contemplative; but, when necessary, they undertake any charitable work suitable to women, especially the teaching of girls and young children, visiting the sick, and instructing in Christian doctrine. The central houses have smaller establishments emanating from and depending upon them. For each of these groups there is one superioress, elected by the professed sisters for three years, and eligible for three years more. Aided by assistants, she appoints a procuratrix over each lesser establishment and assigns the grades and most of the offices. All the sisters return to their central house every summer for a retreat and to hold a chapter for the election of officers. The novitiate lasts three years; the usual three vows are then taken, at first for three years, then either renewed or made perpetual. In each diocese the bishop is protector.

There are houses in Italy, England, and Wales. In Italy there were in 1908 about 600 sisters and 60 novices. They have 64 establishments, most of which are elementary schools for children and girls; there are also several boarding-schools for girls, a few orphanages, and a home for poor old men. They are scattered in nine dioceses, some in Piedmont, others in Lombardy. The principal houses are those of Borgomanero, the central house for Italy, Domodossola, Intra, and Biella. The English branch began in 1843 on the initiative of Lady Mary Arundel, who had taken a house at Loughborough in order to aid the Fathers of the Institute in that mission. Into this house, fitted as a convent, she received two Italian sisters, the first nuns to wear a religious habit in the English Midlands since the Reformation. A year later they opened a girls' and infants' school, which was the first day-school for the poor taught by nuns in England. The first English superioress was Mary Agnes Amherst, niece of the Earl of Shrewsbury. Under her rule the present central house was built at Loughborough. A boarding-school and middle and elementary schools are conducted by the nuns. There are six other establishments. At St. Etheldreda's in London and at Whitwick, Rugby, and Bexhill they have girls' and infants' schools, at Cardiff, two houses, one for visiting the sick and aiding the poor, and the other a secondary school and pupil-teachers' centre. Whitwick and St. David's, Cardiff, are the only places in which their work is not auxiliary to that of the Fathers of the Institute. (See ROSMINIANS.)

WILLIAM HENRY POLLARD.

Providence, DIOCESE OF (PROVIDENTIENSIS), is co-extensive with the State of Rhode Island. When erected (17 Feb., 1872) it included also that portion of south-eastern Massachusetts which has since 14 March, 1904, been set off as the Diocese of Fall River (q. v.). It thus embraces an entire state, the majority of whose population is Roman Catholic (State Census, 1905). The city of Providence was the residence of the Bishop of Hartford from the establishment of that see in 1844 (see HARTFORD, DIOCESE OF). In 1847 a Brief authorizing this transfer of residence was obtained from the Propaganda.

The first appearance of Roman Catholic worship in the colony of Rhode Island was in the latter part of 1780, when the French army under Rochambeau encamped at Newport and Providence. It is known that there were several chaplains with the army who often said Mass publicly. Shortly afterwards (Feb., 1783) the colonial legislature repealed the act disfranchising Roman Catholics. The Negro uprising in Guadeloupe, which followed the French Revolution, drove several Catholic families (French) to Newport and Bristol. In Newport also about 1808 there died one Joseph Wiseman, Vice-Consul to His Catholic Majesty of Spain. The building of Fort Adams at Newport and the beginnings of the cotton-mill industry in Pawtucket brought in some Catholics to these parts in the twenties. The first priest assigned to Rhode Island was the Rev. Robert Woodley in 1828. The first land owned in the state for church purposes was purchased in Newport in 1828. During the thirties the growth was gradual and fluctuating. It was only in November, 1837, that Mass was said for the first time in Providence in a Catholic church built for that purpose. In 1842 another parish was erected in Providence, but when Bishop Tyler (see HARTFORD) died in June, 1849, there were but six small parishes in the state. The famine in Ireland (1848) brought thousands to these parts who found work in the factories, foundries, machine shops, and jewelry shops then beginning to flourish in Rhode Island. During the fifties most of the still large and important English-speaking parishes were established; several costly churches were attempted; an orphan asylum was founded; and a few very primitive schools were begun. The Knownothing Movement in March, 1855, disturbed Catholics because of threats against the convent. In the sixties the growth was appreciable but not extraordinary, and most of the congregations were in debt with very little to show for it—an evidence of their extreme poverty. When Bishop McFarland left Providence in 1872 to fix his residence at Hartford, he left behind him a poor cathedral and episcopal residence and a debt of \$16,000—so unable or so indifferent was his flock to second his admirable zeal and devotion.

Thomas Francis Hendricken, the first Bishop of Providence, was born in Kilkenny 5 May, 1827. He made his preliminary studies at St. Kieran's College, Kilkenny, which he attended in 1844. He took up the study of theology at Maynooth in 1847 and was ordained by Bishop O'Reilly of Hartford at All Hallows College in 1851. After a short period as assistant and pastor of a small parish he was transferred to Waterbury, Conn., where he proved to be a successful church builder. He transformed the parish and seemed to be equal to any financial burden. Perhaps because of this remarkable talent he recommended himself to Bishop McFarland as the man best fitted for the heavy labours that then awaited the first Bishop of Providence. He was consecrated bishop in the cathedral at Providence on April 28, 1872, by Archbishop McCloskey of New York, the metropolitan of the province. He set to work at once to build an episcopal residence and a suitable cathedral. He had no sooner begun than the panic set in. Nothing daunted, and in spite of failing

health, he began a tour of his diocese to collect, and succeeded in raising some hundreds of thousands of dollars in a few years, so that when he died (May, 1886) the new cathedral was almost completed without any debt encumbering it. It was during his episcopate that the French Canadian Catholics began to come to the diocese in considerable numbers, first to Woonsocket and then to the various mill towns along the little streams of the Blackstone and the Pawtuxet, and above all to Fall River. The bishop, engrossed with other things, did not realize apparently the magnitude of the problem, and his attempts to deal with it were not infrequently a cause of anxiety and pain to himself and others.

Rt. Rev. Matthew Harkins succeeded Bishop Hendricken after an interval of eleven months. Born in Boston 17 Nov., 1845, educated at the Boston Latin School, Holy Cross College, and Douai College in France, he made his theological studies at Saint Sulpice (Paris), where he was ordained in 1869. The Vatican Council took place while he was continuing his studies in Rome. Made pastor of Arlington in 1876, he was transferred to St. James' parish, Boston, in 1884, in succession to Bishop Healy of Portland and Archbishop Williams of Boston, its former pastors. On the 14 April, 1887, Bishop Harkins was consecrated in the new (uncompleted) Cathedral of Sts. Peter and Paul in Providence which had first been opened a year before for the obsequies of his predecessor. A man of wide reading, acute mind, and judicial temperament, a lover of order and method, he has devoted himself to the task of organizing his diocese. He has particularly made his own the diocesan charities. The orphan asylum begun in 1851, transferred in 1862, had always obtained a precarious income from fairs and donations, and for these he substituted parochial assessments. Through the generosity of Joseph Banigan the Home for the Aged in Pawtucket was built in 1881. Mr. Banigan also built the large St. Maria Working Girls' Home in Providence in 1894 at a cost of \$80,000, and either gave in his lifetime or left by will (1897) sums of \$25,000 or more to nearly every diocesan charity. St. Joseph's Hospital was begun in 1891 and the St. Vincent de Paul Infant Asylum in the following year; the Working Boys' Home began in 1897, the House of the Good Shepherd in 1904, Nazareth Home (a day-nursery, that also supplies nurses in the homes of the poor) in 1906. In Woonsocket and Newport and other parts of the diocese similar charitable institutions have been erected at the suggestion and advice of Bishop Harkins. Almost twenty parishes out of a total of seventy-nine are exclusively French Canadian, while there are a few small parishes of mixed French and English-speaking Catholics. In the last fifteen years (1911) the Italians have come to Providence and the vicinity in large numbers, so that now there are perhaps between thirty and forty thousand of them in the diocese. Two churches for the Italians were dedicated in Providence in 1910 and other smaller parishes provide for their needs in the outlying districts. The four colonies of Poles have four Polish parishes, while the Portuguese have one in Providence. One Syrian parish in Central Falls ministers to some of the Orientals in these parts.

Parochial schools are established in the greater number of the English-speaking parishes of the cities. Thus out of seventeen English-speaking parishes in Providence, nine have large and well-equipped schools; of the four in Pawtucket, three have schools; the three parishes in Newport have schools. The others are either very small or heavily in debt or unable to procure suitable teachers. Among the French Canadians, with whom the church school is a patriotic as well as a religious institution, it is rare to find a parish without its school. Religious women are usually the teachers (in ten schools, the

Sisters of Mercy); in only three are there Brothers for the larger boys. La Salle Academy, a diocesan High School of which the bishop is president, obtained a university charter from the state (1910). The teachers are diocesan priests (for the classics) and Christian Brothers. It is conveniently situated in Providence. One day high school (St. Francis Xavier's Academy) and two boarding schools (Bayview, Sisters of Mercy, and Elmhurst, Religious of the Sacred Heart) provide similar training for the girls. In all there are some eighteen thousand children receiving Catholic training in the diocese.

A diocesan weekly paper, the "Providence Visitor", sanctioned by the bishop and edited by diocesan priests, has a considerable influence among the Catholics of the state. The Catholic Club for men, established in 1909, has its own home in Providence and a large and influential membership. The Catholic Woman's Club, established in 1901, has a membership of four hundred and is noted for considerable literary and social activity. Although in a numerical majority, Catholics do not exert any perceptible influence on public life. They receive their share of elective offices, the last two governors, the one a democrat, the other a republican, being Catholics. Frequently the mayors and other city officials are Catholics. There has, however, never been a Catholic judge of a superior court.

The clergy until recently was nearly exclusively diocesan. From 1878 to 1899 the Jesuits had St. Joseph's parish in Providence, but left there, as there was no prospect of opening a college. Now various small communities of men have parishes in outlying districts, Westerly (1905, Marist Fathers), Portsmouth (1907, Congregation of the Holy Ghost), Natick (1899, Sacred Heart Fathers); in 1910 the Dominicans began a new parish between Pawtucket and Providence. The Catholic population of the diocese, approximately from 250,000 to 275,000, live for the most part in the densely inhabited Providence County, only eighteen parishes, and several of them very small, existing in the four other counties of the state, while there are sixty-one in Providence county.

History of the Catholic Church in New England: Diocese of Providence, I; Chancery Records.

AUSTIN DOWLING.

Providence, DIVINE (Lat., *Providentia*; Greek, *πρόβουια*).—Providence in general, or foresight, is a function of the virtue of prudence, and may be defined as the practical reason, adapting means to an end. As applied to God, Providence is God Himself considered in that act by which in His wisdom He so orders all events within the universe that the end for which it was created may be realized. That end is that all creatures should manifest the glory of God, and in particular that man should glorify Him, recognizing in nature the work of His hand, serving Him in obedience and love, and thereby attaining to the full development of his nature and to eternal happiness in God. The universe is a system of real beings created by God and directed by Him to this supreme end, the concurrence of God being necessary for all natural operations, whether of things animate or inanimate, and still more so for operations of the supernatural order. God preserves the universe in being; He acts in and with every creature in each and all its activities. In spite of sin, which is due to the wilful perversion of human liberty, acting with the concurrence, but contrary to the purpose and intention of God and in spite of evil which is the consequence of sin, He directs all, even evil and sin itself, to the final end for which the universe was created. All these operations on God's part, with the exception of creation, are attributed in Catholic theology to Divine Providence.

The Testimony of Universal Belief.—For all religions, whether Christian or pagan, belief in Provi-

dence, understood in the wider sense of a superhuman being who governs the universe and directs the course of human affairs with definite purpose and beneficent design, has always been a very real and practical belief. Prayer, divination, blessing and curse, oracle and sacred rite, all testify to a belief in some over-ruling power, divine or quasi-divine in character; and such phenomena are found in every race and tribe, however uncivilized or degraded. We find it, for instance, not only amongst the savages of to-day, but also among the early Greeks, who, though they do not appear to have clearly distinguished between Providence and Fate, and though their gods were little more than glorified human beings, subject to human frailty and marred by human passion, they none the less watched over the home and the family, took sides in human warfare, and were the protectors and avengers of mankind. The intimate connexion of the gods with human affairs was even more marked in the religion of the early Romans, who had a special god to look after each detail of their daily life, their labours in the field, and the business of the state. The ancient religions of the East present the same characteristics. Auramazda, the supreme god of the Persians during the period of the great kings, is the ruler of the world, the maker of kings and nations, who punishes the wicked and hearkens to the prayers of the good (see cuneiform inscriptions translated by Casartelli in the "Hist. of Relig.," II, 13 sq.). A similar notion prevailed in Egypt. All things are in God's gift. He loves the obedient and humbles the proud, rewards the good and smites the wicked (Renouf, 100 sq.). Osiris, the king of the gods, judges the world according to his will, and to all nations, past, present, and future, gives his commands (op. cit., 218 sq.). Amon Ra-is, the lord of the thrones of the earth, the end of all existence, the support of all things, just of heart when one cries to him, deliverer of the poor and oppressed (op. cit., 225 sq.). Assyrian and Babylonian records are no less clear. Marduk, the lord of the universe, shows mercy to all, implants fear in their hearts, and controls their lives; while Shamash directs the law of nature, and is the supreme god of heaven and earth (Jastrow, 296, 300, 301). The books of the Avesta, though they depict a dualistic system, represent the good god, Mazdah Ahura, with his court, as helping those who worship him against the principle of evil (Hist. of Relig., II, 14). In the dualism of the Gnostic theories, on the other hand, the world is shut off from the supreme god, Bythos, who has nothing directly to do with human affairs before or after the incarnation. This idea of a remote and transcendent deity was probably derived from Greek philosophy. Socrates certainly admitted Providence, and believed in inspiration and divination; but for Aristotle the doctrine of Providence was mere opinion. It is true that the world was for him the instrument and expression of the Divine thought, but God Himself lived a life wholly apart. The Epicureans explicitly denied Providence, on the ground that if God cares for men He can be neither happy nor good. Everything is due, they said, to chance or free will. On both these points they were opposed by the Stoics, who insisted that God must love men, otherwise the very notion of God would be destroyed (Plutarch, "De comm. notit.," 32; "De stoic. rep.," 38). They also attempted to prove the action or existence of Providence from the adaptation of means to ends in nature, in which evil is merely an accident, a detail, or a punishment. On the other hand, the notions of god, nature, force, and fate were not clearly distinguished by the Stoics, who regarded them as practically the same thing. While even Cicero, who works out the argument from adaptation at considerable length in his "De natura deorum," ends

unsatisfactorily with the statement, "Magna Dii curant, parva negligunt", as his ultimate solution of the problem of evil (n. 51-66).

The Testimony of Scripture.—Though the term Providence is applied to God only three times in Scripture (Eccl., v, 5; Wis., xiv, 3; Judith, ix, 5), and once to Wisdom (Wis., vi, 17), the general doctrine of Providence is consistently taught throughout both the Old and New Testaments. God not only implants in the nature of things the potentiality of future development (Gen., i, 7, 12, 22, 28; viii, 17; ix, 1, 7; xii, 2; xv, 5), but in this development, as in all the operations of nature, He co-operates; so that in Scriptural language what nature does God is said to do (Gen., ii, 5, cf. 9; vii, 4, cf. 10; vii, 19-22, cf. 23; viii, 1, 2, cf. 5 sq.). Seed time and harvest, cold and heat, summer and winter, the clouds and the rain, the fruits of the earth, life itself alike are His gift (Gen., ii, 7; viii, 2; Ps. cxlvi, 8, 9; xxviii; ciii; cxlviii; Job, xxxviii, 37; Joel, ii, 21 sq.; Ecclus., xi, 14). So too with man. Man tills the ground (Gen., iii, 17 sq.; iv, 12; ix, 20), but human labours without Divine assistance are of no avail (Ps. cxxvi, 1; lix, 13; Prov., xxi, 31). Even for an act of sin, Divine concurrence is necessary. Hence in Scripture the expressions "God hardened Pharaoh's heart" (Ex., vii, 3; ix, 12; x, 1, 20, 27; xi, 10; xiv, 8), "Pharaoh's heart was hardened" (Ex., vii, 13; viii, 19, 32; ix, 7, 35), "Pharaoh hardened his heart" (viii, 15) and "Pharaoh did not set his heart to do it" (vii, 23), or "hearkened not" (vii, 4; viii, 19), or "increased his sin" (ix, 34), are practically synonymous. God is the sole ruler of the world (Job, xxxiv, 13). His will governs all things (Ps. cxlviii, 8; Job, ix, 7; Is., xl, 22-6; xlv, 24-8; Ecclus., xvi, 18-27; Esther, xiii, 9). He loves all men (Wis., xi, 25, 27), desires the salvation of all (Is., xlv, 22; Wis., xii, 16), and His providence extends to all nations (Deut., ii, 19; Wis., vi, 8; Is., lxvi, 18). He desires not the death of a sinner, but rather that he should repent (Ezech., xviii, 20-32; xxxiii, 11; Wis., xi, 24); for He is above all things a merciful God and a God of much compassion (Ex., xxxiv, 6; Num., xiv, 18; Deut., v, 10; Ps. xxxii, 5; cii, 8-17; cxlv, 9; Ecclus., ii, 23). Yet He is a just God, as well as a Saviour (Is., xlv, 21). Hence both good and evil proceed from Him (Lam., iii, 38; Amos, iii, 6; Is., xlv, 7; Eccl., vii, 15; Ecclus., xi, 14), good as a bounteous gift freely bestowed (Ps. cxlv, 16; Eccl., v, 18; I Par., xxix, 12-4), evil as the consequence of sin (Lam., iii, 39; Joel, ii, 20; Amos, iii, 10, 11; Is., v, 4, 5). For God rewards men according to their works (Lam., iii, 64; Job, xxxiv, 10-7; Ps. xvii, 27; Ecclus., xvi, 12, 13; xi, 28; I Kings, xxvi, 23), their thoughts, and their devices (Jer., xvii, 10; xxxii, 19; Ps. vii, 10). From His anger there is no escape (Job, ix, 13; Ps. xxxii, 16, 17; Wis., xvi, 13-8); and none can prevail against Him (Ecclus., xviii, 1; Wis., xi, 22-3; Prov., xxi, 30; Ps. ii, 1-4; xxxii, 10; Judith, xvi, 16, 17). If the wicked are spared for a time (Jer., xii, 1; Job, xxi, 7-15; Ps. lxxii, 12-3; Eccl., viii, 12), they will ultimately receive their deserts if they do not repent (Jer., xii, 13-7; Job, xxi, 17, 18; xxvii, 13-23); while the good, though

they may suffer for a time, are comforted by God (Ps. xc, 15; Is., li, 12), who will build them up, and will not cease to do them good (Jer., xxxi, 28 sq.; xxxii, 41). For in spite of the wicked, God's counsels are never changed or thwarted (Is., xiv, 24-7; xliii, 13; xlv, 10; Ps. xxxii, 11; cxlviii, 6). Evil He converts into good (Gen., i, 20; cf. Ps. xc, 10); and suffering He uses as an instrument whereby to train men up as a father traineth up his children (Deut., viii, 1-6; Ps. lxxv, 10-2; Wis., xii, 1, 2); so that in very truth the world fighteth for the just (Wis., xvi, 17).

The teaching of the Old Testament on Providence is assumed by Our Lord, who draws therefrom practical lessons both in regard to confidence in God (Matt., vi, 25-33; vii, 7-11; x, 23-31; Mark, xi, 22-4; Luke, xi, 9-13; John, xvi, 26, 27) and in regard to the forgiveness of our enemies (Matt., v, 39-45; Luke, vi, 27-38); while in St. Paul it becomes the basis of a definite and systematic theology. To the Athenians in the Areopagus Paul declares (1) that God made the universe and is its supreme Lord (Acts, xvii, 24); (2) that He sustains the universe in its existence, giving life and breath to all things (verse 25), and hence, as the source whence they all proceed, must Himself lack nothing nor stand in need of any human service; (3) that He has directed the growth of nations and their distribution (verse 26), and (4) this to the end that they should seek Him (verse 27) in Whom we live and move and have our being, and whose offspring we are (verse 28). Being therefore the offspring of God, it is absurd for us to liken Him to things inanimate (verse 29), and though God has borne with this ignorance on man's part for a time, now He demands penance (verse 30), and, having sent Christ, Whose authority is guaranteed by His Resurrection, has appointed a day when the world shall be judged by Him in justice (verse 31). In the Epistle to the Romans the supernatural character of Divine Providence is further evolved, and the doctrine of Providence becomes identical with that of grace. Nature manifests so clearly the power and the divinity of God that failure to recognize it is inexcusable (Rom., i, 20-2). Hence God in His anger (verse 18) gives man over to the desires of his heart (verse 24), to a reprobate sense (verse 28). Some day He will vindicate Himself (ii, 2-5), rendering to every man according to his works (ii, 6-8; cf. II Cor., v, 10; Gal., vi, 8), his knowledge (Rom., ii, 9 sq.), and his secret thoughts (ii, 16); but for the present He forbears (iii, 26; cf. ix, 22; II Peter, ii, 9) and is ready to justify all men freely through the redemption of Jesus Christ (Rom., iii, 22, 24, 25); for all men stand in need of God's help (iii, 23). Christians, moreover, having already received the grace of redemption (v, 1), should glory in tribulation, knowing that it is but a trial which strengtheneth patience and hope (v, 3, 4). For the graces that are to come are far greater than those already received (v, 10 sq.) and far more abundant than the consequences of sin (v, 17). Life everlasting is promised to us (v, 21); but unaided we can do nothing to gain it (vii, 18-24). It is the grace of Christ that delivers us (vii, 25) and makes us co-heirs with Him (viii, 17). Yet we must also suffer with Him (verse 17) and be patient (verse 25), knowing that all things work together for good to them that love God; for God in His Providence has regarded us with love from all eternity, has predestined us to be made conformable to the image of His Son, that He might be the first-born of many brethren, has called us (II Thes., ii, 13), has justified us (Rom., v, 1; I Cor., vi, 11), and even now has begun to accomplish within us the work of glorification (Rom., viii, 29, 30; cf. Eph., i, 3 sq.; II Cor., iii, 18; II Thes., ii, 13). This, the beneficent purpose of an all-seeing Providence, is wholly gratuitous, entirely unmerited (Rom., iii, 24; ix, 11-2).

It extends to all men (Rom., ii, 10; I Tim., ii, 4), even to the reprobate Jews (Rom., xi, 26 sq.); and by it all God's dealings with man are regulated (Eph., i, 11).

The Testimony of the Fathers is, it need hardly be said, perfectly unanimous from the very outset. Even those Fathers—and they are not many—who do not treat expressly of the subject use the doctrine of Providence as the basis of their teaching, both dogmatic and practical (e. g. Clement, "I Epis. ad Cor.", xix sq., xxvii, xxviii in "P. G.", I, 247-54, 267-70). God governs the whole universe [Aristides, "Apol.", I, xv in "Texts and Studies" (1891), 35, 50; "Anon. epis. ad Diog.", vii in "P. G.", II, 1175 sq.; Origen, "Contra Celsum", IV, n. 75 in "P. G.", XI, 1146; St. Cyprian, "Lib. de idol. van.", viii, ix in "P. L.", IV, 596-7; St. John Chrysostom, "Ad eos qui scandalizati sunt", V in "P. G.", LII, 487; St. Augustine, "De gen. ad lit.", V, xxi, n. 42 in "P. L.", XXXIV, 335-8; St. Gregory the Great, "Lib. moral.", XXXII, n. 7 in "P. L.", LXXVI, 637 sq.; XVI, xii in "P. L.", lxxv, 1126]. It extends to every individual, adapting itself to the needs of each (St. John Chrysostom, "Hom. xxviii in Matt.", n. 3 in "P. G.", LVII, 216, 217; and embraces even what we think is due to our own initiative (Hom. xxi, n. 3 in "P. G.", 298). All things are created and governed with a view to man, to the development of his life and his intelligence, and to the satisfaction of his needs (Aristides, "Apol.", i, v, vi, xv, xvi; Origen, "Contra Celsum", IV, lxxiv, lxxviii in "P. G.", XI, 1143-51; Lactantius, "De ira Dei", xiii, xv in "P. L.", VII, 115 sq.; St. John Chrysostom, "Hom. xiii in Matt.", n. 5 in "P. G.", LVII, 216, 217; "Ad eos qui scand.", vii, viii in "P. G.", LII, 491-8; "Ad Stagir.", I, iv in "P. G.", XLVII, 432-4; St. Augustine, "De div. quæst.", xxx, xxxi in "P. L.", XL, 19, 20). The chief proof of this doctrine is derived from the adaptation of means to an end, which, since it takes place in the universe comprising a vast multitude of relatively independent individuals differing in nature, function, and end, implies the continuous control and unifying governance of a single supreme Being (Minucius Felix, "Octavius", xvii in Halm, "Corp. Scrip. Eccl. Lat.", II, 21, 22; Tertullian, "Adv. Marcion.", II, iii, iv in "P. L.", II, 313-5; Origen, "Contra Celsum", IV, lxxiv sq. in "P. G.", XI, 1143 sq.; Lactantius, "De ira Dei", x-xv in "P. L.", VII, 100 sq.; St. John Chrysostom, "Hom. ad Pop. Ant.", ix, 3, 4 in "P. G.", XLIX, 106-9; "Ad eos. qui scand.", v, vii, viii in "P. G.", LII, 488-98; "In Ps.", v, n. 9 in "P. G.", LV, 54-6; "Ad Demetrium", ii, 5 in "P. G.", XLVII, 418, 419; "Ad Stagir.", passim in "P. G.", XLVII, 423 sq.; St. Augustine, "De gen. ad lit.", V, xx-xxiii in "P. L.", XXXIV, 335 sq.; "In Ps.", cxlviii, n. 9-15 in "P. L.", XXXVII, 1942-7; Theodoret, "De prov. orat.", i-v in "P. G.", LXXXIII, 555 sq.; St. John Damascene, "De fid. orth.", i, 3 in "P. G.", XCIV, 795 sq.). Again, from the fact that God has created the universe, it shows that He must also govern it; for just as the contrivances of man demand attention and guidance, so God, as a good workman, must care for His work (St. Ambrose, "De Offic. minist.", XIII in "P. L.", XVI, 41; St. Augustine, "In Ps.", cxlv, n. 12, 13 in "P. L.", XXXVII, 1892-3; Theodoret, "De prov. orat.", i, ii in "P. G.", LXXXIII, 564, 581-4; Salvianus, "De gub. Dei", I, viii-xii in "P. L.", LIII, 40 sq.; St. Gregory the Great, "Lib. moral.", xxiv, n. 46 in "P. L.", LXXVI, 314). In addition to this, Tertullian ("De testim. animæ" in "P. L.", I, 681 sq.) and St. Cyprian (loc. cit.) appeal to the testimony of the human soul as expressed in sayings common to all mankind (cf. Salvianus, loc. cit.); while Lactantius ("De ira Dei", viii, xii, xvi in "P. L.", VII, 97, 114, 115, 126) uses a distinctly pragmatic argument based on the utter ruin that would result to society, were the Providence of God generally denied.

The question of Providence in the Fathers is almost invariably connected with the problem of evil. How can evil and suffering be compatible with the beneficent providence of an all-powerful God? And why especially should the just be allowed to suffer while the wicked are apparently prosperous and happy? Patristic solutions to these problems may be summed up under the following heads: (1) Sin is not ordained by the will of God, though it happens with His permission. It can be ascribed to Providence only as a secondary result (Origen, "Contra Celsum", IV, lxxviii in "P. G.", XI, 1516-7; St. John Damascene, "De fid. orth.", ii, 21 in "P. G.", XCIV, 95 sq.). (2) Sin is due to the abuse of free will; an abuse which was certainly foreseen by God, but could have been prevented only by depriving man of his most noble attribute (Tertullian, "Adv. Marcion.", II, v-vii in "P. L.", II, 317-20; St. Cyril of Alexandria, "In Julian.", IX, xiii, 10, 11, 18 in "P. G.", LXXIV, 120-1, 127-32; Theodoret, "De prov. orat.", IX, vi in "P. G.", LXXXIII, 662). Moreover, (3) in this world man has to learn by experience and contrast, and to develop by the overcoming of obstacles (Lactantius, "De ira Dei", xiii, xv in "P. L.", VII, 115-24; St. Augustine, "De ordine", I, vii, n. 18 in "P. L.", XXXII, 986). (4) One reason therefore why God permits sin is that man may arrive at once at a consciousness of righteousness and of his own inability to attain it, and so may put his trust in God (Anon. epis. ad Diog., vii-ix in "P. G.", II, 1175 sq.; St. Gregory the Great, "Lib. moral.", III, lvii in "P. L.", LXXV, 627). (5) For sin itself God is not responsible, but only for the evils that result as a punishment of sin (Tertullian, "Adv. Marc.", II, xiv, xv in "P. L.", II, 327 sq.), evils which happen without God's will but are not contrary to it (St. Gregory the Great, op. cit., VI, xxxii in "P. L.", LXXVII, 746, 747). (6) Had there been no sin, physical evil would have been inconsistent with the Divine goodness (St. Augustine, "De div. quæst.", lxxxii in "P. L.", LX, 98, 99); nor would God permit evil at all, unless He could draw good out of evil (St. Augustine, "Enchir.", xi in "P. L.", LX, 236; "Serm.", cxciv, 3 in "P. L.", XXXVIII, 1067; St. Gregory the Great, op. cit., VI, xxxii, XVIII, xlvi in "P. L.", LXXV, 747; LXXXVI, 61-2). (7) All physical evil, therefore, is the consequence of sin, the inevitable result of the Fall (St. John Chrysostom, "Ad Stagir.", I, ii in "P. G.", LXVII, 428, 429; St. Gregory the Great, op. cit., VIII, li, lii in "P. L.", LXXV, 833, 834), and regarded in this light is seen to be at once a medicine (St. Augustine, "De div. quæst.", lxxxii in "P. L.", XL, 98, 99; "Serm.", xvii, 4, 5 in "P. L.", XXXVIII, 126-8), a discipline ("Serm.", xv, 4-9 in "P. L.", XXXVIII, 118-21; St. Gregory the Great, op. cit., V, xxxv; VII, xxix; XIV, xl in "P. L.", LXXV, 698, 818, 1060), and an occasion of charity (St. Gregory the Great, VII, xxix). Evil and suffering thus tend to the increase of merit (XIV, xxxvi, xxxvii in "P. L.", 1058, 1059), and in this way the function of justice becomes an agency for goodness (Tertullian, c. "Adv. Marc.", II, xi, xiii in "P. L.", 324 sq.). (8) Evil, therefore, ministers to God's design (St. Gregory the Great, op. cit., VI, xxxii in "P. L.", LXXV, 747; Theodoret, "De prov. orat.", v-viii in "P. L.", LXXXIII, 652 sq.). Hence, if the universe be considered as a whole it will be found that that which for the individual is evil will in the end turn out to be consistent with Divine goodness, in conformity with justice and right order (Origen, "Contra Celsum", IV, xcix in "P. G.", XI, 1177-80; St. Augustine, "De ordine", I, i-v, 9; II, iv in "P. L.", XXXII, 977-87, 990, 999-1002). (9) It is the end that proves happiness (Lactantius, "De ira Dei", xx in "P. L.", VII, 137 sq.; St. Ambrose, "De offic. minist.", XVI, cf. XII, XV in "P. L.", XVI, 44-6, 38 sq.; St. John Chrysostom, "Hom. xiii in Matt.", n. 5 in "P. G.", LXVII, 216, 217; St. Augustine, "In Ps.", xci, n. 8 in "P. L.", XXXIII, 1176; Theodoret, "De

prov. orat.", ix in "P. G.", LXXXIII, 727 sq.). In the Last Judgment the problem of evil will be solved, but till then the workings of Providence will remain more or less a mystery (St. Augustine, "De div. quæst.", lxxxii in "P. L.", XL, 98, 99; St. John Chrysostom, "Ad eos qui scand.", VIII, IX in "P. G.", LII, 494, 495). In regard to poverty and suffering, however, it is well to bear in mind that in depriving us of earthly goods, God is but recalling what is His own (St. Gregory the Great, op. cit., II, xxxi in "P. L.", LXXVII, 571); and secondly that, as Salvianus tells us ("De gub. Dei", I, i, 2 in "P. L.", LIII, 29 sq.), nothing is so light that it does not appear heavy to him who bears it unwillingly, and nothing so heavy that it does not appear light to him who bears it with goodwill.

The Testimony of the Councils.—From the creeds we learn that God the Father is the omnipotent creator of heaven and earth; that God the Son descended from heaven, became man, suffered and died for our salvation, and is to be the judge of the living and the dead; that the Holy Ghost inspired the Prophets and the Apostles, and dwells in the saints—all of which implies Providence, natural and supernatural. The Profession of Faith prescribed for the Waldenses in 1208 declares God to be the governor and disposer of all things corporeal and spiritual (Denzinger, 10th ed., 1908, n. 421). The Council of Trent (Sess. VI, can. vi, A. D. 1546) defines that evil is in the power of man, and that evil deeds are not to be attributed to God in the same sense as good deeds, but *permissive* only, so that the vocation of Paul is God's work in a much truer sense than the treachery of Judas. The Council of the Vatican sums up past doctrine in the statement that God in His Providence protects and governs all things (Sess. III, c. I, d. 1784).

Philosophical Developments.—The basis of all further philosophical speculations among Scholastics in regard to the precise nature of Providence, its relation to other Divine attributes, and of creation, was laid by Boethius in the "De consol. phil." (IV, vi sq. in "P. L.", LXIII, 813 sq.). Providence is the Divine Intelligence itself as it exists in the supreme principle of all things and disposes all things; or, again, it is the evolution of things temporal as conceived and brought to unity in the Divine Intelligence, which, as St. Thomas says (Summa I, G. xxii, a. 1), is the cause of all things. Providence, therefore, pertains primarily to the Intelligence of God, though it implies also will (I, Q. xxii, a. 1, ad 3 um), and hence is defined by St. John Damascene as "the will of God by which all things are ruled according to right reason" ("De fid. orth.", i, 3 in "P. G.", XCIV, 963, 964). The term "Providence", however, must not be taken too literally. It is not merely sight, or fore-sight. It involves more than mere vision or knowledge, for it implies the active disposition and arrangement of things with a view to a definite end; but it does not involve succession. God beholds all things together in one comprehensive act (I, Q. xxii, a. 3, ad 3 um), and by the same act produces, conserves, and concurs in all things (I, Q. civ, a. 1, ad 4 um). Providence as expressed in the created order of things is by Boethius called Fate (loc. cit.); but St. Thomas naturally objects to the use of this term (I, Q. cxvi, a. 1). Strictly only those things which are ordained by God to the production of certain determinate effects are subject to necessity or Fate (I, Q. xxii, a. 4; Q. cii, a. 3; Q. cxvi, a. 1, 2, 4). This excludes chance, which is a relative term and implies merely that some things happen irrespective of, or even contrary to, the natural purpose and tendency of some particular agent, natural or free (I, Q. xxii, a. 2; Q. cvi, a. 7; Q. cxvi, a. 1); not that things happen irrespective of the supreme and universal cause of all things. But it does not exclude free will. Some causes are not determined *ad unum*, but are free to choose between the effects which they are capable of produc-

ing (I, Q. xxii, a. 2, ad 4 um; cf. Boethius, op. cit., V, ii, in "P. L.", LXIII, 835). Thus things happen contingently as well as of necessity (I, Q. xxii, a. 4), for God has given to different things different ways of acting, and His concurrence is given accordingly (I, Q. xxii, a. 4). Yet all things, whether due to necessary causes or to the free choice of man, are foreseen by God and preordained in accordance with His all-embracing purpose. Hence Providence is at once universal, immediate, efficacious, and without violence: universal, because all things are subject to it (I, Q. xxii, a. 2; ciii, a. 5); immediate, in that though God acts through secondary causes, yet all alike postulate Divine concurrence and receive their powers of operation from Him (I, Q. xxii, a. 3; Q. ciii, a. 6); efficacious, in that all things minister to God's final purpose, a purpose which cannot be frustrated (Contra Gent., III, xciv); without violence (*suavis*), because it violates no natural law, but rather effects its purpose through these laws (I, Q. ciii, a. 8).

The functions of Providence are threefold. As physical, it conserves what is and concurs with what acts or becomes; as moral, it bestows upon man the natural law, a conscience, sanctions—physical, moral, and social—answers human prayers, and in general governs both the nation and the individual. That God should answer prayer must not be understood as a violation of the order of natural Providence, but rather as the carrying of Providence into effect, "because this very arrangement that such a concession be made to such a petitioner, falls under the order of Divine Providence. Therefore to say that we should not pray to gain anything of God, because the order of His Providence is unchangeable, is like saying that we should not walk to get to a place, or eat to support life" (Contra Gent., III, xciv). The Providence whereby we are enabled to overcome sin and to merit eternal life—supernatural Providence—pertains to another order, and for a discussion of it the reader is referred to GRACE; PREDESTINATION.

St. Thomas' treatment of the problem of evil in relation to Providence is based upon the consideration of the universe as a whole. God wills that His nature should be manifested in the highest possible way, and hence has created things like to Himself not only in that they are good *in se*, but also in that they are the cause of good in others (I, Q. ciii, a. 4, 6). In other words He has created a universe, not a number of isolated beings. Whence it follows, according to St. Thomas, that natural operations tend to what is better for the whole, but not necessarily what is better for each part except in relation to the whole (I, Q. xxii, a. 2, ad 2 um; Q. lviii, a. 2, ad 3 um; Contra Gent., III, xciv). Sin and suffering are evils because they are contrary to the good of the individual and to God's original purpose in regard to the individual, but they are not contrary to the good of the universe, and this good will ultimately be realized by the omnipotent Providence of God.

LESLIE J. WALKER.

Province, ECCLESIASTICAL, the name given to an ecclesiastical administrative district under the jurisdiction of an archbishop (q. v.). Ecclesiastical provinces first assumed a fixed form in the Eastern Roman Empire. The more important centres (e. g. Antioch for Syria, Ephesus for the Province of Asia, Alexandria for Egypt, Rome for Italy), whence Christian missionaries issued to preach the Gospel, were regarded as the mother-churches of the newly-founded Christian communities. From the second half of the second century the bishops of the territories

within the same natural geographical boundaries were accustomed to assemble on important occasions for common counsel in synods. From the end of that century the summons to attend these increasingly important synods was usually issued by the bishop of the capital of the state province (eparchy), who also presided over the assembly, especially in the East. Important communications were also forwarded to the bishop of the provincial capital to be brought to the notice of the other bishops. Thus in the East during the third century the bishop of the provincial metropolis came gradually to occupy a certain superior position, and received the name of metropolitan. At the Council of Nicæa (325) this position of the metropolitan was taken for granted, and was made the basis for conceding to him definite rights over the other bishops and dioceses of the state province. In Eastern canon law since the fourth century (cf. also the Synod of Antioch of 341, can. ix), it was a principle that every civil province was likewise a church province under the supreme direction of the metropolitan, i. e. of the bishop of the provincial capital. This division into ecclesiastical provinces did not develop so early in the Western Empire. In North Africa the first metropolitan appears during the fourth century, the Bishop of Carthage being recognized as primate of the dioceses of Northern Africa; metropolitans of the separate provinces gradually appear, although the boundaries of these provinces did not coincide with the divisions of the empire. A similar development was witnessed in Spain, Gaul, and Italy. The migration of the nations, however, prevented an equally stable formation of ecclesiastical provinces in the Christian West as in the East. It was only after the fifth century that such gradually developed mostly in accordance with the ancient divisions of the Roman Empire. In Italy alone, on account of the central ecclesiastical position of Rome, this development was slower. However, at the end of antiquity the existence of church provinces as the basis of ecclesiastical administration was fairly universal in the West. In the Carolingian period they were reorganized, and have retained their place till the present day. The delimitation of church provinces is since the Middle Ages a right reserved to the pope. There have always been, and are to-day, individual dioceses which do not belong to any province, but are directly subject to the Holy See. For the present boundaries of ecclesiastical provinces see articles on the various countries. (See METROPOLITAN.)

Provincial, an officer acting under the superior general of a religious order, and exercising a general supervision over all the local superiors in a division of the order called a province. The division is to a certain extent geographical, and may consist of one or more countries, or of a part of a country only; however, one or more houses of one province may be situated within the territory of another, and the jurisdiction over the religious is personal rather than territorial. The old orders had no provincial superiors; even when the monasteries were united to form congregations, the arch-abbot of each congregation was in the position of a superior general whose powers were limited to particular cases, almost like the powers of an archbishop over the dioceses of his suffragans. Provincials are found in the congregations of comparatively recent formation, which began with the mendicant orders. The Holy See hesitated for a long time before allowing the division of

congregations with simple vows, especially congregations of women, into different provinces as a regular institution, and some congregations have no such division.

The provincial is ordinarily appointed by the provincial chapter, subject to confirmation by the general chapter: in the Society of Jesus, he is appointed by the general. The "Regulations" (*Normae*) of 18 June, 1901, vest the appointment of the provincial in the general council. The provincial is never elected for life, but ordinarily for three or six years. In religious orders he is a regular prelate, and has the rank of ordinary with quasi-episcopal jurisdiction. He appoints the regular confessors, calls together the provincial chapter, presides over its deliberations, and takes care that the orders of the general chapter and the superior general are properly carried out. He is an *ex officio* member of the general chapter. His principal duty is to make regular visitations of the houses in his province in the name of the general and to report to the latter on all the religious and the property of the order; his authority over the various houses and local superiors differs in different orders. He has in many cases the right of appointment to the less important offices. At the end of his term of office, the provincial is bound, according to the Constitution "Nuper" of Innocent XII (23 Dec., 1697), to prove that he has complied with all the precepts of that decree concerning masses; if he fails to do so, he loses his right to be elected and to vote in the general chapter. In accordance with the privilege granted to the Society of Jesus, the provincial of a religious order is authorized to approve of oratories set apart for the celebration of Mass in the convents of his order; these oratories may receive the blessing usually given to public oratories, and may not be permanently diverted from their sacred uses except for good reason and with the approval of the provincial. In congregations with simple vows and not exempt, the provincial has no power of jurisdiction. According to the "Regulations" of 1901, his duty is also to supervise the financial administration of the provincial procurator and the local superiors.

A. VERMEERSCH.

Provincial Council, a deliberative assembly of the bishops of an ecclesiastical province, summoned and presided over by the metropolitan, to discuss ecclesiastical affairs and enact disciplinary regulations for the province. The good government of a society as vast as the Church required grouping of those dioceses whose similar interests would gain by common treatment. This led to the organization of ecclesiastical provinces and so of provincial councils. As long as administrative centralization in the great sees was imperfect, and while the general canon law was being slowly evolved, this provincial grouping was very important. The Councils of Nicæa (325, can. v), Antioch (341, can. xx), and others ordered the bishops of each province to meet twice a year; however, even in the East, the law was not long observed; the Councils "in Trullo" (692, can. viii) and Nicæa (787, can. vi) prescribe, but with little success, only one meeting each year. In the West, except in Africa, and in a certain sense also at Rome, provincial councils were neither frequent nor regular; most of those that were held, and which have left us precious documents, were episcopal assemblies of several provinces or regions. In spite of the frequent renewal of the ancient legislation provincial councils did not become a regular institution. The great Lateran Council (1215) also ordered an annual provincial council, but it was not long obeyed. The Councils of Basle (1433) and Trent also tried to revive the provincial councils, and ordered them to be held at least every three years (sess. XXIV, c. ii), laying down for them a certain

programme. As a result there was, towards the end of the sixteenth century, in Catholic countries, a remarkable series of provincial councils, notably those of Milan, under St. Charles Borromeo; but the movement soon waned. Towards the middle of the nineteenth century there was a fresh series of provincial councils in almost all Catholic countries, but they were never assembled with the punctuality prescribed by the law. Leo XIII authorized Latin America to hold them every twelve years (1897; cf. "Conc. plen.", 1899, n. 283). It must be admitted, however, that modern facilities of communication, and still more the custom of unconventional episcopal reunions or conferences, have compensated for the rarity of provincial councils to a large extent.

(1) The metropolitan has the right and the duty of convoking the council; the Council of Trent (cit. c. ii) ordered it to be convoked, first in the year following its own close, and then every third year at least; if the metropolitan is prevented or the see is vacant, the senior suffragan acts. The time appointed is after the octave of Easter, "or at another more opportune time, according to the usage of the province". It is not necessary to hold the council in the metropolitan city; any town in the province may be selected. The penalty of suspension with which the Councils of the Lateran (c. xxv, "De accusat.") and Trent threatened negligent metropolitans has certainly fallen into desuetude.

(2) All those who, "by right or by custom", have the right to assist at the council are to be convoked. These are, first, the suffragan bishops; exempt bishops, immediately subject to the Holy See, must choose, once for all, the metropolitan whose council they will attend, without prejudice to their exemptions and privileges. Secondly, those who exercise an external jurisdiction: prelates *nullius*, vicars capitular or administrators Apostolic of vacant sees, and vicars Apostolic if any. These have the right to take part in the deliberations. The council may allow this also to titular bishops, and the representatives of bishops prevented from attending. The other persons convoked, with a right only to take part in consultations, are non-exempt abbots, deputies of cathedral or even collegiate chapters, superiors of religious institutes, deputies of the universities and rectors of seminaries, and lastly the consultors, theologians, and canonists. The persons called to the council are strictly obliged to attend, unless legitimately prevented, in which case they must excuse themselves under penalty of censure. Formerly, negligent bishops were deprived of communion with their colleagues (cf. can. x, xiii, xiv, Dist. xviii); but this penalty is obsolete. It is not permissible to leave the council before its close without a just and approved reason.

(3) The ceremonies of the provincial council are regulated by the Pontifical (3rd part, "Ordo ad synodum"), and the Ceremonial of the Bishops (lib. I, c. xxxi); they include in particular the profession of faith. The work of the council is prepared in special commissions or congregations; the decrees are enacted in private or public sessions, and are decided by a majority of the members having a deliberative vote. The metropolitan presides, directs the discussions, proposes the subjects, but he has not a preponderating voice and the bishops can take up whatever matters or proposals they judge fitting. The adjournment or close, generally at a solemn public session, is announced by the metropolitan with the consent of the bishops.

(4) The provincial council is not competent to deal directly with matters of faith, by defining or condemning; yet it may treat of such from a disciplinary point of view: promoting religious teaching, pointing out the errors of the day, defending the truth. Its proper sphere is ecclesiastical discipline; to correct abuses, to watch over the observance of laws, espe-

cially the reform laws of the Council of Trent; to promote the Christian life of the clergy and people, to settle disputes, to decide minor differences between bishops, to adopt measures and make suitable regulations for all these objects. The decrees of the provincial councils are binding on the whole province; each bishop, however, may prudently grant dispensations in his own diocese, as he is the legislator; but he may not abrogate the decrees of the Council. If the Council deems any derogation from the common law useful, it ought to send a *postulatum* to the pope.

(5) Within the limits indicated above, a provincial council is a legislative body whose acts do not require papal confirmation for their validity. It is customary indeed to ask for the pontifical approbation; but the latter is generally given in common form only, so that the decrees continue to be provincial decrees, and can be abrogated by a later council; if, however, the approval is given in specific form, as the Council of Mount Lebanon was approved by Benedict XIV, the decrees acquire a supplementary authority and may not be modified without the papal consent. In any case, the decrees of every provincial council must be revised; Sixtus V (1587) so ordered, and the revision was entrusted to the Sacred Congregation of the Council; but in virtue of the Constitution "Sapienti" of Pius X (29 June, 1908) the duty now devolves on the Sacred Congregation of the Consistory.

A. BOUDINHON.

Provision, CANONICAL, a term signifying regular induction into a benefice, comprising three distinct acts—the designation of the person, canonical institution, and installation. In various ways a person may be designated to fill a vacant benefice: by election, postulation, presentation, or recommendation, resignation made in one's favour, or approved exchange. In all cases confirmation by the proper ecclesiastical superior of the selection made is required, while letters of appointment, as a rule, must be presented. Reception of administration by a chapter without such letters brings excommunication reserved to the pope, together with privation of the fruits of the benefice; and the nominee loses *ipso facto* all right to the prelacy. Ordinarily greater benefices are conferred by the pope; minor benefices by the bishop, who as a rule has the power of appointing to all benefices in his diocese. The pope, however, owing to the fullness of his jurisdiction, may appoint to any benefice whatsoever. These extraordinary provisions became common in the eleventh and subsequent centuries, and met at times with stern opposition. In 1351 an English statute (Statute of Provisors) was enacted, designed to prevent the pope from exercising this prerogative. Similar enactments were made in 1390 and in later years. At present only in certain defined circumstances does the Supreme Pontiff make use of this right. The bishop's power is further restricted at times to confirming an election or postulation; or to approving candidates presented by one who enjoys the right of presentation by privilege, custom, or prescription.

Canonical institution or collation is the concession of a vacant benefice by one who has the authority. If made by the sole right of the prelate, it is free; if made by legal necessity, for example, after due presentation or election, or at the command of a superior, it is styled necessary. An ecclesiastical benefice cannot be lawfully obtained without canonical institution.

Installation, called corporal or real institution, is the induction into the actual possession of a benefice. In the case of a bishop it is known as enthronization

or enthronement. Corporal institution, according to common law, belongs to the archdeacon; by custom to the bishop or his vicar-general. It may take place by proxy: the rite observed depends much on custom. To installation belong the profession of faith and oath, when prescribed. (See **BENEFICE**; **INSTITUTION**, **CANONICAL**; **INSTALLATION**.)

ANDREW B. MEEHAN.

Provisors, STATUTE OF.—The English statute usually so designated is the 25th of Edward III, St. 4 (1350-1), otherwise termed "The Statute of Provisors of Benefices", or anciently "Statutū de p'visoribz" or "Lestatut de revâcons & pvis".

This was among the statutes incidental to the "long and angry controversy" [to quote Dr. Lingard, "The History of England" (London, 1883), III, 349] between the English kings and the Court of Rome concerning filling of ecclesiastical benefices by means of papal provisions "by which the Pope, suspending for the time the right of the patron, nominated of his own authority, to the vacant benefice" (op. cit., II, 416), the papal nominee being called a provisor.

The resulting possession by Italians of church livings in England provoked at one period during the thirteenth century acts of lawless violence (ibid.). Pope Gregory IX (1227-41) pronounced against the propriety of such provisions as interfered with the rights of lay patrons (ibid., 417). And Pope Innocent IV expressed, in 1253, general disapprobation of these nominations (ibid., 419).

From the recitals of "The Statute of Provisors" it appears that the bestowal by the pope of English benefices and ecclesiastical possessions "as if he had been patron or avowee . . . as he was not of right by the law of England", and his "accroching to him the seignories" was complained of as not only an illegal injury to the property rights of particular patrons, but also as injurious spiritually and economically to the community in general. The holy church of England, "*seinte eglise d'Engleterre*", was said to have been founded by the sovereigns and the nobles to inform them and the people of the law of God and also to make hospitalities, alms, and other works of charity in the places where churches were founded, and possessions assigned for such purposes to prelates, religious, and other people of holy church; and these purposes were said to be defeated by this granting of benefices to aliens who did not, and to cardinals who might not, live in England "and to others as well aliens as denizens". Certain of the economic evils had been dealt with by a Statute of Edward I (35 Edward I, St. 1, c. 1, 1306-07), forbidding alien priors or governors of a religious house to impose charges or burdens on their houses and forbidding abbots, priors or other religious to send out of the kingdom any tax imposed on them. But the "Statute of Provisors" recites that the evils complained of in the petition leading to this Statute of Edward I still continue, and "that our holy father, the Pope" (*Notre seinte pere le Pape*), still reserves to his collation benefices in England, giving them to aliens and denizens and taking first fruits and other profits, the purchasers of benefices taking out of the kingdom a great part of its treasure. The Statute, therefore, enacts that elections of bishops shall be free, that owners of advowsons shall have free collation and presentment, and that attempted reservation, collation, or provision by the Court of Rome shall cause the right of collation to revert to the king.

Later Statutes are 27 Edward III, St. 1, c. 1; 38 Edward III, St. 2; 3 Richard II; 7 Richard II, c. XII; 12 Richard II, c. XV; 13 Richard II, St. 2; 16 Richard II, c. 5, and finally in the parliament of 1400-1, the Statute 2 Henry IV, c. 3, c. 4.

Concerning adverse legislation of the Council of Trent respecting provisions, see **BENEFICE**.

The Statutes of the Realm (1810), I, 150, 316, 323, 329, 385; II, 13, 14, 32, 60, 70, 84, 121; *The Statutes at Large* (Cambridge, 1762), ed. PICKERING, I, 326; PULTON, *A Collection of Statutes, now in use* (London, 1870); LINGARD, *op. cit.*, II, 416-419; III, 253-265, 343-349.

CHARLES W. SLOANE.

Provost (Lat., *præpositus*; Fr., *prévôt*; Ger., *Probst*). Anciently (St. Jerome, "Ep.", II, xiv: Ad Rusticum monach.) every chapter (q. v.) had an archpriest and an archdeacon. The former officiated in the absence of the bishop and had general supervision of the choir, while the latter was the head of the chapter and administered its temporal affairs. Later the archpriest was called *decanus* (dean) and the archdeacon *præpositus* (provost). At present the chief dignity of a chapter is usually styled dean, though in some countries, as in England, the term provost is applied to him. The provost, by whatever name he may be known, is appointed by the Holy See in accordance with the fourth rule of the Roman Chancery. It is his duty to see that all capitular statutes are observed. To be authentic, all acts of the chapter, in addition to the seal of the chapter, require his signature. Extraordinary meetings of the chapter are convened by him, generally, however, on written request of a majority of the chapter, and with the consent of the bishop. He presides in chapter at the election of a vicar capitular, who within eight days of the death of the bishop is to be chosen as the administrator of the vacant see. He conducts the ceremonies at the installation (q. v.) of canons-elect, investing them with the capitular insignia, assigning them places in choir, etc. In choir, the first place after the bishop belongs to him. In the absence of the bishop, or in case the see is vacant, the provost conducts episcopal ceremonial functions, while he takes precedence of all, even of the vicar capitular. He must be present, however, personally, not being allowed a substitute. When the bishop pontificates, the provost is assistant priest. It is his office to administer Viaticum to the bishop, and to conduct the bishop's obsequies.

TAUNTON, *The Law of the Church* (London, 1906); FERRARIS, *Bibliotheca canonica* (Roman ed., 1888-96), s. v.

ANDREW B. MEEHAN.

Prudence (Lat., *prudentia*, contracted from *providentia*, seeing ahead), one of the four cardinal virtues. Definitions of it are plentiful from Aristotle down. His "recta ratio agibilium" has the merits of brevity and inclusiveness. Father Rickaby aptly renders it as "right reason applied to practice". A fuller description and one more serviceable is this: an intellectual habit enabling us to see in any given juncture of human affairs what is virtuous and what is not, and how to come at the one and avoid the other. It is to be observed that prudence, whilst possessing in some sort an empire over all the moral virtues, itself aims to perfect not the will but the intellect in its practical decisions. Its function is to point out which course of action is to be taken in any round of concrete circumstances. It indicates which, here and now, is the golden mean wherein the essence of all virtue lies. It has nothing to do with directly willing the good it discerns. That is done by the particular moral virtue within whose province it falls. Prudence, therefore, has a directive capacity with regard to the other virtues. It lights the way and measures the arena for their exercise. The insight it confers makes one distinguish successfully between their mere semblance and their reality. It must preside over the eliciting of all acts proper to any one of them at least if they be taken in their formal sense. Thus, without prudence bravery becomes foolhardiness; mercy sinks into weakness, and temperance into fanaticism. But it must not be forgotten that prudence is a virtue adequately distinct from the others, and not simply a condition attendant upon their operation. Its office

is to determine for each in practice those circumstances of time, place, manner, etc. which should be observed, and which the Scholastics comprise under the term *medium rationis*. So it is that whilst it qualifies immediately the intellect and not the will, it is nevertheless rightly styled a moral virtue.

This is because the moral agent finds in it, if not the eliciting, at any rate the directive principle of virtuous actions. According to St. Thomas (II-II, Q. xlvii, a. 8) it is its function to do three things: to take counsel, i. e. to cast about for the means suited in the particular case under consideration to reach the end of any one moral virtue; to judge soundly of the fitness of the means suggested; and, finally, to command their employment. If these are to be done well they necessarily exclude remissness and lack of concern; they demand the use of such diligence and care that the resultant act can be described as prudent, in spite of whatever speculative error may have been at the bottom of the process. Readiness in finding out and ability in adapting means to an end does not always imply prudence. If the end happens to be a vicious one, a certain adroitness or sagacity may be exhibited in its pursuit. This, however, according to St. Thomas, will only deserve to be called false prudence and is identical with that referred to in Rom., viii, 6, "the wisdom of the flesh is death". Besides the prudence which is the fruit of training and experience, and is developed into a stable habit by repeated acts, there is another sort termed "infused". This is directly bestowed by God's bounty. It is inseparable from the condition of supernatural charity and so is to be found only in those who are in the state of grace. Its scope of course is to make provision of what is necessary for eternal salvation. Although acquired prudence considered as a principle of operation is quite compatible with sin in the agent, still it is well to note that vice obscures or at times utterly beclouds its judgment. Thus it is true that prudence and the other moral virtues are mutually interdependent. Imprudence in so far as it implies a want of obligatory prudence and not a mere gap in practical mentality is a sin, not however always necessarily distinct from the special wicked indulgence which it happens to accompany. If it proceed to the length of formal scorn of the Divine utterances on the point, it will be a mortal sin.

JOSEPH F. DELANY.

Prudentius, AURELIUS CLEMENS, Christian poet, b. in the Tarraconensis, Northern Spain, 348; d. probably in Spain, after 405. He must have been born a Christian, for he nowhere speaks of his conversion. The place of his birth is uncertain; it may have been Saragossa, Tarragona, or Calahorra. He practised law with some success, and in later life deplored the zeal he had devoted to his profession. He was twice provincial governor, perhaps in his native country, before the emperor summoned him to court. Towards the end of his life Prudentius renounced the vanities of the world to practise a rigorous asceticism, fasting until evening (Cath., iii, 88) and abstaining entirely from animal food (ibid., 56). The Christian poems were written during this period; he later collected them and wrote a preface, which he himself dated 405. A little before (perhaps in 403) he had to go to Rome, doubtless to make some appeal to the emperor. A number of his poems (Peristephanon, vii, ix, xi, xii, xiv) were written subsequently to this journey, of which he took advantage to visit the sanctuaries and tombs of the martyrs. "Contra Symmachum" must have been written at Rome; the second book belongs to the period between 29 March

and December, 403. All other works antedate the journey to Rome.

Prudentius wrote to glorify God and atone for his sins. His works fall into three groups: lyrical, didactic, and polemical. The lyrics form two collections. In the "Cathemerinon" the hymns are for the sanctification of the hours of the day or certain important occasions, such as Christmas, the Epiphany, obsequies, etc. Some continue the liturgical tradition of Saint Ambrose, and are written in the Ambrosian iambic dimeter; others are an attempt to enlist the metres of Horace in the service of Christian lyrical poetry. Despite his negligence Prudentius displays more art than Ambrose. Hymn xii, on the feast of the Epiphany, contains the two celebrated stanzas, "Saluete flores martyrum", characterized by profound feeling united to the purest art; hymn x on burial is likewise very remarkable. However, his style is generally diffuse, and the hymns admitted to the Roman Breviary had to be curtailed. The "Peristephanon" is dedicated to the glory of the martyrs: Emeterius and Chelidonius of Calahorra, Lawrence the Deacon, Eulalia, the eighteen martyrs of Saragossa, Vincent, Fructuosus with Augurius and Eulogius, Quirinus of Siscia, the martyrs of Calahorra put to death on the site of the baptistery, Cassianus of the Forum Cornelianum, Romanus, Hippolytus, Peter and Paul, Cyprian, and Agnes. Taken altogether, it is an endeavour to endow Christianity with a lyrical poetry independent of liturgical uses and traditions. Unfortunately, neither Prudentius's talent nor current taste favoured such an enterprise. The narratives are spoiled with too much rhetoric. There are, however, beautiful passages, a kind of grave power, and some pretty details, as in the hymns on St. Eulalia (see v. 206-15) and St. Agnes. Certain others, such as that on St. Hippolytus, have an archaeological interest. The whole collection is curious, but of unequal merit.

The two principal didactic poems are the "Apotheosis", on the dogma of the Trinity, and the "Hamartigenia", on the origin of sin. One is somewhat astonished to find Prudentius attacking ancient heresies, such as those of Sabellius and Marcian, and having nothing to say on Arianism. It is due to the fact that he closely follows and imitates Tertullian, whose rugged genius resembles his own. These poems are interesting examples of passionate, glowing abstractions, precise exposition being combined with poetic fantasy. Some brilliant scenes, like the sacrifice of Julian (Apoth., 460), merit quotation. The comparison of souls led astray by sin with doves caught in snares (Ham., 779) has a charm that recalls the happy inspiration of "Saluete flores". Orthodoxy is his great preoccupation in these poems, and he invokes all kinds of punishments on heresy. Yet he is not always free from error, here or elsewhere. He believes that only a small number of souls are lost (Cath., vi, 95). It is an exaggeration of the meaning of his metaphors to assert that he makes the soul material. The "Psychomachia" is the model of a style destined to be lovingly cultivated in the Middle Ages, i. e., allegorical poetry, of which before Prudentius only the merest traces are found (in such authors as Apuleius, Tertullian, and Claudian). In Tertullian's "De Spectaculis", 29, we find its first conception; he personifies the vices and the virtues and shows them contending for the soul. The army of vices is that of idolatry, the army of the virtues that of faith. The poem is, therefore, at once moral and apologetic. It would be difficult to imagine anything more unfortunate or insupportable. Incidents, action, and characters of the Æneid are here travestied, and the deplorable effect is heightened by the borrowing of numerous hemistichs divested of their proper meaning. The "Dittochæon", forty-nine hexameter tetrastichs commenting on various events of the Old and

New Testament, must be included among the didactic poems of Prudentius. Doubts have been raised regarding the authenticity of these verses but with very little reason. Gennadius (*De viris illustr.*, xiii) furthermore attributes to Prudentius, mistakenly perhaps, a "Hexaemeron" of which we know nothing.

His most personal work is the invective against Symmachus. It shows how the Christians reconciled their patriotism with their faith. Prudentius identifies the Church with Rome and, in thus transforming it, preserves that ancient belief in the eternity of the city. He can be impartial towards the pagan and praise him for services rendered the State. He is proud of the senate, seeing its majority Christian. Christianity is come to crown the Roman institutions. Romans are superior to the barbarians, as man is superior to the animals. These two books against Symmachus undertake, therefore, to solve the problem which presented itself to the mind of the still hesitant pagan. A genius more powerful than pliant, Prudentius displays a more versatile and richer talent than that of his pagan contemporary, Claudian. The rhetoric he disparages, he himself misuses; he often exaggerates, but is never commonplace. The superior of many pagan poets, among the Christian he is the greatest and the most truly poetic. His style is not bad considering the period in which he wrote, and, while there are occasional errors in his prosody due to the pronunciation then current, he shows himself a careful versifier and has the gift (then become rare) of varying his metres. An edition of Prudentius is to appear in the "Corpus" of Vienna, edited by J. Bergman. The best manuscript is at Paris, in the Bibliothèque Nationale, Latin department, 8084; on one of its margins is the half-effaced name of Vettius Agorius Basilius Mavortius (consul in 527), who made a recension of the works of Horace. This manuscript is free from the dogmatic corrections which are found in others.
